Last year the President vetoed a bill to give special aid to distressed areas. It had some glaring faults. Yet the method makes sense. A better measure, requiring more evidence of local self-help efforts and providing safeguards against abuses, should win wide support. And the President might well encourage such steps. They could prove a real help to the Nation directly by relieving distress and indirectly by easing pressures for unwise "shotgun" spending programs designed to spur employment.

Connecticut Area Plan

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article by W. F. Jennings, president of the Postal Transport Association for the first division, in Lynn, Mass., which appeared in the Postal Transport Journal for February 1959:

CONNECTICUT AREA PLAN

(By W. F. Jennings)

There is an old saying that nothing remains the same for any length of time—things either improve or retrogress according to conditions. All eyes are looking to the operation of the Connecticut area plan to estimate its value as an efficient method of mail distribution. At this writing, opinions are mixed as to the improvement over the previous methods of mail handling.

As time goes on we will see new plans of distribution in all parts of the country. The

Department has launched a program calling for such systems in all large centers, terming them metro systems. The first one was developed in the New York City area comprising 27 counties in New York and New Jersey, together with Fairfield County in Connecticut. Results of this first plan were judged to be favorable and so we have the expansion of the idea in all parts of the country.

The metro system is a development of the old trapping centers which were established a few years ago. It was found that the use of the word "trapping" was ill-advised because the word connoted delay. New terminology was recently applied to the trapping centers. They were designated as "mail expediting centers," and this term was used in the "Operation Christmas" orders of 1958. To identify some units in the metro system the term "sectional centers" was used, but the abbreviation "S.C." was confused with South Carolina. Now, the terms "area centers" and "concentration centers" are applied to the appropriate units.

The objectives sought when the Connecticut plan was devised were to provide next-day delivery for all mail in the post offices at 5 p.m., development of a 24-hour scheme of distribution that would never change, and removal of distribution from mobile units. From the viewpoint of postal patrons next-day delivery is highly desirable, but surely the guarantee of such delivery on 5 p.m. mailing is not an ambitious objective. In an area as thickly populated as Connecticut, distances between offices are comparatively short, and it would be reasonable to expect next-day delivery if the letters are mailed at any time during the evening. At one time, such service was the rule and taken as a matter of course. Now it seems to be something to strive for.

It is obvious from an inspection of the plan that large quantities of mail will be massed on area centers and this mail cannot move out until procesesd. A problem is thereby created, a problem that troubled post office people over 100 years ago. Those were the days before mobile units, and all mail was massed on some distributing post office for processing. The problem became acute in such centers as St. Joseph, Mo., where mail for the West was distributed. After the arrival of the day's mail by railroad many hours would elapse before the dispatches could be made ready. The problem was solved by the assistant postmaster of St. Joseph, William A. Davis. He received authority to equip two baggage cars with distributing facilities so that clerks could sort the incoming mail en route. The Hannibal & St. Joseph Railroad cooperated and remodeled the cars so that 65 separations could be made. The first trip was made on July 7, 1862, and the first mobile unit in this country was put in operation. The results were spectacular because the en route distribution advanced the transcontinental mail by 14 hours. This bit of history is mentioned because prior to 1860 all large post offices were trapping centers and congestion at the centers was eliminated by en route distribution. Surely, reverting to the methods of over a century ago will bring about the same problems.

The idea proposed by Mr. Davis received attention in Washington, and 2 years later George B. Armstrong, assistant postmaster at Chicago, Ill., was instructed to test the plan of en route distribution. The tests showed the plan to be an unqualified success, and so the railway mail service was born. In the following few years other routes were established. Opposition soon developed, however, because the postmasters of the great eastern distributing centers became alarmed for they thought that the sorting of mail en route would somehow reduce the importance of their offices.

Now we have the Connecticut plan, which is designed to operate without en route distribution as far as possible. I submit to the reader the thought that a comparison of the plan with the methods of a century ago will show that they are identical. Time has not marched on in this case.

The costs of the Connecticut plan are not available, but the additional truck routes necessary to implement it have been published. Using the average cost of truck operation, the new routes would cost an additional $100,000 to $120,000. Clerk hire necessary in area centers is another item, no figures being available on this expenditure.

We in the N.P.T.A. believe that good mail service will come in direct proportion to the amount of en route distribution that is performed. Any plan of distribution, no matter how efficient, would be better if implemented with mobile distributed units.

The Cuban Situation

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOLLAND. Mr. Speaker, I should like to call to the attention of all the Members, a firsthand account of the situation in Cuba as told by Mr. Robert M. Cox, the president of one of the local radio stations in my district as well as a prominent businessman of McKeesport, Pa., upon his recent trip to Cuba.

His story from the McKeesport (Pa.) Daily News, of January 28 and 29, 1959, follows:

MON-YOUGH BROADCASTING CO., INC.

McKeesport, Pa., January 31, 1959.

Hon. ELMER HOLLAND,
House Office Building,
Washington, D.C.

DEAR ELMER: Enclosed herewith are copies of articles covering my recent visit to Cuba during which I observed, among other things, that the political prisoners are being treated well in La Cabana Fortress, that they anticipate fair trials, that communism in Cuba does not appear to pose the threat that we often are led to believe that it does, that the revolutionary soldiers are courteous and well-behaved and that Fidel Castro is respected as a modern-day "Zorro", liberator of an oppressed people.

From 1956, when I first visited Havana, to 1959, the change from dictatorial oppression to revolutionary freedom is like the change from night to day, for now the Cubans are a happy, laughing and free-talking people.

In my opinion, too much of what we have been told by our reporters has been anti-Castro while Batista's murdering went unnoticed. My own interviews in Havana and in the fortress indicate that the people feel strongly that the United States stood by idly when Cuba was being mutilated by a dictator, while now we are being all-too-critical of their attempts to bring their murderers to justice.

The feeling, in some quarters at least, is that an understanding U.S. Ambassador could do much to help in this period of readjustment and to cement a good relationship between the United States and the 7 million people on this neighboring island which should be our friend and ally.

It is my earnest hope that our Government will temper its criticism with sympathy and understanding in an attempt to make friends of these fine people and if there is any way in which I, in my small way, may contribute toward the accomplishment of this friendship, please be assured that I stand ready, willing and, I believe, able to serve.

Sincerely,

ROBERT M. COX,
President.

[From the McKeesport (Pa.) Daily News, Jan. 28, 1959]

CITY MAN TALKS TO PRISONERS IN HAVANA FORTRESS—ROBERT COX FINDS BEARDED AND ARMED CASTRO FOLLOWERS SET TEMPO IN CUBAN CAPITAL; MADE TRIP FROM FLORIDA VACATION

Bearded young men, armed with smiles and a various assortment of weapons, set the tempo in Havana today, according to Robert M. Cox, McKeesport businessman, who returned recently from the Cuban capital.

Mr. Cox said he was one of the few Americans permitted to enter La Cabana Fortress in Havana to interview Fidel Castro's political prisoners.

He went to Cuba on sudden impulse last week while vacationing in Florida. "I wanted to see what was happening," he said.

His 1-day journey into the troubled country began from Fort Lauderdale, where he took off by plane at 9:15 a.m. last Tuesday.

In 90 minutes, the Mackey Airlines plane had touched down in Havana. Castro at the time was preparing for a huge demonstration called in support of the revolutionary Government's summary execution of captive followers of the deposed dictator Batista.

WORE TENNIS SHOES

Having read accounts of rioting in Havana, Mr. Cox said he wore tennis shoes to permit fast footwork just in case it was needed.

Upon landing in Havana, Mr. Cox said the first person he saw was a young bearded soldier who approached him with a stern command to halt.

Having forgotten the little Spanish he knew, Mr. Cox explained that he used the international language to greet the soldier—a smile. He said:

"From that minutes on the soldier was very friendly and courteous. He led me to the immigration desk where I was passed through with little trouble."

The next phase of his trip was by taxi to the tourist office of Mike Magua where he hired a limousine, chauffeur, and interpreter.

The agency was recommended by the plane's pilot, Capt. Joe Bruby. The pilot had attempted to dissuade him from going to the fortress.

AMONG FRIENDS

"But when I saw the smiles on the faces of the soldiers at the airport, the taxi drivers and people in the streets, I felt I was among friends," Mr. Cox said.

"In fact the only trouble I had up to this time was at the airport when a tyke approached me from behind, stuck a toy pistol in my back and asked, 'Shine, mister?'"

Mr. Cox had been in Cuba in June 1956 when Fulgencio Batista was in power.

"I felt the oppression under the Batista regime at that time," he said, "the people were afraid to talk. Feeling sympathetic to the Castro cause, I felt I had to go back. I went there as a friend.

"The streets of Havana now are filled with smiling faces. The soldiers are courteous. It appears that they want the United States to understand their position."

After picking up his interpreter, Rudolfo Alfonso, and chauffeur, Mario G. Mesa, Mr. Cox said he would like to interview the prisoners in La Cabana Fortress.

DECIDES TO TRY

The interpreter told him that under the Batista government no Americans were permitted to enter the prison, not even the U.S. Ambassador. But he added, with a shrug: "We try."

Mr. Cox said his rented limousine was stopped 50 feet from in front of the fortress by another young, bearded soldier who carefully examined his press card.

The entrance to the prison was guarded by a score of soldiers "all of whom were in gay spirits, laughing and very respectful," he said.

After gaining entrance, Mr. Cox was met by Capt. Alfonso Zayas, who wore a 22-month growth of beard and who further questioned him on his motives and again examined his press card.

The captain then led him to the prison proper and conducted him on his tour of interviews with the prisoners.

[From the McKeesport (Pa.) Daily News, Jan. 29, 1959]

CUBAN CAPTIVES DENY GUILT TO CITY MAN—COX INTERVIEWS INMATES OF FORTRESS JAIL; FORMER BATISTA CABINET MINISTER SAYS HE RESIGNED BECAUSE HE OPPOSED REGIME'S POLICIES

La Cabana fortress in Havana, Cuba, is a huge military prison where Fidel Castro keeps many of the revolutionary government's political prisoners awaiting trial.

Robert M. Cox, McKeesport businessman, said he is one of the few Americans who was permitted to enter the fortress to interview the imprisoned people. He went to Havana last week and spent part of a day there.

He said he was guided through the prison by a polite captain named Alfonso Zayas, who wore a 22-month growth of beard and carried a 45-caliber automatic.

He was led first into a large courtyard filled with prisoners who were milling about at will. The courtyard was bordered on two sides by tunnel-like cells. One side housed the Castro soldiers and the other the prisoners.

CELL DOORS OPEN

Mr. Cox said all the cell doors were open at the time of his visit with the exception of two, where persons accused of murder were imprisoned.

He emphasized the point the prisoners' living quarters were equal, if not better, than those of their rebel guards. He said every man interviewed stated that he was receiving fair treatment.

The first prisoner interviewed by Mr. Cox through a hired interpreter was a young army lieutenant, accused of persecuting Communists.

Mr. Cox said he then asked about the number of Communists in Cuba. He was taken by Captain Zayas to a prisoner who held the post of Minister of Information under the Batista regime until 1954.

The former Cabinet member, who said he was arrested January 4, told Mr. Cox that there are 12,000 Communists and perhaps 90,000 fellow travelers out of Cuba's population of 7 million.

"The man said he resigned from his post because he disagreed with the Batista policies and practices," Mr. Cox reported.

WROTE ARTICLES

"The prisoner said he then began writing a series of articles subtly condemning the Batista practice. Some of these articles, I was told, appeared in two of Cuba's major magazines."

The next prisoner to converse with Mr. Cox was a former Havana police chief who said he filled that post from 1956 until last March. He said he quit because he did not agree with Batista policies.

The prisoner was dressed in a colorful sport shirt and slacks and wore sunglasses.

"He was smoking a large cigar as I interviewed him," Mr. Cox said. "The man anticipated a just trial. The majority of the prisoners wore blue denim trousers and jackets with a white P printed on the jacket."

Mr. Cox then talked to a man accused of murder. He said:

"The prisoner had been a captain in the Cuban Army for 34 years and was stationed at Santa Clara, where he was accused of murdering 16 people and burying them in a common grave.

BURNS ON FOREHEAD

"The prisoner had burns on the forehead. My guide said they were received when a sugarcane field in which he was hiding was set afire to flush him out.

"The man told me he was innocent, while his tearful daughter clung to his shoulder. The prisoners are permitted visitors three times a week."

Another prisoner interviewed was a former colonel in the Cuban Army with 40 years of service. Mr. Cox said he was accused of mistreating rebel soldiers and taking a considerable amount of government money for private use.

"The man claimed he received the money from a former wife," Mr. Cox said. "On the mistreating charge, he said he merely gave captured rebel soldiers a kick in the pants before sending them on their way."

Mr. Cox added:

"Every prisoner I interviewed said he was getting fair treatment and expected to receive a just trial."

He asked Captain Zayas if he were a Communist, to which the rebel officer replied:

"Certainly not. I am a Catholic and catholicism and communism do not mix."

The captain, like many of the soldiers, wore a Catholic medal on a chain around his neck.

INTERPRETER WONDERS

After leaving the fortress, Mr. Cox said his interpreter declared that he could not understand why executions under Batista either were condoned or not noticed in the United States even though they ran into the thousands, while the execution of war criminals after trials now are severely criticized.

Mr. Cox said he boarded his plane back to Florida at 6:30 p.m. last Tuesday, only about 7 hours after he first landed in the Cuban capital. He concluded:

"As I left Cuba, I could not help but be impressed that here was a large island with now happy people ready to be our friends and allies if we just showed some brotherly consideration in this time of need."

Legislation To Prevent Free or Special Travel Rates to Government Officials on Private Passenger Vessels

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PELLY. Mr. Speaker, I desire to announce the introduction of a bill to regulate the granting of free or reduced travel rates to Federal employees and their families.

Last July, during House consideration of the conference report on a bill to authorize construction of two superliner passenger vessels, I expressed regret that the conferees had not retained a provision from the Senate version prohibiting private shipping lines from extending free or reduced rates to Government officials and their families. This new bill would correct that situation.

It has seemed to me that Members of Congress or anyone on the Government payroll either in the legislative, executive, or judicial branches, or any of their relatives, should not be permitted by law to receive favorable treatment as against the general public in travel. No such privilege is allowed in connection with air or rail transportation and I see no reason for there to be any difference when it comes to travel by water. It certainly is inappropriate for persons who adjudicate, regulate and negotiate as well as legislate on shipping matters to be recipients of special favors. The contracts and subsidies involved amount to hundreds of millions of dollars a year, and public confidence, it seems to me, requires a strict standard in this respect.

In my bill I make a distinction as to the historic custom of invitational cruises of newly constructed or modernized ships in that I specifically exempt excursion or trial run voyages when all guests are on an invitational basis.

My bill does not affect the right of the U.S. Government to contract with these same shipping companies for reduced rate costs involving the transportation of military or civilian personnel when such employees are traveling on official business and when such transportation costs are being paid by the U.S. Government.

My bill would restrict, however, any shipping company from giving to any official or employee of the U.S. Government or to any member of that employee's immediate family free or reduced transportation rates below those rates which are offered to the general public.

Lithuanian Resolution for Freedom

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to include the resolution unanimously adopted at a mass meeting held February 15, 1959, at the Lithuanian Naturalization Club, Worcester, Mass., under the auspices of the Lithuanian Aid Society.

The resolution follows:

Whereas the 16th day of February 1959 marks the 41st anniversary of the declaration of Lithuania as a free and independent republic.

Whereas the unlawful, by force of arms, occupation of the Republic of Lithuania by Russia, and the commitment of atrocities against her people, the destructions of her institutions, and her democratic form of government, by Russia, are continued at the present day,

Whereas the Soviet Union has consistently and unilaterly violated all the pacts and declarations solemnly underwritten by the

Soviet Union, viz: peace and nonaggression pacts with the Baltic states, the Atlantic Charter, Four Freedoms, United Nations Charter, Yalta Declaration, and the Potsdam Agreement: Now, therefore be it

Resolved, That the Lithuanians of Worcester, Mass., do most vigorously condemn and protest against Russia's such unlawful by force of arms occupation of the Republic of Lithuania, and the commitment of atrocities against her people, the destructions of her institutions and her democratic form of government, the violation of pacts and peace treaties; and be it further

Resolved, That the Lithuanians of Worcester, Mass., petition the Government of the United States of America, to reassert the principles of the Atlantic Charter, by demanding that all Russian military forces, government, and agents be forthwith evacuated from Lithuania and all other countries now behind the Iron Curtain, and that Lithuania, her people, and all other enslaved and occupied countries and their peoples, be liberated and restored as free and independent nations among the nations of the world as enunciated according to the principles in the Atlantic Charter.

Freedom in United States of America for U.S.S.R. but Not Vice Versa

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HOSMER. Mr. Speaker, under our Constitution, freedom of speech extends not only to citizens of our country, but as well to noncitizens within our borders. It even extends to members of the Diplomatic Corps of foreign nations who are assigned to United States of America posts. It extends not only to the spoken word, but as well to written words and the media to convey them, the mails, radio, newspapers, and so on.

A recent example of the extent to which our constitutional freedoms extend is the mailing via first-class U.S. mail by the Embassy of the U.S.S.R. in Washington of a press release to an extensive list of U.S. newspapers. The obvious purpose was to have the information further transmitted to the newspaper's readers by way of the news columns. The press release concerned the text of a telegram from Mikoyan to Dulles. It was, in fact, carried as a news item by a number of newspapers at the discretion, in each instance, of the individual editor.

No U.S. censor in the Post Office Department intercepted the press releases. There are no such censors in the United States of America. There occured no censorship of U.S. news editors. There are no such censors in the United States of America. No secret policemen sought to check off the names of readers who read the story in the newspapers. There are no such secret policemen in the United States of America.

In fact, the whole incident was so typical of the characteristic freedom which is part and parcel of the American way of life that nobody even thought to comment on it.

But what would have been the result if the U.S. Embassy in Moscow had mailed to Soviet editors a press release on a similar telegram from Dulles to Mikoyan, using the Soviet postal system?

Here is how the Soviet Tass News Agency's dispatch to Chinese Communist news agencies might have read:

Moscow (Tass).—Comrade Premier Khrushchev disclosed that alert People's police have discovered a Capitalist warmongering plot against the Soviet free people financed by Wall Street and masterminded by the spying American Ambassador from inside the spying American Embassy.

Comrade Khrushchev declared the despicable American plot is further proof of the warmongering American warlike attitude toward the peace-loving Soviet free people. The arch-criminal American-hoodlum, Dulles, attempted to send secret counterrevolutionary instructions to enemies of the free peace-loving Soviet People's Republic.

Reactionary criminal conspirators against the glorious People's Republic who infiltrated our glorious Soviet postal system have been discovered by the glorious people's police and the usual glorious penalties for traitors have been imposed.

The criminal-hoodlum-reactionary-traitor-spy-American paid-conspirator counterrevolutionary editor of the Petropovlovsk Daily Free Soviet People's World attempted to print the cleverly coded arch-criminal American-hoodlum, Dulles', capitalist warmongering instructions to criminal-hoodlum-reactionary-traitor-spy-American paid counterrevolutionary conspirators.

He has been given the penalties prescribed by the Free Soviet People's Code of Supreme Justice. His deviationist staff of reporters has been replaced and assigned to reindoctrination centers.

Simultaneously alert Petropovlovsk police rounded up other criminal members of the Wall Street-financed capitalistic-hoodlum-reactionary - traitor - spy - criminal - reactionary-American plot against the glorious freedoms of the peace-loving Soviet peoples. They were apprehended brazenly decoding the arch-criminal-American Dulles' foul instructions printed in an early edition of the Petropovlovsk Daily Free Soviet People's World.

These traitors have been dealt with appropriately. Their families have been sent to reindoctrination centers. They have voluntarily turned over their possessions to the glorious People's Republic in atonement of their sins.

Long live glorious Comrade Premier Khrushchev and our glorious People's Free Republic.

Forty-first Anniversary of Declaration of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. FASCELL. Mr. Speaker, we of the free world should always keep in mind the character of the Government of the U.S.S.R. There are today many who are presently living involuntarily under the domination of this Government. In commemoration of the 41st anniversary of the declaration of the independence of Lithuania—one such nation of captive people—I should like to present for the consideration of my colleagues the following resolution which was adopted on February 15 at a mass meeting of Americans of Lithuanian descent of the city of Miami, Fla.:

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent of the city of Miami, Fla., sponsored by the Lithuanian Council of Miami, Fla., and held February 15, 1959, in Miami Lithuanian American Citizens Club, 3655 NW. 34th Street to commemorate the 41st anniversary of the declaration of the independence of Lithuania:

"Whereas in 1940 the Soviet Union in conspiracy with the Hitlerite Germany and in brutal violation of all the treaties and obligations, signed by her, invaded Lithuania with armed forces and against the will of the people, annexed her to the Communist empire; and

"Whereas since that time the freedom of Lithuanian people is suppressed by cruel means of Communist dictatorship which strives to dominate all the world; and

"Whereas the fate of Lithuania as well as of other subjugated eastern European nations will depend on the success of the foreign policy of the United States: Therefore be it

"*Resolved*, That this meeting of Loyal Americans of Lithuanian Descent of the city of Miami calls upon the Government of the United States to stand firm against the expansion of Communist imperialism and do all in its power to liberate the enslaved nations behind the Iron Curtain; be it further

"*Resolved*, That this gathering urges the Government of United States to continue its opposition to the United Nations' Draft Code of offenses which prohibits lending assistance to and liberation of captive nations; and be it finally

"*Resolved*, That the Government of the United States refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom and sovereign rights to Lithuania and the other enslaved European nations."

LITHUANIAN COUNCIL OF MIAMI, FLA.,

President.
HELEN VERBELA,
Resolutions Chairman.
MIAMI, FLA., *February 15, 1959.*

Pedernales Soil Conservation District

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. THORNBERRY. Mr. Speaker, I am sure that most of us are familiar with the excellent work being performed by the soil conservation districts throughout the Nation.

Those of us from Texas are proud of the constructive and effective program conducted by the officers and members of these districts in our State.

I am particularly proud of the Pedernales Soil Conservation District which is located in the 10th Congressional District of Texas which I am privileged to

represent. This district was named as one of the three outstanding districts in the State of Texas during 1958. I have just received a copy of the annual report of the Pedernales Conservation District and from reading this report I can well understand why it received this splendid recognition.

The Pedernales Soil Conservation District is doing considerable work with the young people living in its area. In addition, the churches in the area are included in its programs. The business people are informed of the work being done.

I believe that this annual report will be of great interest to the Members of Congress. Therefore, I respectfully request that it be inserted in the CONGRESSIONAL RECORD.

The report is as follows:

ANNUAL REPORT OF PEDERNALES SOIL CONSERVATION DISTRICT, 1958

I. The District received its certificate of organization in 1944. Technical assistance was received in 1946. The Board meets regularly on the first Thursday of each month at Johnson City, Tex. In 1958 the Board held 18 regular and called meetings with an average attendance of 85 percent.

II. (a) During 1958, 20 tours and meetings were held with neighborhood groups, rural clubs and other groups of cooperators. The Board of Supervisors participated in 10 of these tours. Other tours outside the District were made by the Supervisors to learn new techniques and enable them to be of better service to the Cooperators. The committees selected by the Board in 1954 are still active and assisting the District. The Legislative Committee has contacted legislators on State appropriations for District needs.

(b) There are 620 operating units in the District with a total of 450,981 acres in farms and ranches. Five hundred eighty-two Cooperators with 440,000 acres of land are actively cooperating with the District. Contacts are made regularly with non-cooperators in an effort to interest them in becoming District Cooperators. Basic conservation plans have been developed on all but 50 of the above agreements.

(c) Considerable work with young people was carried out by the District during the year. Five conservation movies were shown to students this year. Information was furnished the Vocational Agriculture departments of each school for land and grass judging contests. Both schools were urged to write essays for the Fort Worth Press awards program. It is an assignment in the Johnson City school.

(d) The attitude of the business people has been good and they are supporting the District's works. Ads were sold for the District's calendar for the 6th straight year. The District is able to advertise conservation and make a small profit to meet incidental expenses. All business people contacted let the District put displays in their windows during Soil Stewardship Week. Most churches observed Soil Stewardship Sunday in some way. The Board arranged a tour for the ministers so that they could see conservation applied on the land. The District participated in the Fort Worth Press awards program, Goodyear contest, National Farm Life contest, and the Soil Stewardship programs. The District won first place in the Goodyear contest for the second time. This is the seventh consecutive year in which some award has been received by the District.

(e) The district has continued to have a strong publicity and information program. The Johnson City paper carries a regular weekly news column. Feature stories are carried on different practices during the year. Radio stations in San Antonio and Fredericksburg feature the district's news releases on their farm programs. A conservation booth was again erected during the Blanco County Fair and Centennial. To correspond with the centennial, the exhibit was entitled "100 Years of Range Use." Pictures showed the decline of rangelands and then the improvement through the use of improved management practices. Several magazine articles were published concerning conservation carried out by district cooperators.

(f) Statistical report on practice application:

Practice applied in 1958: contour farming, 829 acres; cover cropping, 341 acres; crop residue utilization, 1,002 acres; rotation hay and pasture, 1,237 acres; brush control, 3,386 acres; deferred grazing, 31,235 acres; fertilizing, 283 acres; pasture planting, 444 acres; proper use, 27,764 acres; range seeding, 355 acres; wildlife area improvement, 56 acres; diversion construction, 2.5 miles; ponds, 17; spring development, 1; terracing, 4 miles; fencing, 7 miles; wells, 2; waterways, 3.

Above average rainfall was received in the district for the second year in a row. Some of the rains came as hard downpours with large amounts of runoff. Results from such practices as deferred grazing, proper use, and grass seeding gave good results in most cases. Conservation farming and ranching has continued to pay off for district cooperators. J. J. and J. C. Stewart report that their calves weighed over 550 pounds. Mr. Stewart contributes this to maintaining a cover on the land by proper stocking and to good quality livestock. Bill Stribling again got more than a 100 percent kid crop from his nannies. Good range cover and excellent management during kidding time helped him to obtain this high figure. Willie Haas has continued to improve the physical condition of his soil through the use of soil improving legumes. Hubam clover, alfalfa, and Brabhom peas are used regularly in rotations with other crops. Crop yields have been increased due to improved soil condition and fertility. Melvin Ross seeded a field to blue panic and got good grazing from it during the summer.

(g) All of the appropriated funds have been used to buy equipment for landowners to use. Some of the older equipment was disposed of due to high cost of maintenance. An additional appropriation would enable the district to give more and better service to its cooperators.

(h) Relations with other agencies are good. The Board cooperates with the Lower Colorado River Authority, ASC, FHA, and the Extension Service. These agencies are cooperative at most times and quite helpful to the Board in carrying out its objectives.

III. The attitude and understanding of the cooperators are good. Many have carried out conservation practices this year. As a whole, they have been encouraged by favorable rainfall conditions during the past 2 years. The largest need is for such practices as proper use, deferred grazing, and establishing grass on old fields. The Board feels that a 3-man technical staff is needed to give adequate service to the large number of cooperators. More financial assistance is needed to carry out promotional work and replace worn out equipment.

IV. The Soil Conservation Service personnel spent all their time promoting and assisting with district activities. A total of 25 meetings and tours were held during the year. A large ACP load during most of the year prevented carrying out some of the planned activities.

IRVINE AHRENS,
Chairman, Board of Supervisors, Pedernales Soil Conservation District.

H.R. 2412

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. O'HARA of Illinois. Mr. Speaker, at the request of Commander in Chief Thomas Hammond, of the United Spanish War Veterans, who as a boy of 17 fought with the 2d Massachusetts in all the battles around Santiago in Cuba, I have introduced H.R. 2412. As to the merits of this bill, I respectfully urge upon my colleagues the careful reading of the following editorial from the National Tribune of February 19, 1959:

JUST AND GENEROUS

Among the many hardships, which veterans of the Spanish-American War, the Boxer Rebellion, and the Philippine Insurrection suffered were poor rations—at times none at all—and fighting in tropical jungles in climates to which these volunteers were unaccustomed.

As a result of the poor food and campaigns under fierce heat or torrential rains, these campaigns developed many types of disease for which, due to a lack of medical help, they tried to treat themselves.

Even when medical care was available either the element of time coupled with no facilities for keeping records of treatment brought about a situation in which many of these veterans carried for years the residuals of disease, some even to their last days.

This was also true with respect to injuries received in line of duty in service. Failure to keep records resulted in failure on the part of veterans to prove service connection and thus receive proper recompense for their maladies.

A report from the Veterans' Administration shows that on December 20, 1958, there were 41,531 veterans of these campaigns on the VA rolls and of this number only 258 were able to prove service connection for their disabilities.

Under the terms of the World War Veterans Act of 1924 Congress enacted into law a provision whereby veterans of World War I with disabilities not shown to have resulted in service were granted hospitalization in Veterans' Administration hospitals whenever beds were available. A few years later Congress passed an amendment to the World War Veterans Act granting similar privileges to the veterans of 1898–1902.

Both of these provisions were just and reasonable and showed that a grateful nation was willing to discharge its obligation to the men who had fought the Nation's battles.

Only a few years ago Congress, realizing the fact that the absence of medical records in the case of the men of 1898–1902 had prevented practically all of them from proving service-connected disability, passed a law granting service connection for all disabilities to this group for the purpose of receiving outpatient treatment from the Veterans' Administration. This was a step in the right direction and one for which the Congress of the United States received the gratitude of the veterans concerned.

There was introduced in Congress on January 15, a bill—H.R. 2412—by Representative BARRATT O'HARA, of Illinois, which would extend to veterans of the Spanish-American War, including the Philippine Insurrection and the Boxer Rebellion the same eligibility for hospital care for any disability from the

Veterans' Administration as they now enjoy with respect to out-patient medical service.

In view of the service rendered this group of veterans this would seem to be the next logical step in the care of these aged veterans. It is interesting to note that Representative O'HARA is the only veteran of the Spanish-American War in the House of Representatives—one who knows of the hardship his group suffered.

It must be thoroughly understood that H.R. 2412 does not contemplate granting compensation for these disabilities, merely service connection in order to secure immediate hospital care when needed so that these men would not be required to wait weeks, sometimes months, to receive care from the VA whenever a bed was available.

As we have said, this move is the next logical step in the care of these veterans and there are many reasons why it should be made a part of the laws relating to veterans' welfare.

We have already pointed out that the lack of medical records has deprived many of these men of compensation to which they are justly due.

It would appear that inasmuch as Congress admitted that these veterans were service connected for outpatient treatment, they should also be service connected for hospital care.

As was the case for many veterans of later wars, this earlier group gave no thought to securing aid from the Government until their disabilities grew more serious in later years and when they attempted to secure affidavits from comrades to prove their claim they were unable to do so because many of their comrades were dead and the others scattered to all portions of the world.

It must be borne in mind that this older veteran class did not receive the benefits granted to those who served in later wars. They were paid no bonus as were the men of World War I nor was any GI bill of rights enacted to aid them in reestablishing themselves upon their return from service.

As we have also pointed out, they were not given medical care by the Veterans' Administration until some years after such privileges had been granted to the men of World War I.

In other words, these were truly the forgotten men of a country's war—a war which among other things, was the only one which reaped dividends for their country, a war which brought about the construction of the Panama Canal, a war which united the North and the South and improved conditions under which men who wore the uniform in later years served, a war which was the beginning of a standing army which would find the country not entirely unprepared in any future war.

As the latest figures from the Veterans' Administration have shown, there were on the rolls 41,531 of the men who fought from 1898–1902, as of December 20, 1958. Since that date, not quite 2 months ago, hundreds of those then listed have died.

Actually, they are dying at the rate of more than 7,000 a year, and it is sad to contemplate that with another 6 years there will be but a handful left to receive any type of aid from their Government.

For these reasons we believe that enactment of H.R. 2412 into law would be the final action of a grateful country—one that would enable these men, who are now in their eighties, to face the few years remaining to them with the knowledge that they would be certain of hospital care when it was needed. The satisfaction of knowing that their service was recognized in their greatest hour of need should alone be almost sufficient reason for passing H.R. 2412 and we trust that our aging veterans will not be disappointed.

Frank L. Magee

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. FULTON. Mr. Speaker, Frank L. Magee, president, director, and member of the executive committee of Aluminum Co. of America, was born April 13, 1896, in Shamokin, Pa., the son of Bethlehem Business College President William F. Magee, and Ida Lillian Boyer Magee.

He attended Bethlehem, Pa., public schools and Bethlehem Preparatory School, and was graduated from Lehigh University in 1917 with a degree in electrical engineering.

In college he was a member of the soccer team and president of the Electrical Engineering Society and Alpha Chi Rho fraternity.

Upon graduation from Lehigh, Mr. Magee joined Alcoa as an apprentice at New Kensington, Pa., but soon entered military service for 2 years' duty in the United States and France as a sergeant in the Army's Signal Corps during World War I.

In 1919, he resumed his Alcoa training program at New Kensington and Pittsburgh, and a year later was assigned to the New Haven, Conn., sales office.

From New Haven, Mr. Magee went to a number of sales offices, including New York City; Edgewater, N.J.; Pittsburgh; and Newark, N.J. He was named manager of the Albany, N.Y., office in 1925.

In 1926, Mr. Magee became a plant representative at Alcoa's Massena, N.Y., works, and assistant product manager for wire, rod, and bar products. From 1929 to 1937, he was district sales manager at Atlanta, Ga.

Subsequently, he served as manager of sheet sales, general production manager, and assistant to the vice president. In 1946, Mr. Magee was elected vice president and general production manager, and in 1952, became a director of Aluminum Co. of America. On April 21, 1955, he was elected executive vice president. In April, 1956, he became a member of Alcoa's executive committee, and in 1957, was elected president. Mr. Magee is also an officer and director of a number of Alcoa subsidiaries.

Mr. Magee was named Pittsburgh's 1958 Man of the Year by the junior chamber of commerce. He was Pittsburgh's United Fund campaign chairman in 1958, and currently is chairman of the finance committee, Pittsburgh Bicentennial Association.

A director of the Presbyterian Hospital, Health and Welfare Federation of Allegheny County, Community Chest of Allegheny County, and Fidelity Trust Co., Mr. Magee also is a corporate trustee of Lehigh University; member of the executive committee, Pennsylvania Economy League, and a member of Oakmont, Pa., County Club. He also is a member of the American Institute of Electrical Engineers, Western Pennsylvania Engineers Society, Longue Vue Country Club, University Club, Rolling Rock Club, Fox Chapel Golf Club, and is a former president and director of Pittsburgh's Duquesne Club.

In 1948, Mr. Magee was awarded the President's Certificate of Merit in recognition of his contribution to the military production effort during World War II.

In 1956, Lehigh University presented him with an honorary degree of doctor of engineering. In 1958, he received the honorary degree of doctor of laws from Maryville, Tenn., College.

Mr. Magee is a member of Calvary Episcopal Church, Pittsburgh.

His first wife, the former Marie Janet Weston, died in 1935. A son, Curtis W. Magee, is attached to Alcoa's Cleveland sales office. In 1938, Mr. Magee married the former Dorothy C. Hurlock, of Pittsburgh. She has two sons by a previous marriage, George L. Hoffman, Jr., and William H. Hoffman, the latter an Alcoan at Lafayette, Ind.

Mr. and Mrs. Magee reside at 301 South Linden Avenue, Pittsburgh.

The following special award winners deserve mention: Peter Muller-Munk, art; Michael Late Benedum, business; C. Lee Rumberger, chemistry; John C. Weaver, communications; Mildred E. Everett, education; Jerome R. Reeves, entertainment; Maurice H. Goldstein, good government; E. E. Moore, human relations; Hal C. Davis, labor; Hon. Hugh C. Boyle, law; Charles Fletcher Lewis, literature; Dr. Edmund R. McCluskey, medicine; Alan G. Nicholas, President's award; Dr. Clarence Zener, science; Daniel Edward Murtaugh, sports.

Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a speech by Mr. Magee given at the 19th annual Man of the Year awards dinner:

SPEECH BY F. L. MAGEE GIVEN AT 19TH ANNUAL MAN OF THE YEAR AWARDS DINNER, THURSDAY, JANUARY 29, 1959

The fabric of history is not made by the few whose names have been recorded for posterity. Instead, its strands are the lives of thousands rarely honored nor rewarded for their participation. It is with keen awareness of this fact that I accept the honor you have awarded me tonight.

My embarrassment in accepting this award is somewhat relieved by your parallel and well-deserved recognition of 15 distinguished fellow citizens. I am sure if all 16 of us were asked right now "Who did the most to build up the spirits of Pittsburghers in a year of some discouragements?" we would unanimously vote Danny Murtaugh and his Pirates top Men of the Year.

In all fairness, it must be admitted that my honor tonight resulted largely from the great publicity effort during the united fund campaign. Many of you worked with our team of 38,000 in making the 1958 united fund campaign a success. In a very real sense, you men of the Jaycees are all Men of the Year and share in the awards.

Jaycees have made important contributions, both individually and as a group, to the rebirth of Pittsburgh. You are widely known for your recreation and education program, naturalization ceremonies for new citizens, teenage rodeo, amateur art show, junior golf tournament, and get-out-the-vote drive for Allegheny County. Through

leadership and service, your organization has built an enviable reputation; your active participation in community affairs is a vital element of civic progress.

There are many subjects that would be approriate for a Pittsburgh audience in this bicentennial year. With only limited time available, however, I should like to focus our attention on a single, constructive message that seems vitally important to the future of our area and our Nation. Since the shape of things to come depends so greatly upon our younger generation, I am taking the liberty of directing this message to the organization that is our host.

As a dynamic element of our business economy, the Jaycees are certain to find increasing opportunities for community service. Business and industry have the important responsibility of providing the talent and energy of their leaders to deal with problems which affect the general welfare. Your services will be welcomed and, as you complete your work with the Jaycees, I hope you will be encouraged to seek even greater horizons of responsibility.

Not the least of these responsibilities for members of the business community is that of conveying, through deeds and persuasion, the broader economic understandings of our free enterprise system. Much good can be accomplished through speeches, forums and even indirect financial support of activities that strengthen our heritage of freedom. But there is another form of civic participation in public affairs that I would like to have you consider with me for a few minutes—a form of participation that all too often has been an anathema to the businessman of my generation. I am referring, of course, to personal individual participation in politics.

Active political participation on the part of interested, informed Americans is essential to the survival of the American way of life, as we know and enjoy it. This fact is axiomatic. It is no more true today than it has been in the past, but the disturbing indifference of recent years on the part of good citizens has certainly lent it a sense of urgency.

Broad participation in politics—regardless of party affiliation—is the substructure of good government. Politics, in this sense, is the basis of our democratic way of life—the machinery that offers the privilege of dissenting—that collective personality that achieves conclusions through an interchange of differing concepts and opinions. If you want to share in this all-important process, I urge each of you to become as active as possible in the party of your choice.

To the framers of our Constitution, politics was a living reality. They themselves spent much of their lives and substance in the performance of political responsibilities they regarded as supremely important. You may all remember the familiar story told about Benjamin Franklin, who was present at the critical moment in history when our Government was being established. As he left the session, Franklin was besieged by anxious citizens with questions. "Mr. Franklin," shouted one questioner, "do we have a monarchy or a republic?" Franklin's answer was a challenge to which every generation must respond: "You have a republic, if you can keep it."

In no way do I discount the many selfless public servants who are devoting their lives to this cause. Each one who does his part is worthy of commendation, regardless of political affiliation. But the general public apathy where political affairs are concerned is a well-known, though deplorable fact. Today, we still have a Republic in form, but somewhere along the line, we have lost much of the substance.

One highly important aspect of participation, of course, is voting. But voting alone is not enough. The ballot is simply the visible end product of our political system—somewhat like the glittering automobile body that is lowered into place in the final stage of assembly. The all-important political machinery of our Republic functions—like the motor under the hood—quietly and out of sight. The real power behind the ballot is an active, informed citizenry, and an alert, devoted group of elected officials.

Our first duty is to learn as much as possible about the machinery of government, and the needs and responsibilities of the communities in which we live. No voter, and certainly no public servant can perform his role intelligently without acquiring as much information on each issue as he can obtain; an uninformed voter may be even more harmful than a nonvoter. Armed with this information, we must then be willing to use our influence to the utmost and, if necessary, bear the burden of office.

Our second, but no less important duty is to take an active, personal interest in the political affairs of our community. If we want good laws in this country, it is timely that the businessman should give his attention to two participants in our governmental system which are nearest to the level where the lawmaking process begins: namely, the precinct captain and the county chairman. Any lawmaker will tell you that in his confusion of pressures from organized groups—whether they be identified with business, labor, farmer, or any other vocal element—he ultimately returns to the grassroots politician for his guidance. If more Americans were concerned with what takes place in their local political organizations, we might have a better choice of candidates, and more effective laws.

The tendency to observe rather than participate is one of the greatest dangers that our free society must face. In reality, political inactivity is alien to the concept on which our Government was based. Our Constitution and Bill of Rights assume that free men can and must work out their mutual destinies—not as victims, but as masters of their political system. If this theory is to function as it was intended, we must not be satisfied with the role of an observer, a Monday morning quarterback or an armchair general.

The willingness of citizens who are not professional politicians to enter politics has been one of the great strengths of our republic. Wherever freedom has been won or retained, people have always thought it worth the price of personal sacrifice. Even though political activity sometimes requires sacrifice, it rewards are great. For it provides the opportunity to perform dedicated public service, and to maintain confidence in popular government.

Win or lose, a good candidate contributes greatly to the democratic process—by informing the public and by putting the opposition on its mettle. Moreover, the example of a respected, qualified citizen participating in an election is far more effective than mere exhortation in combating the inertia of fellow citizens.

Groups of various kinds have a significant and important role in politics, but they cannot substitute for individual participation. And selfish minority pressure groups can cause the passage of laws which transgress the rights of individual citizens in opposition to the concept of constitutional liberties.

The way to make our representative form of Government work is for civic-minded individuals to replace political opportunists as office-seekers. I trust that you who are members of the Jaycee organization will consider this a challenge, for if enough people of your experience and ability become active participants in Government, we have no need to fear the future.

Frank Galliano Dies, Beloved Union Advocate

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, last week a friendly, understanding, and gentle man passed on in the Providence Hospital, Oakland, Calif. James Frank Galliano had long been a leader among the liberal thinking people of Alameda County, Calif. He was a lawyer who specialized in labor law and was the counselor of the Central Labor Council for over two decades.

"Gally," as he was familiarly known to thousands of people, was one of those spontaneous individuals who was never too busy to greet his friends or never too much in a hurry to do them a favor. He was an understanding man and loved by all.

Some 8 years ago he was appointed as a commissioner of the port of Oakland and continued to serve in that capacity until his death.

James F. Galliano will be missed in the Oakland scene.

I make part of these remarks an article which appeared in the East Bay Labor Journal for Friday, February 20, paying tribute to him:

FRANK GALLIANO DIES, BELOVED UNION ADVOCATE

James Frank Galliano died in Providence Hospital early Tuesday at the age of 63.

The night before, at the meeting of the Central Labor Council, when Secretary Robert S. Ash told the delegates that the beloved union advocate, counselor of the CLC for two decades, was very ill, a great sigh went through the room. For everybody knew Frank Galliano, and some of those present thought of troublous days in the thirties, when "Gally," as many affectionately called him, was in effect godfather to their union.

Ash paused a moment after making the painful announcement, paused to get control of his voice, and then added that "any of you who pray, pray for Frank Galliano, that he may stay with us."

But already the counselor, who had been found unconscious on the floor of his bedroom by his wife Emilie early Monday morning, was very near death, and earnest prayers were unavailing.

The funeral services were scheduled for Thursday, February 19, at 10 a.m., at the Laurel chapel of the Albert Engle Mortuary Co., the rosary was recited the evening before at the chapel.

The counselor is survived by his wife Emilie, and by a son, Traynor Galliano, and by a grandson.

Galliano was a graduate of the Stanford University Law School, and was admitted to the bar in 1925. A lieutenant in the U.S. Infantry in World War I, he attended Trinity College, Dublin, for a year after the war.

Many of the labor people who were active in this area in the thirties remember how unfailingly Galliano stood by them in those difficult days. Among those who knew him so well at that time were Charles Wagner of the Butchers, Otto Munschner of the Bakers, Bill Franklin and Fred Irvin and Bill Conboy of the Teamsters, Ernie Vernon of the Auto-

motive Machinists, Jim Suffridge of the Food Clerks, and of course G. A. Silverthorn and the late Bill Spooner, secretaries of the Central Labor Council.

Galliano was made counselor to the Central Labor Council in 1939, and had continued as that to the day of his death. He was appointed to the Oakland Port Commission in 1947 by the then mayor of Oakland, Joseph E. Smith, and was still a member of the commission at the time of his passing.

Repeatedly Galliano won cases for unions which established principles for dealing with labor cases in California jurisprudence.

One famous case was that of the Food Clerks and Guy's Drug Stores years ago involving the question of picketing and other important points. Over in San Francisco, M. O. Tobriner was handling a similar case for the Auto Salesmen against the Howard Auto Co. Galliano and Tobriner pooled their abilities in these cases and won for the unions.

Another famous case involved a dairy in Stockton and this one was won by Galliano for the Teamsters. Bill Conboy has vivid memories of this case.

Galliano's relationship with the Retail Clerks was very close. In 1937 he was instrumental in landing a good basic contract for the Food Clerks and he kept a fatherly eye on all their doings ever since. Some years ago, when Dave Beck was at the height of his power, it was Galliano who supplied the legal acumen and the friendly patience through the great struggle in the courts with Safeway.

No one familiar with the labor movement in Alameda County would ever make the mistake of thinking of Frank Galliano as just one more labor lawyer. He was so much more. He was the union advocate in every sense of the word, their skilled legal advocate, but, so much more than that, their advocate for a place in the sun and for an honorable place in American society.

Galliano, in line with his feeling he had for unions as children of his heart and, so many of them, as offspring of his powerful intellect, did not believe that a lawyer achieved greatness by the size of his fees. As a matter of fact, some members of the famous closed shop of lawyers had a feeling that on occasion, when a union was poor and in a desperate plight, Galliano would hand out some free advice of priceless value to the struggling organization. At any rate, all realized that wealth was not Galliano's prime interest. His profound interest was not in money, but in people, the people in the unions. His heart was in the "good and welfare of the union" part of the agenda.

It is already, long since, written firmly into the invisible heartfelt minutes of the unions of Alameda County that goodness and greatness were the traits of James F. Galliano. And now that he is gone those traits are remembered and lovingly dwelt upon.

Washington State Legislature Pays Tribute to First Woman To Represent State in Congress

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
Monday, February 9, 1959

Mr. PELLY. Mr. Speaker, the House of Representatives of the State of Washington by formal resolution has honored our colleague, the gentlewoman from Washington [Mrs. MAY].

This resolution speaks for itself especially as it is a tribute to a Republican from a legislative body two-thirds Democratic.

Under unanimous consent, I include the resolution for printing in the RECORD immediately following these remarks:

Whereas Congresswoman CATHERINE MAY of Yakima has been recently elected from the Fourth Congressional District of the State of Washington to the U.S. House of Representatives, being the first woman from the State of Washington to be elected to the U.S. Congress, and

Whereas CATHERINE MAY ably served three terms as a Member of the House, contributing to the progress of the State in many ways, and particularly in her dedicated efforts to improve the institutional programs and the programs for retarded children, and

Whereas, during these three terms the Members of both parties of the House have developed a very real affection for CATHERINE and a great admiration for her ability and effectiveness and her friendliness and charm, and

Whereas CATHERINE MAY has made a unique achievement in combining a successful political career with a successful career as a wife and mother: Now, therefore, be it

Resolved, That the members of the house of representatives do hereby express to CATHERINE MAY their deep appreciation for her past assistance and contributions to the State and their warmest wishes for all success in her new position; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to Congresswoman CATHERINE MAY, and to the Speaker of the U.S. House of Representatives.

America's Outstanding Democrat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a well-deserved editorial on America's outstanding Democrat, National House Majority Leader JOHN W. MCCORMACK:

AMERICA'S OUTSTANDING DEMOCRAT: MCCORMACK ROLE AS LEADER CITED

(By Frank Daley)

Propelled by the positive conviction—based on 1958 election returns from countless American communities—that our public needs are only adequately met under the guidance of Democratic leadership, the Democratic Party has never had a more brilliant future. Nor has it ever had the certain assurance of continuity in office and for greater gains in State and national offices as it now faces.

The net gains made by the Democratic Party in the 1958 elections of 6 Governorships, 15 U.S. Senate seats, 47 House seats, and 12 State legislatures, presents a political picture of the thinking public.

It brings forth the resentment of the people against the Republican blueprint for stagnation program and the approval of the more positive and vigorous action of Democratic leadership to make democracy work as an instrument to promote human happiness.

When we think of Democratic leadership, its only natural to think of the leader of leaders, the National House Majority Leader JOHN W. MCCORMACK. No other Democrat has done more for the Democratic Party in the past 25 years or was more responsible for the party's landslide victories in the last November elections than Congressman JOHN W. MCCORMACK.

He sponsored or directed the enactment into law which gave labor the right to organize although 94 percent of the House G.O.P. voted no.

Congressman MCCORMACK has played a vital and extremely effective role in having enacted into law social security, minimum wage, and fair working conditions, and he has been a part, a prominent part, in every major legislation enacted into law which provided economical, education and social gains for the people during the past 25 years.

It should be noted that 93 percent of the House G.O.P. voted no against social security, 61 percent of the House G.O.P. voted no on minimum wage and 80 percent of the G.O.P. House voted to oppose fair working conditions.

The House, in fact, was once the breeding place for Presidents. During the first 8 decades of the Constitution, 12 of the 25 Presidents could look back to service in the House. Years later came the first national conventions, and gradually the nominating machinery passed into the hands of leaders outside Congress.

The tremendous victory for the Democrats last November, when it is all said and done, adds up to one simple fact and that is, the elections proved that Americans do not want a veto of the 20th century.

An amazing thing is, from what the Republicans have been saying since last November 4, it does not appear that they have even yet grasped this simple fact. Perhaps they never will.

Estonian Independence

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. GALLAGHER. Mr. Speaker, during their entire modern history Estonians have enjoyed national independence for a very short time, for only two decades. After living under the mild sovereignty of the Swedes during the 16th and 17th centuries, and after enduring the oppressive regime of the Russian czars in the 18th and 19th centuries, early in the 20th they attained their freedom and national independence toward the end of the First World War. That was the culmination of their long struggles, and the realization of their national dream. When the autocratic Russian regime was shattered, they proclaimed their independence and on February 24, 1918, established the Estonian Republic. Thenceforth in the midst of hard but pleasant work, they all were happy and joyful in their homeland. And all seemed to be going well for about two decades. Then the evil forces of the world were let loose; the Second World War started, and the Estonians, with a host of other countries, saw the doom of their independent status as a nation and the loss of freedom as individuals. In 1940 Estonia was overrun by the Red

Army and in July the country was annexed to the Soviet Union.

Since then, for almost two decades, Estonians have been suffering under totalitarian dictatorship, and have been bearing the brunt of alien philosophies imposed upon them by godless Communists. In this indescribable suffering all seems gloomy, and the immediate future does not look bright. But these courageous and tough fighters for freedom, long schooled in adversity, cling tenaciously to their ideals of freedom and never entertain any doubt about the victory of their righteous cause, the cause of freedom and independence. On this 41st anniversary celebration of their independence day we can heartily echo their genuine and patriotic sentiments and hope for the realization of their goal.

H.R. 209 and H.R. 210

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. O'HARA of Illinois. Mr. Speaker, unless we do something about it, and do it quickly, new slums will spring up in our big cities as quickly as we remove the old slums. All the money and effort we are spending on urban renewal programs, laudable as is their purpose, will be wasted if we do not provide means of financing and the incentive for the modernization of residences in districts, once most desirable, that step by step are approaching the slum state. All that is needed to restore them to their former state of high desirability for family homes is a program such as envisioned by H.R. 209 and H.R. 210, which I introduced early in the session and on which I hope the Banking and Currency Committee, operating through its very efficient Housing Subcommittee, will schedule public hearings at the very earliest date possible. This is an entirely new approach to a solution of the problem of the slums. It furnishes a preventative remedy and is based upon modern medical thought that the best way to cure an illness is to prevent it.

In drafting H.R. 209 and H.R. 210 I was aided by the findings and recommendations of the Shinner Foundation of Chicago, which made an exhaustive nationwide study of the causes of slums and their prevention. If our big cities are to escape the spread of the "gray belt of decay to the city limits" envisioned by Dr. Raymond Vernon in an article by Homer Bigart in the New York Times of February 22, 1959, it is imperative that we step on the gas and quickly enact H.R. 209 and H.R. 210. The article from the New York Times follows:

SPREAD OF SLUMS IN CITY FORESEEN

(By Homer Bigart)

Slums will march from downtown business districts to the suburbs in New York and 12 other major cities, according to a paper published yesterday by the Committee for Economic Development.

This gloomy evaluation was made by Dr. Raymond Vernon, director of the New York Metropolitan Region Study. He saw a "gray belt" of urban decay spreading from downtown skyscrapers to the city line.

He also saw scant prospect of arresting the flight of middle-income families to the suburbs. When this group abandons an area, he said, the vacated buildings are converted to intensive low-income use. Thus the wave of slums moves gradually outward to the edges of the city and into the older portions of suburban towns.

STUDIES POPULATION TRENDS

The Committee for Economic Development is a business research and policy group consisting of 150 leading business executives and educators. Its main purpose is to explore national economic problems in the hope of establishing sound policies for the guidance of our economic life.

Dr. Vernon has been engaged since 1956 in various studies of the New York metropolitan area sponsored by the Harvard Graduate School of Business. He is attempting to project the economic and population trends of this area for the next 25 years.

About the only comfort he could offer the cities was: There will always be a downtown.

Downtown will keep its vitality as a center for finance and amusement, Dr. Vernon said, as well as for the sale of products and services that involve a great deal of comparative shopping.

But even the affinity of the financial community for downtown areas may be weakened by the redistribution of population, he warned.

INSURANCE COMPANIES CITED

Insurance companies, for example, he noted, put their main offices in cities where a large pool of literate women clerks is available. However, he said, as the central cities decline in population and as Negroes and other groups with more restricted job opportunities dominate the remaining population, young women who form the labor force for the insurance companies tend to move to the suburbs.

With commuting distances lengthening and mass transit facilities deteriorating in most cities, he warned, downtown may cease to be the best point for recruiting the preferred office labor force.

Moreover, he said, a considerable segment of banking activity has followed the general outward redistribution of population and jobs.

Still, he said he expected continued vitality downtown because office activities would expand even though "the central cities may not capture quite as high a proportion of such activity as they have in the past."

It was the rest of the city, the "gray belt", that seemed doomed to Dr. Vernon. For this area he predicted only a growing obsolescence.

He saw the blight spreading outward from the old slum districts where there has been a sharp decline in population.

MOVEMENT OF SLUMS

The old slums, he explained in an interview, are now inhabited by a growing proportion of aged couples whose children have moved to other areas. Although population is down, there are few vacancies in the tenements. Consequently the low-income groups are settling in brownstones vacated by middle-income families.

In this expanding gray area Dr. Vernon predicted in his report a long-run decline in the intensive use of space as sites for homes and jobs. The high cost of recapturing obsolescent factory sites would rule out the return of industries, he believed.

He cited two possibilities for arresting slum growth: a return in great numbers of middle-income families to the city and government subsidies to low-income housing or park projects. He discounted the first possibility by saying that such a movement would fly in the face of deep-seated historical trends based on powerful sociological forces.

The use of Government subsidies would require a scale of intervention much larger than any previously contemplated, he said.

Examining the comparative advantages to industry of locating in the city or in the suburbs, Dr. Vernon said that the old multistory mill-style building found in the cities was inappropriate to assembly-line techniques and other developments in handling materials.

FACTORY STRUCTURES CHANGE

The preferred type of structure is a long one-story building requiring large sites with the easy possibility of expansion—sites that usually cannot be found in the cities.

Small plants are still being pulled to the central city, but the big ones are being pushed away, Dr. Vernon said. One reason is that the size and internal organization of the big plants has freed them from dependence on many of the services in the congested areas that the smaller competitors find indispensable.

"This independence of larger firms from their environment is reflected," he said, "in a dozen different ways—in their reliance on truckload, instead of less-than-truckload, freight; in their ability to install their own transformers; in their ability to provide their own protective services, and so on."

Eventually the big cities of America will lose large manufacturing plants and become more and more like Manhattan, an island of office workers, he predicted.

His conclusions were pessimistic:

"The outward movement of people will be matched by an outward movement of jobs. Retail trade will follow the populations. Manufacturing and wholesaling establishments will continue to respond to obsolescence by looking for new quarters and by renting in structures in the suburban industrial areas where obsolescence is less advanced. The movement of jobs will reinforce the movement of residences."

Dr. Vernon's study was confined to the New York area, but he stressed that the same problems were to be found in 12 other major cities—Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Detroit, Los Angeles, Philadelphia, Pittsburgh, St. Louis, and San Francisco.

Cuba Revisited

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered last Saturday night in Santiago de Cuba in Oriente Province, Cuba. I was invited to speak there under the sponsorship of the Committee for the Industrialization and Progress of Santiago. However, representatives attended the dinner meeting from a number of other organizations including the 20–30 Club, the Rotary, the Lions Club, and the chamber of commerce. In all, some 250 businessmen attended in the dining room of the Casa Grande Hotel. The hospitality of Santiago was typically Cuban—that is, wonderful and gracious.

CASTRO'S CUBA: A CHALLENGE FOR CUBANS AND AMERICANS

I am sure that a year ago, I could not have addressed you as I am today. In the first place, I am sure Fulgencio Batista would not have permitted an invitation to be extended. In the second place, I am told that your organization, as a demonstration of protest against Batista's tyrannical regime, had refused to convene any meeting or hold elections until civil liberties were restored. Your distinguished president informs me that this is your first meeting of 1959 in free Cuba. Let me say, therefore, that all of us owe a debt of gratitude to Fidel Castro.

Cuba is called the Pearl of the Antilles; she is described as one of the most beautiful islands in the Americas, but how much more beautiful she is now that freedom is restored. Yet, what Castro has won for the Cuban people is but a promise of what great expectations lie ahead.

It is customary in speeches by visiting politicians from one foreign country to another to stress traditional ties. Sometimes this is done as nothing more than a gesture, a courtesy extended as a matter of form. With me, I assure you, it is not merely a formality when I say that Fidel Castro has done more than perhaps any other Cuban to stir the consciences and emotions of the American people and to remind your friends to the north of the deep-rooted historic ties of friendship that bind Cuba and the United States. Ours is a relationship born in a common tradition. It is a tradition of democratic idealism, of revolution. Castro has captured the spirit of that tradition of democratic idealism and has elevated it to a new level of prominence not only throughout the Western Hemisphere but also throughout the world.

More than anything else the spirit of democratic idealism, it seems to me, was one of the primary motivating forces underlying Castro's 26th of July movement. There is something remarkably attractive about the drive, the dedication, the sense of nationality of all these men. A year ago they were regarded in some countries as a group of dreamy idealists caught up in a hopeless cause, adventurers of a sort guided more by self-delusion than by any serious, genuine compulsion. Yet, against apparent overwhelming odds the men of this movement have succeeded with almost miraculous speed in sweeping away a regime of terror, violence, and corruption. Press reports in the United States have stressed the totality of Cuban support behind the Castro forces. This was, indeed, a national revolution; of dimensions like that of the Mexican Revolution. Perhaps, this fact coupled with the democratic idealism that is at the heart of the 26th of July movement and the leadership of a young Oriente lawyer, driven by an inner compulsion to bring democracy to his people, were more responsible than anything else for the success of democracy in Cuba and the overthrow of the Batista regime.

At first, many persons in my country were shocked by what seemed to be the excesses of the Castro forces. The belief became widespread that a virtual reign of terror was being directed against the Batista followers. It was difficult for them to comprehend the reality of the situation. They had had insufficient evidence of Batista's oppression. It was difficult to grasp the seeming contradiction of a democratic leader governing in apparent irresponsibility, and, as it seemed to them, governing ruthlessly. Americans neither understood the implications of this crisis nor the complications engendered by a nation caught up in violent revolution. Nor did they understand that the pent up indignation of a morally sensitive, oppressed people had to have some outlet, and that the public trial of known murderers was in fact a safety valve for a nation that demanded retribution against its oppressors.

Now, I believe, the American people realize the magnitude and the high morality of the 26th of July movement. Gradually the knowledge is becoming more widespread in the United States that these revolutionaries are not a rabble in arms but are a restrained, disciplined, and dedicated group of patriots who have the overwhelming support of the Cuban people and who are trying under great difficulties to bring to Cuba genuine democracy. The norteamericanos are becoming more and more conscious of the great problems facing your young lawyer and as a consequence a genuine feeling of sympathy and understanding seems to be taking shape.

Certainly, Cubans do not have to be reminded of the great political and economic problems besetting their new government. In any revolution there always follows a difficult period of adjustment once the fighting has stopped and the tyrant has been overthrown. The legacy of the old regime is always a tremendous burden for the new government. The general problem of firmly establishing the legitimacy of the new government in a period of transition is fraught with grave dangers. The problem of reconciling the broadening of democracy with the necessity of maintaining a steady, centralized authority to insure public order and national progress, all in a revolutionary atmosphere, is a tremendous task for any new government. In our own national history it took almost a decade to establish a viable constitutional order after our war of liberation.

Nor are the economic problems facing Fidel Castro and the Cuban people any less burdensome. The economic legacy of the Batista regime would certainly be sufficiently oppressive to crush the enthusiasm of a far less devoted and energetic leader. Corruption and waste had completely enveloped the Batista regime. It is said that many Batista officials deposited millions of dollars in United States and Swiss banks. I hasten to add, money that was taken from the Cuban people. It is also reported that Batista himself has set aside upward of $200 million to $600 million for himself, for the most part no doubt in Swiss numbered accounts, before his flight to the Dominican Republic—again, money that belongs to the Cuban people, and which, by the way, I am encouraging our Government to locate and return if at all possible.

The war for Cuban liberation has also added to the great economic burden. Destruction by the revolution has been estimated at an insured cost of about $15 million. Damage and destruction to railroad bridges, and other means of transport and communication has been extensive. In all, the Government faces a staggering national debt of some $1,500 million.

The political and economic problems facing the Castro government are great, but they are not impossible. From abroad one gets the impression that political stability and orderly government prevails in Cuba. This is a happy beginning because out of political stability economic and social progress will emerge and flourish. Unless he removed himself entirely from politics for a while, Fidel Castro was right to assume the premiership and to participate actively in the management of governmental affairs. Political responsibility, it seems to me, cannot be disassociated from political authority. To govern effectively, and efficiently, responsibility and authority must be indivisible. He now has both the actual and the legal authority.

It is gratifying also to hear that the Castro government is planning extensive reforms within Cuba. Certainly plans for agrarian reforms calling for the distribution of government land to the people, proposals to ease unemployment, and the reorganization of the government and the army will be widely acclaimed in the United States and elsewhere as demonstrations of the genuine democratic idealism of the Castro movement.

Serious problems face Fidel Castro and the Cuban people in their quest for a solid democratic order. Yet, I am confident they will meet the challenges thrust upon them. Certainly, the United States can do much to make these challenges more bearable. I am gratified by the speed with which the United States recognized the Castro government, and I am equally gratified to know that our Ambassador to free Cuba, Philip Wilson Bonsal, is a man who knows Latin America and has a genuine sympathetic understanding of the problems that beset the area. His position with respect to dictators is unequivocal. He doesn't like them.

Problems are bound to arise in Cuban-American relations and the great burdens borne by Castro and his Cuban people are not mainly the concern of persons solely in executive authority. It is important, of course, that understandings be reached on the government level, but it is even more important, I believe, that as a people, we in the United States should more clearly understand the real meaning of the July 26th movement, not only for Cuba, but also for the Western Hemisphere and even the whole world. It is well, it seems to me, that we should think of Cuba and recent events here in the broad perspective of Latin American affairs.

The winds of democracy are blowing fresh and vigorous throughout Latin America. The Cuban experience is not only the most recent, but the most dramatic, demonstration of the rollback of totalitarianism in the Western Hemisphere. The Cuban revolution is the fulfillment of a dream of a great leader; it is the rededication of a people to democracy. There is, of course, no way of measuring the impact upon the world this event has made, but I am sure that the emergency of a democratic Cuba gives cause for grave concern to all dictators whether of the left or the right, not that Cuba could ever be a physical threat to them, but that Cuba can be the symbol of what they fear most, the rule of the people.

We in the United States are beginning to see the deep implications of the 26th of July movement, and many of us, indeed I hope all of us, are trying in every way to make the golden opportunity of Castro's revolution a reality. As a Nation we must maintain an undiminished confidence in the Cuban people to achieve a genuine democratic order. We must work desperately hard on the practical level to help the Cuban people succeed.

We can give Castro undiminished support in the solution of his political problems but there is also much to be done on the economic side. Here, the United States is prepared to help Cuba in this period of revolutionary transition. American economic aid to the Batista regime had been negligible. If I had had my way, there would have been none, economic or military. Even the military aid, which regrettably was given and widely publicized, actually amounted to very little. In the past a small technical assistance program operated in Cuba costing an average of $500,000 a year. At present only 12 technicians are active in Cuba under this program. These technical assistance activities carried on by the International Cooperation Administration (ICA) were designed to aid in the solution of specific problems in the Cuban economy. The broad objective of the program was, however, to point up the spirit of mutual cooperation between the people of Cuba and the United States. Specifically, the program was geared to consultation and in-service training of personnel in agriculture with a view to increasing production of a variety of crops such as tomatoes, cucumbers, cacao, coffee, and tropical fruits for domestic consumption and also for export. This operation undoubtedly

contributed to Cuba's economic welfare and diversification. It is even said that production of some crops has increased to such an extent that some imports are no longer needed and small amounts of produce are being exported.

Assistance has also been given in Cuba's mining industry. A civilian aviation project, we hope, has been helpful in working with the Cuban Aeronautical Commission on technical matters such as air traffic control, air safety, equipment procurement, and training. This project has aided in improving air safety and contributed to the growth of Cuban aviation. The technical assistance program has also contributed to improvements in Cuba in the education of aircraft mechanics and the technical advice in public administration provided to the census and statistics services of the Cuban Government in preparation of the coming 1960 census. These activities were carried on throughout all Cuba. I would like to note particularly that a U.S. technician has carried on some specific research work in Cacao here in Oriente Province.

Cuba has, however, received no grant aid from ICA and no loans from the Development Loan Fund. On the other hand, she has received credits from the Export-Import Bank. The most recent of these in the last 8 years was the $17,500,000 credit to expand Cuba's telephone system, an installation that should be of benefit to large numbers of people regardless of the regime which ruled here.

On the whole, official American aid activity in Cuba appears to have been very small, although, of course, private investment of U.S. capital has been substantial. According to one estimate, the total U.S. investment in Cuba is more than $1 billion. Apparently, there was at first some concern in American business circles during the change in governments, but the promise of Provisional President Manuel Urrutia to "actively encourage" U.S. investments in Cuba undoubtedly has reassured the fearful. Reportedly, the system of graft prevailing under the Batista regime has been a deterrent to investment capital, but recently one American businessman was quoted as saying, in reference to the Castro government, "With an honest government, this island could be an economic paradise—it could go ahead and realize its potential." It is possible that if the revolution can be consolidated efficiently and in order and political stability achieved along the lines Castro has promised, Cuba may well become an economic paradise and the development of its great economic potential a reality.

In conclusion, and in all humility, I want to make three suggestions for your consideration, as you go ahead to build a free, honest, and prosperous Cuba.

First, realize that you have the sympathy and support of my country. Call on us for assistance, whether it be more food and clothing for impoverished victims of the revolution, advice on how to attract and hold new industries, or ideas from our experiences how best to solve various social problems. We don't pretend to have all the resources or answers but please realize, as many of you do, our wish to help you establish yourselves in freedom and prosperity.

Second, don't expect too much too soon from the revolution. Insist on civil liberties, yes, and preparations for free elections, but do not expect increased profits and higher wages for everyone immediately. It is one thing to topple a dictatorship, another to build a democracy. Freedom means the right, indeed often the duty, to criticize. It means being able to disagree without being disagreeable. Sometimes it looks awfully sloppy and disorganized, but no better method has been devised for human happiness and governmental strength.

Here I want to leave Cuba a moment and talk about proposals by Cuban and Venezuelan leaders to kick the tyrannies out of the Organization of American States. Certainly this is something to discuss at Quito next year when the O.A.S. convenes there. For my part I believe in universal membership in international organizations, but of course with constant reminders of and obedience to the governing charters. Article 5, part (d), of the O.A.S. charter reads as follows:

"The solidarity of the American States and the high aims which are sought through it require the political organization of those States on the basis of the effective exercise of representative democracy."

I am reliably informed that the O.A.S. at Quito will have an opportunity to consider a concrete, specific definition of "the effective exercise of representative democracy," a yardstick which would disclose at once the respective shortcomings of Trujillo, Stroesner, Somoza, and Duvalier.

It can't all be done in a day—but it will be done if Cubans exercise self-control, tolerance, a sense of humor, and faith in democracy.

Finally, and this injunction is also not needed by most of you, beware of Communists who would try to make you believe they speak as Cubans, Cubans devoted to Cuba and speedy social and economic changes. Communists, of course, thrive on disorganization and are trained to take advantage of it. Their social justice anti-U.S.A. and pro-Cuba themes should fool no one, certainly not any Cuban who hated Batista and would fight against the resurgence of his counterpart in Cuban politics. Cuba's destiny is not that of Hungary today, Hungary where a local revolt cannot win because of the Soviet Union's intercession from outside its borders.

In Oregon, my home State, last week I heard Vice President NIXON—with whom I often do not agree—say something we all might ponder: "We should be more concerned about the meaning of the American Revolution," he said, "and less afraid of the Russian revolution." High officials in our Department of State would do well to heed the Vice President's timely advice.

In the final analysis, therefore, the greatest burden seems to rest upon Fidel Castro and his associates. In a very real sense he is a man of destiny; for if he fulfills the promise of his revolution and succeeds in imparting throughout all Cuba the zeal, the energy, the dedication to duty, and the democratic idealism that is so much part of his personality, there can be no doubt that Cuba and her people will emerge in a new age of progress and prosperity. But, we must all be patient with this man; as he himself recently said: "I am a man, not a god. We cannot do everything in 1 day." Indeed he can't do everything in 1 day. Nor can he do what is to be done without the support of the Cuban people and his friends in the Western Hemisphere. I do not doubt for one mintue that Fidel Castro has the overwhelming support of the Cuban people. Nor do I doubt that there are millions of my own countrymen who feel as I do that this man deserves the sympathy and support of our Nation.

Fidel Castro has advanced the trend toward total hemispheric democracy one more significant step. Neither we in the United States, nor you in Cuba can permit him to fail, for, after all, he is the symbol of what all of us desire most: a world of freemen.

Prompt Start on Libby Dam—Resolution of Montana Legislature

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. METCALF. Mr. Speaker, Montana's 36th Legislative Assembly has sent a joint memorial to the Congress in support of legislation providing for a prompt start on Libby Dam, the most important multipurpose project remaining to be built in the Pacific Northwest.

Libby, a $285 million project, would rise in the Kootenai River in northwestern Montana. It would back up 5,985,000 acre-feet of flood control storage, or more than one-fifth of the 27 million acre-feet of upstream storage which the Corps of Engineers says is necessary to control floods of record in the Columbia River Basin.

In addition to its ultimate installed generating capacity of 800,000 kilowatts of power, the corps project would provide regulated streamflow to add 805,000 kilowatts of energy to production at Grand Coulee, Chief Joseph, the Dalles, and Bonneville Dams. It is estimated that another 90,000 kilowatts would be generated in Canada by Libby storage. Libby also would provide substantial recreation, navigation, wildlife, and other conservation benefits.

The project was authorized by Congress in 1950. But, because this major unit in the Columbia River power and flood-control program would back up a reservoir into Canada, its construction is contingent upon an agreement with Canada under terms of the Boundary Water Treaty, signed on January 11, 1909, by the United States and Canada. Canadian representatives on the International Joint Commission have refused to approve the project, meantime proceeding with studies of development plans which could shut off the water of the Kootenai in the United States.

Proposed Canadian diversions of the Kootenai north of the border could cut the average annual flow of the river at the Libby site by more than 70 percent, thus making the project unfeasible.

Instead of sitting around until Canada shuts the water off, I propose to amend the authorization to provide for construction of the dam in two stages. The first stage would back water up to the Canadian border. The second stage would be added when agreement is reached with Canada. This measure, H.R. 3339, is sponsored in the Senate by the senior Senator from Montana [Mr. MURRAY], the junior Senator from Montana [Mr. MANSFIELD], the junior Senator from Idaho [Mr. CHURCH], and the senior Senator from Vermont [Mr. AIKEN].

We have the assurance from the Corps of Engineers that the two-stage construction idea is sound engineering.

It will take about 3½ years to do the detailed planning and design work. Agreement with Canada while this planning work is going on could speed up completion of this needed project by up to 3 years.

House Joint Memorial No. 3 of the 36th Montana Legislative Assembly follows:

HOUSE JOINT MEMORIAL 3

Introduced by Shelden (Lincoln), Jensen, Helding, Gill, Broeder, Harball, and Tonner

A joint memorial of the Senate and House of Representatives of the State of Montana to the President of the United States, Dwight D. Eisenhower; the Congress of the United States; James E. Murray and Mike Mansfield, Senators from the State of Montana; Lee Metcalf and Leroy Anderson, Representatives in Congress from the State of Montana; the Committee on Public Works of the United States Senate; the Committee on Public Works of the United States House of Representatives; the Committee on Appropriations of the United States Senate; the Committee on Appropriations of the United States House of Representatives; the Secretary of the Army, Wilber M. Brucker; the Chief of the Corps of Engineers, Department of the Army, Maj. Gen. E. C. Itschner; and the Director of the Budget, Maurice H. Stans; urging construction of Libby Dam in two stages, with work beginning on the initial stage as soon as possible in order to protect the national interest in water and water resources rising in the United States; and requesting sufficient appropriations so that detailed planning and design work can begin immediately

Whereas Libby Dam site is located in Lincoln County in western Montana and Libby Dam will be constructed across the Kootenai River some 15 miles upstream from Libby, Mont.; and

Whereas preliminary geological and engineering investigation and planning of the Libby Dam project have been carefully completed and the findings compiled; and

Whereas Libby Dam, the biggest storage project remaining to be built in the Pacific Northwest, will be designed to provide flood control, hydroelectric power, recreation and navigation benefits to Montana, the Pacific Northwest and the Nation; and

Whereas the Libby project's tremendous storage of water—5,985,000 acre-feet—would provide valuable flood control for several hundred miles along the Kootenai and Columbia Rivers and also would substantially aid flood control and navigation on the Columbia River below Pasco, Wash.; and

Whereas Libby Dam will have an initial installed electric generating capacity of 600,000 kilowatts, an ultimate installation of 800,000 kilowatts of power, which Montana and the Northwest need to bring in new industry; and

Whereas Libby Dam storage would also firm up power production in the projects downstream on the Columbia River; would provide a regulated streamflow which would add 805,000 kilowatts to the production at Grand Coulee, Chief Joseph, McNary, the Dalles, and Bonneville dams; and

Whereas no other proposed single dam on the Columbia River system would provide for generation of as much salable power at site and downstream; and

Whereas the rapidly increasing population of the Pacific Northwest and the Nation places upon this generation a special responsibility for the maximum utilization of all the great natural resources bestowed upon this country by divine providence; and

Whereas any lesser development of the Libby damsite would result in great loss of storage capacity and both at-site and downstream power benefits, which can create thousands of jobs urgently needed to provide for our burgeoning population and the future defense and welfare of our region and the Nation; and

Whereas the Pacific Northwest is isolated from the major population centers of the Nation by great distances and high freight rates and must rely upon the full development of its own natural resources in providing for its future growth and economic welfare; and

Whereas hydroelectric power is the only truly inexhaustible energy resource available to a civilization whose entire future growth and economic strength will be increasingly dependent upon the provision of adequate supplies of electric energy; and

Whereas the industrial development of Montana and the entire Pacific Northwest will be greatly enhanced by the large amounts of low-cost power made available by the full development of the potential of the Libby Dam site; and

Whereas the people of the State of Montana have seen in the examples of Hungry Horse Dam on the south fork of the Flathead River in their State and many other dams in the Pacific Northwest the immense benefits which accrue as a direct result of the construction of such great projects not only to the State in which they are constructed but also to the entire region and the Nation; and

Whereas revenues from the sale of power from Libby Dam represent the most feasible source of funds to aid in the rapid construction and the maintenance of major future irrigation projects in the State of Montana, which developments can provide homes for any farm families which may be displaced by the construction of Libby Dam; and

Whereas large amounts of storage are required in the Columbia River and Clark Fork River Basins to provide adequate protection against the seasonal floods which periodically cause great loss of life and the destruction of millions of dollars worth of property, causing great hardship throughout the Pacific Northwest; and

Whereas many of the large storage projects planned by the Army Engineers for the control of floods in the Columbia River Basin have been and are being lost due to conflicting uses and inadequate development, so that it is seriously doubtful that even the minimum flood control storage requirements of the region can be met; and

Whereas Libby Dam, with 5,985,000 acre-feet of usable storage in its reservoir is one of the few remaining great storage projects still feasible and not involved in serious controversy in the Columbia River Basin and can provide more usable flood control storage than a combination of all the other feasible potential projects in the Clark Fork River Basin; and

Whereas Libby Dam, as planned and authorized, must have the approval of the International Joint Commission; and

Whereas the International Joint Commission has for years been unable to reach agreement on the project and says it will not give approval until the Canadian Government's investigation of alternative uses of the Kootenai waters in Canada has been completed; and

Whereas one of the Canadian proposals is to divert part of the Kootenai River flow into the Columbia River at Canal Flats, in order to generate additional power at sites in Canada; and

Whereas such a diversion would materially reduce the amount of water available for storage and generation at the proposed Libby site, and could reduce the amount to the point where Libby Dam would be unfeasible; and

Whereas in order to protect Montana's and the national interest in water and water resources rising in the United States, in order to provide for at least partial flood control and storage: Now, therefore, be it

Resolved by the Senate and House of Representatives of the State of Montana, That the Representatives of the State of Montana in the Congress of the United States be urged and requested to introduce and the Congress of the United States be urged and requested to enact into law an amendment to the existing authorization of the Libby project, necessary to provide for construction in two stages, the first backing water up to the international boundary, the second to be added when agreement is reached with Canada; and be it further

Resolved, That the Congress of the United States be urged to provide sufficient appropriations so that detailed planning and design work for two-stage construction can begin immediately and that construction can begin as soon as design work is completed; and be it further

Resolved, That the amendment include reservation of a block of power for Montana; and be it further

Resolved, That this assembly request the Congress, in making appropriations for the construction of the Libby project, to define the compensations that shall be received from the Government of the United States by the County of Lincoln and by affected cities and school districts in said county for extraordinary expenses resulting from expanded services required in the fields of school and hospital facilities, health and sanitation, and police protection incidental to the construction of said projects; and to provide all necessary funds and take all needed action to insure the construction of all transportation and other facilities needed to provide opportunity equal to that now existing of access to mines, to forests in Federal, State, and private ownership, and to manufacturing and refining plants, to the end that the present steady and continuous employment of Montana people depending upon forests and mines for their livelihood will not be adversely affected; and be it further

Resolved, That copies of this memorial be submitted by the secretary of the State of Montana to each of the individuals and to the chairmen of each of the committees named in the title of this memorial and also to the Presiding Officers of both Houses of the Congress of the United States, RICHARD M. NIXON and SAM E. RAYBURN.

JOHN J. MACDONALD,
Speaker of the House.
PAUL CANNON,
President of the Senate.

Installation Banquet Veterans of World War I, U.S.A., Boston Naval Shipyard Barrack No. 1240, Boston, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. LANE. Mr. Speaker, I wish to include herein part of an address delivered by me at the installation banquet conducted by the Veterans of World War I of the U.S.A., Boston Naval Shipyard Barrack No. 1240, held at the Linwood

Grille, near Fenway Park in Boston, Mass., on Monday evening, February 23, 1959. Outgoing Comdr. Anthony D. Tieso officiated as the toastmaster of the evening, and the welcoming remarks were given by Department Commander Melvin D. Eddy. The installation of the newly elected officers was conducted by Department Senior Vice Commander Frank Farnham. The newly elected Comdr. William Francis Cooney extended the thanks of the organization to all invitees and the members, and presented an appropriate gift to Past Department Commander Francis W. Powers, and Department Commander Melvin D. Eddy:

It was George Washington who recommended that all officers who should continue in service to the end of the Revolutionary War should be entitled to half pay during life.

The Congress took favorable action on his recommendation.

We have come a long way since those days, regarding the coverage and the substance of pensions for veterans.

In spite of the fact that there is a movement underway—in 1959—to renege on the Nation's obligation to its veterans.

Those who are conducting this campaign do not dare to make a frontal attack for they know it would arouse a storm of opposition.

Instead, they are trying to divide the veterans by making a distinction between needy and nonneedy veterans in order to promote confusion and dissension. This is the opening wedge to reduce present pensions, and to throw a permanent roadblock in the way of pensions for all honorably discharged veterans of World War I which they see coming up over the horizon.

Unfortunately, many corporations and wealthy individuals seem to have persuaded the President that the budget must be balanced at all costs at the expense of our missile and space programs, the economic expansion of our country, and the American tradition of providing pensions for its ageing veterans.

These are the very same people who solemnly asserted that "nothing is too good for our boys" back in 1917 and 1918.

But today they want to forget those assurances and those promises.

During the very month that they honor the birthdays of two great Presidents they conveniently overlook George Washington's recommendations, and they avoid Abraham Lincoln's reminder that we must "care for him who shall have borne the battle and for his widow and his orphan."

But no matter how hard they try, no matter what devious techniques they employ they cannot get around the precedent, and the moral obligation of providing pensions, that are deeply rooted in our history.

The first national pension law was passed by the Continental Congress on August 26, 1776. Every officer, soldier, or sailor losing a limb in any engagement, or being so disabled in the service of the United States as to render him incapable of earning his livelihood, was promised half pay for life, or during disability.

The Revolutionary service pension law of 1818, introduced a new principle into this field of legislation. Before this time, disability was the firm requirement for the payment of any pension. With the new law, mere service in the Armed Forces, together with poverty, became the basis for entitlement.

Congress adopted a pure service pension schedule for the Revolutionary War survivors, on June 7, 1832. This act granted full pay for life to veterans who had served a minimum of 2 years.

The Mexican War Pension Act of 1887 granted a pension, if the veteran was suffering from disabilities to a pensionable degree. Veterans 62 years of age or older, were entitled to a disability pension, regardless of any disability.

The trend was plain to see. Congress was becoming more liberal with the experience of each successive war.

In the debate on the Mexican War Pension Act, Senator Hoar, of Massachusetts, pleaded for uniformity, for consistency of action on the part of Congress. He explained that if the Government were bound as a matter of principle, to pension soldiers or sailors who do not need a pension, and who are under no disability, then it is a universal principle, and, as such, the veterans of all wars are entitled to the pension. Enactment of the bill, said the Senator, would very shortly compel the Congress to take the next step—a pure service pension for the Civil War veterans.

The Mexican War Pension Act was debated for 3 years, but logic and honor finally prevailed, and Congress passed the bill in January of 1887.

The Dependent Pension Act of 1890 was a service-pension law. Pensioners, however, were required to demonstrate their inability to perform manual labor as a means of supporting themselves. Because of this strange twist, the law spawned many abuses, and gave rise to much dissatisfaction.

Widespread agitation led to the act of May 11, 1912, setting up a formula whereby the Civil War veteran must have served at least 90 days in that conflict, and that he must be 62 years of age or older. The payments, provided for on a graduated scale according to length of service, were increased by subsequent legislation.

The act of June 5, 1920, was entitled "An act to pension soldiers and sailors of the war with Spain, the Philippine Insurrection, and the China Relief Expedition."

It provided that any such veteran who has reached the age of 62 years shall, upon making proof of such fact, be placed upon the pension roll.

As for pure service pensions, the Spanish-American War is the most recent conflict where such provisions have been authorized by the Congress. Obviously, the veterans of World War I are next in line for this entitlement.

When Congress passed a bill to provide adjusted compensation for the veterans of 1917–18, it was vetoed by President Harding on September 19, 1922. In the message explaining his action, the President was looking to the future when he said that it is inevitable, as the years pass, that pension provision for World War veterans will be made, as it has been made for those who served in previous wars.

That prophecy was made over 36 years ago.

When we average out the length of time that the veterans of five previous wars in American history—up to and including the Spanish-American War—had to wait before service pensions were authorized, we find that it takes nearly 43 years.

We, the veterans of World War I, with over 40 years behind us, are getting close to the time of our entitlement.

When we consider that our honored seniors, the Spanish American War veterans, only had to wait 22 years for their pensions, it would appear that favorable action on our claim cannot be delayed much longer.

In the last session of the Congress, when my bill to provide a Federal charter for our organization was being debated, there were a few who opposed the bill. They insisted that our group was organized for the sole purpose of "lobbying through Congress a general pension bill that would provide $100 monthly to all World War I veterans regardless of need or length of service beyond 90 days."

I objected to that general accusation, pointing out that our organization serves the social and fraternal needs of its members. It also makes a positive contribution to every community in which there is a barrack, by its example of good citizenship, and by its perpetuation of those ideals that give young Americans in every generation, the faith and the courage to work for, and if necessary to fight in the defense of our freedoms.

But as to the charge that we are seeking a pension I say, "So what?"

There is nothing sudden or surprising in such a proposal—more than 40 years after World War I, and following a precedent that was firmly established long ago.

We believe that the veteran who is 62 years of age or older is entitled to a pension of $100 per month upon proof of age and honorable service, as a matter of right.

We are confident that this formula is the simplest and fairest method by which the Nation's obligation to the aging veterans of World War I will be honored.

In the school of practical experience, we have learned that few people in positions of leadership and influence showed any interest in our objective, until our organization was founded. Its rapid growth within the period of several years, has opened the eyes of our legislators, and is reminding a grateful, but sometimes absent-minded nation, that the pension issue is approaching decision day.

We are building unity and strength and inspiring comradeship through our membership in the Veterans of World War I of the U.S.A. We realize that only by such mobilization of our forces, directed toward the goal of a pension for all veterans of that conflict, can we win to our side, the public support that is necessary for victory in this campaign.

That is why we attack the administration's sly proposal, whereby the benefits for needy veterans—covering both compensation and pensions—might actually be increased.

No self-respecting veteran is opposed to additional aid for our needy comrades.

But we resent the deception inherent in this proposal.

Under the guise of helping the neediest veterans, it seeks, eventually, to determine eligibility on the basis of need alone, and thus completely undermine the obligation to provide a pure service pension to all aging veterans.

It is a clever maneuver, but it does not fool us.

We will not permit this administration to turn back the clock.

An old trick, being dusted off for use again, is to scare the public by estimating the cost of veterans' benefits some years from now. But this one-sided slanting of the facts fails to mention the mortality rates.

There are few survivors of the Spanish-American War.

The ranks of World War I veterans have been thinned in the space course of 40 years. Even as the veterans of World War II, are beginning to decline in number. In any case, about 22 more years must pass before they, in turn, become eligible for pensions.

It is no coincidence, therefore, that the administration and its big business advisers would like to readjust the Nation's pension program.

It is designed to block the veterans of World War I.

We would like to believe that it is motivated by fear of our growing strength, and that it merely represents a last-ditch effort to stop or slow down our drive.

That is only true in part.

They have had this idea in the back of their minds for a long time.

Some years after every war, when they think that people have forgotten the promises that were made in time of national emergency, certain financial interests always attempt to sabotage veterans' benefits so that they can keep more for themselves.

Under the current excuse of balancing the budget they believe that the opportunity they have been waiting for has arrived.

But the people on November 4, 1958—and in no uncertain fashion—demonstrated that they are in no mood for the Federal Government to abandon its responsibilities.

As employees of the Boston Naval Shipyard you are well aware of other moves they would like to make in the name of economy.

If they had their way, everything would be farmed out to private contractors—including the U.S. Navy, the Veterans' Administration hospitals, the civil service, and perhaps the Government itself.

If they had their way.

But the people have the final authority over their representative form of government. As long as we have truly enterprising organizations like the Veterans of World War I of the U.S.A., the economizers will not be able to default on their obligations.

We know that we are on the right course, and we intend to follow it until we reach our goal.

Report of Water Pollution Control Advisory Board

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. METCALF. Mr. Speaker, at a meeting here in mid-December, one of President Eisenhower's advisory groups took an unheard of action. Its members unanimously opposed a recommendation by the man who had appointed them.

The group is the Water Pollution Control Advisory Board. The recommendation of President Eisenhower is that the Federal Government in fiscal year 1961 discontinue Federal grants to States and local governments to help them plan and build treatment works to prevent discharge of untreated or inadequately treated sewage or other waste into public waters.

Indirectly, at least, the Board also endorsed the principal objective of H.R. 3610, by the gentleman from Minnesota [Mr. BLATNIK], now pending in the Committee on Public Works.

The Blatnik bill would double the $50 million a year construction grants program for 10 years. It would likewise increase the grants available for individual projects from $250,000 or 30 percent of the estimated cost, whichever is smaller, to $500,000 or 30 percent, whichever is smaller. It would provide for reallocation of funds from States not using them to others having approved projects for which grants have not been made because of the lack of money.

For the information of my colleagues, I append the Board's report to the Surgeon General under date of February 11, 1959. I have deleted the section headed "Acknowledgments." In addition to the usual thank you's, Acting Chairman Milton P. Adams reported that "some members expressed to me the hope that they might count on a larger share of your—the Surgeon General's—time at future meetings."

Mr. Adams said this meeting "will stand out as the one containing subject matter most pertinent to the discharge of our duties under Public Law 660." He also noted that all actions taken were by unanimous vote by the members present.

The report follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C., February 11, 1959.

THE SURGEON GENERAL,
Public Health Service,
Washington, D.C.

DEAR DR. BURNEY: The fifth meeting of the Water Pollution Control Advisory Board was held in Washington on December 15 and 16, 1958. The purpose of this meeting was to discharge the responsibilities prescribed under the terms of the Federal Water Pollution Control Act for reviewing the policy and program of the Public Health Service and making recommendations to the Surgeon General.

Several important matters affecting certain phases of the water supply and water pollution control program have developed since our last meeting. Being fully aware of this situation, we devoted our time and energies to considering all of the issues possible during the 2 days we met.

Having in mind the policy of the Congress, as stated in Public Law 660, "to recognize, preserve and protect the primary responsibilities and rights of the States in preventing and controlling water pollution * * *" the Board gave careful consideration in its deliberations to the results of a survey of the States, conducted by one of the Board members, Mr. Milton P. Adams. A questionnaire was sent to all State and interstate water pollution control administrators and State sanitary engineers to ascertain their opinions on the effectiveness of the Federal program, or what changes they believed should be made.

Answers were received from all States, four of the six interstate agencies, Alaska, Hawaii, and the District of Columbia. Replies to the survey were incorporated in a 14-page memorandum dated December 12, 1958, addressed to the Chairman, Members of the Board and staff of the Public Health Service.

The Board found this memorandum of great interest and of much value in certain of its deliberations. The members directed that it be accepted and made a part of the official minutes of the meeting.

"Summary of Results of Poll" (p. 5 of the memorandum) is reproduced here as part of this report. The number of affirmative and negative answers received has been placed after each of the 10 specific questions as asked.

MUNICIPAL SEWAGE DISPOSAL CONSTRUCTION GRANTS

1. Are current Federal allocations resulting in stimulation of sewage plant construction within your jurisdiction? Yes, 43; no, 9.

2. Do you favor doubling the authorization of construction grant allocations through reintroduction and enactment of the Blatnik bill (H.R. 11714, 85th Cong.) or its equivalent? Yes, 38; no, 13.

3. Do you favor elimination of further Federal construction grants by repeal of section 6, Public Law 660? Yes, 2½ [1], no, 48½.[1]

4. Do you favor repeal of section 6 with future sewage disposal construction grants to become an exclusive State function financed out of proceeds of a State excise tax on local telephone services as per Federal-State action committee recommendations? Yes, 2; no. 48.

5. If your answer to (4) is "yes," do you think your legislature would enact such a tax in 1959? Yes, 1; no, 12.

6. If your answer to (5) is "yes," do you think your legislature would appropriate from the proceeds of such a tax, funds in an amount equal to or greater than you are now receiving for sewage disposal construction grants? Yes, 1; no, 10.

OTHER MATTERS

7. Do you favor creation of a new position of Assistant Secretary of Water Pollution Control within the Department of Health, Education, and Welfare as per H.R. 13839 (Blatnik), 85th Congress, or its equivalent? Yes, 16; no, 28.

8. Do you favor continuance of Federal program grants to States and interstate agencies (sec. 5, Public Law 660)? Yes, 49½ [1]; no, 3½ [1].

9. Are you satisfied with progress to date toward solution of interstate water pollution control problems in which the Public Health Service has participated? Yes, 44; no, 1.

10. Since industry cannot qualify for grants, but its taxes assist in providing grants to cities, States, and the Public Health Service, would you favor amendments of the internal revenue laws to permit industry an accelerated amortization rate for such capital investments as are necessary to meet State or interstate water pollution control objectives? Yes, 51; no, 3.

This report covers those items of major concern to us, and which, we believe, need your immediate attention.

RECOMMENDATIONS

The Board submits to you its recommendations on the following:

1. The proposal of the Joint Federal-State Action Committee of September 9, 1958, that Congress on its part amend the Internal Revenue Code to provide a tax credit to the States against the local telephone service tax for a 5-year period, and the States on their part enact and collect a 3-percent excise tax on local phone service. This credit would equal 30 percent of the Federal tax, or 3 percentage points of the present 10 percent tax conditioned, of course, on each State's enacting a 3 percent phone service tax satisfactory to the Federal Treasury. In addition, the committee proposed that Congress authorize the Treasury to distribute the revenue equivalent of 1 percent tax on local telephone service to certain low income States. The combined tax credit and revenue distribution to the States would equal 40 percent of the Federal revenues now derived from the local telephone service tax, if, as, and when each State had met the Federal requirements. Whether the proceeds of the 3 percent State excise tax on phone service, if enacted, would ever be made available for sewage disposal construction grants to take the place of Federal funds now authorized, rests within each State legislature, and, of course, is not subject to the will either of Congress or the Federal Treasury. Present grants for vocational education and sewage treatment projects and the related Federal responsibility for administration, would become an unfunded State obligation if and as a new system goes into effect. The Treasury's distribution of these revenues would be discontinued at the end of 5 years with the States assuming full financial responsibility for the two programs.

The Board rejected the committee's proposal as not feasible, despite the knowledge and understanding on the part of each member that the current plan reportedly had administration blessing. Here are some of the reasons discussed leading up to their unimous action:

(a) The telephone companies have already alerted their customers to seek repeal of the entire 10 percent Federal excise tax on local phone service as an unfair tax on them.

Footnote at end of speech.

(b) The plan described above still fails to meet requirements of the resolution adopted at the Governors' conference at Miami, Fla., last May.

(c) The plan further leaves the States within the control or even dictation of some Federal official.

(d) There would be an unnecessary loss and dissipation of $60 million of Federal revenue annually, even if every State enacted a federally approved 3-percent State excise tax on phone service (see Dr. Flemming's press statement of October 6, 1958, released October 10).

(e) Our members are convinced that few, of any, State legislatures could be prevailed upon to enact a 3-percent State excise tax on local phone service because of the following reasons: (1) Adverse lobbying pressure against such a new tax; (2) the fact that phone service is not a measure of sewage disposal or vocational benefits and cannot be sold as such; (3) legislators from such cities as Pittsburgh, New York, Chicago, Cincinnati, Cleveland, Milwaukee, and a host of smaller places where sewage treatment has been provided, without the aid of Federal grants, could hardly be expected to support such local excise tax legislation for the benefits sought, or as a substitute for present Federal funds.

We believe that the construction grants program is operating effectively at the present time and should, if anything, be increased. If an increase is impossible, then we recommend that it be continued at its present level of operation.

2. The bills introduced in the 85th Congress to amend the Federal Water Pollution Control Act, H.R. 13420, H.R. 13839, and S. 4321, which we understand will be reintroduced in the 86th Congress. In general, these bills proposed to amend Public Law 660 to: (1) Increase the maximum grant limit on an individual project to $500,000; (2) permit municipalities to join together to build joint treatment facilities with the amount of grant allocable to each community as if it were a separate project; (3) increase to $100 million for construction grants for each annual appropriation; (4) permit reallocation of unused allotments; and (5) establish an Assistant Secretary of Health, Education, and Welfare for the administration of the Water Pollution Control Act and transfer all functions and responsibilities for water pollution control from the Surgeon General to the Assistant Secretary.

Though the Board approved of doubling the limitation on individual grants, and the provision for reallocation of unused construction grant funds, we resolved that the annual budget be increased only to the level necessary for meeting the States' construction grants needs.

We unanimously opposed the provisions of H.R. 13839 and S. 4321 establishing an Assistant Secretary for the water pollution control program. However, we are deeply concerned with the present low status of this program within the Public Health Service. We strongly recommend that you take immediate action to elevate the program's status in order to offset the congressional sentiment for removing the water pollution control responsibilities from the Service.

3. The impact with the expiration of program grants (sec. 5, Public Law 660) on June 30, 1961, will have upon the State and interstate agencies in their efforts to control pollution.

In view of the overwhelming number of State administrators who favor continuing the Federal program grants, the Board firmly believes that Congress should be requested to extend these grants to June 30, 1970.

4. The need for an accelerated tax amortization rate on the construction of industrial waste treatment facilities.

Since industry cannot qualify under Public Law 660 for grants to aid in the construction of such treatment works, the Board favors amending the internal revenue laws to provide an incentive for building these necessary treatment plants. Thus, industry can fulfill its role in the effort to abate and control water pollution.

5. Public awareness activities by the Public Health Service to educate and inform the various publics on the serious pollution threat to this Nation's water resources.

The Board is still deeply concerned with this lack of public knowledge, though we commend the water supply and water pollution control program for its accomplishments with a limited budget. We therefore reaffirm our previous recommendation that more definite steps be taken to formulate an organized public awareness program that will not only inform the people, but make them acutely aware of this problem.

We urge that adequate funds be requested to conduct such a program effectively and that the Surgeon General and his staff utilize national radio and television networks to further enlighten the general public, and consider calling a national conference on water pollution similar to the recent national air pollution conference held in Washington.

6. The budget resources and needs of the water supply and water pollution control program.

The presentation by the chief of the program confirmed our prior impressions and opinions that his program accomplishes a great deal with very limited resources. There is need, however, for even greater accomplishment. The Board therefore urges that immediate consideration be given to requesting a budget increase so that the program will be more effective.

7. The activities of the interstate enforcement section in carrying out its responsibilities under the Federal Water Pollution Control Act.

The Board is eminently satisfied with the activities and progress to date. We strongly support the Service's efforts to protect this Nation's vital water resources against pollution through its vigorous application of the letter and spirit of the act's interstate enforcement provisions.

In addition to the above items, the Board also considered: (1) Pollution control from Federal installations; (2) working relationships, Corps of Engineers-Public Health Service, title III, Public Law 85–500; and (3) Model Water Use Act, State legislation.

* * * * *

We are looking forward to seeing you again in the spring.

Sincerely yours,

MILTON P. ADAMS,
Acting Chairman, Water Pollution Control Advisory Board.

Members present at fifth meeting: Milton P. Adams, Irwin T. Bode, William F. Duckworth, Dr. Harold M. Erickson, Seth Gordon, Fred C. Heinz, Anton Hulman, Jr., Frank E. Long, William W. Wise.

Official:

ROBERT C. AYERS.
Executive Secretary.

Mr. Speaker, Mr. Adams is executive secretary of the Michigan Water Resources Commission. Mr. Bode is director of conservation, State of Missouri. Mr. Duckworth is an auto dealer and mayor of Norfolk, Va. Dr. Erickson is the Oregon State Health Officer. Mr. Gordon is director of the California Fish and Game Commission and a member of the California Water Pollution Control Board. Mr. Heinz is vice president of the H. J. Heinz Pickle Co. Mr. Hulman is a Terre Haute, Ind., industrialist and chairman of the Indiana Flood Control Commission. Mr. Long is a Buffalo, Wyo., rancher and banker. Mr. Wise is director of the Connecticut Water Pollution Control Commission.

[1] In jurisdictions where the responsibility for water pollution control is divided as between a State water pollution control agency and a State health department or its sanitary engineer, one-half vote was assigned to each. In some cases, the two agencies voted differently. A one-half vote was also registered where the administrator of one State voted both "yes" and "no" on a question.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

American Farm Problem

EXTENSION OF REMARKS
OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. HULL. Mr. Speaker, a lucid and penetrating appraisal of the farm problem in America was made in a recent speech before a convention of Ruritan National by Senator SYMINGTON, of Missouri.

This speech by Senator SYMINGTON, a member of the Senate Agriculture Committee and the astute sponsor of intelligent farm legislation, should be required reading for every American genuinely concerned with recent trends in American agriculture and interested in restoring prosperity to our rural areas.

Under leave to extend my remarks, I include the address by Senator SYMINGTON:

ADDRESS BY SENATOR STUART SYMINGTON, OF MISSOURI, RURITAN NATIONAL, 30TH ANNIVERSARY CONVENTION, SHERATON-PARK HOTEL, JANUARY 26, 1959

It is a privilege to speak here before the 30th anniversary convention of Ruritan National.

I am especially proud to be here, because the speakers at your past conventions constitute a most distinguished group—one which includes my friend and colleague, the distinguished Senator from Virginia, HARRY BYRD.

There is always a bond between a speaker and the audience when they share common beliefs and philosophies.

I believe this is true tonight.

As Ruritans, you recognize the true and enduring values of rural life; and you have dedicated your organization to promoting and serving those values.

Your basic objective is to bring about a closer union and a better understanding between the farmer and the business and professional man, so as to make the rural community a better place in which to live.

In serving rural communities as you do, you are making a great contribution to your community.

You are also serving a larger cause—that of our Nation.

The influence of agriculture extends far beyond the farm, or even the rural community.

While some 20 million Americans actually live and work on the farms, it is estimated that 42 million are involved in the transporting, processing and retailing of farm products, or in supplying the farmers' needs.

In other words, an estimated three out of every eight Americans are directly involved in the feeding and clothing of the Nation.

Remember those figures, when anybody tries to argue that agriculture is no longer important.

Each year agriculture uses more finished steel than is used in a year's output of passenger cars.

Each year, farmers use more crude petroleum than any other industry in the country.

Each year, American farmers keep 2 to 3 million nonfarm workers employed solely in supplying their needs.

So agriculture is today, as it always has been, one of the pillars of our Nation's economy.

As Ruritans, you are aware of, and concerned with, the close relationship between rural and urban America.

You know well that the small town cannot long survive, much less grow or prosper, in the face of continued depressed economic conditions in agriculture.

A decline in farm income is like an economic cancer. It spreads slowly at first, but soon covers an entire area.

It is only natural that, as farm income and purchasing power decline, the farm family is forced to postpone or curtail purchases of needed or desired goods.

If a farmer cannot afford to buy a new tractor, the sales of local implement dealers drop.

As a result, the implement dealer postpones his planned purchase of a new car.

This means the auto dealer must postpone his remodeling or building a home.

And the chain of reduced purchasing power soon engulfs the entire community.

But it spreads even further—to the factories, the firms, and the people of larger cities.

To see the effect, we need only look at the last few pages of our book of economic history.

Farm prosperity reached record levels in the post-World War II period.

In the early 1950's it began to slump.

Conditions continued to worsen, until in 1957 family farm purchasing power reached its lowest point in 17 years.

As farm income dropped steadily, our small towns and rural communities bore the brunt.

Gradually, however, it spread to the larger cities, to the point where, in 1957, and continuing throughout most of 1958, our entire national economy staggered under the most severe recession since the mid-1930's.

I do not want to imply that our most recent recession was caused solely by a sick farm economy. But most economists agreee that continued drops in farm income and purchasing power helped bog us down as much as anything else.

This is why many farmers, farm leaders, and some of us—not enough—in the Congress, are so concerned when various people make light of agriculture—its people, its importance, and its problems.

Wouldn't we like to get hold of that Madison Avenue fellow who started the story that nearly all farmers are now driving Cadillacs?

Farm workers put in a 10-hour day. That we know.

I don't know of many farmers who work less than a 6-day week.

Do you?

The work of no one else is more directly concerned with the well-being of each of us.

For what could be more important than our food?

American farmers are the most efficient and productive farmers in the world.

And we are improving, every year.

Last year, average per acre yields on nearly every major commodity set new records.

On 57 acres, we now produce the same amount of food and fiber that we did in 1940 on 100 acres.

We can produce more pounds of meat, with less feed, than ever before.

Milk production, per cow, has increased 39 percent since 1944.

Yes, Americans are the best fed, and best clothed people on the face of the earth.

And this food and clothing is becoming less and less expensive, in terms of the amount of work required to earn the purchase price.

Thirty years ago the average laborer had to work 15 minutes to earn enough to buy a quart of milk.

This year, he will work just half that time for that quart; and his milk will come in a more sanitary package, pasteurized, homogenized, and irradiated with vitamins.

It now requires less than one-third the worktime of 30 years ago to buy a dozen eggs.

And half the time for a pound of meat.

Now in most industries, increases in efficiency or productiveness are rewarded by higher wages or profits.

This has not been true in agriculture. Despite the fact our farmers feed us well, and help to feed needy people in other lands, they have not shared fully in the benefits of their accomplishments.

Per capita income in agriculture is less than half the level of the nonfarm population.

In 1958, farm workers' wages averaged 76 cents per hour; whereas factory workers' wages averaged more than $2 per hour.

Reports comparing rural and urban standards of living consistently point out that farm families are far short of the conveniences and necessities enjoyed by urban families.

One-fourth of the Nation's farm families have no automobile.

Only half have telephones.

Nearly 2 million farm homes have no running water.

The median income level in agriculture in 1957 was $1,555. This is less than one-third of the median income in wholesaling, manufacturing, transporting, mining—and by far the lowest for any industry group.

Is it not truly a paradox that one of the most efficient and productive segments of our economy is earning so much less than any other?

How, then, can we find ways to help farm families earn a fair return for their effort, without resorting to programs which, in the long run, will hurt farmers, the rural community, and the national economy?

Before entering Government service, I spent nearly 30 years in private business.

Therefore I naturally view this farm problem, or any similar Government problem, from the standpoint of what we used to call "good business practice under sound accounting principles."

With that premise, may we look briefly at a current Government farm problem which invariably is one of management's most important problems, inventory.

All of us know the importance of sound inventory management, and the dangers incident to excess inventory.

We have an inventory problem in Government today which may be the greatest inventory problem ever faced by anybody in peace-

time—the inventory currently in the hands of the Department of Agriculture.

As we know, the Department of Agriculture price-support program operates through the making of loans on commodities.

Unless the loan is redeemed, the commodity is taken over by the Commodity Credit Corporation, a legal instrument created to carry out this operation.

In recent years, there has been a tremendous increase in the quantity of farm products moving into the hands of the Commodity Credit Corporation; and it is now clear that this condition has been caused primarily by the Department of Agriculture giving price support without meaningful production controls.

In effect, the Department of Agriculture has been telling farmers in many crops to produce all they can; and at the same time has provided them with a guaranteed price.

There has been no adequate market for this guaranteed production. Therefore it has piled up in Government inventory at a truly appalling rate.

As of November 30, 1958, the most recent Department of Agriculture report, the CCC inventory of Government-owned farm commodities was valued at $5.5 billion. (In January 1953, this inventory was $1 billion.)

But that tells only part of the story.

That 5.5 billion represents the value of the crops actually owned by the CCC.

In addition, there is some $2.7 billion of commodities pledged for loans, most of which will be turned over to the Government within the next few months.

According to the President's 1960 budget message, the CCC actual inventory will be $6.7 billion by next June 30, and $9.1 billion by June of 1960.

If these 1960 estimates are accurate, the Government holdings of surplus farm commodities will have been multiplied 9 times in an 8-year period.

And this does not include any loan pledges, the cost of which may be several billions more.

At the present time, two crops, corn and wheat, make up approximately 75 percent of this total investment; and the prominence of these two crops will continue.

The new corn program of the Department of Agriculture calls for higher price support for most corn farmers; and at the same time does away with all measures of production control.

So we are certain to have even greater corn production; and therefore an even larger Government inventory.

Wheat production is expected to continue at an equally high level.

The figures again.

This Commodity Credit Corporation inventory is nearly $6 billion now; it soon will be $9 billion; and the total obligation—loans and inventory—will be some $10.5 billion.

Therefore the present policy, price support without effective controls just doesn't make sense.

To a farmer, with this gigantic supply hanging over his market, it guarantees heavy trouble.

To all of us, as citizens and taxpayers sharing the cost of this program, including the now heavy storage charges, it constitutes a heavy burden.

To the people who are now entering their 7th year in control of our Department of Agriculture, it is a problem which must now be faced up to.

For that reason all of us, in and out of Congress, hope for sound proposals from the Department of Agriculture this year.

Now what can be done with this $9 billion agriculture inventory?

As I see it, here are the alternatives.

We can continue to store the inventory.

(At present inventory levels, the cost of storage and handling is $420 million per year. As the size of the inventory increases, this cost will, of course increase to, according to the President's state of the Union address, $1 billion per year in storage charges alone.)

At this rate, we will soon run out of places to store our idle surplus crops. Then tens of millions more dollars will have to be spent to build more storage space.

Just not good business.

Secondly, the Secretary of Agriculture can sell these stocks on the market, for what they will bring.

That would be normal business practice, in manufacturing or wholesaling, or retailing.

This latter action would result in sharp cuts in the price of beef and hogs.

Some believe, however, that this day of reckoning is due.

In fact, hog prices are already skidding. In recent months they have dropped from $23 to $17 per hundred pounds; and, according to Department of Agriculture reports, by next fall they may be down to $10–$12, as low as they were in 1955.

Cattle prices, which are now doing fairly well, can only drop heavily if we move our inventory of more than 2.5 billion bushels of Government stocked corn, and possibly wheat, into the market.

Thirdly, we could destroy these surplus stocks.

That would be a heavy levy on every citizen of the United States. All the money invested would be lost.

With hundreds of millions of hungry people around the world, that action might be misunderstood by many.

Fourth, perhaps we could move much of this inventory into the hands of hungry people, all over the world.

To that end, I have introduced a bill which requires that not less than 25 percent of our foreign economic aid be given in surplus farm commodities.

In this way we would be using more of the productive capacity of our American farm families as a weapon in the struggle for world freedom and a just and lasting peace.

Already we are selling some of our surplus stocks for foreign currencies. This is under the Public Law 480 program.

A bill has been introduced in this Congress to allow countries to purchase our food and fiber stocks under long-term contracts, so they can be assured of a supply while they are developing their own resources.

It has also been suggested that the free nations set up a world bank, in which storable food could be deposited, withdrawn, or loaned, in order to meet emergencies of the member nations.

As long as we are going to be in the business, and properly, of strengthening countries to resist communism, why not do it partly with food, of which we have plenty, instead of dollars, with which we are having increasing troubles.

So there they are, the four possible solutions to this growing agriculture inventory problem.

We can destroy this inventory.

We can sell it.

We can use more of it for economic aid.

Or we can keep on storing it.

As Ruritans you are vitally interested in a prosperous rural America.

But you know there can be no true farm prosperity so long as the Department of Agriculture continues to sit on this gigantic surplus of farm commodities.

It is a situation which must be faced; and in the interest of the country as well as the farmer, it should be faced now.

As a member of the Senate Agriculture Committee, I am one of those eager to find the right answer, so the families on the farms, and in the rural communities of America, can share more fully in the unprecedented prosperity of our Nation.

Let us all dedicate ourselves to the right, and therefore the wise, solution to this farm problem.

We would then be striving to do our share toward the attainment of a free and prosperous America.

In that way we would be serving the objective of Ruritan, "to make our community a better place in which to live."

Some Problems of Our Neighbor to the South

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. WOLF. Mr. Speaker, our attention has been directed in recent days on our good neighbor to the south by the visit of President Eisenhower to Mexico.

A recent letter which I have received from an acquaintance, who has made his home for several years in Mexico, sets forth very dramatically and cogently some of the problems which that country has to solve.

This letter, I think, expounds very accurately the great potentiality of Mexico, and will impress upon the people of the United States the desirability of cooperation on the part of our Government with the new President of Mexico in his efforts to raise the living standard of the majority of the Mexican people and to make the Government more stable and responsible:

Mexico is another story politically. Although its heritage reaches back to more than 100 years before the pilgrims landed, politically and economically it is a younger country than the United States.

Mexico City is one of the most modern and cosmopolitan cities in the world which stands comparison with New York or Paris, but politically it is at the stage the United States was when trustbuster Teddy Roosevelt came on the scene. The wealth here is in the hands of the very few. In Guadalajara alone there are probably more millionaires than in the whole United States. Palaces, and mansions, unbelievably large and elaborate, are almost commonplace here. Yet in this very city hundreds of people go hungry, and the blind and crippled and fatherless are left to beg on the streets because the Government and its appointed or elected officers serve only the rich. A person here who is the equivalent of a Congressman in the United States begins his office with only one thought in mind—how to become as rich as possible before his term ends by fair means or foul, with no thought of serving the people.

There are no strong unions in Mexico with the exception of the railroad workers, telegraph workers, etc. who go on strike often, but the rest of the vast army of skilled and unskilled workers are virtually slaves of their employers. Men in politics who are honest are the rare exception here and often get shot in the back by the henchmen of less scrupulous rivals. It will take a host of Teddy Roosevelts and F.D.R.'s to clean up the Government and introduce welfare programs before this will be a real democratic nation. But, nevertheless, progress is being made. The new President, Lopez Mateos, issued a decree the other day. For the first

time in Mexico's history public schoolchildren next year will receive free textbooks. Many of the poor children couldn't afford to buy their books even though Mexico's laws state that public education shall be free. For the first time many children will be able to go to school.

Mexico is a wonderful and fascinating country in many ways. It has great natural resources, breathtakingly beautiful scenery, and the climate in Guadalajara is one of the most perfect in the world, as is the climate in much of Mexico. All the country needs is good government and a healthy system of unions to raise the living standard of the working people and to create a large middle class. The majority of the people are either filthy rich or desperately poor. Unlike the Hollywood stereotype of a Mexican, the average Mexican is hardworking, good natured, proud, high moraled, and extremely devout. Surely a people with such qualities deserve all the privileges of a truly democratic nation, and little by little I think they will win them.

Every American should get on his knees and thank God that he has a political system which provides honest leaders. Unfortunately, most Americans take their democratic government too much for granted. Many a Mexican has sighed and said to me "If only our Mexico had a government like you have up there." I am sure others say the same thing in many countries all over the world.

One should be proud to be a public servant of the people in a land where no man starves to death while his millionaire fellow citizen looks on uncaring; where no blind or crippled person or orphaned child goes uncared for; where no rich man can build a palace while his very laborers are starving on the wages he pays for their backbreaking work.

I love Mexico and her people, but not her rich people. They profess to be devout Catholics but they're not Christians. I love the poor people, proud and even noble in their poverty; the struggling small shopkeepers and skilled craftsmen who barely make a living, the farmers who are robbed of their crops by the unscrupulous banks which lend them money on usurers' terms. They are the real Mexicans and in them lies the hope of Mexico's future, not in the few and privileged rich.

The New Inflation: Administered Prices

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. McGOVERN. Mr. Speaker, during the last few years everyone has become aware of the dangerous inflationary trend. The President, in his state of the Union message, called upon Congress to stop inflation. Although everyone is aware of the problem, no one seems to know just what to do about it. I think that all Members of this body, no matter to what committee assigned, should do everything in their power to set machinery in motion which would either solve the problem of inflation or in some way bring the power of public opinion to bear upon those responsible for it.

My attention was recently called to the testimony of Gardner C. Means, a distinguished economist, before the Senate Antitrust Judiciary Committee. Dr. Means made a brilliant analysis of the situation which is summarized in an article, "Inflation Besetting Us Is of a New Breed," by Bernard D. Nossiter, in the February 8, 1959, Washington Post and Times Herald. Under unanimous consent, I include the article following my own remarks. Dr. Means' analysis indicates that the current price inflation is limited to the concentrated industries which includes steel, automobiles, and others in which a relatively few companies have dominant control.

It appears in these industries that an administered price system is operating. Under the administered price system, prices are not responsive to supply and demand. On the contrary, when demand falls off prices in the administered price industries go up. I will not take the time to recount the numerous instances in the last few years when prices were pushed up arbitrarily. It is significant that only a short time ago United States Steel raised its prices when demand fell to 49 percent of capacity and that the automobile industry raised its prices during the period when demand for passenger automobiles fell by about 50 percent.

Dr. Means' analysis also shows that we have, at the same time these prices are being pushed up, an entirely different situation in the competitive industries. Agricultural prices, for example, either have been declining or have come up very little. The farmer, in other words, receiving relatively low prices for what he had to sell, has had his net income further reduced by having to pay relatively high prices.

Legislation which I introduced today which is similar to the bill introduced by Senator O'MAHONEY on January 12, will put the big corporations on notice that they no longer will be permitted to raise prices unnecessarily without public review. This bill will not apply to small consumers or to small business. It is limited to the eight largest corporations in any manufacturing industry, if they account for 50 percent of the industry's sales. An analysis of the material introduced by Dr. Means indicates that the administered price system only operates in areas of economic concentration. It is easy to see why this situation obtains.

If two, three, or four large corporations account for most of an industry's production and sales, they are able, by sheer market power, to operate successfully a price-fixing system. I do not mean they necessarily conspire to do so. The corporations, over a period of years, have developed a highly sophisticated method of fixing prices. They merely follow the leader. If United States Steel, which is the leader in the steel industry, raises its prices, all the steel companies do likewise. If General Motors raises its prices, then other automobile manufacturers raise theirs.

The bill which I am introducing would require the 8 largest companies in an industry to announce their proposed price increase 30 days in advance. During that time, the Federal Trade Commission would hold public hearing and the corporations would be required to come in and justify their proposed increase. Farm, labor, and other organizations would be permitted to come in and express their views. In this way, the price increase would receive public attention and consideration.

I believe that this procedure would have a healthy effect on our economy. The proposal admittedly will not necessarily solve the inflation problem, but it will be a step in the right direction.

The above-mentioned article follows:

INFLATION BESETTING US IS OF A NEW BREED

(By Bernard D. Nossiter)

A pioneering approach to the peculiar price inflation that marked our recent past is embodied in the strange-looking charts at right.

[Charts omitted in RECORD.]

They were put together by Gardiner C. Means, of Vienna, Va., a distinguished but lonely economist. He held a slew of Government posts in New Deal days and was recently an adviser to a relatively sophisticated business group, the Committee for Economic Development. Twenty-seven years ago Means rocked economic thinking when he and Adolf A. Berle wrote "The Modern Corporation and Private Property."

What the Means charts show is that contemporary inflation is a very different animal from the classical demand inflation. The chief difference lies in whether big price increases come in competitive or concentrated industries.

In other words, what Means has done is violate a sacred taboo of economic thinking. He has actually gone and looked at where the price increases are taking place and asked whether the differences over separate periods of time aren't meaningful.

To compound his sins, he has married economic theory to economic fact. And, as everybody in the business knows, the gulf between the institutionalists (fact men) and theoreticians is as wide as the breach between Montagues and Capulets.

Classical inflation is pictured in the top chart, covering the war and immediate postwar years. This was a money phenomenon, an increase in money demand which was not offset by an equivalent increase in goods—what Federal Reserve Board Chairman William McChesney Martin likes to call too much money chasing too few goods.

In drastically oversimplified form, this is what happened:

The staggering war expenses were paid by the Government through borrowing (deficit financing). To the extent that the Government borrowed (sold bonds) to commercial banks, the Government was simply printing money. The goods this money bought were shot off, exploded, dropped on cities, or left to rot in military warehouses. So, when controls came off, the extra money in the hands of people and businesses bid up prices, much more than it induced increased production. Even with the best will in the world, increased production could not come about quickly enough because resources of men and materials were almost fully employed—too much money was chasing too few goods.

According to Means' charts, the biggest price increases came in the highly competitive industries—lumber, farm products, processed foods, textiles. In these, producers can't control their prices which are set by those impersonal market forces so dear to Adam Smith.

But the concentrated industries with few producers—steel, autos, aluminum, electrical machinery—held back. They do have considerable discretion over price and didn't take full advantage of the big increase in money demand.

Now, the new inflation presents a different picture. All the price push comes from the concentrated industries. The competitive industries in several cases cut prices—textiles, farm products, miscellaneous. And there is

a logic in this. The period under study, 1953 to October 1958 (the last month for which Means got data), was a time of much less than full employment. The period spans two recessions (1953–54 and 1957–58). The money supply did not zoom upward.

So, only industries who need not rely on impersonal market forces but have considerable control over their prices could make increases stick. And the charts show that they did.

Many economists will quarrel with Means' interpretation of his charts. They will contend that the ability to administer prices has nothing to do with whether an industry is competitive or concentrated. They will argue that all Means is showing in his new inflation chart is what you would expect in a period of investment boom—and the Nation certainly was enjoying one from 1955 through 1957—steeply rising prices in steel and other producer goods industries as the result of extra demand for producer goods.

This debate can't be settled in this space or anywhere else now because relatively little is still known about administered prices, or for that matter, concentration.

Let's take a closer look at the charts. The solid black bars are industries or industry groups which are highly concentrated—a handful of producers account for most of their production. The cross-hatched bars are mixed concentrated and competitive—chemicals, furniture and the like. The light gray bars are the competitive industries with thousands of producers, no one of them big enough to affect prevailing prices or production.

The bars are two-dimensional, but that's not as scary as it sounds. The height of each bar measures the percentage of price increase or decrease at wholesale in each industry. For example, in the bottom chart, steel prices went up 36 percent between 1953 and October 1958; farm products prices went down 5 percent.

The width of each bar measures the industry's weight in the wholesale price index—that is, the amount of sales of that industry in relation to the amount of sales of the other industries. If steel sales during 1953-October 1958 were $8 billion and farm products sales were $24 billion, then the farm products bar would be three times wider than the steel bar.

The height of any bar times its width is its area. In these charts, the height (price increase) times width (economic weight) gives a graphic picture of the economic impact of each industry on the price level. In other words, the area of each bar shows how much force each industry or industry group had on the price level.

We can see very quickly that the competitive industries accounted for almost all the pull in the war period. There is much more light gray than black in this picture.

But in the recent period, the push comes from the concentrated industries. Means figures that they account for 85 percent of the gross increase in the wholesale index. If they hadn't gone up in price, the wholesale index would have risen less than 1 percent instead of 8 percent. And this is what you would expect during a period when total output of goods is increasing little and so is the money supply.

There is one other point to note. In the bottom chart Means has broken out steel and fabricated steel from the broad category of metal and metal products. He did this to demonstrate the overwhelming force of the steel and steel-using industries (machinery and motive) in pushing up recent prices.

While Means appears to have demonstrated that the new inflation stems from the concentrated industries, he still hasn't answered the question agitating political debate: Is it the unions or is it the corporations?

Is it Roger Blough's United States Steel, Frederick Donner's General Motors, Ralph Cordiner's General Electric? Or is it David McDonald's United Steelworkers, Walter Reuther's United Auto Workers, James Carey's International Union of Electrical Workers? Or have both sides embarked on an unspoken wage-price or price-wage collaboration?

The charts are of no help here. But Means, who prepared his material for the Senate Antitrust and Monopoly Subcommittee, went back into the committee's steel hearings for some arithmetic. After lengthy calculations, based on a series of arguable assumptions, he concluded that labor costs per ton went up $1.75 during 1956–57; prices went up $11 a ton.

This would appear to make United States Steel, the industry's price leader, the chief culprit. However, it must be repeated that Means' computation is derived from assumptions which can be debated. At best his conclusion is suggestive.

Who are these concentrated steel and steel-using industries? They can be reduced to 10 corporations. In terms of ingot capacity, steel is United States Steel (29 percent); Bethlehem (16 percent), and Republic (9 percent).

The motive end of the machinery and motive category is: General Motors (51 percent of 1958 auto production); Ford (29 percent), and Chrysler (14 percent).

The machinery end is tremendously complicated by definitions. But electrical machinery is General Electric (owned 16 percent of the industry's assets in 1947, the last data year); Westinghouse (13 percent); Western Electric Co., an American Telephone & Telegraph subsidiary (13 percent); and Radio Corp. of America (6 percent).

Some policy implications flowing from Means' analysis were spelled out by Chairman ESTES KEFAUVER, Democrat, of Tennessee, of the Senate subcommittee. If Means is right, then:

A tight-money policy won't hold down prices without bringing on a recession because corporate giants are the least affected by a shortage of lendable funds. They raise their expansion money largely from profits, not borrowing.

A balanced Federal budget is irrelevant because this is not a money, but an administered price inflation.

To be sure, easy money and unbalanced budgets would, according to anybody's analysis, worsen the situation by piling a money inflation on top of an administered price inflation.

(However, a minority group of economists headed by Leon Keyserling paradoxically argues that easy money and budget deficits will stimulate an offsetting amount of extra production when, as now, men and resources are not fully employed.)

But what Means is really saying is that some new institutional devices must be invented to control concentrated industries and/or their unions if price stability is to be achieved.

What form the new devices should take might well be on the agenda of Vice President RICHARD M. NIXON's new Cabinet committee on inflation and the massive congressional study Majority Leader LYNDON B. JOHNSON, Democrat, of Texas, once proposed for the Joint Economic Committee.

When Men in High Places Get Sick

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article written by Frances Burns for the Boston Globe and appearing in their issue for February 22, 1959:

WHEN MEN IN HIGH PLACES GET SICK—DISEASES REMAIN UNCONQUERED BUT WE HAVE MATURED MEDICALLY—AS A NATION AND AS INDIVIDUALS WE ARE LEARNING TO FACE THE FACTS OF NATURE OPENLY AND COURAGEOUSLY

(By Frances Burns)

One of Boston's ablest physicians has observed to colleagues that his crippling arthritis has been wonderful because there were so many things he was not asked to do.

His disease has cleared the decks and left him increasingly free as he grows older for the work that seems important to him.

It may be another generation before anyone knows the consequences of the illnesses that have bedeviled the administration of the American Government in the 1950's. But whether this Nation and the world prove to have been better or worse off because the President, his Secretary of State, and the leader of the opposition suffered severe illnesses and carried on their duties in spite of them, there will be a wealth of information available on which to base judgment.

For it has been a period of unparalleled candor about the health of people in high places.

Secretary of State John Foster Dulles last week began the drastic X-ray treatment which is expected to prolong his life and, perhaps, save him pain, after the recurrence of cancer for which he underwent surgery a little more than 2 years ago. Barring what amounts to a medical miracle, known to doctors as a spontaneous remission, which rarely, for no observable reason, halts the disease, there is little likelihood that treatment will provide more than a temporary delay in its course.

AT CRITICAL TIME

The Secretary's illness comes at a critical time in the relations between the East and the West—though has there been any time in the past decade when relations were not critical—and the reaction among our allies in England, France, Germany has been one of great anxiety. For Mr. Dulles has conspicuously run a one-man State Department; his the single, firm, and dominating grasp on the Nation's foreign policy. Other Western statesmen are said to fear that either there may be a lack of continuity in it, or that, partly incapacitated but carrying on, Mr. Dulles might freeze what has seemed to be necessarily a fluid situation, unwilling to start anything new that he would be unable to see through.

EXPERIENCE FACTOR

Yet this Nation remains calm. It may be that "Wolf! wolf!" has been cried too often in the past few years when interpreters of news predicted disaster from decisions made in the face of the President's illnesses. It may be that the American people are maturing medically. So many Americans are seeing cancer, heart disease, arthritis, at close hand, in themselves or members of their families, that they may agree with Senator RICHARD NEUBERGER, of Oregon, who is preparing to return to his job in Washington after 5 months of surgery and radiation for cancer, commented that no one really grows up until he realizes he has to die.

Certainly his own experience must be a factor in Mr. Eisenhower's refusal to let Mr. Dulles leave the Government so long as there is a possibility that he may be able to carry on. For the President has learned that it is possible to ignore the body and continue work, freed from the fear that most active people have of disease, and with an excuse at hand to escape some of the unessential burdens placed on heads of state today.

PUBLIC IN DARK

Part of the growing up of the American people has been an increased understanding of the nature of chronic disease and of the efforts to do something about it. People are, on the whole, less likely to fear the known than the unknown.

No one up to now has been able even to guess how much, if at all, history has been changed by the illnesses of those in high places. For many years these illnesses were concealed from the people, often from those in Government itself.

Grover Cleveland learned that he had cancer of the throat at a time when the Nation was threatened with financial crisis. He was spirited to a boat from the cape, where he summered, and somewhere off Long Island was operated on, successfully. Almost no one knew of it until nearly a quarter of a century later when, some years after his death, his surgeon reported it.

No candid report was given to the Government or the people on the illness of Woodrow Wilson, who suffered a stroke on a western tour to appeal for his League of Nations. In the multiplying rumors resulting from the secrecy, all chance for the success of this crowning of his life's work was lost.

The sequel to the blackout of news on the death of President Harding was a batch of scurrilous rumors. It is quite evident today in the light of the symptoms that he suffered a heart attack, and even then doctors must have known it.

F.D.R.'S ILLNESS

And it is doubtful if stories that grew out of lack of frankness about Franklin Roosevelt's physical condition and illness in his last years ever will be scotched. Yet he suffered from high blood pressure and a natural weariness. Candor about them might have avoided damaging reports after his death.

Whatever else the Eisenhower administration may or may not have done, it has showed that the details of disease suffered by those in high places may safely be given to the public. It is doubtful if, in this country, it ever again will be possible to conceal them.

Certainly no one knows whether the people are best served by continuing on active duty men who have had heart disease, cancer and arthritis, or whether there should be a conscious effort to have younger men in Government. At any rate, the question is out in the open, with something now on which to base an answer.

Mississippi

EXTENSION OF REMARKS
OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. COLMER. Mr. Speaker, unfortunately, there are still some people in our great common country who reside north of the Mason-Dixon line that harbor ill will toward those who reside in the so-called Southland.

It has been nearly 100 years since that unfortunate fratricidal strife known as the War Between the States ended. Fortunately, the bitterness engendered by this tragic and unnecessary strife has been in the process of slowly dying out. But with the advent of the equally unfortunate decision of the Supreme Court in the school segregation case and the "civil wrongs" legislation, that spirit seems to have been revived by too many of our so-called northern brethren. A recent example of this tragic sectionalism was a letter written by someone here in Washington spewing his venom at my great State of Mississippi. Possibly such exhibitions of hatred and ignorance should be ignored but, for the enlightenment of any persons of like mind, my good friend, Mr. Oliver Emmerich, the distinguished editor of the State Times, a prominent daily newspaper published in Jackson, Miss., has taken justifiable pride in pointing out the great progress that is being made in the State of Mississippi in an editorial. The editorial follows:

NO, MY FRIEND, MISSISSIPPI IS NOT SLOWLY DYING

(By Oliver Emmerich)

The State Times is in receipt of the following message—a product of the campaign of hate waged in the East against the people of the South:

"Happy 1959, Mississippi. You are losing population. I hope you will die more slowly in 1959, 1960, 1961, 1692, etc., etc., than you have been dying up to now. Please, Mississippi, die slowly.

"C. A. CASTLE."

Harry Emerson Fosdick once said, "Prayer is dominant desire." We feel sorry for any individual whose desire stems from hate. What spiritual foundation other than hate could wish slow death to a whole State?

The savagery of the Dark Ages aroused such vicious feeling that men were often condemned to the excruciating pain of slow death. Once a King of England decreed that two robbers be skinned alive. Their skins were tacked to the outer walls of Westminster Abbey.

In this more enlightened age it is tragic to find any person, whose vision is so blurred and whose understanding is so blighted, as to pray for a return of the spirit of the Dark Ages.

Any individual who wishes slow death for Mississippi will find disappointment in the revitalized spirit of this State. Here is the true story of Mississippi:

One hundred years ago Mississippi was the fifth richest State in the Union. Then came the devastation of war, the exploitation of Reconstruction, and finally the resurrection of a triumphant faith which now is sweeping this State to new plateaus of progress and glory.

Slow death? Let's check the industrial life of Mississippi. Twenty years ago Mississippi had only 843 factories, 47,890 industrial workers, and a total industrial output of only $175 million.

Last year the new industrial life of Mississippi had increased our industries to 2,041, our industrial workers to 113,800, and our total industrial output to $1,605 million, an increase of 850 percent.

No signs of rigor mortis here.

Slow death? Let's look at Mississippi's financial progress. Twenty years ago—in 1938—Mississippi banks had on deposit $195,008,000. Last year the total deposits were $1,153,157,000. We are very much alive in this category, as it is easy to see.

Die slowly? Take a peep at Mississippi's agriculture. Total cash farm sales in 1938 were $134,964,000. In 1956 the total was more than 400 percent greater—$596,065,000.

Mississippi dying? Let's look at the educational picture. In 1938 Mississippi spent $24.55 per pupil in elementary schools, or a total of $12 million. Last year Mississippi spent $81,500,000 on elementary education, or $181 per schoolchild.

Mississippi also is in the midst of a $120 million building program for new elementary- and high-school buildings, seeking to equalize the school facilities of the two races. This program was voluntary. It was enacted in 1953, before the U.S. Supreme Court's school-segregation decision.

In addition, our State has budgeted $21 million for higher education, plus $7 million for university and college buildings.

The State of Mississippi is second from the top among the States in the percentage of total tax budget spent for education. A State with this concept of learning is very much alive, forward looking, and on the march.

What's the racial situation? The answer is that racially, Mississippi is up and coming. This State has more Negro college presidents than all of the New England States combined; more Negro schoolteachers (7,217) than all of the Mid-Atlantic States. These teachers meet the same regulations and enjoy the same salary scale as white teachers.

Of the nearly $40 million spent annually in Mississippi for old-age assistance, aid for the blind, dependent children, and total and permanent disabilities, Negroes who represent 45 percent of the population receive 60 percent of the total. White people, representing 55 percent of the population, receive 40 percent.

Eighty percent of public health funds spent for combatting venereal diseases go to Negro residents. Of the total expenditures for public health, our Negro people get a rightful share. This applies to our charity hospitals as well.

What about bombings? Unlike situations in Boston, Peoria, and some parts of the Southland, no churches or other buildings have been bombed in Mississippi. There have been no incidents of racial violence. The two races live here as friends in this, the hospitality State of America.

What about public health? In the past 20 years death from communicable diseases has been reduced more than 85 percent. Twenty years ago, Mississippi suffered from widespread effects of malaria and typhoid fever. In 1957, there was not a single death from either of these diseases in Mississippi.

Other communicable diseases are being blotted out. Mississippi is a place to live long for this is a State where good health prevails. There's nothing deathlike, slow or fast, in this progressive State.

Now, what is the truth about Mississippi's population? The U.S. census figures for January 1, 1959, reveal that Mississippi is gaining population. She lost 4,882 in population between 1940 and 1950. But what mossback of the past wants to apply 1940 population figures in the year of our Lord 1959?

Mississippi had no large municipalities a few decades ago. Jackson, our capital, went from 48,282 in 1930 to 128,000 in 1959.

In the same period Hattiesburg jumped from 18,601 to 35,891; Biloxi from 14,850 to over 45,000; Greenville from 22,943 to 44,574; Pascagoula from 4,339 to more than 25,000; Natchez from 13,422 to 25,195.

This is the population trend today in Mississippi. In the next quarter of a century America will see happening in Mississippi what has happened in California during the last quarter of a century.

Remember this, friends, everywhere: The last half of the 20th century belongs to the South—and Mississippi intends to claim and acquire her share of it.

Slow death? How could any description fit less the revitalized and triumphantly growing State of Mississippi?

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ROOSEVELT. Mr. Speaker, commemorating the 41st anniversary of Estonian independence is in fact a study of and a tribute to the spirit of nationalism and freedom. Estonia has demonstrated a spirit strong enough to outlive German landlords and Russian governors; strong enough to withstand, at the end of the First World War, first a Bolshevik invasion, then a German invasion, then another Bolshevik invasion; and strong enough to establish a republic and to maintain it through the trials of over 22 years.

Estonia had been independent from its early beginning until the 13th century. Then it found itself a pawn in the power politics of larger, aggressive neighbors, culminating in Russian rule in 1710. For more than 200 years they lived under oppressive Russian rule. Their chief desire during all that time was to be free, though they were unable to attain their freedom without help from others. But history took pity on these heroic people during World War I. With the Russian revolution of 1917 czarist autocracy was overthrown and that government's authority over other nationalities was shattered. Estonians felt a taste of freedom, and on February 24, 1918, they proclaimed their independence. In 1920 the U.S.S.R. signed a peace treaty renouncing all rights to Estonian territory. In 1932 a further guaranty was agreed upon, a nonaggression pact. Thus Estonia built its foundations of sovereignty upon the treacherous sands of Soviet paper promises.

But in 1940, the curtain came down on independent Estonia. As one of the first nations to be subjugated by the Soviet Union after the Hitler-Stalin Pact, Estonia was directly incorporated into the Soviet Union. After being occupied by the Nazis during World War II, Estonia was again returned to Soviet rule. Untold hardships and suffering have been inflicted upon this small nation—deportation, execution, imprisonment, and mobilization—total and brutal sovietization of Estonia.

The unhappy Estonians continue to suffer under totalitarian tyranny. But their hope for freedom and their desire for independence is not dead. It is living in the hearts and minds of Estonians still struggling for their liberty. Estonia no longer remains on the map of Europe, but it does remain in the hearts of all freedom-loving people. The United States still refuses to recognize Estonia as part of the Soviet Union de jure.

Estonians have a spirit—a feeling—of belonging together. This feeling has survived the centuries of division, invasion, and oppression. It was this feeling which, taking the 19th century form of nationalism, founded the Estonian state. The people of Estonia—with their tenacity and their flexibility, their energy, and their courage, their stoicism, and their wit—have suffered the trials of invasion and oppression without being broken or embittered, without losing their capacity for self-government and toleration. We cannot fail to feel in their debt. We encourage the Estonian people in their hope for a complete restoration of freedom; heartily applaud their moral resistance to Communist tyranny, and humbly pay tribute to this long-suffering patriotism.

Irish Came Here With Governor Winthrop and Latchstring Has Been Out Since

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by George F. Weston, Jr., which will be of interest to my colleagues and which appeared in the Boston Herald Traveler on February 20, 1959:

IRISH CAME HERE WITH GOVERNOR WINTHROP AND LATCHSTRING HAS BEEN OUT SINCE

(By George F. Weston, Jr.)

The Irish form a large percentage of Boston's population, and there were many honored men of Irish ancestry here from the very earliest days.

The list includes such famous men as Gen. Henry Knox, chief of artillery under Washington; the artist, John Singleton Copley; and the patriot, John Hancock.

IRISH AMONG EARLY SETTLERS

It is generally believed that the first Irishmen to settle in Boston came at the time of the devastating potato famine in 1846–47. It is not the fact. There were many here long before that.

Governor Winthrop's fleet brought several: John Coggan, the first storekeeper in Boston, for one; and George Downing of Dublin, who later married Governor Winthrop's sister, for another.

The ship, *St. Patrick*, which belonged to Thomas Wentworth of Ireland, arrived in Boston, probably in 1632. The records show an edict issued by Governor Endicott which reads:

"It is ordered, that the Scottishe and Irishe gentlemen which intends to come hither shall have liberty to sit down in any place upp Merimacke Ryver not possessed by any."

The rebellion in Ireland in 1644–49 led by "Rory" O'Moore caused some Irishmen to emigrate to America. Governor Winthrop welcomed them by ordering "that the goods of these persone come from Ireland shall be free from ye rat."

The Governor was not thinking of rodents. He meant that the goods should be free from the rate—not taxed.

PURITANS WELCOMED THE NEWCOMERS

It is evident that the Puritans of 17th century Boston had a friendly feeling toward the Irish and gave a cordial reception to those who chose to make their homes in Massachusetts.

That this attitude was appreciated was amply demonstrated at a time when the courage and resources of the Bostonians were nearly exhausted.

The Indians under the leadership of King Philip organized a war whose objective was the complete extermination of white settlers.

The Indians, themselves, were nearly exterminated, instead, and the war ended shortly after the death of Philip on August 12, 1676.

The colonists were victorious, but at a terrible price. Fully a tenth of the men had been killed, crops were ruined, and there were sickness and destitution everywhere.

At this tragic time the good people of Ireland sent to Boston a shipload of food and other necessities "for the releiffe of such as are Impoverished, Destressed, and in Nesessitie by the late Indian Warr."

LEPRECHAUNS CAME WITH THE POTATOES

According to tradition, potatoes and leprechauns first were transported to New England on this relief ship. The potatoes, throve, but the leprechauns must have found the Puritan climate inhospitable. They apparently returned to their own country.

It was nearly 200 years before the people of Boston had an opportunity to repay this kindness.

In 1847 Ireland was famine stricken. It was no mere food shortage, but a complete crop failure which left the people starving.

New Englanders, remembering the help which their ancestors had received, sent prompt assistance.

The people of Boston persuaded the Government to lend them the man-of-war *Jamestown* as a relief ship.

The *Jamestown*, which was at the Charlestown Navy Yard, was promptly loaded with $115,000 worth of food and medical supplies.

The Laborers Aid Society, composed of poor Irishmen, gave its services in loading the ship. Significantly, the loading began on St. Patrick's Day.

The ship, under Capt. Robert Forbes, put to sea on April 12, and arrived in Cork 15 days later—an amazingly fast trip.

ONLY ONE TACK IN ENTIRE VOYAGE

Captain Forbes was a remarkable man. His first voyage was at the age of 13. He was master at 20, and captain of his own ship at 26. He took the *Jamestown* across the Atlantic making only one tack in the entire voyage.

The ship was greeted by a band playing what they believed to be "Yankee Doodle" and by a reception committee whose chairman said, "A thousand lips pale with woe, and a thousand tongues half paralyzed with hunger utter the feeble exclamation, 'God Bless America.' "

The grateful people greeted Captain Forbes and his crew with cheers wherever they were seen. Many of the babies born at about that time were named "Forbes," "Boston," or "James." The last was, of course, short for "Jamestown."

Several other communities sent ships, also. One vessel from Isleboro, Maine, had great difficulty in finding a return cargo.

Finally her hold was filled with sods to act as ballast. These were placed on some of the farms in Isleboro and, a few years later, they were found to be producing genuine Irish shamrocks.

May they continue to grow there forever.

We Are Winning in the North

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks I wish to

insert in the RECORD a very fine editorial which recently appeared in the Selma, (Ala.) Times-Journal.

There follows the editorial:

WE ARE WINNING IN THE NORTH

An audience of 200 southern businessmen, in luncheon session at Augusta, Ga., to honor Gen. Robert E. Wood, retired board chairman of Sears, Roebuck & Co., was surprised and delighted to hear this Republican stalwart from Chicago rip into the U.S. Supreme Court for its desegregation decree.

"This racial problem could have been settled—given time and patience—by the South itself," fiery General Wood declared.

His comments were greeted with spirited applause by businessmen gathered for unveiling of a plaque in his honor at a new Sears store.

"Hundreds of thousands of northerners feel the Court's desegregation decree was a mistake," he said. "I resent very much the interference of the States rights by the Supreme Court which, to my mind, is the worst Supreme Court we have had in 100 years."

The general, who said he voted straight Republican, described Georgia's Democratic Senators HERMAN TALMADGE and RICHARD B. RUSSELL as "two of the best in the U.S. Senate today."

Calling Earl E. Warren the President's "worst appointment," Wood said the Chief Justice's "own people in California found him out."

Here is new evidence that intelligent citizens of the North, as the Times-Journal persistently has predicted, are beginning to realize that legal abortions aimed at the South ultimately will cripple all other sections of the Nation, as well.

When that realization becomes general above the Mason and Dixon line, the demogogs who are willing to sell out Americanism for minority bloc votes are going to be driven into exile, and decent representation will become the rule in Washington.

Then the Constitution as interpreted and reinterpreted by able justices again will prevail, and the South will be given ample opportunity to solve its own problems in its own way.

Mr. Speaker, an editorial on this subject recently appeared in the Talladega (Ala.) Daily Home, and I ask also that this well-written article be inserted.

There follows the editorial:

TALKING TURKEY

According to the Associated Press story, it was with amazed delight that some 200 southern businessmen at Augusa, Ga., heard Gen. Robert E. Wood, retired chairman of the board of Sears, Roebuck & Co. rip into the U.S. Supreme Court for its integration decree.

Present for a luncheon given in connection with the unveiling of a plaque in his honor at a new Sears store, the lifetime Republican and prominent business leader talked the sort of language it is strange to hear nowadays in the era of tacit censorship against any presentation of the constitutional viewpoint, which also happens to be the southern viewpoint.

"Hundreds of thousands of northerners feel the Court's desegregation decree was a mistake," he said. "I resent very much the interference with States rights by the Supreme Court, which to my mind is the worst Supreme Court we have had in 100 years."

The crowd, of course, was in hearty agreement with those words, as well as with the statement that Chief Justice Earl Warren is President Eisenhower's worst appointment.

For such expressions to come from such a source is to bring renewed hope that time is on the side of the South. If men like General Wood see so clearly the menace of the Court's recent rulings, we may be sure that many others hold similar ideas and one day will impress them upon northern political leaders.

Urgent Need for Developing Coosa-Alabama Waterway

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ROBERTS. Mr. Speaker, the Coosa-Alabama River is one of America's potentially great waterways. I am sure the Members will recall my many statements pointing up the benefits which will accrue Alabama and the Nation upon complete development of this waterway.

Very soon, the Congress will be asked again to keep the faith promised 14 years ago when Congress authorized three locks and dams on the Alabama River. You will be asked to provide the appropriation of $150,000 needed for planning and design on the Millers Ferry lock and dam. We hope and believe Congress will not turn this request down.

An editorial on this subject appeared in the Talladega (Ala.) Daily Home of February 16, 1959. Under leave to extend my remarks, I ask unanimous consent that this editorial be included in the RECORD.

There being no objection, the editorial was included as follows:

AN URGENT NEED

The importance of full development of the Coosa-Alabama Waterway system cannot be overemphasized.

The matter will come up again in Washington soon and it is urgent that backers of the waterway development lend wholehearted support to the Coosa-Alabama River Improvement Association which for many years has promoted this project.

A comparatively small sum is needed for advanced planning of Millers Ferry lock and dam on the Alabama River, a key phase in the development program.

There is nothing that could bring greater prosperity to the 29 counties in Alabama which are considered to be commercially tributary to the vast river system.

Completion of Millers Ferry lock and dam and installation of locks on existing dams and proposed dams on the waterway would provide navigation facilities which would bring great benefits to the valley and to all of Alabama and adjacent States.

The waterway would open up to the inland cities and towns trade and commerce with the world. It would bring new industries and industrial payrolls that could add greatly to the prosperity of the area.

Full development of the waterway would also bring great potentialities for recreation in the form of boating, fishing, and other sports.

But primarily it would mean more dollars, more jobs, and more prosperity for the area.

It is estimated that within a 20-year period the tributary area of the rivers would secure additional industry that would involve the expenditure of millions of dollars, an estimated 65-percent increase in population requiring 120,000 additional housing units costing more than a billion dollars, and an increase in industrial empolyment by more than 55,000 with payrolls of $150 million.

It is something that should receive all-out support of the people of the area and careful consideration of the congressional committees and Government agencies involved.

Mr. Speaker, I have an editorial pointing up the importance of development of the Coosa-Alabama River which appeared in the Tallahassee Tribune of February 19, 1959. I also wish to insert this editorial with my remarks.

The editorial follows:

THE COOSA-ALABAMA

It is to be hoped that representatives of the Coosa-Alabama River Improvement Association meet with success when they appear before the appropriations committees of the Congress to secure funds for advance planning of Millers Ferry lock and dam, Alabama River.

This is no "pork barrel" project, but the initial step in the development of the Coosa-Alabama River system.

Development of the Coosa-Alabama is important to our State and Nation. The area considered to be commercially tributary to the system includes all or part of 43 counties, 29 of which are in Alabama, 14 in Georgia, and 1 in Tennessee.

These counties have an area of approximately 26,000 square miles and include a population of 1,547,000, according to the 1950 census. Sixty-six percent of this population is in Alabama and the Alabama area contains a third of the entire population of the State.

One of the benefits to be obtained through this development would be lower transportation cost on bulk materials and stabilization of transportation rates throughout the river basin.

However, from where we sit, the principal benefit to be derived would be the attraction of new industries, a project which is of vital concern to all our citizens from Gov. John Patterson to many a small farmer who would have the benefit of at least part time employment to help compensate for the shrinking cotton acreage in our State.

The fact that many new industries are seeking waterside locations is borne out in a recent report of the American Waterways Operators which records a total of 404 waterside industrial locations for the first 9 months of 1958.

We hope our Senators and Congressmen will listen with great interest as representatives of the Coosa-Alabama River Improvement Association unfold their plans at the committee hearings. And we hope further that they will lend their good offices in cooperation.

Mr. Speaker, the Association of American Railroads has submitted a protest to the Corps of Engineers on development of the Coosa-Alabama River, and this subject is discussed in an editorial which appeared in the Anniston, Ala., Star of February 15, 1959. I also ask consent to have this editorial inserted in the RECORD.

The editorial follows:

RAILROADS STILL THINKING NEGATIVELY

It is no wonder that the railroads of this country have been having economic difficulties in recent years, for it seems that they are always thinking negatively instead of positively. If they had spent half as much on research as they have spent in fighting other means of transportation, their status would be much better today.

Instead of improving their own methods, however, they have wasted their time and energy in opposition to truck transportation, which they should have initiated, and now

they are sitting still and watching the airways take over their passenger service.

They are fighting the development of the Coosa-Alabama River enterprise and have filed a protest with the Army Board of Engineers for Rivers and Harbors, in which they contend that the findings by the Engineers in this particular are erroneous and misrepresentative.

But this is nothing new. For here in Alabama the railroads fought the dock development at Mobile and river transportation on the Tennessee, not to mention their long battle against Senator John Tyler Morgan when he was leading the fight for an isthmian canal.

They even tried to bribe the eminent Alabama Senator, but they got kicked out of his office pronto.

If it had not been for their ability to barge heavy tonnage down the Warrior to Mobile, the U.S. Steel Corp. probably would never have organized the Tennessee Coal & Iron Co.

But all of these waterway developments have meant billions of dollars in revenue to the rails, in spite of their opposition.

The railroads should keep in mind the fact that there always will be instances wherein either they or the trucks will have to transport tonnage to the ports; and as far as we are concerned, we prefer the railroads, as they do not clutter up or tear down the highways.

But the fact remains that today industrial water is essential to the manufacturing process in a majority of instances. And the city or State that makes that facility available will make jobs for the railroads as well as for the seaborne or river traffic that justifies waterway development.

Last Sunday there was an editorial in this paper that referred to the vast tonnage that now plies up and down the Tennessee and the waterways of the Northwest. We now learn that industrial enterprises valued at $13 billion have been located on the Ohio River and its tributaries since 1950.

The Coosa-Alabama River system is one of the greatest undeveloped waterways in the United States, if not in the world. And now that the Alabama Power Co. is investing more than $100 million on these streams, it is a foregone conclusion that billions of dollars worth of new industrial development will follow suit in time.

If the Coosa and the Alabama had been located in almost any region north of the Mason and Dixon line, they would have been developed years ago and we would have prospered as much as have the people on the Ohio.

But both Senators Morgan and Pettus in their day found themselves stymied by sectional prejudice.

Those prejudices are giving way to a more enlightened industrial statesmanship today, however, and this part of the South is growing as fast in material development as any other American region. And in the field of chemistry we are leading the Nation, thanks largely to our abundance of water.

Alabama Mayors Discuss Municipal Improvement Projects

EXTENSION OF REMARKS
OF
HON. ARMISTEAD I. SELDEN, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. SELDEN. Mr. Speaker, the members of the Alabama congressional delegation were privileged last week to meet with a group of representatives of the Alabama League of Municipalities who came to Washington to report to us on the progress of various Federal-municipal programs. At the meeting the organization's capable executive director, Ed E. Reid, presented a number of Alabama mayors who each discussed for us an important, Federal-aid program. These reports by the mayors are most enlightening and, since they are concerned with the use of Federal funds for the betterment of municipalities, I think it is appropriate that they be shared with other Members of Congress. My congressional district was represented at this meeting by the mayor of Tuscaloosa, Ala., the Honorable George Van Tassel, and the mayor of Uniontown, Ala., the Honorable T. Ralston Long. Mayor Van Tassel gave a report on airport construction and Mayor Long reported on planning assistance. Their statements are as follows:

THE NEED FOR FEDERAL AID FOR MUNICIPAL AIRPORT CONSTRUCTION

(By George Van Tassel, mayor of Tuscaloosa, Ala.)

The recent action of the U.S. Senate in approving a $465 million airport aid bill for the next 4 years was extremely gratifying to Alabama municipal officials. We strongly hope that the House will do as well for our future airport construction program. I would like to list some reasons why our towns and cities are interested in this type of legislation:

1. There is a national interest in municipal airports—as well as a local interest.

2. There is likewise a national responsibility as well as local responsibility for such airports.

3. Aviation is now an essential transportation element contributing to the economic strength of the country, in addition to contributing to national defense.

4. Because airfields, both large and small, serve or can serve national defense needs—because they are important to the national economy and because they are used for interstate flight operations—the development of an adequate airport system within the State, as a segment of an adequate national airport system, is a joint responsibility of the Federal Government in partnership with State and local governments.

AIRPORTS USED IN INTERSTATE FLIGHTS

5. In Alabama there is not a single public field—the small ones as well as large—that has not been used by aircraft in interstate flight. Many are used regularly.

6. Many Alabama airfields—including some very small ones with strips as short as 1,700 and 2,000 feet—have also been used for emergency landings of military aircraft and have thus saved the aircraft, thereby also saving the taxpayers, millions of dollars in aircraft losses. Wherever there is an airport there is insurance for emergency needs, as well as for general use.

7. If there is justification for Federal highway aid—and there certainly is—then there is justification for Federal airport aid. Both serve the transportation needs of the country and are vital to the entire national economy.

8. No one will challenge the statement that Federal aid is essential for highway construction. This is substantiated by steadily growing Federal appropriations. It should be recognized just as strongly that Federal aid is also necessary and essential for airport construction.

9. The two situations are very similar as to needs, as to utilization and usefulness and as to the inability of State and local governments to finance them alone.

IN THE AREA OF INTERSTATE OPERATIONS

10. Military aviation is in the area of interstate operations; airline aviation is likewise in the same category, as is most executive and business flying. Flying is no longer mainly a local operation. As the Federal Government assumes control and jurisdiction over all types of flying—both interstate and intrastate—it has an obligation to assist with the construction of facilities for their airport needs.

11. Federal aid should not be limited to any class or category of airport or landing area. There have been reports that the President believed Federal aid should be furnished only to jet airports during his proposed tapering off, transitional period. All airports, both large and small, are important to adequate State and national airport systems.

12. The cities must have Federal aid for the resealing of runways and for filling of runway joints. This is not just a simple maintenance job, as the CAA ruled, thus making them ineligible for Federal grants. Therefore, the proposed amendment covering the eligibility of periodic seal coating of flexible airport pavement and the filling of joints in rigid airport pavement is most important to the cities and should be approved.

Many small communities are now required to maintain airports with runways of 5,000 to 6,000 feet in length to accommodate the type of aircraft now utilizing them. As aircraft are now growing larger, heavier, and provide greater impact on the paving, the situation has passed beyond just fair wear and tear and has created additional heavy costs, which some cities cannot afford.

OUR STATE'S IS A $13 MILLION PROGRAM

13. Alabama's Federal aid program to date has amounted to $13,521,000, with the Federal Government providing $6,754,000 and the State and cities providing $6,767,000. Alabama could not possibly have financed this program alone. Neither could any of the other States.

14. It has been estimated by the Alabama Department of Aeronautics and the Civil Aeronautics Administration, just prior to the CAA transfer to the Federal Aviation Agency, that over $24 million will be needed in local, State, and Federal funds during the next 4 years (1959–62), if Alabama is to be provided with the new airport facilities the State now needs or will need. It should be obvious that Alabama alone cannot provide this amount.

15. For 1959, the Alabama Department of Aeronautics recommended 76 Alabama cities to CAA for inclusion in the 1959 edition of the national airport plan. As airport needs are steadily growing and some suddenly developed because of new industrial requirements, this list is certain to be increased within the proposed 4-year extension of the Federal Airport Act, that the Senate has voted. Actually, we need a minimum extension of 5 years for the Federal Airport Act.

COMMUNITIES RECOMMENDED FOR AIRPORT PLAN

The 76 cities recommended are as follows:

Abbeville, Albertville, Alexander City, Aliceville, Andalusia, Anniston, Ashland-Lineville, Atmore, Auburn-Opelika, Bay Minette, Bessemer, Birmingham, Brewton, Brundidge, Butler, Camden, Centreville, Centre, Citronelle, Clanton, Columbiana, Cullman, Decatur-Athens, Demopolis, Dothan, Elba, Enterprise, Eufaula, Eutaw, Evergreen, Fairhope, Fayette, Foley, Fort Payne, Gadsden, Geneva, Greensboro, Greenville, Grove Hill, Guntersville, Haleyville, Hamilton, Headland, Heflin, Huntsville, Jackson, Jasper, LaFayette, Lanett, Leeds, Linden, Livingston, Luverne, Marion, Mobile, Montgomery, Monroeville, Muscle Shoals, Oneonta, Ozark, Phenix City, Red Bay, Roanoke, Russellville, Scottsboro, Selma, Sylacauga, Talladega, Tallassee, Troy, Tuscaloosa,

Tuskegee, Union Springs, Uniontown, Vernon, Wetumpka.

COMMUNITIES DERIVE GREAT VALUE FROM PLANNING ASSISTANCE

(By T. Ralston Long, mayor of Uniontown, Ala.)

The 701 program of Federal grants through the Housing and Home Finance Agency to our State planning and industrial development board to assist in the preparation of comprehensive master plans for municipalities of under 25,000 persons has been of great value to the municipalities which have received this technical assistance. Ninety-one cities and towns in Alabama have received substantial technical assistance through this program. Our State agency has completed the work called for in three projects and they are currently performing the work called for in the Alabama P–4 contract. This latter project provides for work in 43 municipalities.

An additional project (Alabama P–5) which would have provided for assistance to 12 cities, had been applied for last summer and failed to materialize because of a shortage of Federal funds for the current fiscal year. All of these cities are in desperate need of help.

In addition to the above, several cities have asked the State agency for help on their planning problems and have been placed on a waiting list for the next application for a 701 grant.

MUNICIPAL PLANNING SHOULD BE CONTINUING

That the city planning, made possible through the 701 grants, has been of great value to the municipalities, the area of the State in which each is located, and to the State as a whole is unquestioned in most every informed mind in the State. This is demonstrated by the fact that practically every city which has prepared a city plan has continued their city planning program after the plan itself has been completed—usually with proper technical assistance. For instance, 26 municipalities which have had city plans prepared and completed with 701 grants, are receiving currently monthly consulting advice under a contractual arrangement with the State planning and industrial development board.

The desire for, and need of city planning derives from a number of causes in Alabama. Many Alabama communities are growing very rapidly and this condition imposes the real need for land use controls, and community facility planning to satisfy immediate needs as well as long range needs. The interstate highways and other important highway planning and construction is causing municipal problems which can only be solved within the framework of comprehensive city planning. Chambers of commerce and other municipal industrial development groups often feel that city planning is one of the musts that a city should have to successfully compete for commercial and industrial growth. Probably of greatest importance in creating the demand for city planning in Alabama, is the desire of our communities to rejuvenate or renew the physical plant of the city. City planning is probably the most important of the several tools necessary to achieve a worthwhile urban renewal program.

RECIPIENTS IN STATE GEOGRAPHICALLY DISTRIBUTED

All of these reasons are causing the requests for city planning Federal grants in Alabama.

The 91 municipalities which have received city planning assistance are fairly evenly distributed geographically throughout the State. The number of cities by congressional districts is as follows:

	Municipalities
District 1	9
District 2	10
District 3	13
District 4	10
District 5	9
District 6	9
District 7	13
District 8	9
District 9	9

It is anticipated that the future program from 701 grants to the State of Alabama will also be well distributed over the State.

Some reference has been made previously to the fact that industrial development is one of the causes for city planning. The point is sufficiently important to be emphasized. Certainly the Alabama State Planning and Industrial Development Board believes this to be so, since, for nearly 20 years they have alloted a part of their appropriation to maintain a staff of technically trained personnel to assist Alabama communities in city planning problems. This feeling of the importance of creating better cities to help spur industrial development of the State is also shared by the State chamber of commerce, and most local chambers of commerce.

REGIONAL AND METROPOLITAN PLANNING

Up until the present, the metropolitan and regional features of the Federal 701 program have not been used because Alabama State laws do not make sufficient provision for these types of programs. Bills have been prepared and will be introduced in the Alabama State Legislature which meets in regular session in May. It appears that the legislation will receive favorable action and the Housing and Home Finance Agency will likely have a number of requests for metropolitan or regional 701 programs during the next year.

We strongly believe that the 701 program of local planning assistance grants has been extremely valuable to the municipalities and the State of Alabama in the past. We strongly urge the strengthening of the appropriations for these activities whereby sufficient Federal money will be available to match local money.

Masonry Supports Public Schools and Freedom of Religion

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit the following article from the Knoxville Scottish Rite News, for November 1958, by Mr. E. E. Patton, a well-known historian of Knoxville, Tenn.:

MASONRY SUPPORTS PUBLIC SCHOOLS AND FREEDOM OF RELIGION

(By E. E. Patton)

On the back cover of the New Age, the official publication of the Supreme Council of Scottish Rite Masons, may be found the following sentence: "The supreme council favors the American public school, nonpartisan, nonsectarian, efficient, democratic, for all of the children of all the people." Masonry favors an efficient teaching force—teachers elected and retained because of their ability and not because of kinship, friendly relations, or political influence. The Masonic fraternity favors the teaching of civics, history, and government, including the Declaration of Independence, the Constitution, with all its amendments. This should be done without prejudice or partisanship on the part of the teacher or supervisor. It favors democratic operation of the public school system throughout the Nation. In the public school the son of the section hand is given as much consideration, credit, and honor as the son of a millionaire. That is democracy in the Masonic manner.

The supreme council further favors the inculcation of patriotism, respect for law and order, and undying loyalty to the Constitution of the United States of America. It is true that the civic record of some Masons has not been so attractive and commendable, but 99 percent of American Masons are law abiding and loyal to the American flag. It should be remembered that Jesus had 12 disciples, and 1 of them betrayed him. American Masons do not criticize the loyalty of Masons of other countries to their flag and the concern for the safety and security of their native land. Jacob A. Riis was born, reared, and educated in Denmark and he said he loved the flag of Denmark better than any other flag, except the flag of his manhood and his children, the American flag. Americans honored him for his loyalty to the flag of his native country. If an American Mason is disloyal to the American flag, he is a Mason only in words, not in morality and affection.

The supreme council also favors the compulsory use of English as the language of instruction in the grammar grades of our public schools. The reason for this is so basic that discussion is not necessary. John Quincy Adams accompanied his father to Europe at the beginning of the Revolutionary War. He acted as his father's secretary and learned all the languages of Europe, but when he became Secretary of State and later President of the United States, he conducted all his official business in the language of America—the English language. He was not a Mason but he followed the Masonic custom.

The Tennessee General Assembly of 1919 passed an act which requires every public schoolteacher of this State to be an American citizen. The general assembly of 1851 passed an act requiring every high school in Tennessee to have not less than 1 year of American history and Government. Every Mason of the State and Nation has given his wholehearted support to both these acts. They tend to make sure of the safety and security of the Nation and that is what all loyal Americans want and demand.

The supreme council goes yet a step further in this attempt to safeguard the security of our Nation. It favors adequate provision in the American public schools for the education of the alien population in the principles of American institutions and ideals of citizenship. Every naturalized citizen should be able to speak the English language. He should have a knowledge of our great civic documents; the Declaration of Independence, and the Constitution. He should have a working knowledge of the liberty, freedoms, privileges, and safeguards he enjoys under our form of Government. If he fails or refuses to meet these requirements then he should be sent back to his former home. We do not want him or any of his kind.

The Scottish Rite is a strong and outspoken proponent of the principle of the entire separation of church and state, and opposition to every attempt to appropriate public money—Federal, State, or local—directly or indirectly, for the support of sectarian or private institutions. Public money

for private or sectarian schools would be on a par with public money for the support of churches—the church that could produce the greatest number of members and supporters. It should never be done.

The person who is opposed to the principle of separation of church and state could not by any manner of means be regarded as a loyal and devoted American. Our great country is founded on this basic principle. Just bear this in mind; where religion is free, Masonry is free and where Masonry is free religion is free. All loyal Americans believe in this motto and they are willing to sacrifice their lives in order to bequeath it to their children and their children's children.

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation, under God, indivisible, with liberty and justice for all."

State, Nation Seen in Fiscal Fight for Survival

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. KNOX. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of my colleagues an article which appeared in the State Journal of Lansing-East Lansing, Mich., on Sunday, February 8, 1959. The writer of the article, Harold Thompson, is a Detroit businessman, who was deputy secretary of state in 1947 and 1948 in the State of Michigan.

There is much food for thought in Mr. Thompson's statements. Spending more than our income, whether it be ours as individuals, or that of local, State, or Federal Government can lead only to disaster.

The article follows:

STATE, NATION SEEN IN FISCAL FIGHT FOR SURVIVAL

(By Harold Thompson)

It would seem that we, the people, are in a mess. Our National Government is in debt to the sum of $300 billion, our State is bankrupt, our cities have serious financial problems and our schools are in jeopardy for lack of money. The only answer to date on the horizon is to borrow more money—that is, increase the national debt, borrow from the veterans' trust fund, and (in Detroit) put out a huge bond issue for the rehabilitation of our school buildings.

Very few of our elected representatives at any level are looking the cause squarely in the face. The effect is obvious but the cause is equally obvious and simply is that we are spending more than our income. This is true in our Federal Government, it is true in our State government, and it is true at local levels.

Any American housewife knows the answer when faced with this problem in her little domain. Sure, the family can borrow money and then borrow more money, which our governments are now doing. They call it refinancing. The average man and his wife, however, know that to keep piling debt on top of debt simply means that in the end they will be wiped out. They know they would lose their home, their car, and anything else they are buying on time.

FACE PROBLEM SQUARELY

Knowing this, the average man and his wife simply face squarely their problem and do the only thing they can do to save their little world. They simply cut down expenses, regardless of how deep they have to cut. They know no other way of survival, and indeed there isn't any.

If this sounds like oversimplification, it is only because the last 20 years have produced too many politicians who appeal to their voters by promising everything in sight. Promising something for nothing, under the illusion that in issuing new U.S. bonds and borrowing from the veterans' trust fund for example, we are borrowing merely from ourselves.

This is the great American lie and history will record of us that we were in fact dishonest.

Proof of this lies in the fact that nowhere do we find any elected representative talking about paying off our national debt, and at local levels we find our representatives talking only about how to raise more money. As far as the national debt is concerned, we, the present people, have no intention of paying any part of the $300 billion, but are passing the buck to our great-grandchildren and indeed to our great-great-grandchildren, children as yet unborn, children being taxed without representation.

EXPENSES NEED HARD LOOK

It seems to this humble citizen that we first, therefore, should take a hard look at our expenses of government, and by this I do not mean the defense costs. I mean the tremendous number of new agencies that have cropped up during the past 25 years. Undoubtedly some of them are good, but many of them are luxuries. Are we being honest in having such luxuries and at the same time forcing future generations to pay for them? In short, are we not overgoverned? Do we not have far too many government employees?

This is particularly true at our State level, but yet no one seems to be seriously concerned.

One would like to know what was the total number of State employees 15 years ago and what is that number now?

One would like to know what new agencies have been created during these past 15 years.

One would also like to know how many employees are being carried by different departments in Lansing that have not been certified by civil service.

In other words, this humble citizen would like someone to really get at the facts toward the end of seeing how many functions could be abolished and how many people could be taken off the State payroll.

Such a suggestion will horrify those who use our money to buy votes, but then there are those among our representatives surely who must clearly see that the end is in sight, as indeed the average man and his wife see their end in sight when they embark on a program of borrowing and reborrowing.

RUSSIAN PURPOSE NOTED

The question here is not how to preserve those new functions of the Government which are doing some good, but rather how to save the State and the Union from going under. The object of Russia in conducting the cold war is to deplete us financially; thus those among our representatives who continually subscribe to these everlasting borrowing and inflationary policies are aiding and abetting Russia in her economic attack on this country.

Russia's intent at this stage of the game is not important. The fact is she is bringing this beloved land of ours to its knees by everlastingly weakening its financial structure. We are way past such things as political expediency, and are now in fact fighting for survival.

Thus I suggest that some legislative branch of our State government really get hard-boiled about this matter of being overgoverned. It is not a task for the administration. It is a task for all those of our elected representatives who have to do with spending money. Possibly the State senate is the best body.

Having done this and then followed through by pruning down to the ground, we can then discuss ways and means of raising more money with the least amount of overhead.

In this connection this humble citizen subscribes to the philosophy that all of us should pitch in and help just as all of our boys in the Armed Forces do their task regardless of individual or economic status.

This citizen does not believe most of our people want to steal from their great-grandchildren. This citizen believes that most of our people are good Americans and will help when the need is made clear.

We are past the day of soaking one group to gain favor with another group. We are almost in the position of passengers on the ship that is going down and we are in the lifeboats. We are now in the position of all being in danger if the lifeboat capsizes.

My prayer therefore is that the elected representatives of the people throw partisan politics out of the window and look this whole question right in the face, and, having done this, take such action as is necessary to get us back on the right track, regardless of teh effect on such representatives or their political parties.

Arms and the Man

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. WOLF. Mr. Speaker, in connection with the extension of the Universal Military Training and Service Act which the House recently passed, the following editorial from the New York Post of February 18, 1959, deserves the thoughtful consideration of every Member of Congress. This editorial endorses the position which I took on this legislation—that a 2-year extension would be adequate while a thorough review is made of our military manpower needs and our military manpower procurement policies. I hope that every Senator will have the opportunity to read this editorial prior to taking a position on the extension of the Universal Military Training and Service Act when it comes up for Senate action:

ARMS AND THE MAN

One of the more dubious institutions of our time is the military conscription law. We are a democracy in the space age; our Army depends primarily on complicated scientific gadgets that require special technical skills instead of massive unskilled manpower; the democratic principle of universal service, understandable in time of war, is increasingly inapplicable because exemptions now are generous. Yet the House of Representatives has again bowed to the Pentagon's flag-waving man hunt and voted overwhelmingly to extend the law for another 4 years.

The action was dutiful obeisance to a sacred cow being rushed through the House with a red, white, and blue ribbon. A small group of dissenters with a strong sense of reality did put up a fight for a new look at the Pentagon's flim-flam. But when the vote came they were swamped. Even members who privately expressed doubts about the necessity for the draft timidly refrained from blocking the cow's passage.

The bill is now in the Senate. It deserves much more careful scrutiny there. Many thoughtful men believe that a 2-year extension will certainly suffice while a thorough review is made of the law's merits and our true military manpower needs in this strange new world. We agree.

Dedication of the New Supreme Court Building in New York

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. RAY. Mr. Speaker, under leave heretofore granted, I am glad to place in the RECORD the following remarks made by Justice Gerald Nolan and the address made by Francis M. Verrilli, esq., at the recent dedication ceremonies of the new Supreme Court building in New York:

ADDRESS BY JUSTICE GERALD NOLAN

As the one presiding over the ceremonies I am compelled to say, "Mr. Roscoe, we enjoyed your message very much." Later in the day I hope to have the pleasure of saying, "Andy, you did very well."

I can testify as presiding justice that in Brooklyn we have a very fine and a very active bar association. The officers, trustees, and members of that association are always mindful of the high ideals of an honored profession. They have always been most cooperative in every project initiated by the bench and by the bar, designed to promote, sustain, or to improve the administration of justice.

The leaders of that association have been men of great legal attainment, and the present incumbent of the office of president is no exception to that rule. He exemplifies in the full the spirit of the great association which he represents, and he is a fitting successor to the many distinguished men who have preceded him in that great office.

It is my privilege to present to you at this time the president of the Brooklyn Bar Association, Mr. Francis M. Verrilli. [Applause.]

ADDRESS BY FRANCIS M. VERRILLI

Judge Nolan, honorable justices, reverend clergy, distinguished guests, ladies, and gentlemen, I am very touched by the very gracious introduction of Judge Nolan.

It is a very pleasant task that has been assigned to me today to say a few words on behalf of the Brooklyn Bar Association on the historic occasion of the dedication of its very beautiful edifice.

Every citizen is justly proud of this imposing building, for its simple beauty and practical usefulness, but we are not concerned with marble and gilt, but rather the purposes for which the building has been erected, that is, the full and efficient administration of justice.

It is entirely fitting, therefore, for us, the members of the bar and the able justices of this court, to rededicate ourselves to the continued development of the law and the true administration of justice to all men without fear or favor and without regard to race, creed, or color.

While we have traveled far along this road, there is much to be done and we should continue to strive to give to all the litigants who will enter these halls not only the appearance of justice but the very essence of justice by courtesy, kindly consideration, and patient understanding of their problems.

The layman is often confused and bewildered at the law's delay, and the multiplicity of courts, which constitute our judicial system. The judicial conference, of which you will hear more this morning, I am sure, has set forth a plan for the reorganization of the courts which warrants our most careful and thoughtful consideration, and it is our duty as members of the bench and of the bar to help evolve a workable plan of court reorganization.

The public looks to us, the bench and bar, to solve these problems, and if we face up to them with courage and vision, then we will add honor and luster to the noble profession of the law.

The Brooklyn Bar Association adds its congratulations and felicitations to all those who have made this very historic occasion possible. Thank you. [Applause.]

Need for Flexibility in Cotton Acreage Allotments Cited by Alabama Gov. John Patterson

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. ROBERTS. Mr. Speaker, Alabama cotton farmers realize perhaps better than anyone the dire necessity of congressional modification of the laws regulating allocation of acreages.

A survey conducted in our State shows that unless flexibility in acreage allotments is provided whereby one farmer can transfer unwanted allotments to other farmers in the same county, Alabama will stand to lose the creation of new wealth on nearly 100,000 acres of good cotton land.

I have introduced a bill, H.R. 2428, to provide for lease and transfer of acreage allotments, which, I believe, will help to revitalize cotton production.

I have received from Alabama's new and able Governor, the Honorable John Patterson, a letter pointing up the pressing need for legislation such as I propose, and offering the support of the State of Alabama.

We are hopeful for early consideration of and approval of this legislation.

Under leave to extend my remarks, I wish to insert the letter from Governor Patterson:

STATE OF ALABAMA,
GOVERNOR'S OFFICE,
Montgomery, February 11, 1959.

Hon. KENNETH ROBERTS,
House Office Building,
Washington, D.C.

DEAR KENNETH: Farm leaders all over Alabama are concerned about the wholesale abandonment of cotton allotments due to the situation on many of our farms where small allotments coupled with low prices have rendered cotton production unprofitable.

A survey conducted in each of Alabama's 67 counties indicates that unless the flexibility in acreage allotments which the leasing measure that you support provides is effected for 1959, that Alabama will stand to lose the creation of new wealth on nearly 100,000 acres of good cotton land. Even at present prices and yields the leasing of allotments within the counties as you propose has been estimated to prevent the loss of over $15 million worth of new wealth for Alabama in 1959 alone.

Consequently, this cotton measure could well be one of the most important measures to come before the Congress in 1959 insofar as the economy of the State of Alabama is concerned.

I am sure that I do not need to call it to your attention that while the Nation has allotted to cotton 75.7 percent of its 1950 allotment, Alabama has been assigned only 60.8 percent of its 1950 allotment for 1959.

Therefore, I take this means to urge you to renew your efforts so that Alabama farmers who depend upon the production of cotton for their livelihood may be given the opportunity to plant any acreage not used by their neighbors, protecting the State's allotment whereby Alabama can from this day forward, at least maintain its relative position as a cotton-producing State.

In this connection I offer the full support of this administration and the State of Alabama.

Yours for a greater Alabama.

JOHN PATTERSON,
Governor.

Welfare State?

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. CHAMBERLAIN. Mr. Speaker, disciples of deficit spending should be observing what it has done to the State of Michigan, and maybe their hurry to put the United States in the same boat might be slowed up a bit.

I was glad to see that the Washington Evening Star of February 23 devoted a substantial editorial to a presentation of Michigan's current financial situation.

If my colleagues have not read this article, or do not know about what has happened in Michigan, they will find it most informative and helpful in their own decisions to spend or not to spend the public's money. I submit it for inclusion in the RECORD:

WELFARE STATE?

The State of Michigan leads the world in production of motor vehicles and parts. It ranks very high in other lines of manufacturing, in mining, and in agriculture. It is divided by Lake Michigan into two parts, adding immeasurably to its resort attractions and accounting for its official motto: "Si quaeris peninsulam amoenam circumspice"—If you seek a pleasant peninsula, look about you. It is also broke, financially speaking, or so close to it that the disciples of deficit spending should be enjoying a happy holiday in their hearts.

That it was not literally broke on February 15, according to an Associated Press dispatch from the capital city of Lansing, was due entirely to the willingness of Michigan in-

dustry to hand over more than $35 million in taxes from 2 to 4 months ahead of their due date. Without such prepayment, the State treasury would have been bare of money on February 15—"collapse day," as it had become known. The taxes, of varied types, were due between April 15 and June 15. Gov. Mennen Williams, sometimes mentioned as a Democratic Presidential hopeful, invited Michigan industry to help avert the crisis that Michigan politicians—Democrats and Republicans alike—had created. With the $35 million plus, the State was able to make first payments since last November to the three State universities, to honor overdue obligations to townships and cities, and even to meet such welfare needs as aid to dependent children and the aged.

There is a possibility that "collapse day" may be rescheduled on April 15, but Mr. Williams has some ideas on how to cope with that. He has proposed a constitutional amendment referendum on April 6 to raise from $250,000 to $50 million the amount the State can borrow without express vote, and he has suggested that a veterans' trust fund of $50 million be made available for collateral. He also has proposed bigger taxes—on industry profits and personal income. The news dispatch did not mention any recommendation for cutting down expenditures—now or ever.

Time To Repeal Telephone Excise Tax

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. McGOVERN. Mr. Speaker, today I have introduced legislation designed to repeal the excise tax on telephone service. The 10-percent sales tax on telephone users was levied during World War II as a temporary measure to reduce the load on overburdened telephone facilities and to raise funds for financing the war effort. The original purposes of this tax have long since faded from the scene, and yet this burdensome tax remains.

It may be argued that all taxes are burdensome, but that they are necessary to finance the vital services provided by the Federal Government. However, the tax on communications facilities is particularly severe, and I believe unfair, because it is a regressive sales tax which is imposed on everyone alike without reference to ability to pay. I have always opposed the use of a sales tax where it was not designed to fulfill a specific need.

Now, Federal sales taxes are levied on luxury items such as jewelry, liquor, and nightclub entertainment, and these I believe are well justified. But certainly one cannot put telephone service in the same category as these luxury items. Telephone service is a public utility of the same nature as electricity, gas, and water on which there are no Federal excise taxes.

This tax is also illogical in view of the Federal Government's efforts to promote the extension of telephone coverage through the telephone program of the REA. This program has greatly benefited the rural people of our Nation. But one should note that over 40 percent of our farm families today are still without the benefit, indeed, the vital necessity of telephone service. It is time to repeal this excise tax which runs directly counter to the stated aims of the Federal Government to promote telephone service.

Repeal of Excise Tax on Transportation of Passengers

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. LANGEN. Mr. Speaker, I have received a copy of Resolution 1 of the 1959 Minnesota Legislature, which expresses the concern of the people and the legislature in Minnesota relative to the repeal of the Federal excise tax upon the transportation of passengers.

The resolution follows:

RESOLUTION 1

Concurrent resolution memorializing the Congress of the United States to enact legislation providing for the repeal of the Federal excise tax upon the transportation of passengers

Whereas the Federal excise tax upon the transportation of passengers was adopted as a wartime tax to discourage the movement of civilian passengers during World War II; and

Whereas today, 13 years after the cessation of hostilities, there continues a 10-percent levy on the transportation of passengers (title VI, sec. 609 (a) United States Code), which tax while collected by the common carriers of transportation by rail, by highway, by water, and in the air, is imposed upon and collected from the users of such transportation; and

Whereas millions of dollars in revenues are paid to the State of Minnesota by those common carriers; and

Whereas the 10-percent tax on transportation of passengers discourages the use of public transportation systems and tends to decrease the revenue of the State and local government by reason of the lesser earnings or volume of business of said public system of transportation; and

Whereas there exists ample facilities for the public transportation of persons throughout the State of Minnesota and the Nation and the purpose for which said tax was imposed has long since ceased to exist; and

Whereas the decrease in revenue by reason of the small amount received for said excise tax on the transportation of passengers will largely be made up by the increased income taxes paid by the passengers of common carriers and other excise taxes paid on the facilities and equipment used by said common carriers: Now, therefore, be it

Resolved by the Senate of the State of Minnesota (the House of Representatives concurring therein), That we respectfully urge and request the Congress of the United States to enact appropriate legislation to repeal the Federal excise taxes upon the transportation of persons; be it further

Resolved, That the secretary of state of the State of Minnesota be directed to transmit a copy of this resolution to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives of the Congress of the United States, and to each member of the Minnesota delegation in the U.S. Senate and the U.S. House of Representatives.

KARL F. ROLVAAG,
President of the Senate.
E. J. CHILGREN,
Speaker of the House of Representatives.

Passed the senate the 6th day of February 1959.

H. Y. TORREY,
Secretary of the Senate.

Passed the house of representatives the 16th day of February 1958.

G. H. LEAHY,
Chief Clerk, House of Representatives.

Approved February 19, 1959.

ORVILLE L. FREEMAN,
Governor of the State of Minnesota.

Filed February 20, 1959.

JOSEPH L. DONOVAN,
Secretary of State.

AMVETS 1959 Legislative Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. TEAGUE. Mr. Speaker, several days ago Dr. Winston E. Burdine, national commander of AMVETS, appeared before the Committee on Veterans' Affairs and presented the 1959 legislative program of his organization. AMVETS deserves a great deal of credit for their well-thoughtout legislative program.

I was particularly impressed with the stand of the organization regarding nonservice-connected pensions and find myself in complete agreement with the statements made regarding the relationships which should exist between nonservice-connected pensions and service-connected disability and death compensation for veterans, widows, orphans, and dependent parents.

In its legislative program, AMVETS calls for first consideration for service-connected compensation programs and hospital and medical programs. AMVETS supports pensions based on need but have rejected pension demands which would result in non-service-connected payments for a few days service, which would be greater than payments being made to seriously disabled service-connected veterans, dependent parents, and dependent children.

I hope that every Member of the House will have an opportunity to read Dr. Burdine's statement:

STATEMENT OF WINSTON E. BURDINE, M.D., NATIONAL COMMANDER, AMVETS, BEFORE THE COMMITTEE ON VETERANS' AFFAIRS, U.S. HOUSE OF REPRESENTATIVES, ON AMVETS' 1959 LEGISLATIVE PROGRAM, FEBRUARY 19, 1959

Mr. Chairman and members of the committee, I deeply appreciate your courtesy in granting me the opportunity to appear today for the purpose of presenting the highlights of AMVETS' legislative program for 1959. Having been engaged in the activities of organized veterans since the end of World War II, I am not entirely unfamiliar with the many accomplishments of this committee on behalf of the Nation's war veterans and their dependents. I can assure you that I am highly honored by this privilege today.

AMVETS, as you know, is an organization composed exclusively of World War II and Korean conflict veterans. During our brief existence a definite philosophy has gradually evolved. It is a philosophy that recognizes that the veteran has a vital stake in the economy of this Nation—that he has an obligation as a citizen as well as a veteran—that he will not overburden the economy with unreasonable demands that cannot be fully justified. We are motivated by a desire to perfect a sound enduring structure of benefits that will adequately and properly discharge the Nation's responsibility to its veterans and at the same time merit the respect of the American people. This philosophy has been reiterated in our current legislative program.

PENSIONS

Undoubtedly the most controversial subject in the field of veterans' legislation now facing this committee involves non-service-connected pensions. The administration, congressional leaders, and organized veterans all agree that the present non-service-connected pension system requires revision. Here the unanimity seems to end. Some would expand the program by adding persons to the rolls with no disability and little or no financial need. Others would increase monthly payments to those pensioners who are truly in need, while curtailing monthly payments for those having independent income.

AMVETS position with respect to the non-service-connected pension program was made crystal clear in a policy statement unanimously adopted at the 1957 national convention and reiterated at the most recent national convention in August 1958. This policy states that "AMVETS regard compensation for the service-connected disabled veteran and the surviving dependents of those who lost their lives from a service-connected cause as a paramount objective of the veterans' program. Nevertheless, AMVETS support the non-service connected pension program for veterans and their dependents so long as the program is based on realistic tests of need. The present non-service-connected pension program is deficient in some respects in that it fails to distinguish between various levels of need, thus resulting in thousands of veterans and widows being denied benefits or having to exist on a small pension with no other income when many other fortunate individuals have considerable income and resources and receive the same pension payment. AMVETS reject proposals which would further liberalize the pension program by adding persons to the rolls who are not actually in need. Instead, AMVETS would prefer to see any additional expenditure for non-service-connected pension directed to those most in need. Of particular concern are those unfortunate individuals who are so disabled as to require the aid and attendance of another person. The widows of World War II and Korean veterans are causing particular concern because widows and small children are not eligible for pension unless the veteran had a service-connected disability ratable at an ascertainable degree at the time of his death.

"We cannot disregard the precarious position of the Nation's finances at this time in that 7 percent of the Nation's annual income is being expended for veterans' benefits, yet it is inevitable that as unwarranted expenditures for non-service-connected pensions arise, it will be increasingly difficult to obtain and maintain adequate compensation for the service-connected disabled. We must assume adequate compensation programs, medical services, and adequate pensions for those truly in need rather than embark on pension programs which are actually in the nature of a service bonus."

This policy, Mr. Chairman and members of the committee, was not formulated overnight at a national convention, but resulted from mature deliberation and analysis of the present pension program and the many proposals offered in the 85th Congress to expand the program. Our study revealed some obvious but still rather startling facts. Most Americans know that there exists today a non-service-connected pension program for veterans of World Wars I and II and Korea, but few realize the scope of the program. There are approximately 800,000 pensioners on the rolls today. A great deal is being said about the inadequacy of the pension system, yet the fact remains that at age 65, a veteran may be working half time, have only 10-percent disability, and still qualify for a pension. If he is married, he may have personal income of $2,700 per year. There is no limitation on income received by his wife, and there are no restrictions on liquid assets or net worth.

Your committee, Mr. Chairman, in the results of a survey recently released, reported details of cases of veterans on the pension rolls with liquid assets in excess of $50,000. Numerous cases were reported where the veteran and his wife had more income than the average American family, yet he was receiving a pension and had been on the rolls for many years. The committee survey indicated that about 20,000 of the married pensioners now on the rolls have family income in excess of $5,000. More than 13,000 pensioners have liquid assets of $15,000.

On the other hand, the survey revealed that at the bottom of the scale there are about 46,000 married pensioners who have no income other than their pension and approximately 114,000 have incomes of less than $500 exclusive of pension.

Yet each, irrespective of outside income, receives the same monthly rate of pension—$66.15 or $78.75, if he is 65 years of age or has been in receipt of pension for 10 years. The rate is $135.45 if the veteran requires the aid and attendance of another person.

We of AMVETS are keenly aware of the fact that a seriously disabled veteran with no other source of income cannot live on this meager pension. It is essential that this unfortunate group be granted an adequate pension, yet it is equally important that we guard against providing a windfall or a bonanza for those with substantial independent means. The solution does not lie in increasing the income limits as some have suggested. This would only add more veterans with substantial means to the rolls. The seriously disabled, no-income veteran couldn't care less. Nor does an arbitrary across the board increase for all pensioners solve the problem. Not only would the cost be prohibitive, but inequities with respect to the service-connected compensation program would result.

For example, the highly publicized program of one group advocates a $100 per month pension for all World War I veterans at age 60, irrespective of income or disability. The Veterans' Administration has estimated the cost of this proposal to be $2.3 billion in its first year of operation, then a rapid rise in cost each year until in 1976, just 18 years from now, it will reach the fantastic cost of $26 billion.

Aside from the cost, however, the inequities are apparent. You will be paying the nondisabled veteran with as little as 90 days' service the same monthly amount you pay the veteran who is 50 percent disabled from war wounds incurred in combat. Parents who lost a son in service receive only $50 each provided they are able to meet the severe criteria of dependency that has been established. Two orphaned children whose father lost his life in service receive only $50 each per month.

In other words, we would see veterans with relatively short service and no need actually receiving more consideration from their Government than thousands of war casualties, children orphaned by war and dependent parents. The gross unfairness of this situation is readily apparent.

The solution to the problem confronting us lies in the capable hands of this committee and the Congress. It is the position of AMVETS that first consideration should go to the veteran and his family having little or no outside income and that pensions should not be paid in cases where little or no need exists. The only purpose served by paying a pension to a family with substantial income and net worth is the building of an estate to be passed on to their heirs.

We respectfully urge that you resist the pressures for a greatly expanded non-service-connected pension program of this nature. Instead we urge you to give serious consideration to the establishment of a greatly revised and realistic pension program. In the considered judgment of AMVETS, such legislation should provide that the amount of monthly pension payments be directly related to the amount of independent family income received. The veteran with little or no income should receive a substantial increase in pension payments. As the income increases, the pension payment should be lowered or conversely, the lower the income, the greater the pension payment. In this manner, persons with less than $500 per year income would receive the maximum pension and persons with substantial income would receive the minimum or none.

Inasmuch as family income rather than the income of the veteran alone would be considered, it is suggested that additional payments be made and separate income tables be utilized when dependents such as wife and minor children are involved.

In the opinion of AMVETS, any consideration of pension legislation must necessarily include provisions for establishing the eligibility of World War II and Korean widows to pension on the same basis as is provided for widows of World War I veterans. As you know, widows of World War II and Korean conflict veterans to be eligible for pension must establish that the veteran upon whose death the application for pension is based was separated from service for medical reasons or that he had an ascertainable degree of service-connected disability at the time of death. The widows of World War I veterans applying for this benefit are spared this requirement and may qualify merely on the establishment of 90 days service and a discharge other than dishonorable. We can see no logical reason for the disparity and recommend its correction.

The sliding scale formula of income inversely related to monthly pension payments previously mentioned should be applied to the widow's pension program as well as to veterans. Provisions should be made, however, for the deduction of burial expenses from the proceeds of commercial life insurance in determining a widow's annual income for entitlement to non-service-connected death pension. In many instances, a widow is denied pension for a year because the proceeds from a small insurance policy, most of it consumed by the expense of burial, causes her to exceed the statutory income limit.

We do not propose to offer here a panacea for all deficiencies in the pension program. We do, however, believe that the implementation of AMVETS suggestions will result in a more sensible distribution of the pension dollar and at the same time remove certain inequities now existent.

SERVICE-CONNECTED NEEDS

In considering the service-connected compensation program we come to a matter of priority. Great demands are being made on the Congress to liberalize pensions. We presently have an income limit of $2,700 for a married pensioner. He receives his pension in addition to this or, in other words, has a total income of about $3,450 and yet be carried on the pension rolls on the basis of need.

There are demands from all sides to raise income limits or, in fact, abandon them altogether in favor of a general pension without a needs test.

Consider these demands in comparison to the income pattern of the service-connected disabled. In a survey conducted by the administration it was learned that the income of a 100-percent service-connected disabled veteran, without statutory awards, was only $2,900 per year including compensation. The rate of compensation for this group is $2,700 per year. Therefore, it is apparent that their ability to earn additional income is nil. In the face of this fact, some have the temerity to suggest that we should adopt a pension program which would carry hundreds of thousands of veterans, many with a few days service, to levels of income from $3,500 to $5,000.

The greatest need in the area of service-connected compensation, in the judgment of AMVETS, is greater recognition of the limited or negligible earning capacity of the more seriously disabled veterans. This committee and the Congress recognized it in the 85th Congress by increasing the rates of compensation for certain categories of paraplegic and blinded veterans. There are, however, many seriously disabled veterans who are unable to work because of their disability and receive only $225 per month.

The President in his recent budget message indicated that increases in compensation for some of the seriously disabled was warranted.

Consideration should be given to extending the benefits of the War Orphans Educational Assistance Act of 1956 to the children of service connected totally disabled veterans. This group of veterans, for the most part, are unable to provide for their children's education because of their disability. In short, the special needs of the seriously disabled service connected veteran should receive first consideration.

VETERANS' ADMINISTRATION HOSPITALS

One of the most important programs administered by the Veterans' Administration is its hospital and medical program. This program, representing as it does, the greatest single Government medical program in the world, merits the continuing attention and scrutiny of this committee. We are grateful for the exhaustive study of this subject by your committee in the last session of Congress.

AMVETS position on VA hospitals, though spelled out in several resolutions, may be summed up clearly and concisely. We are seeking a policy that permits maximum utilization of available facilities and a dynamic and ambitious program of hospital modernization, renovation, and replacement. To accomplish the first objective, the Administrator of Veterans' Affairs should have authority to adjust the care and treatment program to the changing characteristics of the veteran population without unwarranted intervention by the Bureau of the Budget.

In this connection, we believe that existing facilities no longer required for certain types of treatment should be used wherever possible for the care and treatment of chronic, long-term patients, particularly selected mental cases. This would alleviate the acute problem now existing in this field of medicine.

In short, the program should be geared to present day requirements rather than budgetary limitations. We are encouraged by the 1960 VA budget for inpatient care which reflects an increase over the current budget. We are told that not only will this permit an increase in the average daily patient load, but the staffing ratios in hospitals will be improved. In other words, there will be more professional and skilled employees per thousand patients than the present budget permits.

We are extremely disappointed that the 1960 budget as presented failed to include funds for the construction of replacement hospitals in Oakland, Calif.; Cleveland, Ohio, and Washington, D.C. It is essential that sufficient funds for increasing the tempo of the replacement and modernization program be provided. As a doctor and a hospital administrator, I am well aware of the exorbitant and unnecesary cost involved in operating hospitals that are outmoded or badly in need of repair or renovation. Money saved by failure to appropriate funds for this purpose is false economy indeed. AMVETS are seeking an increase in the funds for this program and for medical research.

Before leaving this subject, I want to voice AMVETS continuing support of the policy that permits war veterans to receive treatment for non-service-connected disabilities in VA hospitals, provided a bed is available and they are unable to pay. If this humanitarian policy were ever discontinued, I am confident that the quality of VA medicine would deteriorate.

As you know, a good doctor makes a great financial sacrifice in practicing medicine in a Veterans' Administration hospital. This financial loss is offset by the wealth of knowledge and experience gained in treating practically every ailment known to man. If the care and treatment program were limited to service connected there would be little incentive to practice VA medicine.

The result would be the inability to recruit doctors. Obviously, the service-connected veteran would suffer from the inability to staff hospitals and the resultant inadequate medical care.

Here again I must comment upon the relative merits of the needs in the VA hospital program and the demands for pensions. Certainly there can be no question in anyone's mind that the providing of hospital care to needy veterans and the repair and replacement of older hospitals merits a higher priority and fills a far greater need than adding persons who are financially independent to the pension rolls.

Notwithstanding our support of non-service-connected hospitalization, however, I want to make it crystal clear that AMVETS will not condone abuses in this program. If a veteran can afford to pay for his non-service-connected hospitalization, he should not occupy a bed at the Federal Government's expense. We believe that admitting procedures now in effect have held abuses of this nature to a minimum.

PEACETIME BENEFITS

The question of benefits for persons who served after January 31, 1955, has long been a matter of concern to AMVETS. The President's proclamation of January 1, 1955, established January 31, 1955, as the terminal date for entitlement to wartime veterans' benefits. Consequently, persons entering service after that date are not entitled to education and training, housing-loan guarantee and other benefits offered war veterans.

These men do not qualify as war veterans because their service is limited to time of peace. They certainly should not be placed in the straight peacetime service category because, for the most part, they were drafted or entered service under the compulsion of the draft. In many instances the service was even more hazardous than that experienced by some war veterans. So they represent a new category for whom no precedent with respect to veterans benefits has been set. In the 85th Congress, extensive hearings on peacetime benefits were held by the Senate Committee on Labor and Public Welfare. A bill making this group eligible for unemployment compensation was the only legislation enacted.

It is the considered view of AMVETS that one of the most pressing needs of this group is an educational benefit. The results obtained from World War II and the Korean GI bills is dramatic proof of the value to the Nation of such a program. Not only do we have a better educated citizenry but the ability of these people to earn higher incomes has resulted in more taxes for the Federal Government.

I believe my own case will illustrate this. I received $3,200 worth of education under the World War II GI bill. In the 5 years following the receipt of this education, I paid the Federal Government $30,000 more in income taxes than I had paid in the 5 years preceeding it. I would like to have a return of this nature on some of my investments.

Developments in science and engineering have pointed up the alarming shortage of persons educated and qualified for careers in these important fields. Statistics will reveal that more than 25 percent of those who attended colleges and universities under the World War II GI bill became scientists and engineers. There is every reason to believe that the same ratio would prevail today.

Even the Bradley Commission, not particularly noted for its praise of veterans' benefits, had these kind words to say about the World War II GI bill, "the veterans' educational program was a major contribution to the national welfare, and the country would be weaker educationally, economically, and in terms of national defense, if educators, veterans' organizations, the President, and the Congress had not seen fit to embark upon this new and momentous educational enterprise."

We of AMVETS are confident that a program of education and training for the post-Korean group would be equally productive of results. The distinguished chairman of this commitee has introduced at the request of AMVETS, H.R. 2259, a bill creating a program of education and training for persons with service after January 31, 1955. We urge this committee to give early consideration to this measure and other pending bills on this important subject.

JUDICIAL REVIEW AND FORFEITURE

Two long-standing procedures in the Veterans' Administration adjudication process in our judgment are in need of further study and revision. The first involves the so-called judicial review or review by an independent court or board of Veterans' Administration decisions in claims for disability and death compensation.

Under the present system, these claims are first adjudicated by a board in the local Veterans' Administration regional office. In the event of an adverse decision, the veteran may appeal. The appeal is handled by the Board of Veterans' Appeals in the Veterans' Administration in Washington. It is the view of AMVETS that there should be a further avenue of appeal outside the Veterans' Administration.

The second procedure requiring revision is the system of forfeiture. In a study released in the 2d session of the 85th Congress this committee pointed up the inequities existing in the archaic forfeiture laws. These laws provide that any veteran who makes a false statement to the Veterans' Administration in connection with any claim is subject to losing all his rights and privileges as a veteran.

Your study revealed that a veteran could forge or alter a VA check and forfeit all his rights, while the same action with respect to a social security check or a postal money order would not affect his VA benefits. Two veterans, one of them disabled and in receipt of compensation, commit the same offense. Both forfeit their rights to VA benefits. The disabled veteran is, in effect, receiving a life sentence in the loss of his compensation, while the other veteran, by comparison, escapes punishment.

These are but a few of the inequities brought to light by your study. We urge you to consider corrective legislation during this session of Congress.

CONCLUSION

The matters that we have discussed this morning merely touch upon some of the highlights of AMVETS legislative program. With your permission, Mr. Chairman, I would

like to submit for the record the complete digest of our legislative program as adopted by our most recent national convention. Our legislative director will present more detailed testimony on many of these subjects as the session progresses.

In this, my first public appearance before the Committee on Veterans' Affairs, I desire to reaffirm that AMVETS is dedicated to promoting the welfare of the veteran, particularly those who are disabled, and their dependents. We know that this committee and its capable staff are similarly dedicated. We pledge to you our cooperation and objective thinking in arriving at our mutual objectives.

The Value of Freedom

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ROBERTS. Mr. Speaker, I think the Members of Congress will be interested in reading an address delivered by Circuit Judge W. D. Debardelaben, of Anniston, Ala., at a recent meeting of the Helping Hand Club of Anniston.

The address follows:

THE VALUE OF FREEDOM

Mr. President and my friends, your organization's gracious invitation to take part in this meeting accorded to me a rare honor, distinction, and pleasure, for here I find an outstanding leadership in our community.

In casting about for a subject for discussion with which I have some limited familiarity and appropriate, as I believe, to fit this occasion, I have chosen for presentation a matter which I have named "The Value of Freedom." Although this matter to be laid before you has often been stated in varying forms, nevertheless, I subscribe to the thought that repetition is justified to remind you and me of the luxury of freedom wrapped about us as American citizens under the law of this land. Constant consciousness and jealousy of its rewards are indispensable in the perpetuation and defense of our liberties.

From the beginning of time man has been in constant quest of a perfect and just freedom. God, in His infinite wisdom, wove through His sacrifice and example the righteous pattern of life threaded with the divine pronouncement of a just freedom for all of us, should we obey His commandments and support His cause.

American justice and its counterpart, liberty, were guaranteed and made secure by the people themselves upon the adoption of the Constitution and its amendments of the United States. Our Constitution, bought with the lives, blood, and sacrifices of our forebears, and kept inviolate by succeeding generations, which Constitution claims the distinction in the annals of literature as the shining masterpiece of composition and superb importance to all Americans, outranked and superseded in importance by only the Holy Bible, itself. This instrument of ours, I say, must at all costs be preserved, and it will be, provided we all do our full share to this end. It protects us, comforts us, and inspires us, and sets the true course to be followed in the relationship of men, with the full and complete recognition of the existence of a supreme being. We, its beneficiaries, must ever be vigilant and alert to defend it against all enemies from within and from without our country and to keep it in our service.

The first 10 amendments, known as the Bill of Rights, to the Constitution of the United States rings out in clear and unmistakable terms freedom for all people who come under the influence of its protection. I feel sure that all of us at one time or another have read the Bill of Rights, but even so, I hold to the proposition that we should, from time to time, refresh our recollection of its contents and to appreciate anew its provisions. With this idea in view, and with your indulgence, I now present to you the Bill of Rights:

"ARTICLE I

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof: or abridging the freedom of speech, or of the press: or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

"ARTICLE II

"A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed.

"ARTICLE III

"No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

"ARTICLE IV

"The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized.

"ARTICLE V

"No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces or in the militia, when in actual service in time of war or public danger, nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb: nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law, nor shall private property be taken for public use without just compensation.

"ARTICLE VI

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

"ARTICLE VII

"In suits at common law, where the value in controversy shall exceed $20, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise reexamined in any court of the United States, than according to the rules of the common law.

"ARTICLE VIII

"Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

"ARTICLE IX

"The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

"ARTICLE X

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

There you find inspiration for all of us.

Throughout the length and breadth of this land thousands of our boys have borne arms from time to time in defense of our country, enduring the brunt of sacrifice with courage and bravery and earning for themselves the eternal respect and gratitude of all free men. Yes, many of them in the cause of liberty, gave the last full measure of their devotion and now rest in eternal sleep. Let us always keep in our memory an honored place for those who gave so much for us.

As is well known by us, our system of democratic laws consists of three branches of government: the legislative, executive, and judicial, each with its peculiar sphere of limited authority. Thus established we find a time honored form of government by checks and balances so designed that no branch thereof is permittd to usurp and encroach upon the rightful powers of the other branches. All of this is provided for in the name and interest of freedom and justice. No manmade government insures more freedom for the people. This is so for the governed enacted the laws through their chosen representatives for limited terms of office, and they cannot continue therein after the expiration of their tenure of office, although legally eligible to succeed themselves, except at the pleasure of a majority vote of the people. This is democracy in its truest form. Democracy says that those who govern must derive this right from the consent of the governed.

We Americans are all stockholders in the government we have set up for ourselves and the value of the share of stock we hold therein is dependent upon our individual efforts to sustain, maintain, and improve it. No organization, by whatever name it may be called, can prosper to its fullest extent without the constant cooperation of its officers and membership. To function properly each must put his hand to the task, for then and only then will there be a full realization of the benefits desired.

The riches and abundance of America were made possible through the freedom of the individual to manufacture his goods, till his soil, and harvest his crops, ply his trade, and follow his profession in a competitive economy and to sell his talents and products in an open market. Thus we see the real incentive—freedom—stimulating the American citizen to use his capabilities to the fullest degree in the economic field, for he has the certain assurance that he shall reap such reward as his efforts produce and nothing more. Herein lies the financial prosperity of America basking in the sunshine of democracy and guided to its present destiny by the divine authority.

To continue our journey on the road of freedom and to enjoy the happiness that it gives at every milestone along its way, we must be ever mindful and have an abiding conviction of the value of our privileges as American citizens and be ever sensitive to the challenge of all antidemocratic movements acting to destroy our precious heritage.

Peace in our times, as well as for those who come after us, is the uppermost thought of all right-thinking people everywhere. To achieve this there must be a reawakening of the spirit of fellowship all over the world and the unceasing practice of the divine doctrine "Do unto others as you would have them do unto you." Unfortunately, this spirit of fellowship does not prevail in some places on this earth, consequently, in the interests of self-preservation, we must keep and maintain a mighty Army, Navy, and Air Corps, equipped with the latest sinews and armaments, and bear the heavy burden of taxation for this purpose. Let us all bear in mind that whatever may be the cost in taking these protective measures, the cause of freedom warrants it. We shall and must assess the value, as American citizens, of our greatest

assets which are, in general: freedom from want, freedom from fear, freedom of religious worship and freedom of speech and freedom of the press we enjoy from day to day, which you and I are prone to consider as commonplace. We should give our thanks from day to day to almighty God for the many blessings He has bestowed upon us in this free land—constantly reminding ourselves that in many other countries such freedoms do not abound.

Freedom in all her glorious aspects finds the true symbol in the flag of our country, bearing in majesty, in beauty, and dignity the visual message, the import, and significance of her calling.

This flag of ours embraces the hopes, the aspirations, and the inspirations of all Americans, wherever they may be, for the continuation and survival of the democratic process and the liberties we claim as our own.

With God's help and the faithful allegiance of all true Americans to her indispensable cause, she, Old Glory, will forever wave in proud supremacy and with victory won against all enemies who may challenge her eminence in the sun.

Poverty in economic advantages; poverty in educational advancements; and poverty in health are all to be deplored, but the worst poverty of them all is the poverty in freedom.

Freedom, as we all agree, is the firm foundation upon which is rested and built our American fortress of democratic privileges. Without this bedrock foundation, the structure of Americanism established thereon would collapse, and thus we would find ourselves committed to the tyranny of blackness, despair, and oppression. Freedom, I believe therefore, is the most honored and respected word in any language, with the exception of the revered word "God," for God is the supreme being of the universe and the ruler of all mankind, unto whom we, His followers, offer our petitions, supplications, and prayers from time to time for His divine guidance and direction in the preservation of our freedoms and well-being.

The darkness of tyranny covers many areas of the world today, spread and controlled by the godless ideology of communism. One such area is Budapest upon which recently the eyes of the world were focused on the struggle of its people for liberation from enslavement. These brave freedom warriors bought with their sacrifices, daring and even death a short-lived freedom. This, their love of freedom, transcended all other considerations and their acts and deeds warrant the plaudits of everyone who believe in right and justice.

I believe that freedom for the downtrodden people of Budapest will not long be denied, for their will for victory is everlasting and determined. No power can long endure without justice supporting it.

The Budapest incident is a concrete illustration of what it means to be deprived of liberty and freedom.

Let it, therefore, be always remembered by we Americans that freedom may in piecemeal or all at once be denied us, even by forces operating from within our country, if we do not remain alert and ready at all times to combat with all we have the antidemocratic forces which seek to conquer and subdue us by various guises and means and destroy the true meaning of our Bill of Rights as it is clearly written.

What is America?. God built a continent with glory and filled it with treasures untold. He bedecked it with soft, rolling prairies and pillared it with thundering mountains. He studded it with sweetly flowing fountains and encompassed it with long, winding streams. He graced it with deep shadowed forests and filled them with song. These treasures would have meant little if myriads of people, the bravest of the races, had not come, each bearing a gift and a hope. They had the glow of adventure in their eyes and the glory of hope in their souls, and out of them was fashioned a nation blessed with a purpose sublime. They called it America.

Freedom has been woven into the fabric of our lives as Americans. There are those who would confuse with high-sounding phrases; others who would swap it for the tasteless pottage of security; yet others who would encompass and limit it with their definitions.

But freedom is not a thing to be pinned down and defined or to barter away. It is many things. It is everything. It is, in fact, all that we have.

Freedom is the light shining in the window of a church house. It is the call of school bells on the frosty air. It is the pride of a man who says, "This is mine." Freedom is the whistle of a train in the night and the knowing that you might be aboard.

Freedom is the vagabond who sleeps by the tracks, the clerk who decides to go in business for himself, the dreamer who works on a new machine, or the sign that says, "Gone fishing. Back tomorrow." Freedom is the key to the front door, the pencil in your pocket. It is the postcard you send your Congressman, the letters you write, the paper you print, the words you speak. It is your right to agree or disagree, and it is that hushed, fateful moment behind the drawn curtains when you are alone with your ballot. It is your right to go to church or to stay home and sleep.

It is the radio by the window with the knob that sends long pointed fingers searching across the world for voices. Many voices. Any voices.

Freedom is the gun in the top drawer, your top drawer in your home. It is the rifle on the rack above the kitchen door. It is the hardware store where you can buy a box of shells and no questions asked.

Freedom is the luxury of rest, the sound soul-building sleep of one who goes to bed at night afraid of no man. It is the right to grow; to be more of a person this year than last; to become learned if you can, or rich if you are able.

Freedom is the bounty of the harvest, the foods you buy as you please, and use as liberally as you like.

Freedom is the gladness of a little boy running home for supper, and the bright new day that is tomorrow, yours to use and to treasure.

Freedom is the right to hold and to use whatever inventions the future may bring us; but it also is the tear you brush away as the parade goes by, and the bugles cry, and the drums rolls out their stirring notes of a patriotic air. It is some of the sorrow and glory in your heart.

It is the dawn wind on a high mountain peak, the innate respect for the human form, the love of man, the fear of God.

But freedom isn't free. It is the dearest thing we have. It was bought for us and handed down to us at the cost of life, of loneliness, and of torture.

The value of freedom can be no better voiced than in the inspired and immortal words of the patriot, Patrick Henry, of historical fame, when he said for all ages to hear: "I do not know what course others may take, but as for me, give me liberty or give me death."

The 56 American patriots, who signed the Declaration of Independence, our honored and cherished document of freedom from tyranny, knowingly accepted the risk inherent in winning liberty and in so doing they on freedom's altar pledged our lives, our fortunes, and our sacred honor.

You and I, as individuals are responsible for the successes and failures of America. What we do, or fail to do, as citizens, will add up to the strength or the weakness of our Nation.

How To Encourage American Investment Abroad

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I presented before the international section of the New York Board of Trade on February 10, 1959:

HOW TO ENCOURAGE AMERICAN INVESTMENT ABROAD

Mr. Chairman, it is a pleasure for me to join you today to discuss the subject, "How To Encourage American Investment Abroad." This very important problem engages your interest as American businessmen and my interest as a Member of the U.S. Congress. We appreciate the critical importance of this subject and of the need for developing public policy and programs that are adequate.

The London Economist, a week or so ago, put the problem very well. It said that "Provided there is no thermonuclear war, the whole future balance of international manpower is likely to depend on one factor: On whether the poorer nations can be offered the prospect of getting richer within the free world's economic and political system than they would within the Communist one."

When we talk about foreign economic policy as a whole and foreign investment policy in particular, we are talking about policy for national survival. There is no question about it. We are engaged in a life-and-death struggle to save and promote the kind of social, political, and economic system—in short, the kind of world order—that is the heritage of Western democracy. We are trying to do this, challenged by the most artful and persistent foe that we have ever faced. The conflict is all the more trying because we are waging it at this stage without adequate weapons. We have, in fact, an excessive preoccupation with the military side of any prospective conflict. I do not say that military preparedness is not absolutely essential—it is, but by being in the soundest military posture we are assuming hopefully that the Russians will not begin a war with us. Thus, military preparedness only buys time and prevents the conflict from breaking out into a shooting war. The outcome of the long-run competition will not depend on military weapons. The battlefield where the conflict is really joined today and for the future is in the competition for men's minds and allegiances and hence it is where our foreign economic policy, as the economist pointed out, is of such critical importance.

I am afraid that in this department of our strategy for survival we are not well stocked with weapons. In fact, not only have we not devised and put into use the kinds of policies and programs that are essential but we have had a bad habit of stumbling and falling back. One example has come to me very graphically. I am sure that you have all read about the Turbine case under the Buy-American Act which led to a Government contract being awarded a domestic manufacturer despite the fact that the British bidder was $300,000 below the American bid. There are many wrinkles to this case, but what is most striking to me is that the contract was awarded to the domestic firm, despite all the rules and regulations of the Buy-American Act and the Executive or-

der that was proclaimed to implement it, on the grounds of national security. That is, we are asked to believe that letting the contract in England would have jeopardized the national security of the United States. The reason that was given—national security—was just an excuse because it was the only excuse available. What is appalling is the use of such an excuse.

Not only is it ridiculous to think that our national security would be impaired if the two turbines were produced by the British firm in a country that is perhaps our staunchest ally, but what is even more significant is the narrow parochial meaning that this action gives to the concept of national security.

Our national security is not impaired by a liberal trade policy. Quite the contrary. It is through the expansion of trade and investment that we can, in a very real sense, assure our national security. The concept of national security has meaning, of course, only in the context of the threats and dangers that beset us. It is World War I thinking at its worst that defines national security as the maintenance of economic isolationism. In a world where the military threat is one posed by thermonuclear weapons delivered by intercontinental ballistic missiles, if a full-scale war ever gets started, it will be decided in a matter of days. The target of our enemies will be Continental United States. We enjoy no military isolation. How can we bemuse ourselves with economic isolation? No, even on purely military grounds, this kind of national security thinking is a phony, at best, and dangerous, at worst. The danger stems from the fact that this attitude shows no comprehension of what the real issues are and what we must do to wage the cold, nonshooting, war that we are already in.

What we must do and I think, if we apply ourselves, can do very well indeed is to give our kind of economic system a chance to work its wonders throughout the world. We must realize that unlike the Soviet Union that can mobilize all its resources through the State by engaging in State trade and aid activities, because we believe in free enterprise, the role of Government in our society is necessarily limited. That makes it all the more important that we use governmental policy properly to produce the results we want to achieve. We want to see the growth of international trade in an increasingly free environment. In this way, we can stimulate productivity throughout the world and thus increase standards of living. By avoiding conflicts over trade through restrictionist policies, we would avoid some of the most damaging blows to amity and cooperation among the free world countries.

We seek the expansion of private investment. Private investment through the capital and techniques that it employs is the engine of economic growth. Through its growth we look to the expanded use of economic resources throughout the world and that is the essential base for economic progress.

I want to concentrate today on private investment policy since this seems to me to be a critical area from the point of view of Government policy today. That is not to say that trade policy is not significant or that there is not an intimate relationship between trade and investment policy. I think there is, but we have an established trade policy. Last year the trade agreements legislation was renewed for an unprecedented 4-year period. We are, however, deficient as far as investment policy is concerned. This is a subject that has been under intensive study and discussion for a decade but as yet we have not broken out of the chains of uncertainty and come forward with a meaningful policy.

From what we know about private investment and the incentives and obstacles that promote and deter it, I think we can fairly conclude that it is in the field of tax reform that the most effective incentives to private foreign investment can be found. To be sure, the Government can moderate the nonbusiness risks of doing business abroad through such things as the investment guaranty program and through the consummation of treaties and conventions for the protection of private property and to assure equal rights for American citizens and corporations. But when we talk about private investment, we talk about economic decisions by American corporations that are made on the basis of a calculated profit. Foreign investment, by and large, does not assure the investor that he will earn sufficiently higher returns than he can on domestic investment. Through tax policy, the take-home profit for foreign investment can be enhanced and, in addition, the investor can be encouraged to commit his earnings from foreign operations to new investment.

I know that there is a view held in some quarters that the tax system is not an appropriate instrument to use to achieve public policy objectives. I regard that as an unduly sterile approach to tax policy. It is clear to begin with that our system of taxation does, in fact, impart willy-nilly incentives and disincentives to certain types of economic activity and business pursuits. Any system of taxation is bound to.

Moreover, there have been consciously built into the tax system incentives of one sort or another. The real question is whether any particular change in tax policy that is proposed will be successful in accomplishing a legitimate and desired goal. I think that in the case of private investment, because we want such investment to continue to be private, tax reform is in many respects the only good and effective instrument we have. Now, even aside from the question of providing tax incentives to private foreign investment, it would seem to me that our tax system as it applies to foreign source income could stand reform on equity grounds alone. The operation of the foreign tax credit limitation is an example of this. It is a happy coincidence that in suggesting intelligent tax reform we can accomplish both the objectives of bringing greater equity into the tax picture as well as adapting the tax system so as to provide proper incentives to private foreign investment.

As you know, I introduced a bill on the first day of this Congress, known as H.R. 5, which I believe will help accomplish the objective we have in mind. I want to say at the start that while I believe H.R. 5 to be a good bill, soundly conceived, and one that will bring important benefits, it is by no means perfect in every detail. Some changes have already been brought to my attention that may well deserve incorporation in the bill. Most of these have been of a complicated technical nature and have to be given careful scrutiny. The essential thing to my mind is to strike a balance by including, as I believe I did in H.R. 5, provisions that are realistic and effective. I am sure that not everyone in the business community would feel that H.R. 5 does everything that he feels is necessary, but I would suggest to such people that they realize that we may be in danger of accomplishing nothing if we seek to accomplish everything. That would be as foolish as throwing out the baby with the bath water.

The principal provision of H.R. 5 is that establishing a special class of domestic corporation known as a foreign business corporation to conduct the foreign operations of American firms. The foreign business corporation would enjoy the privilege of deferral of U.S. taxes on its income.

This proposal would, therefore, permit the domestication of foreign base corporations established in tax haven countries and would accord the same tax benefits that are enjoyed by such corporations to the foreign business corporation. The question may well be raised as to what advantage the foreign business corporation form offers American business in view of the fact that they can already avail themselves of the tax advantages of this form through the incorporation of holding companies in foreign tax havens. The answer, I think, is that there are significant advantages and the best test of this is that the American business community has, in the hearings which our subcommittee held, expressed its vigorous interest and support for the proposal.

This support reflects several factors. Foreign incorporation may be a cumbersome and expensive proposition. It may mean committing personnel to a foreign country; it means putting your foreign operations under the sometimes uncertain tax policies of a foreign sovereignty. It also means some uncertainty as to whether the United States tax benefits will continue to be enjoyed. As you know, some of the advantages of a foreign base corporation depend on regulations of the Treasury Department.

These could presumably be revised at some time in the future. Moreover, some commentators have been casting sidewise glances at foreign base corporations and suggesting that these are nothing more than tax evasion propositions. By providing explicitly in U.S. statute for the foreign business corporation and by according status and permanency to the privilege of tax deferral and the other collateral tax advantages, a great deal of the uncertainty that presently exists would be dispelled as would a good deal of the inconvenience and expense of foreign incorporation.

Thus, there are, it seems to me, tangible advantages to the American business engaged in foreign operations to be found in the foreign business corporation proposal. I think that it is as well an important and effective stimulus to expand private foreign investment. Recent Department of Commerce studies have shown that something in excess of 50 percent of the earnings from foreign operations are retained for reinvestment purposes.

Tax deferral recognizes this practice and encourages it by, in effect, giving the foreign investor an interest-free loan equal to the amount of income that would have had to be paid to the U.S. Treasury.

The provision of the bill contained in section 3 relating to transfers and reorganizations should be read in the context of the foreign business corporation provisions. This provision would permit the transfer of property from a U.S. corporation to a foreign corporation without any tax penalties resulting from the transfer. Thus, foreign operations presently organized in the branch form can move into a foreign corporation and enjoy the advantages that that form of enterprise may afford. I would expect that in many instances the foreign branch activities would be shipped into the foreign business corporation. Since these are transfers entirely between domestic corporations, no tax consequences would, of course, arise and, therefore, no special legislation is required.

There is one respect in which section 3 of the bill that I have been referring to might very well be changed. As it presently stands, it does not permit the liquidation, say, of a Panamanian corporation and the tax-free transfer of the assets of such corporation to the foreign business corporation. To the extent that we wish to have the foreign business corporation form used instead of a foreign holding company, where the investor decides to liquidate his foreign base corporation and reorganize his foreign activities under the foreign business corpora-

tion, he should be permitted to do so without incurring tax liabilities.

Section 4 of the bill extends, with very minor modifications, the present Western Hemisphere trade corporation provisions and the consequent tax advantages to foreign source income without regard to the geographic source of such income. The extension of Western Hemisphere trade corporation treatment to the Eastern Hemisphere seems to me to be entirely reasonable. In 1942 when the Western Hemisphere trade corporation provision was first enacted, there may have been special considerations of foreign economic policy favoring special treatment to Western Hemisphere trade and investment.

Today, the Western Hemisphere does not stand in a unique position with respect to the rest of the world. Increasingly, our foreign economic policy objectives have come to comprehend the entire free world. To implement these broader objectives, it is appropriate to generalize what has hitherto been very special treatment.

Tax reduction, of course, has a very direct effect on increasing the profitability of foreign operations, and it is for this reason that it is perhaps the most potent tool in the tax arsenal. It must be recognized, however, that the revenue consequences of across-the-board tax reduction are more serious than of other proposals, and for this reason, this provision of my bill is likely to occasion the most opposition.

What I think is not sufficiently appreciated about section 4 is that any tax reduction is not, in effect, an across-the-board reduction. A 14-point reduction will not yield 14 points of tax abatement on all foreign source income. In those cases where the foreign tax rate is above 38 percent, the amount of the abatement will be commensurately less. What is significant, however, is that, by and large, the lower tax rates are found in the less developed countries.

Hence, the maximum benefits from the 14-point tax reduction will be enjoyed on income earned in such countries. The 14-point proposal, therefore, has in practice a selective effect, and it is a selective effect which coincides with the high priority objectives of public policy in the field of private investment; namely, the stimulation of private investment in the less developed areas of the world.

Skipping section 5 for a moment and turning to section 6, the section relating to tax sparing, this provision takes account of the fact that even in many underdeveloped countries tax rates are high and present a barrier to the expansion of investment. If underdeveloped countries wish to enact incentive tax legislation in order to foster private investment, they should be encouraged to do so. The operation of our foreign tax credit system, however, at present frustrates the achievement of such an objective. To the extent that foreign tax rates are lowered, the U.S. tax liability of the U.S. taxpayer is generally increased. The Treasury and State Departments have been much interested in this problem and have recommended the use of tax treaties containing tax-sparing provisions as the appropriate solution.

H.R. 5 suggests, as an alternative, that there be a legislative mandate to recognize incentive tax sparing by foreign countries as taxes paid for the purpose of the U.S. foreign tax credit. Embodying this policy in legislation seems to me to have many virtues. The principal one, of course, is that it avoids the very important criticism that can be directed at tax sparing through treaties, namely, the circumvention of congressional authority in the field of taxation. In addition, under a general legislative mandate, the Secretary of State would not have to negotiate complicated and time-consuming tax treaties. He could, if he wished merely certify unilaterally which foreign tax sparing legislation would be accorded the treatment provided for. Alternatively, he could use this general authority to negotiate executive agreements in order to obtain reciprocal benefits. Such agreements are simpler to negotiate and do not require the advice and consent of the Senate. Thus, the tax sparing provision of section 6 continues the principle of selectivity inherent in section 4 and gives it broader scope.

Sections 5 and 6 of the bill are provisions that can be supported on equity grounds, pure and simple. Affording the taxpayer the option to choose between the country by country limitation and an overall limitation on the amount of tax credit he can take against his U.S. tax liability, would give effect to the principle of equality of treatment on which the foreign tax credit provisions are based. At present, under the existing country by country limitation, foreign source income can be subject to a higher rate of taxation than domestic source income of an equal amount. By permitting the option of an overall limitation, this inequity would be removed in those instances where the taxpayer derives foreign source income from other countries where he has unused tax credits. Section 7 similarly rectifies an inequity in present law relating to the question of gain or involuntary conversion of property of foreign subsidiaries. There does not seem to me to be any good reason why a domestic parent corporation that has insured the property of its wholly-owned foreign subsidiary must pay a tax on the insurance proceeds if the property of that subsidiary is involuntarily destroyed or converted. This contingent tax penalty that may arise against the domestic parent deters investment in those countries in which it is either impossible or difficult to secure arequate insurance coverage and where, as a result, the domestic parent must insure the property involved.

H.R. 5 in itself represents, I firmly believe, a balanced and moderate proposal for tax reform in the field of foreign source income that I am confident would go a long way in providing the kinds of incentives that are necessary in order to promote the expansion of private foreign investment. There really is nothing startling new or revolutionary about these proposals. In fact, they have been under consideration for some years. I am persuaded of one thing, however: The time has come to do something about the subject. We can no longer afford the vacillation and delay that has characterized discussions of public policy in this critical area. I am encouraged to learn that the public advisory groups established to advise the President in this field will come forward with constructive recommendations in the tax leld. We, of course, have to wait for the publication of these reports and findings in order to ascertain what these specific proposals are. But I am encouraged by the initial evidence, at least, that the administration in Washington is bestirring itself, and I hope that a good conclusion will come out of these efforts.

Meanwhile, it is up to the business community, alert businessmen such as yourselves, who are concerned with private enterprise and our foreign economic policy, who are acutely aware of the challenges that confront us, to work unstintingly for the development of sound and constructive policy in this area. In the final analysis, you are the people who will decide what our country will do.

Alabama Delegation Urges Consideration of Coosa-Alabama River Development

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ROBERTS. Mr. Speaker, the development of the Coosa-Alabama River system has been authorized for some 14 years. An item in the Public Works Appropriation Act, 1956, 84th Congress, called for a comprehensive investigation of the entire river system. An interim report has been submitted to the Board of Engineers for Rivers and Harbors. However, the Board has not scheduled this report for its next meeting in March of this year. Inasmuch as this project has been authorized and a favorable report submitted to the Board and since this project has been inserted as a Senate amendment to the Public Works Appropriation Act for the past 3 years, the Members of Congress affected by this project have submitted a letter to the Chairman of the Board, Gen. Walter K. Wilson, Jr., requesting the Board to schedule this project for the March meeting. Under unanimous consent I ask that this letter be printed in the RECORD:

Maj. Gen. WALTER K. WILSON, Jr.,
Chairman, Board of Engineers for Rivers and Harbors, Office, Chief of Engineers, T-7, Gravelly Point, Va.

DEAR GENERAL WILSON: We, the undersigned Members of Congress, respectfully urge that the Board of Engineers for Rivers and Harbors consider the report on navigation plans for the Coosa-Alabama River system at their meeting early in March of this year.

It is realized that the agenda for this meeting has been established. However, due to the importance of the development of the Coosa-Alabama River system and in conformance with the remarks of President Eisenhower in his state of the Union message in 1955 indicating that the plan for the development of this waterway is the kind of partnership he would like to see, we urgently request that this report be placed on the agenda for consideration at the March meeting of the Board.

As you undoubtedly know, the development of the Coosa-Alabama was authorized in the 79th Congress in 1945, including construction of a multipurpose dam at Miller's Ferry and two other dams on the Alabama River. Since that time a private concern, the Alabama Power Co., has begun a multimillion-dollar series of dams on the upper stretches of the waterway. The Federal Government has not kept pace, and the work on the Alabama River remains unstarted.

An item in the Public Works Appropriation Act, 1956, Public Law 163, 84th Congress, called for a comprehensive investigation of the entire Alabama-Coosa River. In partial response to this act, an interim report was prepared by the division engineer, South Atlantic Division, and was forwarded to the Chief of Engineers early last fall. This report indicates that the reporting officers have found that the estimated benefits exceed the estimated cost and early construction of the project is warranted.

We realize that, while there is only a short time prior to the Board meeting in March to consider and analyze the data submitted, we believe that the importance of this project makes it imperative that action be taken which will permit the start of construction at the earliest possible date.

Sincerely yours,

LISTER HILL, U.S. Senator; JOHN SPARKMAN, U.S. Senator; ERWIN MITCHELL, FRANK BOYKIN, GEORGE GRANT, ALBERT RAINS, KENNETH A. ROBERTS, ARMISTEAD SELDEN, GEORGE ANDREWS, ROBERT E. JONES, CARL ELLIOTT, GEORGE HUDDLESTON, Members of Congress.

Salute to the National Guard

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. McGOVERN. Mr. Speaker, on February 22, National Guard units of my State, South Dakota, observed Muster Day. I should like to take this opportunity to express my personal appreciation for the service to all of us provided by the men of the guard. The valiant role played by South Dakota guardsmen during World War II is a vivid memory of mine going back to the early 1940's when many of my college classmates were mobilized as guard units to defend our national interest in the critical opening months of that great struggle. National Guardsmen have served us well in other conflicts and have conducted themselves with great credit during peacetime.

A fitting tribute to the National Guard is the editorial which appeared in the Rapid City Journal for Saturday, February 21, which follows:

GUARDSMEN HANDY TO HAVE

The National Guard Sunday celebrates Muster Day. It is the birthdate of Gen. George Washington who was a member of the Virginia Militia, and it is a time to honor the guardsmen, as we call them now.

In its foundling years, this Nation had to depend on its civilian soldiers—Washington's militia—and we still must plan on our guardsmen who rate as the Nation's oldest fighting organization.

We tend to forget our National Guard during years of peace.

It seems strange that this should be; that after 300 years of fighting Indians, invaders and dictators, floods, fires, and tornadoes, the National Guard should have to prove itself. But prove itself it did, and in 1945, after the smoke of 4 years of battle had cleared away, National Guardsmen had won 14 Medals of Honor and 88 Presidential unit citations. Eighteen National Guard Infantry Divisions had fought throughout Europe and the Pacific, compiling one of the proudest combat records in our history.

The guard's participation in World War II is a perfect example of the unyielding spirit of free citizens who take up arms in the defense of their Nation. And there were dark hours during the war when it was that spirit alone which turned the tide of battle.

Week in and week out, while most of us are enjoying the leisure of hours after work and of weekends, 470,000 Army and Air National Guardsmen are giving of their time in the most vigorous training program of their organization's history. They know that in modern warfare a citizen must be not only willing, but prepared to fight as well.

We are much safer for having them.

Boyhood Heroism

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FOLEY. Mr. Speaker, the problems facing the growth of America are natural subjects of concern for all of us as parents, public officials, and citizens. Great publicity is given to individual delinquent acts involving a very small porcentage of our young people. Very little or no recognition is given to the many acts of heroism which daily are performed by a much larger percentage of our young citizens. Because of this general omission, I am proud to bring the attention of the Members of the House to a recent act of boyhood heroism by Jimmy Lewis of Eckhart, Md. I feel it will warm your hearts and stir your pride as it did mine. There are many unsung Jimmy Lewises who daily show kindness toward their fellow man and devotion to the welfare of dumb creatures.

In their honor and to the honor of Jimmy Lewis, I have inserted the true story of the saving of the lives of Rex, Bing, and Sam, three beagles:

PLAQUE WILL BE GIVEN TO ECKHART BOY

A plaque will be presented to Jimmy Lewis, 17, of Eckhart, by the Animal Welfare Society for his heroism and kindness in rescuing three beagle dogs which were trapped in an abandoned coal mine last fall.

According to Mrs. W. Earle Cobey, president of the Animal Society, the organization's executive committee took note of Jimmy's action after a news account of the rescue was published. Immediate steps were taken to show him some recognition.

The plaque is to be presented at the meeting of the society January 26 at 7:30 p.m., in the Cumberland Free Public Library. At this meeting, the annual report for 1958 will be given and officers will be elected for 1959.

Mrs. Cobey, commenting upon the award to Jimmy Lewis, recounted the report of the rescue of the three beagle hounds, Rex, Bing, and Sam, as it was first recorded by Herbert L. Knepp, president of the Western Maryland Wildlife Federation. The report shows that:

George W. Lewis, Jimmy's father, was hunting with the dogs when they sighted a huge cat—the kind that goes wild and feeds on game—and chased it into the mouth of the abandoned mine. Fallen timbers and rock had so clogged the mine tunnel that the dogs were able to squeeze through, but were unable to find their way out again.

The elder Lewis had almost given the dogs up for lost when Jimmy remembered an old air shaft that descended to the mine. Checking at this point next day, the dogs were heard whining below, where, it is presumed, they went to get fresh air.

Jimmy prevailed upon his father and two of his friends, William Filsinger and Noah Shroyer, to lower him into the air shaft on a rope—a distance of some 50 feet from the surface—to try to save the dogs. Reluctantly, the men acceded to the wishes of the boy, and he went down into the abandoned pit, where weakened timbers could have sent tons of rock and earth tumbling in upon him. Jimmy put the joyous pups in burlap bags and the men pulled them to the surface.

Jimmy lives at Eckhart with his parents, and is student manager of the Beall High football team. He is advisor to the Eckhart Square Circle Boys Club.

THE ANIMAL WELFARE SOCIETY
OF ALLEGANY COUNTY, INC.,
Cumberland, Md.

Mr. JAMES LEWIS,
Eckhart, Md.

DEAR JIMMY: It is with a great deal of pleasure that we, the Animal Welfare Society of Allegany County, Inc., present to you this special award of 1958 in recognition of your courageous act in saving the lives of three beagle hounds on November 23, 1958.

We feel that you are a very worthy recipient of this award, the first we have ever presented anyone.

Presented January 26, 1959.

VIRGINIA B. COBEY,
WINIFRED A. BIGLER,
HELEN POWELL WISE,
DOROTHY BORDEN,
LOUIS B. YOUNG,
Executive Committee.

JANUARY 26, 1959.

JIMMY LEWIS,
Animal Welfare Society, Cumberland Free Public Library, Cumberland, Md.:

My congratulations for the recognition being so deservedly given you this evening by the Animal Welfare Society. Your heroism and kindness in rescuing Rex, Bing, and Sam is an examplification of the best qualities of true American boyhood.

My commendations also to the individuals and organizations which have taken due note of your noble action.

With sincere best wishes to you for all future success.

JOHN R. FOLEY,
Member of Congress.

Rev. Ralph A. Weatherly, Pastor of Grace Episcopal Church in Kingston, Pa., Announces Plans for Retirement

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of Saturday, February 14, 1959:

GRACE RECTOR'S RETIREMENT

The community and the diocese of Bethlehem will share the mixed emotions of Grace Episcopal Church, Kingston, in the wake of the announcement that the Reverend Ralph A. Weatherly will leave the westside charge on October 1. After 41 years in the priesthood of the Episcopal Church, 31 of which were in the service of Grace Church, there will be general agreement he has earned a measure of leisure. The fact that two sons have followed in his footsteps, thus paying him a high compliment, also will have a tendency to modify the normal distress, resulting from the knowledge a notable career is approaching its close.

A North Carolinian by birth and the son of an educator, the Reverend Mr. Weatherly has been at home here for three decades. The community has respected him as a good neighbor and citizen as well as an outstanding churchman. It has been grateful for interest in its welfare, as manifested in many organizations as well as in his church. One who possesses the courage of his convictions, he has never hesitated to make his position clear on issues, in which the public interest was involved. A sense of humor has not been the least of his assets.

The diocese of Bethlehem will miss his counsel and leadership. As chairman of its standing committee, he has occupied a key post, thus making his influence felt far beyond the confines of his congregation.

Greater Wilkes-Barre will wish him well in his future endeavors.

Right on Target

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. CHAMBERLAIN. Mr. Speaker, I am cheered by the fact that certain responsible editors in our country have refused to be buffaloed into the jitters by the current war of nerves.

I am glad to see that the editor of the Evening Star in Washington has commended Adm. Arleigh Burke, Chief of Naval Operations, on his recent statements regarding the stupidity of trying to play a missile-by-missile game with the Russians, and the necessity rather for maintaining enough strength to retaliate after the first blow, and in such force that no one will risk making the initial strike.

I submit for inclusion in the RECORD the article in the February 23 copy of the Star:

RIGHT ON TARGET

Adm. Arleigh Burke, Chief of Naval Operations, has scored a direct verbal hit on the heart of the missile controversy.

Addressing a South Carolina audience, the admiral decried any numbers game approach to appraising our missile strength in relation to Russia's. The important thing, he said, is not whether Russia has half as many or twice as many ICBM's as the United States. What is important, so far as discouraging an attack on this country is concerned, is that we maintain enough strength to retaliate after the first blow has been struck, and to retaliate in such force that no one will risk making the initial strike.

Admiral Burke believes we have this retaliatory capacity today and that the Russians know we have it. Furthermore, he says, we can and will retain this retaliatory capability. In his judgment, we should not engage in "an endless arms race with the Soviets in ballistic missiles, any more than we have attempted to race them in numbers of submarines or Army divisions."

The reassuring thing here is Admiral Burke's belief that we have and will retain the capacity to destroy Russia if we are attacked. It is on this point that the current controversy hinges, the administration's critics contending that we lack or will soon lose the essential retaliatory capacity. At bottom, of course, this is a matter of judgment. Admiral Burke could be wrong. But so could the critics. Admiral Burke is thoroughly competent to judge a matter of this kind, and, despite insinuations that the Chiefs of Staff have been pressured into making soothing statements, we do not believe for a moment that he would make a public speech of this nature unless he fully believed his own words.

Fast-Thinking Sheriff Miller Shows Courage

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. SPRINGER. Mr. Speaker, in this telephone, radar, and automobile age we constantly think in terms of law enforcement as the FBI, the city police, and the State police.

There are still left some really good law-enforcement people at the sheriff's level. In downstate Illinois we ordinarily look to the sheriff for all of our rural protection.

One of these fine sheriffs in my congressional district is Sheriff Eugene Miller in Douglas County, Tuscola, Ill. He recently pulled off an arrest that would have done credit to Wyatt Earp, Matt Dillon, or any other of the famous old sheriffs that show up on Saturday night's TV. For this fine piece of work the Champaign-Urbana (Ill.) News-Gazette wrote an editorial on last Friday, February 20, 1959, and I herewith append it:

[From the News-Gazette, Feb. 20, 1959]

FAST-THINKING SHERIFF MILLER SHOWS COURAGE

Fast-thinking, quick-acting Douglas County Sheriff Eugene Miller thwarted a wild, dangerous escapee from an Indiana reformatory in what might have ended in a trail of tragedy.

The Douglas sheriff, using his auto as well as his head, interrupted the fleeing desperado's flight at a Decatur intersection by a split-second act of good timing and heroism.

As a result, the crime spree of an Ohio youth, perpetrated at Tuscola and resulting in the terrorizing of three persons and the kidnaping of two men, came to an abrupt end—and a much more fortunate one than might have been, were it not for the fast action and fortitude of an alert law-enforcement officer.

Sheriffs, elected officials, aren't always expert police officers. Their role usually is more that of an administrator than one of an apprehender.

But in the case of this bizarre nighttime chase, starting as a varied chain of events after a young stranger attempted to burglarize a Tuscola store, Sheriff Miller proved himself capable in the best tradition of a public law officer doing his duty when he faced a tough situation, regardless of the personal danger involved.

No sheriff out of the old West, not even on TV, could have performed with more bravery and success in getting his man—and saving possible death or injury to others in the desperado's grasp.

Congratulations, Sheriff Miller, for your competence and your courage.

A Laboring Man Speaks

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. HOFFMAN of Illinois. Mr. Speaker, we have all heard and read of labor's influence on its members, both with respect to candidates for political office and recommendations for the enactment of certain legislation.

Few men are willing or are fearful to speak their reactions to such suggestions or pressures. I am submitting, with the writer's permission, a letter which cogently expresses his reaction to the Committee on Political Education directing union members to write to their Congressmen in support of their recommendations. The letter follows:

NAPERVILLE, ILL., *February 16, 1959.*
Representative ELMER J. HOFFMAN,
Wheaton, Ill.

DEAR REPRESENTATIVE HOFFMAN: Two weeks ago I received the latest issue of the IBEW's Newsletter. Several pages were used to expound COPE's political position, and directing union members to write to their Congressmen in support of their recommendations. I took this newsletter to work and it was discussed over lunch boxes for several days. There were members of various construction trades involved, and not one man was in favor of COPE's recommendations.

The greater majority of the opinion was in complete accord with mine, some of which is as follows:

1. Cut unnecessary expense in the Federal Government by stopping the airport and housing bills that just recently passed the Senate. Follow the ideas presented last year by the Byrd committee report and by Representative GWINN's bill, House Joint Resolution 355.

2. Help smaller corporations and increase tax receipts by cutting corporate tax to around 40 percent from 52 percent. Special consideration to new equipment would help modernize, reducing the many present repair expenses used to circumvent the high tax rate.

3. Collect from those getting facilities and loans for little or nothing. Barge lines get channels and the use of locks at the expense of the taxpayer; truck lines pay only a small share of the extra initial cost and repairs they cause to highways. They should both pay their way, and this would probably help solve the railroad problem as well.

4. Cut unnecessary subsidies. Some few are necessary but the majority are actually harmful to the economy. Farm supports are a glaring example, being inflationary in both Federal and consumer levels, reduces gross national product, and costs billions to maintain.

5. Increase pay of officers and skilled members of our Armed Forces. The reduction in waste and training would more than pay the bill. The increased combat efficiency resulting from some better men staying in would be a pleasant bonus to the taxpayer.

6. Increase appropriations for use in research and development, especially in the fields of nuclear and space equipment. Properly applied, the propaganda and industrial applications would greatly reduce the effective cost. The armed services should all be made stronger but the Titan, Polaris, and Minuteman missiles, atomic missile submarines should be pushed to cut the 1960–63

missile gap, propagandize, and learn what we can to build better in the future.

7. Get the "hard sell" into diplomacy. Let the world know that most of the cold war emergencies are due to the failure of the Russians to keep agreements.

8. Protect the workers, public, and the union movement by adequate legislation. The good unions would not be hurt by the correct laws but the controls applied could limit the racketeers in the unions, keep them from using the money and power of unions for themselves, and in general protect the workers and public. A point of interest: The IBEW claims to spend no money in politics in spite of directing us to write in favor of certain legislation, especially the Kennedy bill, which is too weak to help the workers, and if passed would probably hold up adequate legislation for many years.

Please consider the above in your new position of public trust.

Sincerely yours,

DONALD D. HOLLE.

The Pressing Need for a Community Facilities Loan Program

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD a talk entitled "The Pressing Need for a Community Facilities Loan Program," made by the Honorable J. F. Crawford, mayor of Abbeville, Ala., during the recent annual meeting of the Alabama League of Municipalities with the Alabama congressional delegation in Washington:

THE PRESSING NEED FOR A COMMUNITY FACILITIES LOAN PROGRAM

(By J. F. Crawford)

In my opinion the community facilities problem is one of the most serious problems facing our communities. Even now the blunt truth is that we are falling behind in our constant efforts to provide the public works and community facilities which our expanding community needs require.

The community facilities problem did not appear overnight—it is a problem which has been brewing for years, and unfortunately it is a problem which will greatly intensify in magnitude in the decade of the 1960's when family formation will skyrocket.

WE DESPERATELY NEED LOCAL PUBLIC WORKS

Our communities desperately need sewer facilities, water facilities, roads, parks, public buildings, hospitals—in other words all of the facilities essential to a growing community.

The mass exodus to the suburbs of our central cities is no temporary phenomenon—it will continue to be with us and will approach a truly sensational rush in the next decade. This, of course, will aggravate the community facilities program still further.

We recognize that these facilities must be paid for and nothing would please us greater than to finance all the facilities we need from local resources. But the plain truth is that our cities are already in difficult financial straits. It is an open fact of life that the Federal Government through the income tax has staked a claim upon the great bulk of tax revenue. There is just nothing new left for us to tax locally.

Put simply, we need these additional facilities and yet we cannot pay for all we need from current revenue. And another hard fact of life is that we cannot borrow funds to finance our community facilities at a reasonable interest rate and on reasonable terms in the private capital market.

LAST YEAR'S BILL WOULD PROVIDE SOLUTION

We believe that community facilities legislation along the lines of last year's legislation will provide the solution.

If our communities can obtain long-term loans up to 50 years at an interest rate of approximately 3 or 3¼ percent I can think of no greater helping hand in assisting us to cope with the community facilities problem. I think also that the very existence of legislation of this kind would help bring down interest rates in the private capital market.

WE HOPE FOR FAVORABLE CONGRESSIONAL ACTION

We were most favorably impressed by the forceful and persuasive speech in favor of community facilities legislation recently made by Congressman ALBERT RAINS, one of our great Alabama legislators, before the Annual Convention of the National Association of Home Builders. I understand that he is going to introduce the bill again this year and I am hopeful that the Congress will see the wisdom of his proposed legislation and adopt it. Let's review last year's Rains bill.

In expanding the present community facilities loan program (authorized in the Housing Amendments of 1955) of the Housing and Home Finance Agency, this bill Mr. RAINS introduced last year would provide a fund of $2 billion for loans to eligible projects. Of this sum $400 million would constitute a revolving fund, with a provision which would permit proceeds of loans made under the "old program" (the 1955 act) to go into this revolving fund.

The interest rate agreed on by the House Banking and Currency Committee would amount to 2⅝ percent—the lowest rate practicable to cover the cost of the money to the U.S. Government.

Under the bill a borrowing municipality can specify a loan maturity of 50 years or, if it chooses, a term of shorter duration.

ALL CITIES COULD PARTICIPATE

Who is eligible to borrow this money? While smaller communities will be among the principal beneficiaries of the program, the bill removes priorities in existing law and extends eligibility without regard to population size. The unemployment problem is general throughout the country, affecting cities of all population ranges, and it is our belief that the economic stimulant of this loan program should be available to all entities of local government, from the smallest to the largest. At the same time we recognize the crying need for such projects as last year's bill would permit—from the town square to the largest metropolitan municipal center.

TYPE OF PROJECTS ELIGIBLE

What kind of projects could be undertaken? Under existing law, priority is given to applications involving the construction of basic public works, such as water works and sewer systems. Realizing that this priority system excluded many worthwhile and important community projects which could be started at once if liberal loans were available, the Rains bill spelled out the eligible projects.

It would permit loans for:

(1) The construction, repair and improvement of public streets, sidewalks, highways, parkways, bridges, parking lots, airports and other public transportation facilities.

(2) Public parks and other public recreational facilities.

(3) Public hospitals, rehabilitation and health centers, public nursing homes and public convalescent homes.

(4) Public refuse and garbage disposal facilities, water, sewage and sanitary facilities as well as other public utility facilities.

POLICE AND FIRE FACILITIES

(5) Public police and fire protection facilities; civil defense needs; public wholesale farm produce markets, public libraries and offices and other public buildings (other than schools), and public land, water and timber conservation facilities.

(6) In addition the bill would allow loans to nonprofit hospitals to finance specific projects for hospital construction, repair or improvement.

I hope this review of the importance of a community facilities loan program will serve to point up its importance to Alabama cities and towns—small and large.

Address by Secretary of Labor James P. Mitchell at Lincoln Day Banquet, Middlesex Republican Club, Boston, Mass., February 12, 1959

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, the Middlesex Republican Club of Massachusetts, the oldest Republican organization in the United States, was honored to have Secretary of Labor James P. Mitchell deliver the principal address at its Lincoln Day banquet in Boston on February 12, 1959. He spoke, in part, as follows:

Lincoln Day has always been a challenging one for Republicans, for it brings vividly to mind the first principles of that great President, and commands us to measure our actions against them.

This day is one for frank talk.

And I am going to talk frankly to you this evening.

We must face facts in the same way that Mr. Catton's brilliant oration has told us that Lincoln faced them.

Lincoln knew that victory, to be meaningful, had to be of the people—by a party that showed clearly that it was for the people—all of the people.

In the same way, if we are to win in 1960—and we can win in 1960—it must also be a triumph by the people and in their interest.

There is no greater issue upon which Republicanism stands more solidly with all Americans than that of personal freedom—in the field of personal rights, in the field of labor-management practices, in the field of sympathetic social legislation that recognizes the need for local initiative and responsibility, in the field of fiscal management, in the harmony and balance of big and small governments.

The President who wrote the Emancipation Proclamation and signed the Homestead Act did leave behind him, alive and enduring in this party, a veneration for personal rights, and a determination that they shall be protected.

The dignity of the free human being and the majesty of the free human will exercising its own decisions—whether in the person of a Negro voter in Atlanta, a labor union member in Detroit, a small businessman in Los Angeles, a farmer in Iowa—is the central cause of Republicanism. It always has been, since Lincoln, it still is under President Eisenhower, and it will continue to be under the next Republican President in 1960.

It is because of our philosophy of personal rights that Republicans often find themselves at variance with the political philoso-

phies that cluster together under the expandable label of Democratic.

Obviously, the most direct application of the principles of Abraham Lincoln is in the area of civil rights, the rights proclaimed in the Declaration of Independence and guaranteed by the Constitution.

Some Americans are now being denied these personal rights. Reason and moderation demand that this denial be brought to an end with all deliberate speed.

This is the law of the land, and the requirement of a regard to human dignity.

We seek the support of all Americans who agree with us that none of us is secure in our rights while a single American is denied his rights.

They either exist for all or they do not exist for any, for long. Lincoln reminded us that no nation can endure that is only partly free. This job is not yet finished; it is ours to complete his work.

But, first, we must make certain that our meaning is clear to all the people. This means straightforward and honest campaigns not obscured with issues secondary to that of personal freedom. And it means good candidates.

Good candidates are essential.

Also essential are the precinct workers behind them. The recruit-now-for-'60 program, aimed at enlisting 2 million more precinct workers for the 1960 campaign, is underway.

This party is already on the move to victory.

In this undertaking, too, Lincoln sets the example.

His was defeated in 1858. We were defeated in 1958. He achieved victory in 1860. What can he tell us?

He offered affirmative programs.

Looking over an America gripped in the most terrible dilemma it has ever faced, he affirmed the fact that personal rights precede comfort or expediency.

He stood up, and against the counsel of fear, he asserted the fact that right makes might.

And we, how do we look to America?

Lincoln, in defeat, got his strength to go forward from a belief in personal rights. We can do the same.

How does a respect for personal rights, for human dignity, affect our decisions of today?

First, it requires a courageous determination to maintain the purchasing power of the dollar. Holding the line against inflation means holding the line against governmental extravagance. It means refusing to give way before political pressures. It means creating a stable value in the wages and salaries we earn, so Americans can plan ahead. Insurance policies, pension funds, savings must be protected against those who would drive down the value of the dollar by driving up the rate of Federal expenditure. This takes courage. Pressure groups won't like it. But the growth of our economy must have a firm foundation, a foundation which assures that the American wage earner will be able to plan for a secure future.

Second, it requires that we help the labor movement rid itself of the gangsters and hoodlums who stamp down the personal rights of union members.

Third, it requires that we help all our citizens to equal opportunity for employment and advancement.

Fourth, it requires protecting equally and fairly all persons at work in an industrial economy.

Fifth, it requires helping all our citizens to make use of their right to vote.

Sixth, it requires support for President Eisenhower's policy of encouraging the States and local communities to take full responsibility for protecting those rights of all citizens which are not national concern.

Ours is not a narrow objective—we do not seek to build a fence of favors around the undue influence of some parts of our society. Rights are universal, and our approach to them is also as wide as American opportunity.

It was this approach that extended unemployment insurance to 4 million additional workers, and social security to 10 million more men and women—and began the largest public improvement ever undertaken, the highway program.

It was this approach that granted the largest tax cut in our history in 1954 and created the Department of Health, Education and Welfare.

This approach raised the standard of living in this country to an all-time high, fostered an economy that has brought personal income, wages and profits to new and expansive levels.

This approach has established a new agency for aviation, and a new agency for outer space.

Republicanism has been a positive and virile force in this country but sometimes I think we are trying to keep it a secret.

There are new and grave problems ahead of us in the fields of education, of defense, of international strength, of labor-management relations.

These things are the concern of most Americans, and they are seeking the right answers.

We have a proud record and we have a proud opportunity ahead. In looking toward 1960, and beyond, we must remember that as Republicans, our tradition demands that veneration for the personal rights of all the people—high or low, white or black, urban or rural, rich or poor—that inspired Lincoln and has animated all our party in its finest hours.

That veneration determines our approach to the solution of any national problem, whether in education, politics, business or anywhere else.

We have the positive program.

We have the best way to a new and better America.

Let our opponents, grouped haphazardly together for mutual self-advantage, paint the distorted pictures and use the distorted facts and plaster us with distorted labels—this fact will stand out.

When it comes to personal rights for all Americans, no Republican owes a debt—political, financial, or moral—to any one group, any one faction, any one system or organization. The compromises are all on their side. The implied promise and the part performance is all theirs.

In this respect, we are the majority. We are America. And in 1960 our triumph, like Lincoln's, will be a victory for personal rights, and for the popular confidence of Americans in the party that respects these rights as inalienable.

But keep this in mind—to win, we must deserve to win.

Thank you.

Lithuania's Challenge

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader, Evening News of February 16, 1959:

LITHUANIA'S CHALLENGE

The free world today observed Lithuanian Independence Day, although this Baltic country has been absorbed by the Soviet Union and freedom has disappeared there. Be that as it may, today's celebration is fully justified as a reminder that, so far as the United States is concerned officially and all who love liberty above life are concerned, Lithuania still exists and the hope is one day it will throw off the yoke of Communist oppression and take its rightful place in the family of nations.

It was on February 16, 1918, that Lithuania emerged from the bondage of czarist Russia after 123 years. There followed 22 precious years of independence. Then in 1940, the hapless country, with its neighbors, Estonia and Latvia, was overwhelmed by Red Russia and 19 years of slavery and tyranny ensued with thousands in exile and unspeakable hardships visited on the survivors.

But the struggle for freedom goes on in the name of Lithuania. Much to the chagrin of the gang in Moscow, Lithuanian Independence Day is observed annually without fail to remind the Kremlin that it has not succeeded in its purpose although it dominates the scene by force and also to remind the world of Soviet perfidy as well as Lithuania's legitimate aspirations.

An enslaved Lithuania points an accusing finger at Nikita Khrushchev as it did at Joseph Stalin. And it will at Khrushchev's successor if Lithuania does not attain its aspirations in the meantime. For this struggle can have only one ending—the liberation of Lithuania.

Freedom always wins the last battle and it will in the case of Lithuania. Sometimes, the conflict is long and costly, but the outcome is inevitable. It took 123 years before freedom triumphed in Lithuania over czarist Russia; the hope will be that the waiting period will be reduced considerably in the case of dethroning the Reds. In view of the developing crisis, the climax may come sooner than generally anticipated.

Railroad Retirement Benefits

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. McGOVERN. Mr. Speaker, today I have introduced a bill to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act. Several of the major features of this bill include: An increase in retirement and survivor annuities and pensions by 10 percent; an increase in unemployment benefits rates, and an extension of unemployment benefits periods beyond the 130 days allowed by present laws; and a reduction from 65 to 62 in the age at which spouses and women employees may receive annuities at a reduced rate.

The Railroad Retirement Act has been a great boon to the railroad people of this country, providing well deserved security in the years after they have left active railroad service. However, this legislation is now in need of amendment to keep it in tune with the times.

It is well known that in periods of rising prices such as we have had over the past few years, that persons on fixed incomes are most severely hurt. The increases granted to retired railroad employees have not kept pace with the increases in the cost of living.

I believe that this bill will provide the necessary liberalization in railroad retirement provisions and railroad unemployment insurance while, at the same time, by alterations in the financing of these benefits, insure the continuance of the program on a sound financial basis.

Two Senators Put Berlin Focus Where It Should Be

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. JUDD. Mr. Speaker, the main issue in Berlin is not a city, but whether the West will hold its correct moral and legal position, or will yield to intimidation and thereby start the collapse of world collective security.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following release on this vital subject:

[Release from General Features Corp., Feb. 23, 1959]

TWO SENATORS PUT BERLIN FOCUS WHERE IT SHOULD BE

(By Edgar Ansel Mowrer)

Two U.S. Senators have skillfully brought the Berlin debate back to the central issue and cut short the efforts of other Senators who, in the name of flexibility, have confused it.

The two are JACOB JAVITS, of New York, Republican, and THOMAS DODD, of Connecticut, Democrat. The issue is whether the United States, Britain, and France, with West Germany's backing, are going to be bluffed into yielding something by Nikita Khrushchev's Berlin threat or are going resolutely to call the bluff—and seek to benefit by it.

Specifically, the two Senators have introduced separate resolutions calling upon the Allies to stand firm at Berlin and to negotiate the future of Germany with the Russians, rather than bringing the two Germanies together in separate negotiations. For the latter would mean, as Senator JAVITS correctly insisted, that West Germany would be lost. In an inspired burst, the Republican also suggested that the U.S. Senate delegate seven of its Members to be present in West Berlin on May 27, the day when the Soviet ultimatum expires, to dare the Russians to come and take it.

Whether the Senate acts on either resolution is dubious. Neither sponsor is a member of the exclusive Senate Committee on Foreign Relations whose members generally succeed in keeping these all-important matters strictly within the family. But the committee is now pretty well dominated by such champions of flexibility as Democrats FULBRIGHT and MANSFIELD (whose recent plan for a German settlement shocked our firm friend Chancellor Adenauer) and Republican WILEY.

Now none of the Senators mentioned opposes more negotiations as such. During the last few years, partisans of flexibility have persuaded the free peoples that peace through negotiations with the Russians should be possible in the near future since neither side wants war. Even those who believe that each negotiation inevitably strengthens the Communists and weakens the West feel obliged to go along.

But Senators JAVITS and DODD, backed by KEATING, of New York, and MORTON, of Kentucky, want to be sure that any coming negotiations do not undercut the Allies' right to keep West Berlin independent and accessible and that the West does not start by giving Khrushchev any of the things he wants.

For the debate in the United States on German policy is being held against the background of two things—Khrushchev's reiterated threat of war if the Allies insist on maintaining their rights and Prime Minister Macmillan's visit to Moscow.

Khrushchev has obviously been encouraged by the readiness of such Americans and Britishers to negotiate in the name of peace. The more the Allies hurry to get a meeting with Moscow before the expiration of Khrushchev's ultimatum, the more the Russian must believe that his intimidation is succeeding.

To be sure, President Eisenhower and Secretary Dulles have so far stood firm on the central issue—no concessions on Berlin—and the President has warned that Khrushchev will have to shoot first. If they had simply said "nuts" to Khrushchev and waited for him to ask for a four-power meeting, there would have been no confusion. But their desire also to appear flexible, has apparently reassured Nikita that by threat he can at least obtain something.

Macmillan's quick offer to visit Russia must further have convinced the Kremlin that it has nothing to fear and something to gain by intransigence and more big talk.

In short, this Berlin sparring is just another revelation of the situation of the West ever since President Eisenhower at the summit meeting in 1955 assured the Soviets that far from seeking to regain what it has lost, the United States will act only in self-defense. That permanently leaves the initiative with the Russians for they have nothing to fear so long as they do not actually start shooting. (And the lack of American reaction to their cold-blooded destruction of the unarmed American plane may have fathered the thought that minor shooting on their part will be permitted.)

It is hard to see how, if the Soviets persist in aggression, they can fail to gain by it. For pure defense never yet won any kind of a struggle.

A Giant Among Men

EXTENSION OF REMARKS
OF
HON. JESSICA WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mrs. WEIS. Mr. Speaker, to a man, the great leaders of this Congress have already risen to pay their final respects to the memory of Dan Reed, and there is nothing that I, as a newcomer to Congress, can hope to add to what they have already said. The men and women who knew him longest and best have eloquently attested to his greatness, and to their everlasting respect and affection for him, and no greater tribute could be paid any man.

He has made his indelible mark upon all of us, and nothing could be said which would add to the stature of Dan Reed, but I do want his wife and family to know that all of us share with them the deepest kind of regret.

Dan Reed was, very simply, a great and good man—strong, courageous, dedicated, kind. Men of his mettle do not come our way in every generation, and his place here will be exceedingly hard to fill.

Programs and Actions of Congress Vitally Affect Towns and Cities

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD a talk entitled "Programs and Actions of Congress Vitally Affect Towns and Cities," made by the Honorable M. N. Brown, mayor of Enterprise, Ala., who is president of the Alabama League of Municipalities, during that organization's recent annual meeting in Washington with the Alabama congressional delegation:

PROGRAMS AND ACTIONS OF CONGRESS VITALLY AFFECT TOWNS AND CITIES

(By M. N. (Jug) Brown)

On behalf of the full membership of the Alabama League of Municipalities—the 255 towns and cities it represents—I want to express grateful appreciation to the congressional delegation for granting us this opportunity to appear before you to discuss the municipal interest in 20-odd areas of congressional activity.

There has never been a time when a close and effective relationship between the Federal Government and the communities of the Nation was more important than at the present. There are many reasons for this, not the least being the failure of the States to move in and extend a helping hand to the municipalities as they struggle to meet the challenge of the times by providing adequate community services and facilities for the major part of the Nation's population. The cities and towns have been practically deserted by their parent governments—the States. They have been left alone as far as the States are concerned and in effect told to "root hog or die." But, the Federal Government has been much more aware of municipal needs and the Congress has stepped in and provided programs that have literally saved our towns and cities from utter and complete decay. We are grateful to the Alabama congressional delegation for the very important role it has played in this development.

FACTORS THAT CAUSE FEDERAL-MUNICIPAL PROGRAMS TO BE NECESSARY

One may inquire as to why the States have neglected the needs of the cities and towns—the places where an overwhelming part of the country's population lives. Continued rural domination of State legislatures is the chief though not the sole reason. Unequal representation in State legislatures has held back municipal progress. Opposition from large and powerful business groups to progressive legislative measures needed to enable our towns and cities to progress and grow is another handicap we

have faced. The same groups that bombard Congress week after week in an effort to defeat sound Federal-local programs are the ones that hang around the State legislatures in clusters to lobby against public interest programs considered there. Their influence, in controlling legislative policy in the States is considerably greater than their ability to prevent Congress from enacting sound and workable programs designed to help our local communities to grow and become stronger.

They shout "return government back to the States" but at the State level they would bring every possible pressure to bear to see that programs now operated jointly by the Federal and municipal governments never get the State assistance they would have to have were the Federal Government to drop out of the picture as far as financial support is concerned.

The inadequacy of the revenue-raising powers of the municipalities is so great that without outside assistance few, if any, towns and cities could carry on decent services and programs so much needed today by local citizens and businesses.

The competition between the States and their municipalities for revenues to support their services is much greater than would ever be the case between the Federal and the State governments. The overwhelming share of the cost of the State of Alabama's five major publicly supported programs comes from the Federal Government. Not one dime of State assistance goes into the operation and maintenance of the five major services and programs of the city and town governments of our State.

SUMMARY OF OUR INTEREST IN FEDERAL-LOCAL PROGRAMS

We hope you'll bear in mind, as the mayors who follow me to this witness table testify, that the partnership between the Federal Government, on one hand, and the municipal governments, on the other, is enabling our Nation to become stronger and better able to serve the daily governmental needs of all our people. The continuation of these 20-odd Federal-municipal programs are much more important than pleasing the propagandists of the U.S. Chamber of Commerce and the National Association of Manufacturers. Let me also remind you that if Congress had listened through the years to these big-business groups, our country would not today have thousands of federally supported National Guard armories, public hospitals, the social security program, the great Tennessee Valley Authority. No, and we would not have the Federal-aid airport program, the water-pollution control program, public housing, or urban renewal. We would still be in the horse-and-buggy days as far as effective and serviceable government is concerned.

My colleagues here will summarize our interest in—

(1) The airport-construction program; (2) the urban interest in the Federal-aid highway program; (3) a strong civil defense program; (4) the need for continued regulation of natural-gas wellhead prices; (5) traffic safety measures before the Congress; (6) the need for continuing the water-pollution control program; (7) low-rent public housing; (8) need for an expanded urban-renewal program; (9) need for assistance to depressed areas; (10) the value of Federal planning assistance to our cities and towns; (11) the urgency of enacting legislation to make possible a community facilities' loan program; (12) proposed laws affecting municipal bonds; (13) the TVA self-financing legislation; (14) assistance to public libraries; (15) waterways development; (16) legislation affecting school programs; (17) legislation affecting intergovernmental relationships; (18) hospital construction under the Hill-Burton Act; (19) the social security program and its coverage of municipal employees; (20) miscellaneous bills now pending before the Congress.

Let me again thank you for the interest and time that you give us as we present some municipal viewpoints on the several Federal-municipal programs I have listed. I know my fellow mayors will be glad to answer any questions about these programs as we submit testimony during the time we spend here with you.

Speaking as president of the League of Municipalities, I want to generously praise you for the great job you do for Alabama and her people, and especially for the support and help you give the municipal governments and their officials from day to day. I am proud of the reputation you have across the country as being the greatest urban-minded delegation in the entire Congress of the United States.

Remarks by Treasury Secretary Robert B. Anderson, to the Grand Masters of Masonry, Hotel Statler, Washington, D.C., Tuesday, February 24, 1959

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address made by the distinguished Secretary of the Treasury, Robert B. Anderson, to the Grand Masters of Masonry, in Washington on February 24, 1959.

Mr. Speaker, there is no member of the President's Cabinet who is more highly respected, admired, or in whom the Congress and the public have more confidence than Mr. Robert B. Anderson. Those of us who have worked with Mr. Anderson throughout his years of service as the Secretary of the Navy, Deputy Secretary of Defense, and now Secretary of the Treasury, regard him as a dedicated American. In his present position of world service, freedom-loving people look to him for leadership. He is fulfilling their hopes and aspirations.

The address follows:

ADDRESS BY SECRETARY ROBERT B. ANDERSON

Over 300 years ago, Francis Bacon made this statement: "The true and lawful goal of the sciences is simply this, that human life be enriched by new discoveries and powers."

Bacon was pleading with the scientists of his day to use their skills in improving the ordinary conditions of living. This was a radical suggestion for his time. The new world was just opening up; the compass and the printing press were just beginning to have their incalculable influence in enlarging not only man's physical surroundings but the larger creative environment in which new discoveries can take place.

Yet how cramped a world this seems compared with our own.

We live in a period of great international tension—yet it is a period also of unparalleled inventiveness and achievement. The scientists of today have made it possible for us to believe that sources of energy are available which can in time replace most human toil. For the first time in history, there is a possibility that conditions permitting the full exercise of man's creative abilities can be realized for the many, not just for the few.

A great deal has been said about the need to accomplish greater brotherhood of mankind. Our own order is dedicated to this principle. But translated into real terms, brotherhood begins with improvement in the conditions of living. It begins with getting help to people where they need it.

For help of this sort to be effective it must be adapted to differences in cultural backgrounds as well as in the material conditions of living. We must give frank and honest recognition to dissimilarities in customs, history, philosophy, and religion. We must think in terms of minimizing differences—however sharp they may seem on the surface—and maximizing common interests.

I believe it is a little easier to do this if we remember that our own culture is to a very large extent a borrowed one. The mathematics we use today to send a satellite into space had its beginning long ago in Egypt, in Persia, in Greece. Our art, our music, the body of science we build on, all came initially from others.

We have also been givers. Not only our great proponents of freedom and democracy, but Edison, Morse, Kettering, Einstein, Salk, and many other but less well-known Americans have helped change the conditions of life throughout the world. With all that we have given in the past, however, our greatest opportunity may be now, when the aspirations of millions of people to live better are finding tangible expression in many areas for the first time.

During the past 15 years 700 million people in 20 countries have won political independence. But this is not enough. Brotherhood among men is laudable as an ideal. To be meaningful it must be translated into terms of understandable reality. Though much remains to be done the record of our Government and our people has been a commendable one. I should like to illustrate this first by telling you a story—a true story about a little village in India which I visited last fall, in connection with my participation in the international monetary conferences being held in New Delhi.

This village was the site of a foreign assistance project, sponsored and financed by an American nonprofit institution. There were no impressive structures in the village. There were two Americans giving technical assistance. A team of bullocks was slowly moving around in a circle turning a large arm. Each turn produced 1,600 revolutions in the apparatus which generated electricity—sufficient for one light in each house at night, and for power during the day to run a small woodworking plant employing 50 people.

The same bullock-powered equipment pumped water into pipes which ran along the streets of the village with a tap in front of each house. For thousands of years, the villagers had traveled long distances for water. Now, they could step outside the door and draw water whenever they needed it. Moreover, the excess water went into a reservoir and was sufficient to irrigate 50 acres of land. By means of a simple mechanism thought up by an American agricultural specialist, the village had taken its first steps toward the twentieth century. Here surely is the place where emphasis should be put—at the point where people can be given the means of helping themselves through bettering actual living conditions in their own communities.

The technical assistance programs now in progress are, of course, of many different kinds and are carried on under many different national and international auspices.

In every case, the projects are joint operations with the countries concerned. The United States and U.S. technicians, however, have been in the forefront of all of the efforts during the postwar period to help people lift themselves above the level of a bare struggle for existence and into a situation where backbreaking toil does not constitute the whole of living. While there are honest differences of opinion as to scope and detail, I would like to mention a few efforts of our Nation in helping other nations of the world.

Closely allied to the technical assistance programs have been the programs for cultural exchange. These are performing the immensely important service of making possible person-to-person contacts between people of different countries. Through scholarships and exchange of personnel, through on-the-job help when it is most needed, technical assistance and cultural exchange together are probably achieving the most practical results which up to now have been devised for promoting greater well-being among the nations of the free world.

For long-range stability and improvement in standards of living in the less developed countries, however, there must be substantial capital investment extending over a period of years. There must be transportation facilities, powerplants, harbor installations, and industrial equipment of many varieties. Our Government has been a leader throughout the postwar period in the establishment and support of financial institutions providing long-term developmental funds of this type.

The Export-Import Bank, set up by this country in the thirties, has continued since the war to provide financing for the export of American equipment for industrial purposes of many different kinds. In recent years its loans have been largely concentrated in Latin America and Asia.

The International Bank for Reconstruction and Development, formed at the end of the war by the allied countries under our leadership, provides financing for long-run investment programs of various types when private investment is not available on reasonable terms. Recently, the Bank has devoted its funds primarily to assisting economic development in Asia, Latin America, and Africa, contributing enormously to economic development in these areas. The International Bank has had no losses on its loans.

We are hoping that the Congress will promptly authorize the increased subscription to the International Bank proposed in the President's message of February 12. These subscriptions require no cash outlays. The subscriptions to the capital stock of the Banks constitute a contingent liability of all the member governments to meet the obligations of the Bank. In this way the Bank is able to secure adequate loan funds at reasonable rates of interest in the open market.

The President's message of February 12 also proposed to increase our quota in the International Monetary Fund, a companion organization of the International Bank. This institution makes short-term advances to its members in order to facilitates the exchange stability which is an essential condition of healthy international trade.

Unlike the International Bank, the Fund requires outlays on the part of the member countries on a quota basis—one-fourth payable in gold, and the remainder payable in non-interest-bearing securities of the member country. The Fund's activities have grown and have become increasingly effective. To fulfill its obligations properly under conditions of expanding world trade, an increase in the quotas of member countries is imperative. We hope for prompt action on this request also.

The Development Loan Fund, established by the United States, has further assisted economic development by making loans to both governments and private business when a given project cannot obtain financing from the other institutions or from private capital sources. In some cases, the loans granted by this Fund are repayable in the borrower's own currency.

Discussion is now going on within our Government and with foreign countries exploring the desirability of establishing an International Development Association which would be an affiliate of the International Bank. This institution would supplement the functions of the bank by providing loans for development which could not be financed on hard currency repayment terms. It would also permit members with accumulations of nonconvertible currencies, to use their accumulations for constructive loan purposes.

In addition to the programs already mentioned, we are engaged at the present time in negotiations with the countries of Latin America, looking toward the establishment of an inter-American banking institution which would assist economic development in the countries of this hemisphere.

There have been other important governmental programs which could be mentioned. One which was of immense importance to the free world was the Marshall plan for aid to the devastated countries of Western Europe, shortly after the close of World War II.

Through our timely assistance and through their own efforts, the Western European countries were not only able to get back on their feet, they have since come to enjoy a higher standard of living and a better level of production than ever before. Likewise, countries in Asia—many of them newly established as independent nations—have been assisted in their efforts to improve living conditions, to put their economies on a going basis, and to resist aggression.

Still another program which has paid large dividends in human terms has been our plan for exporting part of our agricultural surplus. Under this program, payment for the goods we send overseas can be made in local currencies, thus permitting countries in need of food and certain other agricultural products to benefit from our abundance, even though they may lack dollar exchange.

The story of America's assistance to other countries has and should continue to emphasize the tremendously important role played by American private capital during the past 15 years and in the years ahead. This capital has aided resources for economic growth in other countries. It has brought to these countries a high degree of technical and managerial skill which they lacked. It has contributed to the development of export industries which provide the means for purchasing needed goods from our own country and from elsewhere.

American business today has investments abroad valued at about $40 billion. Each year there has been a movement of capital from the United States to other countries. For the last 3 years, this annual outflow has been at the rate of about $4 billion a year.

Under present world conditions, private investment faces real difficulties. These stem from frequent political instability, the threat of aggression, and subversion in some foreign countries, and the obstacles to capital investment in areas where economic conditions are unstable and relatively less advanced. For these reasons our Government has tried to assist the expansion of private investment through such devices as tax treaties and guarantees against the incontrovertibility of earnings and the risk of confiscation or possible loss from war.

Private capital is a stern analyst. Even with the encouragement of our Government, private investment is made principally in those countries which are willing to compete for it by the establishment of sound fiscal policies, adequate protection, and the recognition of the right of capital to earn. Both the Government and private organizations are continuing to have a major role in promoting the spread of capital and thus insuring better economic conditions in the underdeveloped areas of the world.

Our Government has also had to provide military assistance. This is in our own interest, as well as in the interest of friendly nations threatened with aggression. Without help, the Soviets would have had a clear road for the pursuit of their program of world domination. I need mention only the Near East and you will understand what I mean.

One of the favorite themes of Communist propaganda is the supposed concern of Communist dictatorships for human beings and their welfare. The Western nations who are leaders of the free world must continue to bring out the true facts with respect to these claims.

To do this we have only to note what has actually happened when a country has fallen under Communist control.

In Soviet Russia, the aristocracy of the Communist Party has been substituted for the aristocracy of the czar. There are some 200 million people in the U.S.S.R. Out of this number there are something like 5 or 6 million Communist Party members. These 5 or 6 million are ruled by a bare handful of dictatorial leaders, and these leaders are subject essentially to the orders of one man.

From China, we are told that the Communist regime has devoted itself to furthering the advancement of man. But what has it done in fact?

Families have been ruthlessly torn apart. Vast numbers of people have been herded into communes, without the slightest effort to obtain their consent.

We hear the Communists speak of the people's rights under their form of government. But there are no free elections, in any meaningful sense of the term. There is no free press. There is no freedom of belief. There is no freedom of choice to work. Human resources are regimented for production as if they were so many tons of steel or coal.

The Communists also like to refer in their propaganda to their respect for the rights of other nations. But we cannot erase from our minds the tragic fate of the Baltic Republics, of Bulgaria, of Hungary, of Poland, of Czechoslovakia, of East Germany. All of these peoples have lost the right to direct their own destinies. When they have tried to reassert that right, they have been cruelly suppressed. We cannot ignore the threats of subversion in other countries.

In contrast, our country has moved steadily forward since the close of World War II to further the brotherhood of man. Our most valued export is still, as it has been throughout our history, the concept of freedom and humanity for which our Nation stands. We can be rightly proud that the first postage stamps issued by the Republic of Indonesia turned out to bear the portraits of Washington, Lincoln, Franklin, and Hamilton, side by side with the founders of the new Republic. But we can also be proud of the countless ways in which our sharing of know-how, capital, and just plain friendliness during recent years has helped strengthen the basis of fellowship and understanding throughout the free world. This is brotherhood in action.

Poison in Your Water—No. 15

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. DINGELL. Mr. Speaker, an article appeared in the Winston-Salem, N.C.,

Twin City Sentinel on February 18, 1958, describing pollution in Rockingham County of that lovely State.

Those who doubt the evils of pollution should contemplate this situation which is repeated in State and county after State and county all across the United States.

This is the water we drink.

One of the real things which this Congress and the United States has done to clean up this horrible situation has been the enactment of Public Law 660 in the 84th Congress. Under that law grants were made to municipalities across this country of up to $45 million a year on a matching basis.

The progress made because of this legislation has enabled us for the first time to keep pace with the population growth in this country and to actually catch up very slightly on the filth and pollution which we dump into our streams.

During this Congress the President cut the amount of grants under this program by reducing the budget request from the full $45 million to only $20 million. This strikes a tremendous blow at the program.

It is my hope that the House will consider this article and use it and others which I am inserting into the CONGRESSIONAL RECORD as the basis for appropriating the full $45 million authorized under Public Law 660 of the 84th Congress:

TWELVE TOWNS, FIRMS POLLUTE STREAMS

(By Gene Whitman)

The State stream sanitation committee listed a dozen Rockingham County towns and industrial firms today as significant pollution sources in the Roanoke River Basin.

It identified Draper, Leaksville, Madison, Mayodan, Reidsville, Spray, and Stoneville in Rockingham, and Walnut Cove across the line in Stokes, as communities which have insufficient sewage treatment, or none at all.

It listed Fieldcrest Mills at Draper, Leaksville, and Spray, Leaksville Woolen Mills, Inc., at Spray, and Washington Mills Co. at Mayodan as industrial polluters. Other towns and firms further east were listed.

The cities and industrial firms are expected to advise the division of water pollution control of the State board of health within 60 days whether they contemplate voluntary action to abate the pollution and apply for a temporary permit.

COULD CONTINUE

Under the temporary permit, they would be allowed to continue discharging wastes into the streams under a satisfactory time schedule for building adequate treatment facilities.

The North Carolina policy is not to start enforcement action if satisfactory compliance from the towns and industries is obtained voluntarily.

There was no estimate of the money which will be required to treat the sewage and industrial wastes. The committee suggested that towns and their industries get together on treatment plans, if possible.

Committee conclusions on the pollution and the steps needed to abate it included:

Draper: A system expected to serve 3,500 persons discharges sewage without treatment. A treatment plant should be built as soon as possible.

Leaksville: A system collecting sewage from an estimated 5,000 provides no treatment. A plant should be built as soon as possible.

TWO SEPTIC TANKS

Madison: Sewage from approximately 1,200 flows through two septic tanks that are grossly overloaded. A secondary treatment plant should be built as soon as possible.

Mayodan: A municipal sewage system serves an estimated 2,000 and receives domestic sewage from Washington Mills. A small intermediate treatment plant is overloaded and not properly operated and maintained. It should be either enlarged or replaced.

Reidsville: Sewage from a plant serving about 4,000 is discharged into the Roanoke basin, increasing the coliform bacteria. No further physical improvements are indicated at present, but the city should begin planning to enlarge its facilities or pump the wastes into its new plant for treatment.

Spray: The sewage system collecting wastes from an estimated 5,000 provides no treatment. Proper treatment facilities should be built as soon as possible.

Stoneville: A sewage system serves an estimated 530 and gives both primary and secondary treatment, but needed repairs and alterations should be provided.

Walnut Cove: The sewage system serves only about 566 people—a small portion of the town. A primary treatment plant is overloaded and some sewage is discharged without treatment. The town should consider extending its sewer lines into areas not now served and providing treatment in a single plant.

Fieldcrest Mills, Draper: Sewage from each mill is given partial treatment in a septic tank, then discharged into the river; treatment equal to secondary treatment should be provided.

Fieldcrest Mills, Leaksville: Sanitary sewage, dye house and finishing wastes are discharged without treatment. Facilities should be built, providing the equivalent of secondary treatment.

Fieldcrest Mills, Spray: Sanitary sewage, dye house and finishing wastes are discharged without treatment. Facilities should be built, providing the equivalent of secondary treatment.

Leaksville Woolen Mills, Spray: Sanitary sewage and a small amount of industrial waste are discharged without treatment. If the town of Spray will not accept waste, the company should determine the most practical method of treatment.

Washington Mills Co., Mayodan: Overflow sanitary bleach and dye wastes are discharged without treatment. They should be treated prior to discharge.

Rev. Joseph J. Losieniecki, New Pastor of St. Hedwig's Church, Kingston, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader, Evening News of February 12, 1959:

ST. HEDWIG'S NEW PASTOR

The Reverend Joseph J. Losieniecki, new pastor of St. Hedwig's Church, Kingston, one of the leading charges in the Roman Catholic Diocese of Scranton for Americans of Polish extraction, is no stranger to the community.

A brother of the Right Reverend Monsignor W. A. Losieniecki, pastor of St. Mary's Church of the Maternity, Wilkes-Barre, the Reverend Father Losieniecki devoted 26 of his 43 years in the priesthood to the Park Avenue Parish his brother now serves and to St. Joseph's Church, Wyoming. He has labored at Greenwood in Lackawanna County the past 17 years.

A reputation as a devout churchman and excellent administrator precedes him to the West Side parish where he succeeds the late Reverend Paul Kopicki and the late Reverend James E. Gryczka, whose name was identified with St. Hedwig's for four decades.

In all the parishes in which he served and in local Polish circles, the Reverend Father Losieniecki has been known for his warm personality and even disposition. His ready smile, unfailing cheerfulness, and infinite patience have won for him a legion of friends.

Members of St. Hedwig's Parish are fortunate to have a clergyman of his qualifications as their spiritual guide. He will be an asset to Greater Wilkes-Barre as well.

Juvenile Delinquency Control

SPEECH

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. ELLIOTT. Mr. Speaker, I have introduced a bill H.R. 3464, entitled the "Juvenile Delinquency Control Projects Act."

Every year the problem of youthful lawbreakers grows more serious. Every year we are confronted by a barrage of articles in popular and scholarly magazines about what should be done to stop juvenile delinquency. Every year a large number of bills is introduced suggesting action by the Federal Government to help States and communities solve this appalling problem.

During the last Congress, the subcommitte on special education of the Committee on Education and Labor, of which I have the honor to be chairman, held extended hearings on the general subject of juvenile delinquency.

Many of the Nation's outstanding leaders in the field of youth work testified before our committee. They strongly agreed that we need to know far more than we do at present about the causes of delinquency, the effectiveness of present methods of treatment and control, and development of new ways of handling juveniles who go against society.

EXPLANATION OF THE BILL

Mr. Speaker, my bill provides for this.

It provides $5 million a year for 5 years to pay part of the cost of projects which will demonstrate or develop techniques and practices for the prevention, diminution, and treatment of juvenile delinquency.

Projects may be proposed by States or other public or nonprofit private organizations.

Such projects would be evaluated by a National Advisory Council on Juvenile Delinquency consisting of 12 recognized authorities in professional or technical

fields related to juvenile delinquency and members of the general public.

The Advisory Committee will make recommendations on the projects to the Secretary of Health, Education, and Welfare.

This bill provides for demonstration projects. We expect that projects approved under the bill will be of an action-research nature—that is, actual field trials of methods and techniques in controlling delinquency.

The bill requires complete reporting of results. The Secretary is directed to disseminate any significant findings on juvenile delinquency control as soon as they occur. He is also directed, at the end of the 5-year period, to make a complete evaluation of how knowledge about juvenile delinquency has been advanced by all the projects taken together. In the interim, the Secretary is to make annual reports of his actions on the recommendations of the National Advisory Council, and to submit to Congress recommendations about the administration of the act or further legislation he thinks desirable.

PROPOSED PROJECTS

Mr. Speaker, as an illustration of the results we might expect from this bill, let me recount a few examples of projects suggested by witnesses before our committee:

A former Commissioner of Social Security would like to prove what one or more good, well-trained probation officers can do with juvenile offenders.

The chief of a State child welfare bureau wants to demonstrate what could be done by working thoroughly through the schools, where early truancy and misbehavior often spell future trouble but where understaffed faculties can do little about it.

The director of a private welfare agency thinks they could learn how to perform their present services more efficiently.

A prominent psychiatrist favors a detailed study of one segment of a city to try to identify predelinquent children.

A former Chief of the U.S. Children's Bureau would like to see cities of different sizes experiment on different methods of how to train police for work with juveniles and different methods of organizing police bureaus.

A training school superintendent thinks the ingredients of the personality of adults who are able to influence youths to go straight could be identified.

A State youth control official wants to change one of his training schools to a therapeutic community with high grade social workers to try to work changes in attitudes among those committed.

A correctional official hopes to perfect techniques to identify the few truly dangerous psychotic personalities among the thousands of juveniles he screens for probation, because he is scared to death he may miss one.

EXPECTED RESULTS

Mr. Speaker, I think we can expect significant results from a bill such as this. We have learned the value of demonstrations and research in many fields of endeavor. Not only in scientific fields does it pay off. Our Nation has realized wonderful results from similar demonstration and research projects in the fields of public health, vocational rehabilitation, and education. What could be a more practical step at this time than to assemble and spread what knowledge we now have about juvenile delinquency control, and to launch a broad, coordinated plan of demonstration projects to uncover and test new ways of dealing with this problem.

Mr. Speaker, I believe that this bill will go far in finding more effective ways to prevent and treat juvenile delinquency. I think this will begin a coordinated effort that will assure that all promising avenues of development are followed in the most efficient manner. Even more important, perhaps, I think that we can assure that what is known and discovered through projects begun under this bill will be made available to the States and communities, schools and churches, of this country. Only then can they deal with this difficult and growing problem in the soundest possible ways. Many of the ideas so readily advanced today about what should be done about delinquency may be sound. We will not know which are sound and under which conditions they will work until we go about testing these ideas in actual situations.

This bill is an example of the best kind of role for the Federal Government to play in solving our major social problems. The States and local units of government, the private voluntary organizations and individual families must ultimately do the job of eradicating juvenile delinquency. But we here at this level can help to provide them with the leadership, the coordination, and some of the knowledge and tools to do their job better.

Mr. Speaker, I hope that this bill will receive early, favorable consideration.

Rev. Robert Graham, Late Pastor of Ashley (Pa.) Presbyterian Church

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of February 13, 1959:

REV. ROBERT GRAHAM

After he had served Ashley Presbyterian Church as pastor for 35 years, the announcement in 1956 that Rev. Robert Graham would resign caused widespread regret. He was persuaded by his congregation to remain in the pastorate several months beyond the date he had fixed for leaving. This was to give time to consider the selection of a successor. The request was a measure of the esteem in which he was held in his own church.

In October 1951 members of the Ashley church and officers of Lackawanna Presbytery gathered to observe his 30th anniversary as pastor. Many from other faiths, clergymen and laymen alike, were present to pay tribute. This was likewise true when a dinner was given Mr. Graham on the eve of his retirement. He was admired in his calling and as a citizen for many good qualities not the least of which were his kindliness and his neighborly spirit.

His was the longest tenure of any of the six pastors of the Ashley Presbyterian Church from the time it was formally organized in 1866. Lackawanna Presbytery which knew him as a dedicated member honored him with many calls for service, several terms as moderator. He had been a delegate to both the senate and the general assembly and had long service as State clerk.

Upon his retirement Rev. Mr. Graham became pastor emeritus of the Ashley church and was frequently called upon to officiate or to assist at special ceremonies. For several months last year he served as the acting pastor of a Presbyterian church in Washington, D.C.

In his death this community has lost a clergyman who reflected great credit on his calling, an earnest citizen and an unfailing friend.

Deficiencies in Headquarters, USAF, Manpower and Personnel Policies

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. BROYHILL. Mr. Speaker, on February 11, 1959, I inserted in the RECORD a report made by the Council of Defense Lodges—American Federation of Government Employees—concerning the conflict of military and civilian personnel in the Pentagon.

I am also submitting herewith a copy of a letter written to the Secretary of the Air Force by Mr. John Mann, president, Lodge 1092, American Federation of Government Employees, AFL–CIO, Headquarters, USAF, outlining key deficiencies in headquarters USAF manpower and personnel policies:

AMERICAN FEDERATION
GOVERNMENT EMPLOYEES,
February 6, 1959.

The Honorable JAMES H. DOUGLAS,
Secretary of the Air Force,
Washington, D.C.

DEAR MR. SECRETARY: In Report No. 2512 dated August 7, 1958, the House Subcommittee on Manpower Utilization outlined the following problem:

"The Hoover Commission in 1955 recommended 'that civilians with broad management and accounting experience and competency be appointed as comptrollers.' Three years later, in 1958, the Department of Defense has 970 comptrollers, of whom only 24 percent are civilians. In fact, as recently as July 1, 1958, the Air Force issued an order requiring that all comptrollers in that service must be military except as designated by the Secretary of the Air Force. April 24, 1957, the Secretary of Defense issued a Department of Defense directive—No. 1100.9, Military-Civilian Staffing in Management Positions and Support Activities—which called for the gradual replacement of military in such civilian-type positions as comptrollerships. Present personnel data do not indicate any widespread implementation. Actually, there might be a trend in the opposite direction.

"With the built-in rotation cycle of the military officers, there are generally civilian

deputies in the 740 military comptrollers. The exception is the Air Force where only 11 percent of the comptrollers or deputy comptrollers are civilians."

An interesting question arises from this data: Could the Headquarters, USAF, by increasing the proportion of civilians in the key jobs, improve its fiscal management operations and to what degree of dual staffing exists in the fiscal management?

While this report deals primarily with the comptroller function (accounting, finance, budget, statistical services, and management analysis), we feel that this same situation prevails in many other functional areas throughout Headquarters, USAF. Malutilization of military manpower exists in many other support functions such as administrative services, supply, transportation, maintenance-engineering, procurement, installations, manpower, and management.

Staffing of civilian-type support positions with military personnel has approached a point which, we feel, actually jeopardizes economic completion of the Air Force combat mission. Recent military and civilian pay raises have a direct bearing upon this problem. The assignment of military personnel to civilian or administrative-type duties has become prohibitively expensive. Pay fringe benefits have increased costs to where today's enlisted man can earn over $10,000 per year. In the officer category, the career cost amortization of one full colonel may involve as much as $33,000 per year. This includes base pay, quarters' allowance, longevity pay, flying pay, responsibility pay, PCS costs, dislocation allowances, training costs, retirement, medicare, and other fringe benefits not inherent in civilian manpower costs.

In terms of overall manpower implications, the problem involves much more than simple comparisons of take-home pay between military and civilian personnel. An Air Force major and a GS–12 civilian, for example, may have similar take-home pay in terms of dollars. However, in terms of true cost to the taxpayer, a military man involves many costs, benefits, and investments (education, training, facilities, housing, retirement, etc.) not accorded a GS–12, or other comparable career civilian.

In many areas in Headquarters, USAF, commissioned officers spend their entire tour of duty in nonmilitary, nondefense, noncombat, functional assignments. This is unnecessarily expensive. More importantly, it is creating a misleading manpower picture in terms of defense readiness and combat capability. Manpower totals are padded with thousands of uniformed personnel who are not engaged in, or even prepared for, defense or military-type duties. We feel that this is neither the spirit nor intent of Congress in putting a man in uniform. The assignment of military personnel to administrative and support-type activities may well constitute the most expensive form of bureaucracy in the Federal Government.

Compounding this situation is the fact that the military man often does not have the motivation, aptitude, background, or training for support-type duties. He knows he will probably be rotated in 3 years into an entirely different career category. He also realizes that interim civilian-type assignments tend to jeopardize his long-range military advancement potential. In the support areas, particularly, this has created officer and civilian morale problems, poor management leadership, lost continuity, and inadequate technical specialization. In many cases, important projects or programs are canceled prematurely or reorganizations undertaken at considerable loss in Air Force funds and resources, simply to coincide with an individual officer's rotation. In others, costly or ill-considered decisions are made as a result of disinterest, lack of training, or personnel instability. We feel that this type of transient management is costing the American taxpayer millions of dollars in excess defense costs. During recent Senate appropriations hearings, considerable discussion was centered upon the high cost of personnel instability within Headquarters, USAF.

The problem, as we see it, involves much more than simple mismanagement or labor relations as such. The entire concept of civilian-military relationships, roles, and teamwork must be reexamined within Headquarters, USAF. By comparison the Navy and Army have relatively progressive policies and concepts in the area of military-civilian teamwork. The Navy, for example, has a full-time Industrial Relations Office and has civilianized many of its support functions for purposes of continuity and technical specialization. It also makes greater use of civilian comptrollers. The Army has assigned civilian deputies in many of its support activities. For some reason, Headquarters, USAF, continues to pursue a costly and illogical manpower policy concerning the utilization of civilians. The impact of this policy upon defense capability and costs should be obvious.

We also feel that the proposed 2-percent reduction in DOD civilian manpower will actually increase overall defense payroll costs. Reductions in civilian manpower, in many instances, simply mean that military personnel will be assigned to perform civilian duties. Direct and indirect payroll costs will actually be increased in many areas. This process will then be compounded by a secondary manpower cycle wherein Headquarters USAF will demonstrate a need for additional military manpower. In contrast to this, it is accepted knowledge that advancing weapon systems, technology, and airpower concepts (missiles and spacecraft) will require progressively greater concentration of stabilized civilian manpower in the direct and indirect support areas.

We could cite many more arguments and examples of why greater utilization should be made of civilian manpower in support type activities in headquarters USAF. However, numerous studies by outside consultants and citizen groups (Hoover Commission, Sarnoff Commission, Ford Foundation, Rockefeller report) have indicated similar conclusions. We feel that corrective action is long overdue.

As a point of departure, the following proposals are submitted:

1. Establishment of civilian deputies at headquarters USAF, at all levels, in such functional areas as procurement, manpower, supply, transportation, information services, accounting and finance, and maintenance-engineering.

2. Establishment of civilian comptrollers, and deputies, within Headquarters USAF.

3. Review of Headquarters USAF civilian-military manning ratios in all direct and indirect support functions. Progressive civilianization of appropriate broad functional areas and activities, throughout headquarters USAF, as outlined in DOD 1100.9.

4. Require absolute compliance with existing directives concerning utilization of civilian manpower as outlined in AFR 40–3, AFR 30–22, and DOD directive 1100.9.

Respectfully yours,

JOHN MANN,
President, AFGE Lodge 1092 (AFL–CIO), Headquarters USAF.

Mr. Speaker, I sincerely believe that the deficiencies pointed out in the above letter to the Secretary of the Air Force is further substantive proof that the interests of our Nation would be best served by removing military jurisdiction from civilian employees in the Government service.

Jazz: A Means of Direct Intercultural Communication

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. COHELAN. Mr. Speaker, evidence of the importance of the special international program for cultural presentation has recently come to my attention, and I wish, in turn, to place it before all Members of Congress.

Engaged as we are in efforts to communicate on diplomatic, legislative and political levels, we may overlook the fact that certain kinds of immediate and direct experience are much more meaningful to most citizens of other countries. Friendship comes from interests held in common, but more particularly from enjoyments shared.

In August of 1958 the Woody Herman band toured 19 countries of South America and the results of that tour are to the point. The following comments are excerpted from articles in the December 14, 1958, and December 21, 1958, editions of the San Francisco Chronicle by Mr. Ralph J. Gleason, the able editor of that newspaper's Rhythm section:

Just back from a 30,000-mile, 3-month tour of Central and South America for the U.S. State Department, Bandleader Woody Herman has a simple recommendation on how to make friends south of the border.

"Send them more jazz groups," he said last week in Hollywood.

One of the most amazing things was the reaction of the members of the band. "Week after week," he said, "those New York hippies were personal ambassadors. Every man a diplomat. It was beautiful. And the reception we got everywhere was almost frightening. We couldn't lose."

In Montevideo, for instance, the Herman band outdrew the Russian Ballet which was playing opposite them, and in several halls the band set attendance records.

One of the surprise features of this tour was a series of free concerts which Herman gave at schools and universities.

The first took place in Caracas, Venezuela, in August. Local representatives of the State Department were dubious as to the possible reaction, but Herman felt that if the students had a chance to hear jazz, they would appreciate it. Thousands jammed the beautiful Caracas University hall and thousands more tried vainly to get in. "It was wonderful," Herman said. Then, convinced of the practicality of the free school concerts, they were repeated.

Throughout the tour, South American musicians swarmed around the band and set up friendships that will likely last for years. Members of the Herman band are now involved in sending back music and recordings to musicians all over South America.

Our diplomacy in South America in recent years has not been notable for its success and there has been a growing feeling that if we concentrate more on something, such as jazz, which communicates directly and less on formal diplomacy, we may make more friends more quickly.

One of the main obstacles to the sending of more cultural missions to South America, Herman said, is the difficulty in obtaining funds for this purpose from Congress.

"There has been no publicity here about the success of these tours, therefore Congress doesn't feel the necessity of spending the money," he said.

As proof of the success of the tour, Herman proudly displays an editorial from the Daily Journal of Caracas following the band's appearance there.

"During the course of recent history," the editorial says, "we have seen several excellent ways of how not to win friends and influence people abroad.

"White-tie diplomacy, as Vice President NIXON called it, is on the way out.

"Just how many friends * * * have been made with a round of formal cocktail parties we never did find out. But we have a pretty good idea of how many friends musical ambassadors such as Louis Armstrong, Leonard Bernstein, and now Woody Herman have made for the United States.

"Keep up the good work, Uncle Sam, and send us more of these 'cats'."

Poison in Your Water—No. 16

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD an article appearing in the New York Journal-American on January 10, 1958. That article entitled "Water Pollution Perils Upstate City" sets forth more reasons why the full $45 million authorized under Public Law 660 of the 84th Congress should be appropriated for grants to cities and municipalities to clean up their sewage disposal.

This article sets forth how the county health board president announced he would issue a "boiled water" order on Monday unless the supplies of water in Rensselaer County are cleaned up. He said:

City water in Rensselaer is so polluted it is dangerous for home consumption.

Dr. Quinlan said:

I will prohibit its use next Monday unless something is done.

His grim statement continued:

A disastrously widespread outbreak of hepatitis and allied liver diseases is to be greatly feared.

The water of this area is drawn from the Hudson, one of our great waterways, just above the city of Albany.

This is just another danger to our people which stems from foul, filthy, dirty water full of municipal sewage and industrial waste. This situation goes on in hundreds of cities and communities throughout the United States and lives and health of millions of Americans are endangered thereby:

WATER POLLUTION PERILS UPSTATE CITY—HEPATITIS EPIDEMIC FEARED

RENSSELAER, N.Y., January 10.—An epidemic of infectious hepatitis, a serious liver disease, from polluted water supplies threatened the entire 11,000 population of this city today.

The threat was defined by the Rensselaer County Board of Health in a survey rushed to completion in less than 4 days.

Dr. John J. Quinlan, county health board president, said he would issue a "boiled water" order to public on Monday unless the supplies are cleaned up.

"City water in Rensselaer is so polluted it is dangerous for human consumption," Dr. Quinlan said. "I will prohibit its use next Monday unless something is done.

"Our survey revealed that the supplies, drawn from the Hudson just above Albany, are inadequately filtrated and chlorinated * * * and have a soaring bacterial count in the water mains.

"A disastrously widespread outbreak of hepatitis and allied liver diseases is to be greatly feared."

Dr. Quinlan said the condition had worsened steadily during the past several months.

He said a copy of the country report had been forwarded to State Health Commissioner Dr. Herman E. Hilleboe with a request for his urgent attention.

A Virginian Sparks the Drive To Strengthen Small Business in America

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. BROYHILL. Mr. Speaker, all of us are familiar with the Small Business Administration which was created by Congress in 1953 and made into a permanent Federal agency by action of the 85th Congress.

Under the able direction of its Administrator, Wendell B. Barnes, the Small Business Administration has been of immeasurable help to the entire national economy. SBA has done this through its program of helping to rehabilitate, to expand and generally revitalize thousands of small business enterprises throughout the land.

Through efforts of SBA, many millions of dollars of Government defense contracts have been diverted to small business enterprises, thereby enabling them to maintain steady employment and healthy business conditions in countless communities.

Last year the Congress created the Small Business Investment Act, the objective of which is to furnish long-term and equity-type financing to small business enterprises—a kind of financing not easily to be found through commercial banks. The interest in this plan has been widespread in all parts of the country.

Sensing that the Investment Division was to become one of the most effective segments of the Small Business Administration, Mr. Barnes sought a highly-qualified banker and financial expert to take charge of the division. He found Mr. Duncan H. Read of Middleburg, Va., president of the Middleburg bank, a former partner in the nationally known firm of Dillon, Read & Co., and favorably known in American financial circles. As a Deputy SBA Director in control of the Investment Division, Mr. Read now is rapidly bringing the Division to a level of high operational efficiency.

Mr. Read addressed a meeting in Washington February 20, of the SBA's Region Four Advisory Board embracing Maryland, Virginia, West Virginia, North Carolina, and South Carolina.

Because of a widespread interest in the Small Business Investment Division on the part of Members of Congress, as well as by bankers, investment people and small business throughout the country, I herewith offer the text of Mr. Read's remarks for insertion in the Appendix of the RECORD:

REMARKS OF DUNCAN H. READ, SBA DEPUTY ADMINISTRATOR, INVESTMENT DIVISION, BEFORE SBA'S REGION 4 ADVISORY BOARD

The activities of the Investment Division of the Small Business Administration, created by the Small Business Investment Act last summer, are twofold:

(1) To make loans to State and local development companies, and

(2) To license, regulate and give financial assistance to privately organized, privately financed companies, called small business investment companies.

The provision for loans to local development companies has aroused considerable interest because of the opportunities under title 5 of the act, which permits loans up to $250,000 for assistance to an identifiable small business. Loans can be obtained under section 502 of this portion of the act to help a small business purchase needed equipment, build additional facilities, and even to acquire property deemed necessary to carry out the purposes of small business expansion.

While the law limits to $250,000 the amount we can lend for a single small business, it should be remembered that the number of loans to a local development company for additional small businesses is not necessarily limited. Thus, for example, four loans for as many small businesses may be negotiated if their getting established in the community will carry out the aims and purposes of the act.

Local development companies in Virginia and North Carolina, as well as several further south, already have availed themselves of the opportunity to obtain Federal funds to carry out such aims.

The Small Business Investment Act aims to keep the Government out of business, and to assist and encourage private organizations to provide a source of long-term loans and equity capital for small business, hitherto difficult to obtain. The assistance to the small business investment company provided by the act, is twofold:

First, there are tax advantages for the SBICs and the investors who form them. These advantages may be found in section 57 of the Technical Amendments Act of 1958, and may be summarized as follows:

(1) The investment companies are allowed an ordinary loss deduction, rather than a capital loss deduction, or losses realized on the convertible debentures of small business concerns (including stock received pursuant to the conversion privilege);

(2) Taxpayers investing in the stock of the investment companies also are allowed an ordinary loss deduction, rather than a capital loss allowance, on losses arising from the worthlessness, or sale of such stock;

(3) The companies are allowed a deduction for 100 percent of the dividends received from a taxable domestic corporation rather than the 85 percent deduction generally allowed corporate taxpayers.

I think you regional advisers might be interested in a brief résumé of our analysis of what kind of people and organizations are applying for licensing as a small business investment company; and what they apparently expect in the way of results by forming such companies.

First, for the first time in 25 years, banks are permitted to engage (directly, if you will) in equity and long-term financing. Today, this is their only opportunity to do so. Investment companies are being formed by banks, with and without the participation of private individuals or investment underwriting firms. Such companies would be expected to operate at a profit to all stockholders, but would also create satisfactory relationships of various kinds for the banks and underwriting firms involved.

Second, several investment companies are in the formation stage at the instigation of groups of small business concerns themselves for the purpose of providing these concerns with a source of equity and long-term capital. Such investment companies would be operated at a profit, but primarily for the benefit of the borrowers, and would confine their activities probably to long-term loans not involving the equity of the borrowers. Manufacturers supplying small business concerns would be logical stockholders of such investment companies.

Third, another category of investment companies would be those formed principally as venture capital undertakings, where the incentive is to finance enterprises that have a promising growth potential. Private individuals in high tax brackets who see advantages of putting their capital to work through the formation of an investment company, rather than directly, should be the main source of establishing investment companies in this category.

Now, the profit potentialities of SBIC's will naturally vary with the nature of the business. For instance, certain profit potentialities are available to investment companies in all three categories. First is the differential between the interest paid on borrowings and interest charged on loans; and a second is the income received for services of all kinds rendered to the small business concerns. These two sources of profit might be expected to keep solvent an investment company that wishes to operate primarily pro bono publico, without sharing in the growth of the borrowing companies.

For SBIC's not operating pro bono publico, the third and main source of profit, of course, is in sharing in the growth of successful small businesses through acquisition of their convertible debentures. I think this needs no elaboration.

There are also supplemental or incidental advantages to certain types of stockholders of an SBIC, depending upon the nature of their businesses. Banks, for instance, which form SBIC's might expect to expand their banking business because of the investment company's activities; investment underwriting companies owning stock in SBIC's might expect to develop opportunities for public security offerings; insurance companies interested in SBIC's lending, for example, to real estate developers, might expect to handle considerable insurance in the field of title search and insurance, fidelity bonding, and other types of insurance that the construction industry needs.

But whatever the source of profit might be, there can be no substitute for able management experienced in the lending and investment field.

In reviewing the applications received to date, we have found that applications received from people with previous experience in banking and investments, and in the preparation of financial statements and documents, have required a minimum of implementation and correction.

It will not be surprising to you, therefore, to know that of the 10 proposals for which the applicants have been told to proceed, 5 of these proposals have been submitted with a bank as either sole stockholder or at least one of the stockholders.

One or two applications have been prepared by people with little or no experience in complying with statutory requirements or in the preparation of financial statements. These have been returned to the applicants for corrections of all kinds.

We are constantly being asked when the first SBIC group will be licensed.

We cannot set such a date right now. We can say only that out of 43 applications, we have told 10 that they may proceed to organize as described in their proposals.

We have told another eight applicants that final consideration of their proposals cannot be given until they have furnished further information or amended their proposals.

We advised one applicant that his proposal, as submitted, was not satisfactory for a variety of reasons.

You will see from this chart that there has been a steady stream of proposals coming into Washington, and I hope that the next time we meet I can tell you that most of them have been licensed and that their investment companies are in business.

I think you all may know that SBA organized three briefing sessions in Los Angeles, Kansas City, and as recently as January 30, in Philadelphia. Mr. Barnes was accompanied by several people from SBA's Washington office, as well as two representatives of the Securities and Exchange Commission. We expect to issue very soon copies of the remarks made by Mr. Barnes and the others at the Philadelphia briefing session, with typical questions and answers received at all three meetings.

Judge Bernard C. Brominski Honored by His Hometown of Swoyerville, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of February 11, 1959:

HOMETOWN HONORS JURIST

It was interesting to note that more than 500 persons turned out for a community testimonial dinner in Swoyerville in honor of Judge Bernard C. Brominski. That was an impressive tribute to a native son.

It has been written that no man is a hero to his valet. By the same token, an individual, no matter what eminence he may attain elsewhere, too often does not impress his neighbors when success knocks at his door. Judge Brominski is a refreshing exception to the rule as the gathering in the auditorium of Holy Trinity Church demonstrated.

There are several contributing factors. He is a member of a family that has played a prominent role in Swoyerville, his father, the late Dr. John Brominski, having been a civic leader and burgess. The young jurist himself, endowed with a warm personality, has been a popular figure in the West Side borough. And the people are understandably proud of the contribution he has made to the prestige of his hometown by his elevation to the bench, a distinction Swoyerville shares with him.

In recent years, Swoyerville has developed an esprit de corps through the success of its high school teams and the recognition that has come to other local residents, including its clergymen. The newly developed pride is reflected also in the development of its residential districts. The addition of a jurist to the role of citizens has just about filled its cup of joy to overflowing, if the response to the testimonial is any criterion.

Lincoln as an Extremist on Court

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

[From the Washington Evening Star, Feb. 12, 1959]

LINCOLN AS AN EXTREMIST ON COURT—CIVIL WAR PRESIDENT CALLED OUTSPOKEN IN VIEWS ON DRED SCOTT DECISION

(By David Lawrence)

The Nation is celebrating this week the birthday of Abraham Lincoln. Eloquent eulogies are being spoken—and he deserves them all. But if what Abraham Lincoln said just 100 years ago were attributed today to anyone else in public life, the same utterances would be denounced as coming from a racist, or a person who defies the Constitution.

Few persons realize how outspoken Abraham Lincoln was against a Supreme Court decision and how he insisted that a mere overturning of precedent in a ruling was not settled law. It was just 100 years ago when Abraham Lincoln was debating with Stephen Douglas in the State of Illinois. Only a few months ago the Library of Congress published a book containing facsimiles of the printers' copy of the stenographic record of the Lincoln-Douglas debates as edited and prepared for the press by Abraham Lincoln.

Following is a quotation from Mr. Lincoln's speech delivered on July 13, 1858, at Chicago:

"The sacredness that Judge Douglas throws around this decision (of the Supreme Court of the United States) is a degree of sacredness that has never been before thrown around any other decision. I have never heard of such a thing. Why, decisions apparently contrary to that decision, or that good lawyers thought were contrary to that decision, have been made by that very Court before. It is the first of its kind; it is an astonisher in legal history—it is a new wonder of the world."

In speaking further of the Dred Scott decision, Mr. Lincoln said at Quincy, Ill., on October 13, 1858:

"But we nevertheless do oppose that decision as a political rule which shall be binding on the voter to vote for nobody who thinks it wrong, which shall be binding on the Members of Congress or the President to favor no measure that does not actually concur with the principles of that decision. We do not propose to be bound by it as a political rule in that way. * * * We propose so resisting it as to have it reversed if we can, and a new judicial rule established upon this subject."

In another speech delivered in Chicago on July 17, 1858, Mr. Lincoln quoted with approval a letter from Thomas Jefferson, written in 1820, which declared that if the

judges of the Supreme Court are to be considered as "the ultimate arbiters of all constitutional questions," this could be a "very dangerous doctrine indeed and one which would place us under the despotism of an oligarchy."

In a speech delivered at Ottawa, Ill., on August 21, 1858, Mr. Lincoln took up the race question. He denounced slavery, but then added:

"I have no purpose to introduce political and social equality between the white and the black races. There is a physical difference between the two, which in my judgment will probably forever forbid their living together upon the footing of perfect equality, and inasmuch as it becomes a necessity that there must be a difference, I, as well as Judge Douglas, am in favor of the race to which I belong having the superior position. I have never said anything to the contrary, but I hold that notwithstanding all this, there is no reason in the world why the Negro is not entitled to all the natural rights enumerated in the Declaration of Independence, the right to life, liberty, and the pursuit of happiness. I hold that he is as much entitled to these as the white man. I agree with Judge Douglas, he is not my equal in many respects—certainly not in color, perhaps not in moral or intellectual endowment. But in the right to eat the bread, without leave of anybody else, which his own hand earns, he is my equal and the equal of Judge Douglas, and the equal of every living man. * * *

"What next? Free them and make them politically and socially our equals? My own feelings will not admit of this; and if mine would, we well know that those of the great mass of white people will not. Whether this feeling accords with justice and sound judgment is not the sole question, if, indeed it is any part of it. A universal feeling, whether well or ill founded, cannot be safely disregarded.. We cannot, then, make them equals."

With further reference to the equality or inequality of the races, Mr. Lincoln said, on September 18, 1858, at Charleston, Ill.:

"I will say then that I am not, nor ever have been in favor of bringing about in any way the social and political equality of the white and black races—that I am not nor ever have been in favor of making voters or jurors of Negroes, nor of qualifying them to hold office, nor to intermarry with white people; and I will say in addition to this that there is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together there must be the position of superior and inferior, and I as much as any other man am in favor of having the superior position assigned to the white race. I will add to this that I have never seen to my knowledge a man, woman, or child who was in favor of producing a perfect equality, social and political, between Negroes and white men."

Poison in Your Water—No. 17

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. DINGELL. Mr. Speaker, another area of our country became closed to water sports and to recreation because of health danger. An article describing the situation appeared in the San Francisco, Calif., Call-Bulletin on December 17, 1957. The article pointed out how the Redwood City harbor had become so polluted that it was a health danger. Raw sewage drifts into the bay and surrounding areas from improper operation of nearby sewage disposal plants. The result is that citizens who could play and recreate in once pure and beautiful waters are denied that enjoyment because of the health danger from sewage and pollution in the area:

WATER SPORTS HELD POLLUTION DANGER

(By Stuart W. Welch, Call-Bulletin peninsula reporter)

REDWOOD CITY, December 17.—Water contact sports should not be allowed in Redwood City's harbor or connecting slough because of the health danger, according to the county health department.

A letter to this effect was read last night to the city council here by Dr. Harold D. Chope, county health director.

Any type of swimming, water skiing, or skin diving would be dangerous, Dr. Chope wrote, because of water pollution.

The health director pointed out that sewage drifts into the bay and sloughs from improper operation of nearby sewage disposal plants.

It is expected the council will pass an ordinance banning all water sports except boating by next spring.

Protest Against Electrical Equipment From Foreign Concerns

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. DENT. Mr. Speaker, I present herewith for the attention of the Congress a resolution passed by the General Assembly of Pennsylvania. The resolution is self-explanatory and is a protest against the purchase of certain electrical equipment from foreign concerns by American agencies. You will note that this is a bipartisan resolution. I sincerely pray that the Members of this body will take cognizance of the seriousness of the effects of the continuation of this policy by Government agencies:

Whereas the Tennessee Valley Authority (TVA) is seriously jeopardizing American recovery from the recession by awarding sizable contracts to foreign concerns; and

Whereas our immediate concern is the loss of a multi-million dollar turbo-generator contract to the C. A. Parsons Company of England while the Westinghouse Electric Corporation, East Pittsburgh, Pa., was the lowest domestic bidder; and

Whereas the importation of this electrical apparatus will result in the loss of more than one million man-hours of work for the Westinghouse Electric Corporation employees which is comparable to work for 700 employees for one (1) year or 350 employees for two (2) years; and

Whereas there will also result a loss of direct and indirect taxes in the amount of $3,255,500 Federal and $363,300 State; and

Whereas during 11 months of 1958 the Federal Government awarded $30,530,114 in heavy electrical apparatus contracts and foreign manufacturers were awarded 35 percent or $10,711,070; and

Whereas we believe that in addition to the effect this policy has on our economy, it is a reckless and hazardous policy for the security of our Nation, as this equipment will now be dependent on a foreign company, from across the ocean, for maintenance and repair; and

Whereas the Government of England stands steadfast in its policy that no equipment as referred to herein shall be purchased by English concerns from a foreign country because of national security; and

Whereas we believe the Government should look beyond the price alone and evaluate the health of our own economy and the soundness of our national defense: Therefore be it

Resolved, That the House of Representatives of the Commonwealth of Pennsylvania hereby memorialize the President of the United States and the Congress of the United States to establish a congressional committee to investigate the policies of the Tennessee Valley Authority so that further loss of employment in the United States, at a time when employment is now of grave concern, will be avoided; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the presiding officers of each House of Congress of the United States and to each Senator and Representative from the Commonwealth of Pennsylvania in the House of Representatives.

HIRAM G. ANDREWS,
Speaker, House of Representatives.
JAS. MINSKY,
Chief Clerk, House of Representatives.

Garnishment

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LANKFORD. Mr. Speaker, the fourth of a series of articles dealing with garnishment in the District of Columbia is inserted at this point in the Appendix of the RECORD:

[From the Washington Post, Feb. 4, 1959]

EMPLOYERS DENOUNCE GARNISHMENT AS DISRUPTING FUNCTION OF PERSONNEL

(By Morton Mintz)

"I object to the fact that three or four firms in the city of Washington are causing this hearing. It (garnishment of wages) is causing my firm to use one clerk's time some 3 hours a week, and it is expensive. My time is also involved."

This was Richard D. Gibbs, secretary of Peoples Drug Stores, testifying before the House District Judiciary Subcommittee on May 27, 1957. He continued:

"Most of the people think that Peoples Drug Stores are doing something to them by holding their salaries, and they think we influence these garnishments, whereas, we do everything to discourage them."

The grief caused easy-credit customers and the public under the District's bad debt or garnishment law has been set out in preceding articles. But employers have a host of complaints, too. More of these were placed before the House subcommittee by Victor Ottenstein, representing the District News Co.

He spoke of the many times easy-credit stores and small-loan companies phone his

firm, learn that an employee who wants to buy from them is being garnished—and sell to him anyway.

"I feel," he testified, "that it is a promiscuous extension of credit when they know that the employee will probably default, and it is a nuisance to the employer.

"We train our employees and it takes a while before they catch onto the work, and then they get a garnishment and they might leave the job and go somewhere else, which means we have to go to the trouble of employing someone else to replace them.

"A new person makes mistakes which cause us annoyance. Some employees who might have their salaries attached this week will have them attached next week by another firm. A person with a family has to pay rent and has to buy food and they cannot exist without some sort of income, and in some cases it makes thieves out of these employees * * *.

"Now, it is not only a nuisance at our place of business, because it takes executive time out to handle these matters, or to see the employee about these situations, and to train new employees, but when we have to appear in court to say that the employee earns only so much and should get an exemption, it takes the whole day, and we just cannot afford to spend that time."

Ottenstein then went into the effects of the bar on attaching wages of Federal and District Government employees. He said it is "unfair to non-Government commercial establishments * * * to have employees threatened with garnishment because it is difficult to hire employees. There is a scarcity in the labor market, and these employees figure, 'Well, I'll get a job with the Government, and they cannot attach me.'"

Here are illustrations, based on interviews with employers, of points made by Ottenstein and others:

One large employer, Government Services, Inc., had to handle 531 attachments last year. The source of more than 100 of these was two easy-credit stores, which stresses once again that a huge share of the garnishments originates with a very few firms.

This employer, at the request of the Washington Post, made a detailed study of its cost of handling these attachments. The estimate: $10 each.

The pay of one valued GSI employee was attached for 2 consecutive months. "It just doesn't make any sense working here and not getting a paycheck," he said. He quit.

Another major employer, Washington Terminal Co., had to process 623 garnishments last year. The estimated average amount: $150. This company estimated a smaller cost of handling, $4 each.

One employer of fewer than 150 persons made a study for the Washington Post of the cost of training replacements for five employees who, heavily in debt, began to steal, were caught and were fired. His estimate: $460 in direct payroll costs.

From a letter to Municipal Judge Milton S. Kronheim, Jr., from Nicholas Costin, a restaurant operator: "Some of these garnishments are granted against people who have never been in my employ, or who have left my employ many months ago. This only proves that sales are made without any check upon the purchaser's credit. We who are employers are obliged to answer a garnishment and often find ourselves obligated to these unscrupulous creditors when such an answer has gone astray."

Many employers end up making loans, often out of their own pockets, to garnished employees. If an employer advances wages to an employee whose pay has been attached, he can be sued by the creditor.

The creditor's right to sue is effective under the garnishment law for a 6-month period or until the debt is paid, even if the garnishment itself expires. Such a suit was filed against a real estate firm in 1957 by Hollywood Credit Clothing Co., Inc., 703 7th Street, NW. Municipal Court Judge Milton S. Kronheim Jr. dismissed the case, ruling the realty firm, in advancing wages to a $50-a-month janitor after it received a Hollywood attachment, was not trying to help the janitor evade the judgment, but only to help him exist.

John Crosby States the Case for Pay Television

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. UDALL. Mr. Speaker, I present below a most provocative article written by the respected television critic, John Crosby, which appeared today in the New York Herald Tribune. Mr. Crosby's article follows:

IS PAY TV THE ANSWER?

Costs are becoming an awful problem on television. Gad, I remember way back when the Milton Berle show—the whole hour, including musicians, writers, chorus girls, guest stars, and Berle—came to $17,000 a week. Today you can hardly get the dog act for that. You can hardly get anything for $17,000 except prolonged commercials on daytime television.

Sure, television is graced by an occasional Hamlet or For Whom the Bell Tolls. But, increasingly, the specials and even the regulars, such as Palyhouse 90, are falling behind their budgets. Television more and more is in an era of deficit financing, like Government. Sometimes the deficits are fairly formidable, too. Eventually, they will be downright frightening.

Already See It Now has vanished, mostly, though not solely, because it was too expensive. The other serious operations on television—many of them anyway—are sustained by deficit financing that cannot go on forever. However, even apart from the shows that have disappeared altogether, as See It Now, the rising problem of cost has cut the quality of television in less spectacular ways.

Already, a good many writers, including several who started in television, say they won't write for TV because TV can't afford them. That applies also to actors. To get a cast like that in For Whom the Bell Tolls you have to go way over your budget. If the best writers are unobtainable you must take lesser writers and get a lesser script.

All of which leads me to ask the question aloud that I have been asking myself for a long time: Can the advertiser afford television much longer? Or, to put it another way, can it afford good television, which is what we are primarily concerned with here? Sure, the advertiser can afford to turn on the network and fill it almost uninterruptedly with commercials, as is being done on daytime television. Or, it could fill the nighttime air with garbage—westerns and parlor games.

But is this enough? It's not enough for me. I am increasingly in favor of pay television, because I think it is the only solution to the interesting problems. I have never been naive enough to suppose that pay TV would automatically open the floodgates to operas, symphonies, and really worthwhile things. Let's not delude ourselves with great expectations. There will be plenty of junk on pay TV, too.

But at least there will be plenty of money to put on decent dramas. Actors we got; writers we got; directors we got, and the creative energy of this country is at white heat. All we haven't got is money, at least on television we haven't. I would dearly love to see a top producer like Fred Coe given enough money to pull together all the elements he needs in writing and acting and then thrown into competition with the junk merchants at the box office.

Television should be restored to the hands of the showmen instead of the advertisers. Again, this will not necessarily lead to Nirvana. There have been some awfully shoddy, sensational, cheap-jack showmen. But at least the aim of any showman is to entertain, not simply to sell goods. Just the absence of commercials would add so much to some shows. Already good directors are driven out of their wits by inserting underarm deodorant advertisements in the middle of tender, dramatic scenes. When such commercials become the price of survival, then your serious writer and director leave the medium altogether.

Why not pay TV? Well, the chief cry against it is that it is un-American. Free broadcasting is the American tradition. But is any television really free? They add the cost of "As the World Turns" to the soap chips. And I don't even like "As the World Turns." I'm forced to pay for a program I don't want—and so are you. This isn't free TV; it is pay TV, and you don't have any control over what you're paying for.

I don't think sponsored television will disappear altogether, either. If you wanted to play "Concentration" or to watch Dick Clark's teenagers dancing to rock and roll music, or to see "Secret Storm," it would have to be on free television because no one in his right mind would pay to see those things.

A concert by the Philharmonic would not attract an audience big enough to interest Procter & Gamble, but it would sure attract a big enough one to interest Sol Hurok, whereas no one would pay 10 cents to see "Name That Tune"—the rating notwithstanding.

Besides, all the arguments are going to pale eventually before the single overriding argument of economics. If costs continue to mount, the advertisers won't be able to pay the bills and it will have to be pay TV.

Addresses at Ceremonies Dedicating New Supreme Court Building, Brooklyn, N.Y.

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ROONEY. Mr. Speaker, under the privilege heretofore granted me by unanimous consent of the House, I include herewith the following remarks of the Honorable Gerald Nolan, presiding justice of the appellate division, second department, Supreme Court of the State of New York, and the address made by Mr. Andrew S. Roscoe, president of the Downtown Brooklyn Association, at the ceremonies dedicating the new Supreme Court Building, in Brooklyn, N.Y., on January 5, 1959:

PRESIDING JUSTICE NOLAN. When we think of courthouses, this type of building, I suppose we all think of judges, lawyers, jurors, and litigants. If we stop to consider the matter I think we will all agree that what

goes on in courthouses, the administration of jusice, affects directly or indirectly every segment of our community. This program would not be balanced nor would it be complete if we did not hear from a representative of commerce, industry, banking.

We are very happy that we have with us today on this occasion one who has been for many years a friend of the court, a dynamic booster for everything that Brooklyn stands for, a keen student of political science, and a leader in the banking circles of the borough.

It is a privilege at this time to present to you the president of the Downtown Brooklyn Association, Mr. Andrew S. Roscoe. [Applause.]

ADDRESS BY MR. ANDREW S. ROSCOE

Our distinguished presiding officer, so well equipped for his duties, since he is also the presiding justice of the appellate division, Right Reverend Bishop DeWolfe, Right Reverend Monsignor Rev. Dr. Steinbach, Mr. Borough President, distinguished justices, not only of this great court but of all other courts, distinguished guests, my ladies and gentlemen, it is a great honor to be here. No one could wish for a more eloquent background to a speaker's platform than this supreme courthouse, which stands as an integral part of a civic center unmatched in any other community. This striking and imposing structure represents a very tangible achievement—the result of skills of labor, architects, and engineers, of planning and financing. It represents a happy conclusion to years of effort. This is sufficient reason for pride.

But I, for one, find this a time and an occasion for humble gratitude.

It is said if we hold any object close enough to our eyes, the object, however small, is big enough to blot out the sun.

This very wonderful supreme court building is very close to all of us, but being this close, it could blot out something larger, stronger and, if you please, more beautiful. This "something"—for it has no convenient and all inclusive label—is the spirit, the drive and the inherent hopes of a free community which recognizes justice as the keystone and the pillar of good government.

As an individual I am grateful to those before my time, to the symbolic body politic which has continuously fought for the rights of a free citizenry against external enemies and those enemies within ourselves such as doubt, timidity, and the instincts of inordinate self-aggrandizement.

A combination of geography and a unique community spirit have given to Brooklyn its deserved reputation as a frontier town or, if you will, an "open port" to our America. For 300 years Brooklyn has been a gateway and a sanctuary, an experimental area for people of different backgrounds and cultures to work and to live together with consequent inestimable benefit to themselves and their neighbors. That has been no simple, automatic accomplishment.

Just as a man cannot be called truly honest if he has never faced and rejected the temptation to steal, he cannot be called a true citizen unless and until he has firmly adopted the rigorous principles that demand political, religious, and racial tolerance for all others as well as for himself. Brooklyn has served and is serving as a "melting pot"—I think I would rather call it a crucible, a testing place of the American spirit. From this crucible prejudice has been sifted and human understanding has been nurtured. Ours is a divine and human faith, a vital philosophy. Such faith inspires progress.

In 1861, when the old Supreme Court Building opened, Brooklyn had a population of 279,000. Today its citizens number about 3 million. The borough has become a world-recognized center of commerce, industry, education, and the arts. Aggregate family income in Brooklyn has leaped in 25 years from $1½ billion to over $5 billion.

But let us recognize an essential of civil progress. In this growth the people have relied upon the law—its administration and just interpretation. Different points of view demand interpretation. The rapid and just disposition of litigation has played a vital role in the borough's tremendous progress over the years.

The ideal concept of absolute justice for all enables us to plan for a future community, secure in the hopes of all our citizenry who come to recognize equality before the law, integrity in the administration of justice. It is rightful that the Supreme Court Building be part of a civic center, for it gives stern recognition that without the law and respect for it we have no society, no commerce, no industry—and most important, no hope for an even better future.

This building will enable the distinguished members of the supreme court of the second judicial district to function in improved physical facilities. However, the strength of our judicial system does not lie principally in physical facilities. The source of strength lies in the knowledge, the character and the heart of the men who serve on the bench and thus serve their community.

I noted before my gratitude to the body politic. I note now the deepest kind of gratitude to the members of the supreme court who are continuing with distinction and greatness the brillian traditions of justice, justice humanly administered.

I thank God we live in a society where justice can not be dispensed by electronic machines, for only the creatures of the Lord are endowed to judge, to understand their fellow mortals.

I sometimes wonder if we adequately conceive the tremendous burdens that have been placed upon the distinguished jurists to whom we owe so great a debt.

More than a quarter of a century has gone by without any addition to the number of justices of the Supreme Court of the Second Judicial District. In 1932, this body of jurists handled 3,342 cases. In 1958, still with 15 justices exclusive of the appellate division, over 5,000 cases have been adjudicated. It has been a stupendous task and a magnificant accomplishment. In 1932, automobile registration was modest, commercial aviation was in its infancy, labor legislation was just beginning to become a part of our legal system, sociology and psychology were tenuous, timid studies. Today our judges must treat with and properly administer infinitely vaster areas of legislation, and dispense justice in the administration of a progressively increasing caseload. They accept new theories of dynamic justice and are required to employ new, infinitely broader areas of social science in the expanding role of justice.

The assignment to this district of 3 city court judges and a justice of the 10th district is recognition that too much is being asked of too few.

The action on studies of modernization of judicial procedures I leave to legal authorities.

But I know I am voicing the sentiments of businessmen whom I am honored to represent as president of the Downtown Brooklyn Association when I say that even further steps should be taken to lighten the heavy burdens which the members of the Supreme Court in this district have shouldered without complaint and with such dedication to the service of the people of Brooklyn.

As a businessman, I know the volume of business can not be increased beyond a given point without proportionately increasing the manpower. Because the borough faces a future of economic and social growth, the Court too faces additional tasks. The issue of more justices is urgent; time itself can be an element of justice or injustice. "The law's delays" of Hamlet's grim soliloquy may well constitute a form of tyranny itself.

I voice my congratulations, and a hope that the Governor of New York, the Mayor of New York and the members of the Board of Directors of the State, the members of the legislature, in the best public interest will give favorable attention to easing the burdens of the dedicated and devoted men whom the people are proud to know as the Supreme Court of the great State of New York.

What Would It Prove?

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to insert in the RECORD an editorial which appeared in the Mesa Tribune, Mesa, Ariz., under date of February 16, 1959, entitled "What Would It Prove?"

WHAT WOULD IT PROVE?

Throughout Soviet history the Communists have sought to tantalize the world's gullible millions with false lures. Not the least of the frauds is that they do more for humanity, economically, than do their capitalist rivals.

The truth on this score, of course, is that most Russians have been living for decades in a planned depression. As recently as half a dozen years ago, their housing was worse, on the average, than under the hated czars.

Obviously it won't always be this way. Living standards have risen in some parts of Soviet life and will continue to climb. The day may come when ordinary Russians really are provided for adequately, though that time probably is not as near as Premier Khrushchev forecasts.

Just for argument's sake, however, let's say the Russians will at some future point match or even surpass the economic output of the United States.

Khrushchev assumes—and this is one place where the Reds probably believe their own stuff—that this will "prove" the superiority of the Communist system.

He assumes, too, that whether this particular economic lure has worked up to that time or not, it will surely attract the millions thereafter.

The questions for us are: Will it lure the uncommitted peoples and will it prove the superiority of Soviet communism?

We have to fear that the lure will work on some. It even works to some extent in this day and age, when we know it to be a fraud.

But it is not likely to work on men who have tasted genuine freedom.

Nor will it demonstrate the superiority of the Russians' way of life over our own.

Man is not just a machine to be stoked. As a human being, he has a crowning spirit. This spirit comes to fullest, truest flower only when he is free.

Even in the fanciful prospect that the Russians should some day outproduce us 4 to 1, they will not be superior. They will not begin to match us until they are free men living in individual dignity, enjoying the fruits of the mind and heart—not just of the factory and farm.

New Supreme Court Building Dedicated in Brooklyn, N.Y.

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the remarks by Justice Gerald Nolan and the address by Hon. Charles W. Froessell at the dedication ceremonies of the new supreme court building in Brooklyn, N.Y., on January 5, 1959:

PRESIDING JUSTICE NOLAN. To those of us who are from Brooklyn—and I say that advisedly because I speak of the sons of Brooklyn who are sons by birth and those who are sons by inclination—to those of us who brag that we come from Brooklyn, which might be more accurate, it seems to me when we think of the court of appeals we think of it as a strictly Brooklyn institution because of our distinguished friend and neighbor, the chief judge of the court of appeals, the Honorable Albert Conway, who is unfortunately unable to be here today, but we have, of course, other judges in that court, and I am about to present to you one of them.

No one, I think, is better able than he is to appreciate this beautiful building because he knew the problems that faced the judges who sat in the old courthouse which this magnificent building has replaced, and for many years he served with great honor and distinction as a justice of the supreme court and held court in that old courthouse.

I am sure that he is very, very happy to be here on this occasion, and we are happy to have him. It is my pleasure to present at this time associate judge of the court of appeals, one of our neighbors from the county of Queens, the Honorable Charles W. Froessel.

ADDRESS OF HON. CHARLES W. FROESSEL

Mr. Justice Nolan, Judge Keogh, Reverend Clergy, my brethren of the bench and of the bar, ladies and gentlemen, may I add to that introduction of Judge Nolan's that I was born in Brooklyn. I think he meant to imply that, but I wanted to make that certain. Secondly, the very gentle yet incisive suggestion that the speakers be brief will not go unheeded, I am sure, provided, of course, that we agree upon the definition of the word brevity. But let me assure you that that last clause should not alarm you.

At the outset I should like to bring to you the greetings of my chief judge, Albert Conway, and all of the associate judges of the court of appeals. I know that every one would have been delighted to be with you this morning and to join with you, excepting for the fact that this is the opening of our January term. We meet at 2 o'clock this afternoon, and since lawyers travel from great distances to be at that court, we could not very well suspend operations.

As we lift the curtain upon this very delightful event that is being unfolded here this morning, we witness the opening of another chapter in the long history of the supreme court of the State of New York. It was originally established 268 years ago on May 6, 1691 by the colonial legislature of our then State.

Some 86 years later the framers of our first constitution, the constitution of 1777, not only recognized this court but continued its existence. Some 70 years thereafter, and in 1847, the powers and jurisdiction of the court of chancery were transferred to this court. It was in that setting in the closing days of the Civil War that the late home of the supreme court in Kings County was established, thus manifesting that even in those very critical days, when the Nation was plagued with problems that they wondered whether they would ever solve, our forebears recognized that no matter what the time, no matter what the crisis, justice must be served. Thus the supreme court has functioned there ever since.

Meanwhile, other courts have had their jurisdiction transferred to this court. It acquired appellate jurisdiction, first in general term, then in the appellate division, and the appellate term. So that now the supreme court of the State of New York is the highest court of original general jurisdiction, in law and in equity, in matters civil and matters criminal, with appellate jurisdiction, subject only to that jurisdiction which the constitution has laid down for the court of appeals of the State of New York.

The supreme court is one of the great courts of the world, and we are delighted that they have found this new home which has long been overdue. Today as you move into your new home, this very beautiful new building, we find it fittingly set upon the site where freedom of speech was exercised by two great newspapers published in this county and the city of New York.

It is also appropriate, is it not, that these exercises this morning should be held in the part in which you will select juries which Magna Charta insisted on as the principal bulwark of their liberties.

When I think of some of the courthouses that I have seen all over the world—and I am thinking now of one in particular in the bush of African Uganda, and others in other places—this certainly is a dream.

Judge Conway and I the other day were talking about your dedication, for we both served on this court and in this county over a long period of years. We talked then of the new courthouse, I mean when we served on the court, for plans for this new building were conceived many years ago, and we both looked forward to the day when we might be privileged to sit here as part of the circuit that all supreme court judges traveled in those days from St. George to Riverhead and sometimes upstate.

But after all is said and done, limestone and granite, and all the other accessories of this delightful modern building, while affording comfort to those who serve here, certainly will not in themselves render justice, will they? That can come only from dedicated judges, jurors, and court staffs who recognize that they are not merely dealing with cases but have in their hands the lives and the liberties and the treasuries of our people, who recognize that to perform their duty they must appreciate that the art of doing justice is doing what you have to do better than you have to do it.

The psalmist said that justice is the insurance we have on our lives and our property, and obedience is the premium that we pay for it. As judges, we must insure justice by giving our very best, by competence, industry, patience, and integrity. At best, justice is a very frail thing, is it not, as all things human. But we do our best, and even when we do our best, we are not always sure that we are always right. That applies to the court of appeals as well as to every other court in the State.

It is particularly difficult in this tremendously complex civilization in which we live, when the contest for power anud for the control of men's minds, and now for the control of outer space, is in high gear, when the law of the sea is undergoing debate in the United Nations for radical changes, and lawyers are pondering already about the laws of outer space. With all that we still have our congested calendars, so-called court reform, and the countless other problems to perplex and challenge us.

You will recall Judge Cardozo's reference in his "Nature of the Judicial Process" to the concern that he felt, and the troubled spirit that he had in the early days on the bench when he looked for certainty in the law and found that it was a trackless ocean, and the search was futile, for the haven was always beyond. Our problem is to find it as nearly as we can, whenever we are called upon to do so.

A genius has been said to be a common man doing common things uncommonly well. I would like to be that sort of a common man in my work as a judge, and I am sure that every judge present in this courtroom feels likewise. Perhaps we can approach the goal if we try hard enough.

So, my friends, this morning let us not merely dedicate a building which in all its beauty is a quiet yet forceful symbol of justice, and all that justice implies, let us rededicate ourselves to see to it so far as we are concerned and so far as we possibly can, each one of us, that we shall do our best to make that noble symbol a reality.

Statement of Hon. Lymon Goolsby, Mayor of Winfield, Ala., on the Library Services Act

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ELLIOTT. Mr. Speaker, on February 17 members of the legislative committee of the Alabama League of Municipalities met with the Alabama congressional delegation to discuss municipal problems. It was a great day of exchange of views on many problems.

Among the statements made on the occasion was a very fine statement by the Honorable Lymon Goolsby, mayor of Winfield, Ala., entitled "What the Library Services Act Has Done for Alabama."

I include Mayor Goolsby's statement as part of my remarks and commend its reading to interested Members of the U.S. House of Representatives:

WHAT THE LIBRARY SERVICES ACT HAS DONE FOR ALABAMA

(By Lymon Goolsby)

Tremendous stimulus has been given to the development and improvement of library service in Alabama by the grants from the Library Services Act (Public Law 597, 84th Cong.), passed in June 1956. The first allotment of $40,000 was received in March 1957. In the second year of the act, fiscal 1958–59, Alabama received $139,644, and in the current or third year, fiscal 1959–60, Alabama is receiving $161,369. During the 3 years Alabama has received a total of $341,013 of Library Services Act aid. Largely because of the interest aroused and the needs shown by the State plan for the use of the Library Service Act grants, the State legislature increased the State appropriation for the public library service division for the biennium 1957–59 by almost 40 percent. This increase in funds has made possible the extension of service to 188,572 people who had no library service prior to 1956 and greatly improved and strengthened service to 519,153 people who had quite inadequate service prior to the act.

The number of counties in Alabama with no free library service has been reduced from 11 to 6. In addition to these direct improvements in local library service, the State agency, the public library service division, has been greatly strengthened so that it can give more service more efficiently to all areas of the State; both in developing new libraries where there are none now and in giving its various services, such as book loans, reference and information help, and professional advice to established libraries. Although not included in the areas receiving direct help from Library Services Act grants, one county which was without any library service prior to 1956 now has a library with a bookmobile serving the entire county, and we feel that much of the impetus for the founding of this library came from the interest generated by the act, and we know that much help was given by the field representatives of the division which before the act would have been impossible. Action of a similar nature, though not on a countywide scale, has occurred in other communities.

INCREASED LIBRARY SERVICE SINCE 1956

In 1956 it was estimated that 38 percent of the State's population had no access to free library service; in 1959 this percentage has dropped to approximately 31 percent, as a direct or indirect result of the Library Services Act. In addition to this, greatly improved service is available to people living in the areas where regional libraries have been established, and to the whole population of the State through the strengthening of the Public Library Service Division and its field services.

The Library Services Act funds have provided almost $25,000 worth of books, including periodicals, filmstrips, and recordings, over $86,000 worth of equipment, including six new bookmobiles (five now operating and one on order), two automobiles for the field staff, two station wagons for regional libraries, library furniture and equipment both for the new regions and the division, office machines and duplicating equipment including such major purchases as a multilith and an addressograph machine. These funds have also purchased the necessary supplies for processing the new books. They have provided for the addition of seven professional librarians, five subprofessional assistants, eight bookmobile clerks and drivers, and clerical help for the new regional libraries and the division's staff. They have made possible the operation of the bookmobiles purchased and much necessary travel both by field staff and attendance at workshops for in-service training by library personnel over the State.

EXTENDING THE REGIONAL LIBRARY PROGRAM

In addition to all this, the increased State appropriation made possible the purchase of $44,000 worth of books for the regions established under the Library Services Act through 1958; in fiscal 1959 the new regions will receive $56,000 worth of books from State appropriations as part of the Alabama State plan under the Library Services Act.

Five new regional libraries have been developed, and two regional libraries have been greatly strengthened with the addition of one or more counties. In these libraries it has been found that use increased dramatically with the new books and equipment and professional guidance. For instance, in the Horsheshoe Bend Regional Library, almost 4 percent more books were circulated in the two counties which had formed the region before the addition of a third county, in the first 9 months of operation than had been circulated in those two counties in the entire previous year; and the number of books circulated in the entire region had doubled, going from an average of over 11,000 volumes per month to more than 22,000 volumes per month. The same kind of increase is seen in the circulation figures of the other regions where there are old figures for comparison.

THERE IS STILL MUCH TO BE DONE

There is still much to be done, even though we are proud of the accomplishments so far. In addition to the 133,280 people in the 6 counties still without public library service of any kind, there are also 21 counties without library service in the rural areas outside of municipal or town libraries, and 12 counties in which the county library, though willing and anxious to serve the residents of the whole county, has no effective means of giving service beyond the town in which the library is located. In these 33 counties almost 831,000 people have no access to library service near where they live. It is these areas which will be disappointed if the present program in the State is curtailed.

The President's budget recommended the appropriation of $5,150,000 for the coming year, but it is hoped by us that Congress will appropriate the full authorized amount of $7,500,000 under the Library Services Act. If the State continues to appropriate funds for library service as it has in the current biennium, Alabama can easily qualify for the full $209,495, which would be its allotment under the full amount authorized. The progress made during the first 2½ years of the effective period of the act, each year with less than the authorized amount having been granted, is a sure indication of the ability of the State to use the money wisely and of demonstrated needs met.

Coal Research Commission

EXTENSION OF REMARKS
OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. DENT. Mr. Speaker, in extending my remarks in the RECORD, I want to announce that I am introducing tomorrow a new Coal Research Commission bill.

This bill takes into consideration the criticism aimed in the creation of this Commission by those who say that it is an unwarranted raid on the Treasury. I am including in my new legislation a proviso that the coal industry receive a larger percentage as a depletion allowance, and that from this increased depletion allowance the coal producers will pay on a per ton pro rata share the entire cost of the operation of the Research Commission. There are those who may argue that the inclusion of this provision in the enabling act creating the Commission is a contradiction in that two distinct subjects are covered by the same legislation. I know of no other method by which we could pursue the ends we have in mind, except to make both provisions part of one act, namely, the creation of the Commission, detailing its functions, and establishing the revenue for its operation.

In this legislation, I propose that the Federal Treasury advance $5 million for the initial expenses of creating the Commission, and to start it functioning. This money, however, under the terms of my act will be repayable to the Federal Treasury after the act is enforced. At this time I would also like to present the following statements and information heralding the greatest advancement yet made by this important industry in its fight to keep its share of the American economy for the future. The Congress of the United States should take cognizance of the fact that the bituminous coal industry is neither subsidized, nor in any way, receives any public moneys from the U.S. Treasury. It is therefore important that all of us keep abreast of the actions and the thinking of this great segment of our industrial strength.

Under leave to extend my remarks, I submit the following releases from the National Coal Policy Conference:

WASHINGTON, D.C., February 25.—Management and labor in the bituminous coal industry and related groups have formed an over-all organization designed to advance and promote the interests of the industry on the broadest possible front.

Formation of the National Coal Policy Conference, organized and supported by the United Mine Workers, the bituminous coal operators, the coal-carrying railroads, coal-using electric utilities, and some industry equipment suppliers, was announced today by George H. Love, chairman of the conference, and chairman of the board of Consolidation Coal Co., Pittsburgh, Pa.

"We, of course, are concerned with the immediate future of bituminous coal, but our thinking goes far beyond that," Mr. Love said. "We are concerned with the adequacy and availability of our total energy resources and the assurance that such resources, including coal, have their proper place in the national economy in the decades to come."

Joseph E. Moody, president of Southern Coal Producers' Association, will serve as executive director of the conference. Headquarters will be in Washington, D.C.

Creation of an organization similar to the one now established was suggested by John L. Lewis, president of the United Mine Workers, in an address in Cincinnati last May.

In making the announcement, Chairman Love said:

"I think the formation of the National Coal Policy Conference is unprecedented. I know of no other instance where management and labor in a major industry, and related major industries have agreed to work together to advance common interests as they have in this particular case.

"The step we have taken is a most heartening indication for the future of the bituminous coal industry."

Mr. Lewis hailed the formation of the National Coal Policy Conference as follows:

"Formation of the National Coal Policy Conference can only be considered as among the most gigantic forward strides taken by the American coal industry in its long and proud history. Assuredly, the industry and its workers have long needed a common voice to focus the attention of the Government and the American people upon the efficiency of this Nation's basic industry.

"The most valuable natural resource in the United States has far too long been the object of legislative apathy and public ignorance.

"This new effort with its able leadership will be able to speak for our industry with confidence and in a positive manner. Within itself it will be a forum where all segments of the industry can meet to resolve their various problems.

"To the general public it will demonstrate the truth: America's basic resource—coal—its proper utilization and its future must be the concern of all Americans. The National Coal Policy Conference promises to insure that coal will be recoghized for what it is—America's primary source of power."

Howard E. Simpson, president of the Baltimore & Ohio Railroad Co., said:

"The railroad industry welcomes the formation of the National Coal Policy Conference as a major step toward the economic recovery of America's coal and railroad industries.

"The Nation's railroads have long been concerned by the steady decline in the production, consumption, and transportation of coal.

"The health of the coal industry is essential to the economic well-being of the railroads. Coal depends on efficient rail transportation to market its product."

Philip Sporn, president of American Electric Power Service Corp., said:

"The organization of the National Coal Policy Conference is not only a significant event for the coal industry, but is, I believe, of even much greater significance for the country as a whole. Coal has an indispensable role to play in the coming growth and development of the country over the next 30 to 40 years and a great responsibility in assuring that our dynamic industrial system can continue to have available to it the large share of its total huge energy requirements which cannot be supplied by anything else but coal during that long period."

Among the objectives of the Conference are the following:

1. The development and execution of an intensive nationwide educational campaign to acquaint the public with the vital importance of the coal industry to the national welfare.

2. The broadening of domestic and export markets for bituminous coal.

3. The encouragement and promotion of research into the production, marketing, and utilization of coal.

4. Creation of positive and constructive Government policies toward the bituminous coal industry.

5. Steps to increase coal's depletion allowance in order to meet rapidly rising costs of operation, and to accumulate the capital needed for future expansion.

6. A program to place bituminous coal in a position where the industry can meet the demands for increased production which would be placed upon it in case of war.

7. Action to stop the dumping of residual oil at coal's expense and to put an end to the practice of dumping natural gas for industrial uses to the detriment of the coal market.

8. Action to end extravagance and waste in the program to develop civilian atomic energy here and abroad.

9. The formulation of broad policies for the coal industry in matters agreed upon by the Conference groups.

Coal technology has advanced steadily in recent years. Production efficiency has increased until the current average output is approximately 11 tons per man per day. Labor peace has been maintained in the coal industry over a full decade. Prices at the mine are approximately what they were 13 years ago, an amazing record during an inflationary period. But national consumption of coal has declined since World War II. Compared with the all-time peak for bituminous coal production—631 million tons in 1947—production was down to approximately 400 million tons in 1958.

Coal profits have remained too low for the economic health of the industry as a whole. The cost of opening a new coal mine is more than three times what it was in 1946. Meanwhile, the industry has lost markets; some markets because of legitimate competition, others from what it regards as unfair competition.

Today, residual oil is being imported into the United States at a rate equivalent to 41 million tons of coal annually. Simultaneously, natural gas is being sold at unrealistically low prices to displace coal as boiler fuel, a wasteful use of an extremely valuable and diminishing resource.

Coal is the one industry on which the United States must rely, and will continue to have to rely, for the bulk of its power requirements in time of peace as well as in time of emergency. Without subsidies, the American coal industry speedily expanded production to meet the power crises of two world wars.

However, the coal industry and coal-carrying railroads cannot meet the demands of a national emergency if they continue to operate under existing conditions.

It is vital to national security and well-being that the capacity to mine and transport adequate supplies of bituminous coal is maintained.

The National Coal Policy Conference will take the most vigorous action possible to increase the production and consumption of coal and see to it that the transportation system which will be expected to deliver this coal in an efficient and orderly fashion is in a position to do so.

"The long-term interest of the Nation in this case," Mr. Love said, "clearly coincides with its short-term interest. Our industry contributes $5 billion annually to the national economy and supports, directly or indirectly two million people. Shipments from mine to market add $2 billion to the revenues of the carriers. Twenty-one States out of the forty-nine produce substantial quantities of coal and have a major interest in the industry's prosperity."

Officers of the conference and the executive committee are as follows:

Chairman: George H. Love, chairman of the board, Consolidation Coal Co., Pittsburgh, Pa.

Executive director: Joseph E. Moody, president, Southern Coal Producers' Association, Washington, D.C.

Members of the executive committee:

Coal operators: George H. Love; F. S. Elfred, chairman of the board of Peabody Coal Co., of St. Louis, Mo.; Harry LaViers, president, South-East Coal Co. of Paintsville, Ky.; C. J. Potter, president of Rochester & Pittsburgh Coal Co., of Indiana, Pa.; Raymond E. Salvati, president of Island Creek Coal Co., of Huntington, W. Va.; and Kenneth A. Spencer, president of Pittsburg & Midway Coal Mining Co., of Pittsburg, Kans.

United Mine Workers: John L. Lewis, president; Thomas Kennedy, vice president; and Michael Widman, Jr., assistant to the president.

Railroads: H. C. Murphy, president and chairman, executive committee of Burlington Lines; Howard E. Simpson, president of Baltimore & Ohio Railway Co.; and John Tilford, president of Louisville & Nashville Railroad Co.

Utilities: Philip Sporn, president of American Electric Power Service Corp., of New York.

Coal industry equipment suppliers: J. H. Fulford, president of Jeffrey Manufacturing Co., of Columbus, Ohio; and W. L. Wearly, president of Joy Manufacturing Co., of Pittsburgh.

JOSEPH E. MOODY

Joseph E. Moody, executive director of the National Coal Policy Conference, was born in Hartford, Conn.

After graduating from Cornell, he entered the brokerage business, leaving it in 1929 to become secretary of the Manufacturers' Association of Hartford County, Conn. This association was composed mostly of the manufacturing plants in Hartford County.

In 1937, Mr. Moody became directof of personnel for the Hat Corp. of America in Norwalk, Conn.

He did work with war agencies in Washington during 1941 and part of 1942, and in 1942 he entered the employ of the York Corp. of York, Pa.

Mr. Moody became president of Southern Coal Producers' Association in November 1947.

As spokesman for the southern producers' group, which has mines in Kentucky, Tennessee, Virginia, and West Virginia, Mr. Moody has been a vigorous advocate of policies aimed at maintaining the industry's competitive position.

In 1956 he aided in forming American Coal Shipping, Inc., an inter-industry effort intended to stimulate coal exports. He also helped in the organization of the High Volatile Coals Export Association and Low Volatile Coal Exports, operators' groups concerned with stabilizing exports.

Mr. Moody's efforts were instrumental in the opening of the Florida utility market for the bituminous coal industry, and he has also been a vigorous and frank critic of Government policies which he considers injurious to the industry.

His work in promoting the interests of the southern producers and of the entire bituminous coal industry has attracted national attention.

He will keep his post as president of Southern Coal Producers' Association.

Mr. Moody married Laura Russell of Friendship, N.Y. They have four children: Mrs. Donald L. Cates of San Anselmo, Calif., Mrs. Robert H. Sowers of Cincinnati, 1st Lt. Bryce Moody, and Margaret Moody.

THE BITUMINOUS COAL INDUSTRY IN BRIEF

1. Where located: The principal bituminous coal-producing States are: Alabama, Alaska, Arkansas, Colorado, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Missouri, Montana, New Mexico, Ohio, Oklahoma, Pennsylvania, Tennessee, Utah, Virginia, West Virginia, and Wyoming.

2. Production: In 1957—the last year for which official figures are available at this time—total production was 492,703,916 tons. The Bureau of Mines has issued a preliminary estimate of 400 million tons for 1958. Peak production was 631 million tons in 1947.

3. Mines: In 1957 there were 8,539 mines in operation; in 1958 there were 7,588 mines producing.

4. Jobs: Average daily employment in 1957 in the industry was 228,000; the estimated daily average employment for 1958 was 190,000.

5. Of the total production about 83 percent is hauled as revenue producing freight by railroads. In 1957 the railroads hauled 382 million tons. The estimated total for 1958 is 332 million tons. (The balance of production is moved by trucks and waterways.)

6. Principal consumers of bituminous coal in 1958 were:

	In millions of tons
Electric Power Public Utilities	153
Steel	84
Other industries, including railroads and chemicals	90
Overseas and Canada	52
Retail sales	36

(Tonnage consumed in excess of the estimated 400 million 1958 production was drawn from previous production.)

STATEMENT BY HOWARD E. SIMPSON, PRESIDENT, BALTIMORE & OHIO RAILROAD CO.

The railroad industry welcomes the formation of the National Coal Policy Conference as a major step toward the economic recovery of America's coal and railroad industries.

The Nation's railroads have long been concerned over the steady decline in the production, consumption, and transportation of coal.

The health of the coal industry is essential to the economic well-being of the rail-

roads. Coal depends on efficient rail transportation to market its product.

In 1957, 422 million tons of coal and coke were transported by rail. The gross revenue received from this transportation was approximately $1¼ billion, representing more than 15 percent of the entire freight revenue of the railroads.

The Baltimore & Ohio, for example, depends upon the transportation of coal and coal byproducts for 30 percent of its gross freight revenues. Certain other railroads look to coal for an even greater proportion of their income.

The decline in coal production, from 631 million tons produced in 1947 to approximately 400 million tons in 1958, has, therefore, had a serious effect on the economy of the railroad industry. It has meant a reduction of personnel. It has meant a loss, through inactivity and deterioration, of valuable rail equipment used in the transportation of coal. It has meant the loss of vitally needed revenue.

With this background, the railroad industry is happy to participate in forming the National Coal Policy Conference. We believe that this conference will be in a position to make an important contribution to the Nation's economy, and will constitute an important example in good labor-management relations.

The aims of the conference deserve the support, not only of those in the coal, railroad, and power businesses, but of every American citizen.

STATEMENT BY GEORGE H. LOVE, CHAIRMAN, NATIONAL COAL POLICY CONFERENCE

The future of the bituminous coal industry is of vital importance to the welfare of the entire country.

This being the case, it is time that the industry and other industries heavily dependent upon coal take affirmative action to protect their interests and the Nation's interests.

We, of course, are concerned with the immediate future of bituminous coal, but our thinking goes far beyond that. We are concerned with the adequacy and availability of our total energy resources and the assurance that such resources, including coal, have their proper place in the national economy in the decades to come.

Our group intends to start the campaign to enlarge coal's markets immediately and to continue as long as is necessary.

Another primary aim of the National Coal Policy Conference is to acquaint the public with the pertinent facts about coal.

It is as modern as any source of energy on earth and is an indispensable national asset.

Among the most important of all our objectives is to make certain that the industry will be in a position to make the contribution which would be required of it in the event of a major war. This is necessary for our national security.

The bituminous coal industry has made tremendous strides in efficiency and productivity since World War II, particularly with regard to productivity per mineworker employed. Prices also have been remarkably stable during a period of national inflation. At the mine today they are approximately what they were in 1946.

Unfortunately, the coal industry has not expanded as have other major industries within recent years.

Coal's earnings also have been very low by comparison with other industries. With mining highly mechanized, the situation is such that the ability to expand rapidly in times of emergency is called into question. This is true regardless of the fact that all informed persons agree that coal is our basic energy resource and will be called upon to supply a large part of the rising demand for energy in the future.

The National Coal Policy Conference is not an organization intended to attack other industries or Government. Coal does not seek or expect favoritism. All we ask is fair play and fair competition. These requests are not unreasonable.

It is no secret, however, that we feel that the Federal Government has permitted, and is permitting, discriminatory practices which hurt coal. Among these are heavy importations of residual oil which have displaced coal along the east coast, the dumping of natural gas for industrial uses at coal's expense, and wasteful spending on the civilian atomic energy program.

While we have lots of coal, the industry cannot be expected to remain on a standby basis. It takes from 2 to 3 years to develop a new mine; it takes a lot of capital to buy the machinery and other supplies needed to extract the product. In my opinion, any further reduction in coal output could threaten our national security. A substantial rise in output in the near future would be in the nature of defense insurance.

I think the formation of the National Coal Policy Conference is unprecedented. I know of no other instance where management and labor have agreed to work together to advance common interests as they have in this particular case.

The step we have taken is a most heartening indication for the future of the bituminous coal industry.

The long-term interest of the Nation in this case clearly coincides with its short-term interest. Our industry contributes $5 billion annually to the national economy and supports, directly or indirectly, 2 million people. Shipments from mine to market add $2 billion to the revenues of the carriers. Twenty-one States out of the 49 produce substantial quantities of coal and have a major interest in coal's prosperity.

Statement of Hon. V. H. Albright, Mayor of Haleyville, Ala., on Traffic Safety Measures

---

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ELLIOTT. Mr. Speaker, on February 17, members of the legislative committee of the Alabama League of Municipalities met with the Alabama congressional delegation to discuss municipal problems. It was a great day of exchange of views on many problems.

Among the statements made on the occasion was a very fine statement by the Honorable V. H. Albright, mayor of Haleyville, Ala., entitled "Reviewing Traffic Safety Measures Before Congress."

I include Mayor Albright's statement as a part of my remarks and commend its reading to interested Members of the U.S. House of Representatives:

REVIEWING TRAFFIC SAFETY MEASURES BEFORE CONGRESS

(By V. H. Albright)

We still have with us the tremendous problem of traffic safety. While last year the national fatality toll dropped slightly to 37,000 killed, I think we can take little comfort in that fact and that any optimism we exhibit be of a very cautious nature.

I am proud that Alabama was one of those States showing a decrease in traffic deaths, dropping from 910 killed in 1957 to 792 killed in 1958.

But it is still a tragic thing that 792 good citizens of Alabama and nearly 37,000 others throughout the country lost their lives on our highways and that traffic accidents caused billions of dollars in property damage and millions of crippling injuries.

Legislation on this subject will be handled by our good Fourth District Congressman Kenneth Roberts, who is chairman of the newly former Subcommittee on Health and Safety.

REVIEWING TRAFFIC SAFETY MEASURES SO FAR INTRODUCED

I would like to review with you briefly some of the traffic safety measures which he had introduced and which will come before his subcommittee.

First, and I think most important, are two bills concerned with safety standards of automobiles as they are manufactured.

Experts have repeatedly said that much could be done which is not now being done to manufacture safer automobiles.

It has been repeatedly demonstrated, for example, that when a crash happens, the driver or passenger who is wearing a seat belt has a far better chance of escaping death or injury than a person who is not wearing a seat belt.

Yet there has been no move to make seat belts standard equipment on new cars.

One of the bills I just mentioned would require the Department of Commerce to determine exactly what safety standards new cars should meet, and then make it unlawful to ship these new cars in interstate commerce unless they meet the required safety standards.

This measure is certain to meet strong opposition from the automobile manufacturing industry, which appears to be more concerned with sales than with safety. And this industry has the money, people and experience to put up a tremendous battle.

The other of the two measures we are talking about may be a back door method of accomplishing the same objective.

This bill would require that all automobiles purchased by the Federal Government would have to meet safety standards prescribed by the Department of Commerce.

The Government is one of Detroit's best customers, and it is believed that if the manufacturers have to provide certain safety equipment for Government-purchased automobiles, that safety equipment will soon become standard equipment on all automobiles.

Another bill which will be considered by this subcommittee is one which would provide some Federal funds for research into driver training programs.

PROPERLY TRAINED DRIVERS NEEDED

This is another area where it has been proven time and again that properly trained drivers have fewer accidents, fewer fatalities, fewer injuries, and fewer traffic law violations.

The Federal funds provided by this act would have to be matched dollar for dollar by the States applying for them. They would not be used for teachers' salaries but for research and study to develop the best possible type of driver training program. And control of these funds would be at the State level.

Still another important piece of legislation is one which would determine how much damage to our health automobile exhaust fumes are causing and require some control of the amount of pollution being discharged into our atmosphere.

At a recent air pollution conference right here in Washington the Public Health Service said there is some ground for belief that

automobile exhaust fumes are a source of lung cancer.

There is expected to be introduced in the near future, if it has not already been introduced, a bill which would set up a central record system of traffic law violations.

CHECKING ON DRIVER'S PREVIOUS RECORD

As the situation is at present, a driver in Alabama can have his license revoked for a traffic law violation, and then skip right across the State line into Tennessee or some other State, complete the necessary residence requirements and get himself a new license which will serve him until he gets into another scrape with the law.

The State issuing the license has no way of checking to see what his previous driving record has been, or even checking to see whether he has been previously licensed in Alabama.

With a central records section reporting on all license revocations and traffic law violations, the examining officer could check any applicant's previous driving record in much the same manner that a law enforcement officer can check a suspect's criminal record with the FBI.

These are but a few of the many bills concerned with the safety of all of us which will be referred to the Health and Safety Subcommittee, but certainly these are some of the most important.

I feel sure that all of us will want to give the chairman all the help we can in getting as many as possible of these bills enacted into law.

Educational Television—Advertising's Responsibility

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. ASHLEY. Mr. Speaker, I recently had occasion to attend the midwinter conference of the Advertising Federation of America. Because the advertising industry is often the subject of misunderstanding and adverse criticism, I was particularly impressed and pleased by a speech on the topic of educational TV delivered by Mr. John P. Cunningham, chairman of the board, Cunningham & Walsh, Inc.

Educational TV has in the last 10 years mushroomed from 1 established station to 36 stations now broadcasting with at least 12 applications pending for additional broadcasting permits. Because business must take the lead in putting educational television stations on a sound financial footing, it is commendable and noteworthy, I believe, that the advertising industry has put its best foot forward in recognizing its responsibility to stimulate the expansion and use of educational television. It is for this reason, Mr. Speaker, that I wish to insert the full text of Mr. Cunningham's remarks in the RECORD:

I am not going to use this platform to brag about the power and glory of advertising.

I would rather use it to face up to a responsibility that I believe we have that is not yet recognized by very many of us. Yet, in my opinion, it is the most important unsolved problem that has confronted us in this generation—the problem of properly harnessing television in the educational area.

It is the problem of releasing to the country the tremendous latent forces of television to the task of upgrading our national mind. In importance, it ranks with the problem of releasing the forces of nuclear energy to the task of upgrading our national industrial vigor.

Until this television force is released, I don't see how any one of us can be completely comfortable about the tremendous commercial franchise we hold in this medium.

Hardly more than 10 years ago, this amazing new instrument was thrust by the precise fingers of science into our somewhat clumsy hands—willing and energetic though they may be.

As the 10 years have rolled by, television has proved itself to have two great powers beyond any other means of communication.

First, it has an exposure-power hitherto unknown in communications. The average American citizen sits before that little square screen for over 3 hours a day—for over 22 hours a week. More than at any other occupation except working and sleeping.

Secondly, unlike any other means of communication, it has immediacy.

Now, a man can sit by his own hearth and look around the curve of the earth. He can see his own destiny being shaped. At the moment. Live. On stage. He can peer into the parliaments of man. Sitting in his own armchair, he can view the eternal conflicts taking place that will mold his future and that of his children.

All the stored-up knowledge of the ages—science, music, art, culture—can be spilled into his living room. Soon he will be able to roam the entire world from his own armchair.

But so far it is little more than a highly magnetic new plaything.

Its editorial content was almost wholly turned over to American business. I make no excuses. We have done astonishingly well with it in the field of entertainment. We are delivering the world's most talented artists to your living room every night—6 feet away from your own personal box seat—a couple of hundred dollars's worth of free theater tickets each week.

But we are being widely criticized by a highly vocal, highly intelligent and responsible minority.

Too many commercials, too silly, too repetitive. Too many western, giveaways, etc. Too much pallid programing. Not enough cultural fare.

I will not dwell on the criticisms. We are all well aware of them.

All of us in business, I'm sure, recognize the great unused educational power of television and would like to see it exercised.

But we tend to walk away from this problem and say it is not ours. We tend to say that it is the responsibility of the educators, the legislators, the broadcasters.

I say let us walk away from it no longer. As custodians of so large a share of the airwaves, it is our problem. As responsible citizens of the United States, it is our problem.

Let us face it.

Well, what is the character of the problem? What should be our objectives? What are we after?

First, let me explore with you what it is possible to get out of television—what television can contribute to the forward march of the mind—project headway—if I may call it that.

For one thing, it can give us a much better informed and intelligent electorate. For instance, sessions of Congress should be televised on a regular schedule—dull though they may be. Let us see our representatives in action—or in inaction. Let us see the empty seats. The filibustering. The logrolling. The pork-barrelism. Let us also see the wisdom, the patience, the vision of the men opposed to these undemocratic forces.

Let us send Congress into the classrooms of the country—to bring life to the tomes and the teachings. Let our children examine first-hand what we hopefully expect them to improve.

Let our school children also look into sessions of the Supreme Court—not the trials perhaps—but certainly the majestic simplicity of this ultimate Court on the days of decision—those famous Mondays.

The United Nations, too, is worthy of a wider theater.

International broadcasting is very near. That was the portent of our recently launched Atlas satellite which tossed President Eisenhower's Christmas words back to earth.

International television will enable the nations of the earth to exchange their cultures—and their national aspirations—from fireside to fireside. It holds promise of being the greatest force yet in the promotion of permanent peace.

Television can cultivate new interests in young rock-and-roll brainpans. Our cold war with communism is no longer a conflict between two classes of thought. It is a conflict between 2 million classrooms of thought—and we must throw the greatest cross-country classroom of all into it—the TV set.

Television is the one instrument through which sleeping interest in science, chemistry, and the arts can best be aroused.

It reaches homes where books are seldom read.

It reaches homes where beauty is absent.

Television can teach foreign languages more quickly and coherently than any book ever written.

Locked in that mess of tubes and wires behind the screen is the capacity to raise the intellectual and scientific attainments of our whole people to new levels.

It has often been said that there are many good teachers—but few great teachers. Television can bring those few great teachers into every man's living room. It can be used in teacher-training. It can upgrade the entire teaching staff of the Nation.

The great immediate thing that television can do is to make a college degree available to every single American. The only action required of the television student would be to go to a central place in his city four times a year to take an examination. It might take the TV student 5 to 10 years to acquire the credits for a degree now piled up in our 4 bright college years—but what is that to a hungry mind?

Our collegiate admissions system, as compared with Russia's, seems to have one very serious mechanical defect. The intake valve is corroded—corroded with privilege. It admits many youngsters to a college education who sometimes don't want it very much—but who are persuaded to go to college by family tradition, ease of money, and social status—a sort of self-perpetuating collegiate class—while college is denied to many minds potentially more valuable to the Nation—that are forced into work.

Television today alone can correct this dreadful inequity—with some sort of countrywide televarsity.

How does Russia look at this opportunity?

Let me give you the words of Dmitry Chesnokov, who is No. 1 of the Soviet airwaves.

In an interview in Moscow with our Mike Wallace recently, he said:

"Each television program should improve the human being. Our main purpose is to raise the culture of the people."

"What about laughter?" Wallace asked him. "What do you do for comedy, for humor?"

Chesnokov replied, "When a program of so-called humor is deprived of meaning and sense, it is not humor. It must have a purpose. It must point out a shortcoming in

society, a social deformity. We do not believe in laughter, just for the sake of laughter."

Which means that there are no Milton Berlovitches on the two Russian networks—first and second service, they call them.

Well, what do we need to do?

We need made available to every single farm and apartment, tenement and garret in this country a full-time 24-hour-a-day TV educational channel. That's all, and that isn't much.

What is the situation now?

There are some inspiring early morning educational efforts now on the networks, such as "Continental Classroom" on NBC, sponsored by A.T. & T., General Foods, and others. There is "Sunrise Semester" on CBS. The networks now are willingly contributing much free time to Project Headway.

Thirty-six cities have educational TV. But two-thirds of the Nation's population has no access to these channels.

There are only 60,000 TV sets in America's 1,520,000 individual classrooms, about 4 percent.

Many colleges—299 to be exact—allow credits for TV courses toward their regular college degree. But they can't easily reach the great mass of our working populace, because in very few cities is prime evening time or weekend time available, and that is the time obviously most essential, since 85 to 90 percent of our workers are on the job all day.

The Metropolitan Educational Television Association in New York City operates its staff, its studio, its live programing, and its educational kinescopes on an annual budget of $400,000—$400,000 a year, I said—which is less than the cost of two Dinah Shore Chevy shows.

* * * * *

Television can even do some things better than the college classroom. It can give students front-row closeup seats for important demonstrations. It can bring the finest laboratory facilities to remote schools which could not otherwise afford them. It can provide postgraduate courses to college graduates—while they work.

To give all our people equal opportunity will require a nationwide 24-hour-a-day clearance that will reach every television set in the United States, either on a single channel or multichannel basis.

Some people have felt that opening up the ultra high frequency channels, of which there are 70, as opposed to VHF's 12 channels, was the answer. But today, UHF seems to be slowly passing away. UHF stations are closing and UHF set production has declined to around 8 percent of total sets.

There is no question in my mind but that American business would like to see this Project Headway on the airtracks—including advertisers, broadcasters, and advertising people.

* * * * *

American industry very much wants a pool of scientific-minded youngsters available. It spends millions a year in employee recruitment programs now to get them—Western Electric, General Electric, Sperry, Westinghouse, etc.

American industry today not only supports many educational programs directly—but many more indirectly.

Last week alone in New York in addition to the regular educational channel WPIX there were 37 programs that could be conceded as educational, put on by the broadcasters—sustaining. No sponsor. But who paid for them? As far as I know, the networks have no source of income except from advertisers. So the producing costs, studio, and camera costs for these daytime programs all were paid for by the sponsors of "The Nervous Guns" and "Joe Revolvers" at night.

No complaints.

The problem is manifold.

How can prime time be fairly secured?

How can channels be isolated?

Who's going to pay for it?

Who's going to direct it?

I did not come here with the answer. I came here to take this problem out of the back corridors of our concern and to deposit it out here in the open—and to acknowledge our obligation as advertising people to help solve it.

The whole lumpy and contorted problem, however, is shot through with reassuring rays of light.

Federal and State educational funds can be wooed and won. Legislatures are listening. The big foundations are dabbling—seriously. Many high-minded men are working with the problem—men who recognize the investment that broadcasters have put into their franchises and know these investments must be respected in the solution. Many men who draw their salaries from commercial TV or are involved in the frothiest of TV entertainment are desirous of solving it.

They need our help.

How can we give it to them?

It is a task worthy perhaps of an important spotlight committee, consisting of leading advertisers, broadcasters, and educators, similar in stature to the Hoover Commission, to explore and recommend.

It is a task perhaps worthy of a joint committee formed by our own trade associations—the AFA, the 4–A's, the ANA—and the broadcasting associations—to face it and come to grips with it.

In my own small way, I hope to make a continuing nuisance of myself among advertising people until it is solved.

Even if and when we should get a countrywide educational clearance setup, it will still have need for our advertising and publicity skills.

It must be marketed well to the American citizenry. Its values to the individual and the Nation must be defined and publicized—at least as effectively as the 1960 Buick.

It will be solved someday. But as a nation we cannot afford to allow this great cultural force to lie around unused on into the years.

Only when television is finally well harnessed to the march of the national mind can we in advertising relax comfortably among our ratings, our westerns, our quizzes and our job of entertaining the masses.

To Be Young and a Southerner

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. UDALL. Mr. Speaker, those who would understand the mind of the South give heed to its quiet as well as strident voices. One of the eloquent quiet voices of the South is Ralph McGill, the editor of the Atlanta Constitution. I present below the Blazer lecture which Mr. McGill delivered at the University of Kentucky this month:

TO BE YOUNG AND A SOUTHERNER

There are many times in these great and testing days, when I think of the opening paragraph of "A Tale of Two Cities":

"It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of light, it was the season of darkness, it was the spring of hope, it was the winter of despair, we had everything before us, we had nothing before us, we were all going direct to heaven, we were all going direct the other way—in short, the period was so far like the present period, that some of its noisiest authorities insisted on its being received, for good or for evil, in the superlative degree of comparison only."

That is as true today as when Charles Dickens wrote it long ago. But then, as now, there are days when it is a wonderful and a fearful thing to be alove. One wakes each morning wondering what new crisis or convulsion news will greet him. And one greets each night a bit weary with confronting all that day has brought.

What will Russia do? What is Prime Minister Nasser plotting in the Middle East? Will General de Gaulle be able to halt the war in Algeria, or will it blind him and France to such weakness that the general and his government will fall, pulling him, and perhaps Europe, into chaos? What is the fate of West Germany and Berlin? Will we awaken one morning to know that war flames about the distant isles of Matsu, Quemoy, and perhaps Formosa?

These are but the main acts in the big drama of our time.

All this daily adds a jigger of adrenalin, the bourbon of the hormone world, to our bloodstream. I am at the age when I think just to be alive is a great and wonderful thing. But to be alive, and also to be a southerner, is the finest luck of all.

It is we who are made, whether we like it or not, participants in one of the most tremendous sociological processes of all time. Try as we will, we cannot be merely spectators. In one degree or another we must participate as the Nation remakes itself, with great travail, and some agony strongly to be a part of the future—and not to slip backward into the hand-wringing apathy of the frustrated and the impotent nations which chose to rest on the old ways and to cry the old shibboleths.

The processes of change are accelerated—all over the world they are quickening. Ideas are as powerful as missiles. New nations appear and still more are clamoring to be born. And we of the United States have chosen to make the American dream bright enough and wide enough to give light to our path as we move to keep pace with events.

And we, in this varied and complex South which we love and serve, have had grievous burdens put upon us. Tremendous opportunities knock at our door. We are a part of history and it is all the more good to be alive and a part of it.

And to be young southerners—that, of course, is the most delightful, mystical and wonderful agony of all.

One of the phrases most familiar to our ears is that of "the new South." Many prophets have proclaimed a new South. The truth is there is always a new South in the making. Sometimes it slows down to a slow pace of a weary man on a tired horse traveling a quiet road. And then again, it speeds up like a square-dance tune or the mad, giddy whirl of a carousel with our leadership trying to catch the brass ring—good for another ride.

This South is new to me. It is not the one I knew as a boy. It certainly is not the one my father knew. My grandfather—like yours, would never have imagined the South of today. And certainly when you are a grandfather you will dwell in a South that will not much resemble that of today.

Valor, courage, integrity and the mighty mysteries and values of God and man remain constant. So do weaknesses, mean-

ness and vanities. But the world changes—and we are a part of the world.

It would be very interesting, indeed, if one could peer into the minds of the young southerners today—and, for that matter, into the heads of all our young citizens.

But none has so great a regional stage show, and so good an opportunity to decide, as the young southerners in college and those just coming into their teens and becoming aware of the forces in their lives. Their leaders are before them and are on trial. They are watching their political representatives in the spotlight of the great drama of human rights and public education.

Since their political leaders are before them so plainly, the young southerners cannqt help but think about these men and about those who speak from pulpit, podium, or press on the same subject.

Not since the period 1855–61 have the young southerners had so stark a contrast or so vivid a drama to watch. Somebody is wrong. That at least is obvious. The Deep South direction is exactly contrary to that of the rest of the country. The debate is joined.

It is a great time and sometimes a dismaying time, to be alive and sensitive to the tremendous issues of our day. They are complex. The young southerner knows even better than his political leaders that the problem which in time will close the doors of his schools is by no means local.

The young southerner also is a product of what cynics call the Bible belt. He is, by and large, a church-going, Sunday school attendant. And this, too, worries him. He understands that what the preacher and the church school teacher say on Sunday runs contrary to what his Governor says on Monday. He keeps trying to rationalize the Sermon on the Mount and the last press conference at his State capitol.

In a way, this is a very lucky thing for the young men and women in their teens, coming with a rush toward maturity. No generation since that of 1855–61 has had so good a chance to compare and contrast what it hears and what it reads.

Even the most blind today can sense that we are caught up in a great convulsion of history. We all know that our lives unalterably are committed to a future which somehow frightens us. None of us has ever been able, of course, to see into that inevitable tomorrow. But this one seems to be making so much noise. And the old wrestlers in the international cockpit of history are not as strong as they once were. The big new giants are Russia and China. And they don't go by the old rules.

All this is plain to all the young persons of America. They know that history is on the march. Missiles are more understandable to them than to their parents. It is no exaggeration to say that, in spirit at least, the young American is closer to the future than his father and mother.

Prophets are never well regarded. But one may venture a prophecy about the future with some assurance of being vindicated by the swiftly moving years. Out of the South's great travail and agony of soul in time will come a new political leadership. It will be more in tune with the industrial South and the future which such a civilization produces. It will open new and better schools, not close them. How long it will take none may say for sure. Years will pass. Perhaps a few. Perhaps many. But that leadership in a time of intercontinental missiles, of machines which think, and of great concentrations of populations, will not consider the greatest issue to be where a colored man shall sit in a streetcar or where his child will go to school. Almost any prophet will see that new political leadership is an inevitable part of that future of which every tomorrow is the opening of a new door.

The story of the Republic is one of frequent struggles with the past, with old cultures and traditions.

This one of our time is nothing new. But it is a great and significant one. And perhaps the luckiest person of all, when all is said and done, is the young southerner. His leadership is on trial. He can see it plainly and he can follow or reject.

Some of you will do the job of recreating the domestic equilibrium of our region and our country. I hope we do not leave you too much to do.

We must agree with Sophocles that the day can be evaluated only after dusk, that it is through death that one judges life.

There is quite a job to do—

In education, for example, we have come a long, hard path. Public education is relatively new in the South.

The report of the U.S. Commissioner of Education for the year 1900–01 showed southern schools to be wholly inadequate, poorly attended, and poorly taught.

The amount spent on public education was about a third of the national average. Then, as now, there was a greater proportion of the children to adults than in the North. In addition to this, about 80 percent of the southern population was rural and sparsely settled. School terms in agricultural areas were confined to a few winter months.

In 1901 Charles W. Dabney of the University of Tennessee said in a report:

"In the Southern States, in schoolhouses costing an average of $276 each, under teachers receiving the average salary of $25 a month, we are giving the children in actual attendance 5 cents' worth of education a day for 87 days only in the year—such means will never educate the people."

In 1900–01, for example, Alabama's Legislature gave the university a mere $10,000. Until 1904 Louisiana had a limit of $15,000 on annual appropriations for Louisiana State University. The total yearly income for the 63 colleges and universities of Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, and Arkansas was $65,843. This is less than the average southern State now spends per year on its schools.

We know, looking at history, that the damage done by the Civil War in property losses was great. The poverty which followed was harsh, often brutal. But the corrosive damage done the spirit and soul of the South was through lack of education. The children, the grandchildren, and the great-grandchildren of the adults of those postwar years did not have a fair chance. I have known many fine men and women who were deprived of any chance at adequate education in those years. My own father was one. These persons had almost a passion for educational opportunity for their children.

By 1901 the situation was so desperately hopeless that it attracted the attention of northern philanthropists. George Foster Peabody was first to help. John D. Rockefeller, Jr., and his father poured $53 million into their general education board between 1902 and 1909 to help the South toward education.

The crusade for public schools fervently was preached at barbecues, picnics, in churches, courthouses, schools, fairs, and camp meetings. There was strenuous opposition. Some persons of influence and learning did not believe in free public education. Others did not want the Negro to have it.

Poverty lay heavily on the South. But nowhere was it as burdensome as on the farms—especially the many small ones. The wan man in the faded denim, his sunbonneted wife, and his pinched but eager children, had already shown their resentment in the Populist revolution.

Walter Hines Page described them in a great speech for free education as the forgotten man. Franklin Roosevelt, years later, was to take that phrase and make it a part of our political vocabulary.

By 1913 a certain momentum was attained. Standards of admission and graduation, which were widely debased, were tightened. Public education came to the South.

Teachers and parents have sacrificed and toiled for it. The despair of the first years of the century are but memories for the old or stories to be read in books.

What of education in 1959?

The compulsive determinnation of politicians and many of the people to destroy public education in four or five States is almost incredible even when one lives with it.

To speak the phrase, "close the schools," means a previous process of closing the mind has been completed. The mind must be shut before doors to schools may even be thought of as closed.

In early January of this year the Census Bureau released some figures on education. A part of that report, as sent out by the United Press International, was as follows:

"Arkansas spends less per pupil to educate its children than any of the 31 other States that finance schools through school districts, the Census Bureau reported today.

"Arkansas provided $69,636,000 for its 388,000 schoolchildren, or $154 per child, according to the report covering 1957.

"The next five low rankings all went to southern or border States, South Carolina, $165 per pupil; Alabama, $77; Kentucky, $185; Georgia, $192; and West Virginia, $205."

The obvious question growing out of these school figures for 1957 is, What about the rest of the picture?

Southern schools are still among the lowest in expenditure per pupil. But it must be noted that the amount spent in 1957 was a tremendous increase over that of 20 years ago—and is a moonshot away from the educational totals of the bygone era.

A study of the South's position today reveals a national story of change and shifts, economic, population, and also a pattern of growth and process.

The South has grown, changed, and progressed.

But so have the other regions. It is important, therefore, to know what the picture is. Otherwise, we will not know what the job is.

The progress story, as revealed by Department of Commerce figures, is a spectacular one in Texas and Florida. But because the South started in the industrial revolution without any real manufacturing base, certain paradoxes emerge. In personal income Percentage retail sales gains in the South advance since 1940 is higher than the rest of the Nation. Yet, we are still last in income per capita. There is another paradox. Percentage retail sales gains in the South are the second highest—despite our lowest per capita income. Apparently, our wives spend more of our income dollar.

According to the Department of Commerce, the per capita income for the continental United States for the 4 years from 1954 through 1957 was $2,027, a gain of 14 percent for the 4 years. The per capita income of the 12 Southeastern States in that period was $1,427, exactly $600 a year, or $50 a month below the national average. Yet, this was a gain of 16 percent, second highest in the Nation.

Not even Florida, with all her spectacular growth, reached the national per capita income average. Hers was $1,836. Georgia was second, with $1,431. Mississippi was lowest with $958.

Continuing with the Department of Commerce figures for the past 10 years through 1956, we find these results.

In employment the South is fifth in percentage increase with 24 percent.

If the employment is an indication of industrial development we have here a clear

and interesting picture. Where is the greatest growth in America?

The Pacific States have an employment percentage gain of 67 percent.

The Midwest is up 41 percent.

New England has declined, showing but a 1-percent gain. The Mid-Atlantic States of New Jersey, Pennsylvania, and New York, long heavily industrialized, are just about holding their own.

The West Central States are up 41 percent. But it is the astonishing State of Texas, where employment is up 78 percent, which brings up their average.

And in the South our average is up 24 percent, largely because of Florida which has outdone even Texas in percentage employment gain—a whopping 81 percent in 10 years.

So, we have an answer to the question—Where is the really great growth? It is in the Far West, in Texas, and Florida. We are all familiar with the fact all our cities are growing. The shift is from the fields to factories.

For example, only 1 out of every 10 Negroes now is a farm hand; the rest are in the cities, not just southern cities, but in northern and western cities, too. Migration from the South has not really been slowed down. In the decade from 1910 to 1920, almost 10 percent of the population of the South migrated. In the decade from 1920 to 1930, it was almost 15 percent; in the last decade, ending in 1950, 18.9 percent of the South's population left.

The Negro problem of population annually grows less.

In the years since 1950 through October 1958, there has been a growth in the United States of 15 percent in population. Only two Southern States have reached the national average; Florida with 51.9 percent and Virginia with 15.4 percent. Most of this latter population is a spillover from Washington's great force of Government workers.

Three Southern States lost population, keeping company with Vermont in this category. They are West Virginia, Arkansas, and Mississippi. The Bureau of the Census estimated that after the 1960 census, when Congress by law proceeds with reapportionment, the 17 States of the West will gain 11 House seats, the North will lose 7 and the South 4. With Alaska in the Union the 17 States of the West have 36 of the 98 Senators. This is 14 more Senators than our 12 Southern States. When Hawaii comes in during this session the western count will rise to a majority of 16 more.

What does this cause us to know?

It is that population shifts have rather profound economic and political effects.

This is, in brief, some of the background of the changes which have touched us all, stopping at every door, passing over none.

For all the South's struggle and progress, her needs and lacks in education have remained unmet. She is not alone in this, but to be willing to destroy the advances made is almost too fantastic to be believed at a time when the need for more and better education has been violently thrust upon us.

There are already minds and schools closed in the South. There will be more. But I firmly believe those who take this action are trampling out the vintage where the grapes of wrath are stored. I mean no irreverence when I say that while public education may be crucified on a cross of willful destruction of it, it will rise again out of the wreckage.

Kentucky, North Carolina, Tennessee, and West Virginia have somehow escaped this ugly compulsion to close schools.

One naturally asks: "Why?"

There is one immediate answer. It is leadership. That leadership, seen by an outsider, is broad in scope. It includes elected officials, educators, students, the churches, newspapers, and the citizen himself. I know, it was not easy. I am sure there is still reluctance and resistance.

But, nonetheless, civilization, the best quality of Americanism, and the best southern tradition have managed to exert the most influence here. I am aware that the percentage of Negro population is less in the States noted than those in the old cotton South. That is, of course, a factor. More of the plantation-type economy exists in the Deep South.

But, let us be candid. The real explanation is leadership.

You did not have so many closed minds. Your resistance, when confronted with law, accepted law.

It puzzles me, looking at the South. Our beginnings were made by those determined persons who came through the mountain passes and spread out into the Southeast. We are, basically, the same sort of people. But the hands of that great potter, economics, was on us all and we are not all shaped the same emotionally or spiritually. It should be plain that a first loyalty must be to one's country. But not all see that.

Kentucky, North Carolina, and Tennessee can go forward toward the job of progress that we must do here in the South. North Carolina has announced, for example, that because her universities are to remain open, she will build a great research center in the triangle between her three largest institutions. A State whose colleges and universities are to remain open can plan and progress. Virginia has accepted a course of law.

Those States which live in frustration, fear, and uncertainty, will pay a price which may not be calculated if they do indeed destroy, even for a time, public education. That it will be severe in terms of education, business, and things of the spirit, is undoubted.

The voices of those States fully committed to processes of law and democracy must continually be raised in support of both.

Our population burgeons. One hears already not the patter of little feet, but the thunder of them. No system of private or parochial schools can do the job. These schools have a real function. But the almost 200 million Americans and their children increasingly crowded into urban areas can be served only by an efficient public school system.

Ignorance, prejudice, and shabiness of mind and values always are careless leaks in the dikes of civilization in which man is a free individual. These forces must always be recognized for what they are and their presence and purpose publicly proclaimed and opposed.

There are many paragraphs in Boris Pasternak's "Dr. Zhivago" which seem to me to apply in our region, and in the Nation as well.

One of them is this:

"If the beast who sleeps in man could be held down by threats—any kind of threats, whether of jail or of retribution after death—then the highest emblem of humanity would be the lion tamer in the circus with his whip, not the prophet who sacrificed himself. But don't you see, that is just the point—what for centuries raised man above the beast is not the cudgel but an inward music: The irrestible power of unarmed truth, the powerful attraction of its example."

If the South loses, or betrays public education into inadequacy, we will lose, too, this inward music, and the ability to offer the example of unarmed truth.

Reuther Wants More of the Same

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial entitled "Reuther Wants More of the Same," which appeared on February 18, 1959, in the Phoenix Gazette, Phoenix, Ariz.:

REUTHER WANTS MORE OF THE SAME

Walter Reuther is seeking to extend his kind of financial and political ruin from the State of Michigan to the United States. He proposes that the entire labor union movement sponsor a march on Washington for jobs to dramatize his personal program for socializing employment.

The kind of policies Reuther demands have bankrupted Michigan, lost his United Auto Workers half a million members and killed Michigan Gov. G. Mennen Williams' fond hopes for a Democratic presidential nomination. Reuther cannot escape responsibility for Michigan, since his UAW virtually controls the State. We shall discuss Michigan's dilemma more in detail at a later date; for now, Reuther's effort to compound his failure deserves a close look.

He proposes vastly greater Federal subsidies for unemployment, including federally financed housing and medical and legal care. He demands a shorter workweek and authority for the President to suspend Federal withholding taxes from wages and salaries. The withholding provision is the craziest item of all, since it would merely delay payment of taxes, not forgive them. It would not apply to the unemployed since they have no current income, but to those who are earning. Reuther says it would provide quick injections of consumer purchasing power.

This infatuation with governmentally manipulated consumer purchasing power is at the root of all Reuther's cockeyed philosophies. Even in the shorter workweek, he would bitterly resist any status quo in hourly wage rates, insisting that they be raised to give each worker the same take-home pay for a shorter week as for a longer one. His idea is that the Government, by legislating the same pay for less work, would force industry to hire more people and thus increase consumer purchasing power.

What Reuther is saying is that more Government domination of the country's economic life would increase the gross national product by making more money available to everyone, thereby boosting demand. It is not a new idea. It is as old as socialism. And it is as false.

The National Tax Foundation has been taking a look at gross national product (GNP) in relation to Government control-through-spending. In 1913, when pump priming as a routine thing was unheard of, GNP amounted to $13 for every $1 of Government spending. Now there is only about $4 of private enterprise production for every Government dollar. Or, to put it another way, GNP today is only 11 times greater than in 1913, but Government expenditures have risen 50 times.

Obviously, increased Government spending has not increased private production in ratio. In fact, the opposite would seem to be true. When we get the bill for today's skyrocketing

welfare state expenditures, the lesson may be driven home even more drastically.

Reuther remains stubbornly blind to the quietly insistent lesson of history. Even Michigan has not opened his eyes by smacking him in the face far more dramatically. He wants Federal domination of the Nation's economy at all costs, and he intends to use his union as a weapon to achieve it.

We hope the people have more sense than to fall for the Reuther panacea.

National Civil Service League Announces Winners of 1959 Career Service Awards

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. REES of Kansas. Mr. Speaker, I believe Members of the House will be interested in a statement of the National Service League identifying the names of career employees who are recipients of career service awards this year:

The National Civil Service League today named the winners of its fifth annual career service awards, the most prized awards conferred upon public employees by a citizen organization. Each year, the league, a nonpartisan organization of citizens for good Government, recognizes and focuses national attention on 10 outstanding Federal employees who exemplify the highest characteristics of public service. A special committee of the league selected the 1959 award winners on the basis of competence, efficiency, character, and continuity of service.

The recipients of the awards will be honnored at a dinner on Monday, March 2, at the Sheraton-Park Hotel in Washington. Mr. Frank Pace, Jr., president of General Dynamics Corp., will be the principal speaker. Mr. Pace formerly served as Secretary of the Army and Director of the Bureau of the Budget. The banquet will also feature music of the U.S. Air Force Band and a star performer. Master of ceremonies for the evening will be Mr. Theodore F. Koop, Washington director of news and public affairs for CBS. A scroll and personal memento will be presented to each winner.

The 1959 winners, who represent the best traditions of the career service, are:

Lyle T. Alexander, Chief of the Soil Survey Laboratories, Soil Conservation Service, Department of Agriculture. For three decades Dr. Alexander has been rendering great service to his country in a Government career. A world leader in soil science, he has made outstanding contributions in the fields of soil management, soil genesis, clay minerals, and radioactive materials. He is a top expert on the use of radioactive materials in agricultural research, and especially on the effects of radioactive fallout on soils. He has been highly effective as Chief of the Soil Survey Laboratories.

John B. Barnwell, Assistant Chief Medical Director for Research and Education, Veterans' Administration. An inspiring and humble humanitarian, Dr. Barnwell organized a cooperative study of the chemotherapy of tuberculosis that served as a model for other cooperative studies, improved the treatment of tuberculosis, and saved many lives and millions of dollars. A 16-year veteran in Government service, he is now directing a tremendous medical research program that is favorably affecting a very large segment of the total medical care of the United States.

James C. Evans, civilian assistant to the Assistant Secretary of Defense for Manpower, Personnel, and Reserve. The chief adviser on racial and related matters in the Office of the Secretary of Defense and a principal consultant to other Government agencies on such matters, Mr. Evans has greatly aided our national security in more than 15 years of Federal service. Due to his foresight, ability, and integrity, the Department of Defense has made remarkable strides in integrating military personnel in the armed services and improving the equality of opportunity for both military and civilian personnel.

William F. Finan, Assistant Director for Management and Organization, Bureau of the Budget. Mr. Finan is the key assistant to the Budget Director for the improvement of organization and management in the entire executive establishment. He is widely recognized for his notable contributions to improved administrative performance. There is perhaps no one in the Federal Government who knows as much as he does of the intricacies of its administrative system, and who has done more to find solutions to difficult problems. He has been in the public service for almost a score of years.

Lyle S. Garlock, Assistant Secretary of the Air Force for Financial Management. Mr. Garlock administers almost one-quarter of the entire Federal budget. For the fiscal year 1959 he is exercising fiscal control of sums in excess of $18.6 billion, the largest single peacetime appropriation ever given to any single organization in the executive department. His expeditious financial handling of the B–52, B–58, B–70, and the advanced missile programs has produced outstanding results. In his 25 years of service he has wisely and successfully borne heavy loads of responsibility matched by few men.

Paul M. McDaniel, Deputy Director, Division of Research, Atomic Energy Commission. Having been in the service of the Nation for more than 16 years, Dr. McDaniel has long been associated with the atomic energy program. His efforts have contributed much to the proper organization and operation of the Atomic Energy Commission to meet the challenges of new discoveries. He was instrumental in establishing the Division of Research study of controlled thermonuclear energy. He also has filled many special assignments for the United States in connection with atomic energy.

Robert J. Myers, Chief Actuary, Social Security Administration, Department of Health, Education, and Welfare. For almost 24 years Mr. Myers has rendered distinguished service to the social security programs of the Nation. He has also been prominent in conducting numerous international actuarial surveys and reviews for foreign governments. His eminence in his profession is internationally recognized, and key personnel in government, here and abroad, have confidence in him and seek his services. His vast knowledge and long experience make him extremely valuable to the public service.

Richard A. Weiss, Scientific Director, Army Research Office, Office of the Chief of Research and Development, Department of the Army. Dr. Weiss has played a progressively important role in the evolution of scientific research and development as a basic factor in the national defense effort. He has significantly advanced our defense capabilities through his administrative and personal contributions in such fields as optics, nucleonics, and electronics. Since 1941, this dedicated scientist has devoted himself to the service of the United States, has rejected non-governmental positions offering higher salaries, and has encouraged the youth of the Nation to develop scientific talent.

Joseph E. Winslow, assistant to the Special Assistant to the President for Personnel. The top career official concerned with the personnel policies affecting all departments and agencies of the Government, Mr. Winslow is a dedicated and highly competent civil servant who has materially helped improve Federal personnel management. In his 24-year career, he has participated in drafting significant personnel legislation, and has had a principal role in the development of the recent training authorization legislation, the President's Award for Distinguished Federal Civilian Service, and many other important administrative measures. He is frequently consulted by top officials for assistance in Federal personnel matters.

Conrad L. Wirth, Director, National Park Service, Department of the Interior. Having devoted 30 years of public service to the conservation of the Nation's human, cultural, and natural resources, Mr. Wirth has given new vitality to the whole program of the National Park Service. He is one of the best known and most popular bureau administrators in the Federal Government. While preserving the areas of the National Park System inviolate as a priceless heritage for future generations, Mr. Wirth has given inspired leadership and provided commonsense judgment to programs designed to make these areas more meaningful and enjoyable to the cultural and recreational pursuits of their millions of visitors.

Statement of Hon. J. W. Arnold, Mayor of Cullman, Ala., on Bills Relating to Issuance and Sale of Municipal Bonds

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. ELLIOTT. Mr. Speaker, on February 17, members of the legislative committee of the Alabama League of Municipalities met with the Alabama congressional delegation to discuss municipal problems. It was a great day of exchange of views on many problems.

Among the statements made on the occasion was a very fine statement by the Honorable J. W. Arnold, mayor of Cullman, Ala., entitled "Bills Relating to Issuance and Sale of Municipal Bonds."

I include Mayor Arnold's statement as a part of my remarks and commend its reading to interested Members of the U.S. House of Representatives:

BILLS RELATING TO ISSUANCE AND SALE OF MUNICIPAL BONDS

(By J. W. Arnold)

In each session of Congress numerous bills are offered which relate to and affect the issuance and sale of municipal bonds. Some of them usually are calculated to be of assistance to the issuing bodies. But, sometimes there are bills whose passage would adversely affect the best interests of our local communities. I would like to discuss types of proposed bond legislation falling into those categories so that our delegation in Congress will know our interest and point of view regarding such proposals.

Ever since the spread of industrialization in the South, our cities and towns have been able to secure passage of State legislation to do these things:

1. To finance construction and equipping of industrial plants for lease to industrial

tenants. This is done through issues of revenue bonds.

2. To finance construction of various types of municipal utilities—waterworks, sewers, natural gas and electric systems—through the issuance of revenue (non-general-obligation) bonds.

3. To finance the municipality's share of hospital construction, development of local public housing authority projects and urban connecting link highways.

TAX EXEMPTION HAS STIMULATED INVESTMENT IN MUNICIPAL BONDS

The policy of the Congress to not tax income earned from municipal securities has stimulated a good market for such bonds or other evidences of debt. Many attempts have been made to repeal this exemption, but always Congress has voted on the side of the municipalities. This we hope will continue to be your policy. Without the exemption feature the interest rate on municipal bonds and other evidences of indebtedness would run so high that we would not be able to undertake many of the municipal programs that we currently sponsor.

A determined drive is always put forth by the Treasury to remove this tax exemption from our statute books. We hope you will hold the lines against any such atempt that may again be made by the Treasury in the 86th Congress.

One bill has already been introduced by Representative ABRAHAM MULTER, of New York, to eliminate the tax exemption on bondis issued by communities to finance the construction of industrial plants by public bodies. We hope you will help us either kill it or hold it indefinitely in the House Ways and Means Committee.

ESTABLISHING A BROADER MARKET FOR MUNICIPAL BONDS

To lower interest costs to municipalities in financing their operations and public works programs, we suggest:

1. That Congress amend section 5136 of the Revised Statutes of the United States to authorize commercial banks to underwrite revenue types of public securities and allow commercial banks to compete freely with other financial institutions for these issues.

Cities and towns are turning increasingly torevenue bonds in financing municipal public works. Experts in the public finance field now estimate that one-half of all municipal borrowing is done through the issuance of revenue bonds. Interest charges cities and towns pay on revenue financing is determined to a very important extent by the competition between financial institutions for these issues. Commercial banks may deal in general obligation (full faith and credit) bonds, but are prohibited by law from underwriting revenue bonds of cities and towns. This restriction in competition has the effect of increasing interest costs and as a result, the cost of many municipal improvement programs is unnecesarily high.

2. It has been suggested—as another means of improving the municipal bond market—that Congress enact legislation which will broaden the market for municipal bonds by permitting regulated and unregulated investment companies to distribute interest on such bonds to their shareholders without loss of tax exemption. Legislation is pending now to accomplish this.

Many companies have large sums of money that can be invested in municipal securities if the interest earnings are tax exempt. The interest is now tax exempt as far as the companies are concerned, but when it is passed along to shareholders it becomes taxable as income of individuals. It has been estimated that the cost to the U.S. Treasury would not be heavy. If this is true, the proposed legislation would seem to be in the municipal interest and worthy of your consideration.

Back for a moment to the whole subject of municipal tax exemption, let me say that it is the feeling of municipal governments and their officials that the constitutional immunity of the States and the municipalities and their agencies from Federal taxation is necessary to the preservation of the Federal form of dual sovereignty in American government upon which depends the integrity of local self-government in the United States and with it the firmest possible assurance of democracy and the preservation of human liberties.

I thank you.

Farewell Appearance of J. J. Singh, "Mr. India," Before the Far East Subcommittee of the House Foreign Affairs Committee To Give His Views on United States-Indian Relations

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FULTON. Mr. Speaker, Mr. J. J. Singh, the president of the India League, is leaving the United States and returning to his native India. Mr. Singh, or "J. J." as he is called, has made many good friends here. Under leave to extend my remarks, I include some of the many personal tributes, news articles, and editorials that have appeared in the newspapers and those that were received on the occasion of the farewell public meeting of the India League of America, held on Wednesday, February 11, 1959, at the Community Church of New York, New York City:

Representative EMANUEL CELLER, of New York, chairman of the Judiciary Committee of the House of Representatives, Washington, D.C., member of the executive committee of the league:

"INDIA LEAGUE OF AMERICA,
"*New York, N.Y.*

"DEAR FRIENDS: I cannot tell you how much I regret not being able to be with you at this farewell meeting of the India League of America. I feel as if I were saying goodbye to old friends by proxy, and that I know is no way of revealing the depth of friendship and regard I have felt for the members of the India League. I wish I could be with you to tell you of the personal satisfaction I have gained from my association and participation in the work of the India League.

"I want to single out from among the many friends in the India League the one with whom I have worked closest and who has given me so much of his time and thought when there was work I could do as a friend of India in the Halls of Congress. J. J. Singh has been a source of strength and inspiration to all of us; a man of dedication to his principles; a sturdy ambassador of good will for India. I remember the work we did together in accomplishing the passage of legislation that removed the obnoxious India Exclusion Act from our statute books and prepared the way for the naturalization of Indians resident in the United States.

"Though he is leaving our midst, I know that our paths will cross again.

"We who are the friends of India will not forget for one moment that a crucial role in world history is now being played by the people of India. India must be given every opportunity to prove to the world that freedom and economic opportunity can exist side by side and that it is not mandatory that freedom of a people must necessarily exclude its economic well being, or that economic progress can only be made at the expense of freedom. This is the test mankind faces in these troubled times and one of the most significant of all testing foregrounds is the subcontinent. It is not a choice, it is a must that we, in the United States, give economic aid to India, help to increase her trade, and help to finance her new industries. That we have so far failed to recognize the importance of India to the development of a free society everywhere is borne out by the fact that of the $20 billion of trade that the United States carries on, only $500 million relates to India. Yet India gives us the mica, the jute, the manganese, the spices that we ourselves must have in the development of our own economic and scientific progress. To India we look for the attributes of charity and compassion, steeped as she is in spiritual strength. We in the United States cannot afford to take our eyes away from the Indian scene. I have witnessed for myself in my visit to India the heartbreaking problems that face her. I have seen, too, the tremendous work that is being done in the villages. The intelligence and sensitivity of her leadership, her men and women of dedication and sacrifice have left a deep impress on me. The world watches the struggles of a free people of India and the progress made under that freedom as against the brutal totalitarianism of Communist China. In a sense then I say—and I repeat—that herein lies the test tube of whence our civilization shall go.

"I shall miss you all, but I must leave you with the assurance that my work and friendship for India shall continue unabated.

"Sincerely and hopefully,

"EMANUEL CELLER."

Justice William O. Douglas of the Supreme Court of the United States, Washington, D.C., member of the national advisory board of the league:

"DEAR MR. SINGH: It was with deep regret that I received the news of the dissolution of the India League in your letter of January 29.

"The work done by the organization, and particularly yourself, has made a significant contribution to the better understanding of India by people in the United States. Through your efforts, many Americans have seen the close kindship between the people of your country and ours as we both struggle toward our common goals of freedom and peace.

"My sorrow at your departure from our shores is tempered by my admiration for your accomplishments. I wish you Godspeed in whatever you put your many talents to in your native land.

"Yours faithfully,

"W. O. DOUGLAS."

Mr. James A. Farley, former Postmaster General of the United States:

"DEAR MR. SINGH: I read with interest and regret the article in the January 18 edition of the New York Times relative to your decision to return to your home in India after 33 years in the United States.

"I can well understand yours and your wife's desire to get back to India again not only for your own, but for your children's sake. You have been a very worthwhile resident of our city and have won the admiration and respect of all who came in contact with you. I want you to know that I have had the opportunity to see and visit with you and like all of your friends, hate to see you leave.

"May I extend to you every good wish for success, health and happiness in your home country.

"Sincerely yours,

"JAMES A. FARLEY."

Senator J. W. FULBRIGHT, chairman, Senate Foreign Relations Committee, the Senate, Washington, D.C.:

"Thank you so much for your letter of the 31st. I regret that you are retiring and returning to India, but you can rest assured that you have made a great contribution to a better understanding of your country in America during these past years.

"Sincerely yours,

"J. W. FULBRIGHT."

Representative JAMES G. FULTON, member of the House Foreign Affairs Committee, Washington, D.C., member of the national advisory board of the league:

"DEAR J. J.: As a personal friend, it is a pleasure to add my comments on your valued contribution to the growing friendship between India and the United States, which I believe will be one of the decisive factors in world affairs in the next generation. I do hope that you will keep me advised as a member of the House Foreign Affairs Committee, when there are matters which you think should be brought to my attention in order to maintain this friendship which has been growing steadily through such a difficult period.

"With personal regards and best wishes,

"Sincerely,

"JIM FULTON."

Dr. Frank P. Graham, U.N. representative in India and Pakistan, member national advisory committee of the league:

"DEAR MR. SINGH: I regret your leaving us and wish you, Mrs. Singh and your family every happiness in your return to your native land. You have been a real nonofficial but effective ambassador to the people of the United States. We will deeply miss you here.

"With high esteem and warm regards to you and Mrs. Singh from Mrs. Graham and me,

"Sincerely yours,

"FRANK GRAHAM."

Dr. John Haynes Holmes, minister emeritus of the Community Church of New York, member of the national advisory board of the league:

"DEAR MR. SINGH: This is melancholy news you send me in your letter of the 29th—melancholy for us who lose, by your return to India, and are deprived of your presence and work here in the hour of India's continuing need in the vast struggle for independence, but happy for you and your wife who return to your beloved country to serve the great cause there, as, for so many years, you served it here in America.

"Your work here on behalf of India's liberty has been truly remarkable. You have functioned in various capacities as scholar, teacher, propagandist, orator, and advocate, of a nation's cause, and all of these upon the highest level of integrity, honor, and resourceful leadership. You have been like the watchman on the towers, always alert, always fearless, militant, and courageous. It's easy to see why we shall miss you, for India is still in critical times, and where shall we look for the guidance and tireless service which constituted always so large a measure of our own strength? But, as I have said, what America loses here is straightway gained by India, and thus made a continuing labor on behalf of your heroic people.

"I am deeply sorry that, because of illness, I shall be unable to participate in, or even be present at, the farewell meeting arranged for February 11 next. I take pleasure, therefore, in accepting your invitation to send you a message of farewell which, in due course, I shall forward to you. It has been my privilege to know you and to admire you, and to share with joy in your work. I should count it my great fortune that, thanks to your courtesy, I may send you this message of farewell, for which you ask.

"With renewed greetings, and all best wishes, I remain,

"Very sincerely yours,

"JOHN HAYNES HOLMES."

Mr. Henry R. Luce, publisher, Time-Life-Fortune, member national advisory board of the league:

"DEAR J. J.: As I prepare to leave for Arizona, for a period of concentrated reading, thinking, and writing, I learn that in my absence there will occur the valedictory meeting of the India League of America. I learn, too, that you are soon to leave us and return to India. The two facts add up to a tautology, for it is impossible to imagine an India League with J. J., and vice versa.

"While I may not have been a regular participant in the work of the league, I am proud of my association with it as a member of the advisory board, and I am specifically proud of certain of the league's achievements. Two examples come to mind. One is the securing of UNRRA relief for the victims of the Bengal famine in 1943. The other is the act of Congress enabling Indians to become American citizens. It will always be a cause for gratification to me that my wife, as a Member of Congress, was a sponsor of that law.

"Of course, when one speaks of the India League's activities in these and other good causes, one speaks mostly of J. J. Singh, who brought the organization to life exactly 20 years ago. You have been good for us Americans. You learned our democratic processes better than most of us and employed them wisely and constructively. You have been a good friend and, particularly since your marriage to the enchanting Malti, an ornament to our society.

"I know that my colleagues in Time, Inc., are toasting you and Mrs. Singh at a party in our offices in mid-February. I deeply regret that I shall be absent. In case I am not back in New York in time to speak directly with you, here are my regretful farewells to the J. J. Singhs, and my hopes that you, as an incorrigible ambassador, will visit us soon again.

"Sincerely yours,

"HENRY R. LUCE."

Senator KARL E. MUNDT, the Senate, Washington, D.C., member of the national advisory board of the league:

"DEAR MR. SINGH: It is with deep regret, because of conflicting dates out in South Dakota in connection with the observance of the 150th birthday of Abraham Lincoln, that I cannot be with you for the farewell public meeting being sponsored by the India League of America in New York City on February 11.

"It is with even greater regret that I learned that the Indian League of America is being dissolved and it is with a genuine sense of personal loss that I learned of your decision to return to your native country of India. You have served both India and America well for a long period of time in your self-assigned responsibility as 'Indian Ambassador without portfolio.'

"Knowing you as I do, I am sure that once you are back in India your service to both countries will continue to be significant and that you will do much to bring about in India better understanding of America and the free way of life which it exemplifies and symbolizes. The future of India is with the free world and I know that you will bring to the attention of the leaders of India the continuing importance of cooperation with the free world in the development of policies and programs designed to prevent the further spread of communism, and the dangers to peace which the expansion of communism necessarily provides.

"With every best wish, I am,

"Cordially yours,

"KARL E. MUNDT,
"U.S. Senator."

Hon. William M. Rountree, Assistant Secretary of State, Washington, D.C.:

"DEAR MR. SINGH: Thank you for your letter of January 31, 1959. I share your regret that the India League of America has decided to end its long service for the cause of Indian-American friendship. I am happy to enclose a message on the work done by the league which you may wish to use at the final meeting.

"Your own efforts will be long remembered and your presence in the United States will be missed. Even though you are ending your work here, I am glad that we will have in your person in India a firm friend of the United States who will continue to work to strengthen the bond of friendship between our two countries.

"Sincerely,

"WILLIAM M. ROUNTREE,
"Assistant Secretary."

"To the India League of America:

"It is with a sense of regret that I send these farewell greetings to the India League of America on the occasion of its last meeting. The league can be proud of its contribution to the close and friendly relations which exist between India and the United States. I am confident that, even though the league itself will no longer exist, its work will be continued by the individuals who were members of the organization. My colleagues and I assure you that we will do our utmost to strive for an ever larger measure of friendship and understanding between our two countries.

"WILLIAM M. ROUNTREE,
"Assistant Secretary."

[From the New York Times, Feb. 17, 1959]

The city bade a fond farewell yesterday to Sirdar Jagjit Singh, Indian's unofficial ambassador, who has been supporting the cause of his homeland in New York for the last 33 years.

Mr. Singh—"sirdar" is a Sikh honorific roughly equivalent to "captain"—was the guest of honor at a luncheon at the Waldorf-Astoria Hotel sponsored by Mayor Wagner and paid for by the Indian League of America. Mr. Singh is its president. He is leaving for retirement in New Delhi on March 8.

Mr. Singh, or "J. J." as he is known, received a scroll from Mayor Wagner citing him for distinguished and exceptional service to the city.

The citation noted that Mr. Singh "has accomplished so much in furthering mutual friendship and understanding between the people of India, his native land, and the people of the United States, his adopted land for 33 years."

Representative EMANUEL CELLER, Brooklyn Democrat and chairman of the House Foreign Relations Committee, praised his old friend for his efforts at United States-Indian understanding even during dark periods.

Mr. Singh, who said that he considered himself a New Yorker, promised that he would tell his people "about the greatness, kindness and decency of the American people."

[From the New York Herald Tribune, Feb. 17, 1959]

THE UNOFFICIAL AMBASSADOR

Many friends of India will be saddened by the news that, after 22 years of promoting friendship and understanding between our two countries, the India League of America is being disbanded and its president, J. J. Singh, is taking his family back to India.

The league's membership has never been large, but its work, largely carried on through Mr. Singh's personal diplomacy and his tireless lobbying and letterwriting, has, in a quiet way, helped considerably to bring about a greater American understanding of the

vastly important but long mysterious giant of the East.

The fact that Mr. Singh's departure has signaled the dissolution of the league is an eloquent measure of his personal contribution to it. The league hopes that another organization (Mr. Singh suggests the Asia Society) will carry on its work. As for unofficial ambassador Singh himself, whose return to India after 33 years here is prompted by family considerations, his enthusiasm remains undimmed, and it perhaps is not too much to hope that he will be as effective an interpreter of the United States to his countrymen as he has been an interpreter of India to Americans.

[From the New York Times, February 18, 1959]

AN UNOFFICIAL ENVOY

In giving a farewell luncheon for J. J. Singh, Mayor Wagner has recognized the distinguished part that this unofficial envoy from India has played in the life of our community. We hope that it is not farewell but merely au revoir, and that J. J.—as he is affectionately known to thousands of Americans—will come back to visit soon and often.

After 33 years in this country Mr. Singh has decided to take his charming family back to his native India and to retire there. No one who knows him can accept the idea of his retiring without the broadest reservation. He will continue to work on behalf of his country and on behalf of better understanding between India and the United States. Perhaps he may even form an America League in India, since he was the life and soul of the India League here for 20 years and as he leaves the India League has disbanded, saying "mission accomplished."

He has been singularly successful in presenting the cause of his people to this country. One reason is that he has understood and liked Americans and made them like him. His urbanity, good humor, commonsense, and patriotic devotion have endeared him to everyone who had reason to know him.

J. J. Singh has been an honor to India and a most pleasant vistor here. More like him would do us all good.

Popular Education

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. MULTER. Mr. Speaker, when the national defense education bill was before the Congress last year considerable opposition was voiced to the student loan program provision. Many thought that it would not be used. The following editorial from the New Republic of February 23, 1959, gives some interesting statistics concerning the widespread popularity of the program.

I have introduced a bill, H.R. 4220, which would provide for a college scholarship program. I cannot too strongly urge upon our colleagues the necessity for enactment of this measure, to supplement the loan program:

POPULAR EDUCATION

A largely ignored report from the U.S. Office of Education shows that the student loan program authorized in last year's National Defense Education Act is 10 times more popular than Congress anticipated. Under the program, college students can borrow up to $1,000 a year for academic expenses. They do not have to begin repaying the loan until 1 year after they graduate, and then the terms are reasonable: 10 years to pay at 3 percent on the unpaid balance.

Congress last fall appropriated $6 million to get this program stated. The colleges have to put $1 of their own into their loan funds for every nine Federal dollars received. By the end of 1959, more than 1,200 colleges and universities had asked for $62 million—466 of them never had a student loan program before.

The administration has responded by proposing that Congress meet the students' demand about half way: the President has requested that another $24 million be appropriated for fiscal 1959 and another $30 million for fiscal 1960.

Addresses of John Cashmore, President of the Borough of Brooklyn, and Frederick Zurmuhlen, Commissioner of the Department of Public Works of the City of New York

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mrs. KELLY. Mr. Speaker, on leave to extend my remarks in the RECORD, I include the following addresses of Hon. John Cashmore, president of the Borough of Brooklyn, and the Honorable Frederick Zurmuhlen, commissioner of the department of public works of the city of New York, at the ceremonies on January 5, 1959, dedicating the new Supreme Court Building in Brooklyn, N.Y.:

ADDRESS OF JOHN CASHMORE, PRESIDENT OF THE BOROUGH OF BROOKLYN

Mr. Justice Nolan, reverend clergy, distinguished members of the bench and bar, ladies and gentlemen, today we dedicate the building which will stand for the next century, at least, as the symbol of justice in Brooklyn. It is a magnificent structure, indeed, and well it should be in keeping with its noble purpose. Constructed at a tremendous cost, it represents no small sacrifice on the part of the people of the great community it is to serve.

But sacrifice in the name of justice is nothing new to this community of Brooklyn, because the very ground on which this structure stands reverberated nearly 200 years ago to the tramp of Washington's soldiers, and the land nearby was literally soaked with the blood of those who gave their lives to throw off tyranny and oppression so that freedom and justice might be the symbols of the American way of life.

And let us not lose sight of the fact that the historic Supreme Court Building across the street, which now gives way to the needs of a new era, was also constructed at equally great financial sacrifice during the War of 1861, when men of the old city of Brooklyn were dying by the thousands to prove the truth of their conviction that no race of people could be kept in bondage and slavery under the American system of justice.

Today, one short century later, the members of the race that was enslaved live side by side in this community with the members of the race that were their tormentors. In this courthouse they will both stand equal before the law.

To be sure, this great structure does represent sacrifice, but the very principle of justice itself has always required sacrifice, constant, never-ending sacrifice, by those who would serve its cause and reap its benefits.

Although the spirit of justice and the self-discipline that are entailed in its preservation seem native and natural to the character of our people, it is also true that some leadership is necessary in undertaking a project so great as this.

Many of our citizens have given much to make this a day of accomplishment, but there is one man who has provided the leadership and the courage to overcome the obstacles that arose during the past 5 years. I am happy to salute him, for when others were fainthearted he pushed on. He is the great mayor of the city of New York, Robert F. Wagner. To him and to Commissioner Zurmuhlen, who have done so much to make this great courthouse a reality, I extend the thanks and appreciation of the Borough of Brooklyn.

And now we, the administrators of the city who have supervised the erection of this structure, which is but stone and mortar, deliver it to you, the justices of the court, to infuse in it the spirit and the soul of justice. Yours is an awesome responsibility indeed. To find the truth, to render exact justice between man and man, to preserve the heritage of liberty and justice that our people of Brooklyn have fought for and died for—these are burdens to try even the strongest and most learned of men.

That Almighty God will give each of you, and those who come after you, the strength, the courage, and the wisdom to face these great tasks is the fervent prayer of all the people of Brooklyn, who have so often proved their complete and unselfish devotion to the cause of justice.

Thank you. [Applause.]

ADDRESS OF FREDERICK ZURMUHLEN, COMMISSIONER OF THE DEPARTMENT OF PUBLIC WORKS, NEW YORK CITY

Justice Nolan, reverend clergy, the resident justices and many judges of many courts that are here today, distinguished guests, and not to forget the borough in which this building lives or is, the Honorable John Cashmore, Mr. Borough President, ladies and gentlemen, as you have been told, we have gathered here today for a formal dedication of what is probably the newest and largest landmark in the Borough of Brooklyn. It is the largest component of this borough's civic center, which has been developed over a long period of time and is based upon a vision and ability to see into the future of many borough planners and many city planners, in addition to the department of public works.

Much of what we see nearby today in arriving or leaving, or which we come in contact with in our day to day pursuits as officials, judges, attorneys, businessmen, or civil service personnel, may be taken for granted among the many facilities this city must afford its citizens, without appreciating or even considering the years and the nights, the days, the hours, the headaches that go into the evolution of the plans and designs that are conceived and then finally consummated by architects, engineers, and then interpreted into actual physical being by skilled and semi-skilled workmen.

The skill of the surgeon, the logic of the advocate, the dedication of the clergyman may be found around us here in counterpart in terms of architecture and engineering. Professional careers may be saved, an innocent suspect may be exonerated, a weighted soul may be redeemed. A lasting facility has been constructed to afford comfort, conven-

ience and protection of our rights in an atmosphere synonymous with the prestige of our democratic way of life, our respect for the Constitution and the constitutional law of our land.

There has already been a whisper of criticism of this building by chronic complainers. An official may falter, the attorney may err, even a clergyman may be remiss on occasion. This is no more or less true of the architect and the engineer. There are those who would scoff when a case is tried and decided, a delicate operation performed or a building built. But to paraphrase a well-known saying, "Let him who is perfect cast the first aspersion."

The department of public works, and I am well into my 12th year as its commissioner, is justly proud and almost smugly happy today to have been responsible for this building. It has been a long time coming. This building was in the budget in 1948 originally, and is only being dedicated in 1959.

Our nonprofessional as well as our registered architects and professional engineers whose efforts are cordinated with those of the outside consultants who were in this case, Shreve, Lamb & Harmon, well-known architects, and Sisco & Hennessey, well-known engineers, the contractors, a coadventure of Castagna & Son, and R. H. Construction—all of these have filled their tasks with the degree of dedication that enabled us to complete this project in time and with some degree of completion.

I mean by that, that we do not feel particularly good about opening or dedicating a building that has no landscaping around it. However, that was due to a lack of money. The landscaping, I am positive, will be in the next capital budget, and will take place during the coming year. However, I think, Judge Keogh, we did provide you with at least an entrance to each one of the courts, and an entrance from each one of the streets on which the court faces.

In my time as commissioner we have completed some $600 million worth of work. That is a lot of money. And the men who have the headache of finding where it comes from are represented here today by the borough president of Brooklyn, not only in his own capacity as borough president, but I understand he is going to represent the mayor also, the members of the board of estimate—without them none of this work would be possible. Almost needless to say, the $600 million included some $200 million worth of hospitals as well as an impressive number of health and welfare stations, firehouses, police stations, new library construction, and rehabilitation, pollution control projects, together with miles and miles of interceptor sewers, bridge repairs, and new bridges.

Simultaneously we have maintained and operated 68 public buildings assigned to our jurisdiction, with more than 7 million square feet of space, larger than Radio City and the Empire State Building. And that makes us one of the largest landlords in this city.

Now some of our tenants have large families. We are going to have a large family in this building. We get along very well. There is never any question about the rent at least, though at times there may be complaints about the services. But then all big landlords have some headaches.

We do our best with limited budgets. And if you read our reports, you will find that we maintain these buildings at less cost per square foot than is done in private industry.

We, in the department of public works, will give the best for the dollars assigned to our department, and all we ask is an appreciation for the things so many take for granted, the incomparable services and protection that the department and other departments afford on a day-to-day basis.

We offer you today, Judge Keogh, and your entire staff of judges, this temple of justice as a monument to democracy, to our way of life and our firm conviction that we know what we want, because we know it is best for us, and not because we have been told that it is best for us; because we have the absolute right to enjoy our use of reason and decide for ourselves as individuals, not in classes, on the best individual interest.

To that simple, honest principle this magnificent building is dedicated. Not with our words, not with our flags, but with our oath of allegiance, with our hearts, with our inbred respect for the law and order which regulates our land, our rights and privileges, and our responsibilities.

It has been a privilege as an engineer and as an architect to have supervised the construction of this landmark. It will stand for generations and command the respect of those whose rights will be protected here.

And may it serve well the present and those future generations for whom we have planned and built here the Brooklyn Civic Center in the greatest city in the world. [Applause.]

National Guard Muster Day

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. VAN ZANDT. Mr. Speaker, February 22 some 470,000 National Guardsmen honored George Washington by mustering at their respective armories throughout the United States.

The Altoona (Pa.) Mirror recognized the occasion by the following editorial entitled "Let Us Remember," which appeared in the February 21 edition. This editorial is a great tribute to the citizen-soldiers that make up our National Guard and which have contributed greatly to the preservation of our Nation.

The editorial follows:

LET US REMEMBER

Tomorrow is the birthday of Gen. George Washington.

Tomorrow is also National Guard Muster Day—an occasion for more than 470,000 of our citizen-soldiers to honor this same George Washington, an early comrade-in-arms of the Virginia Militia.

This newspaper believes that Muster Day should be more than a day set aside by National Guardsmen. We believe that it should be an occasion for citizens everywhere to honor the National Guardsmen themselves; to acknowledge the great debt they owe to the men of their oldest fighting organization.

We tend to forget our National Guard during the years of peace. Even now many of us have forgotten what World War II should have proved once and for all: That National Guardsmen are capable of meeting any challenge that faces them.

It seems strange that this should be; that after 300 years of fighting Indians, invaders, and dictators, floods, fires, and tornadoes, the National Guard should have to prove itself. But prove itself it did, and in 1945, after the smoke of 4 years of battle had cleared away, National Guardsmen had won 14 Medals of Honor and 88 Presidential Unit Citations. Eighteen National Guard infantry divisions had fought throughout Europe and the Pacific, compiling one of the proudest combat records in our history.

The guard's participation in World War II is a perfect example of the unyielding spirit of free citizens who take up arms in the defense of their Nation. And there were dark hours during the war when it was that spirit alone which turned the tide of battle.

Tomorrow—on Muster Day, 1959—the spirit remains. Week in and week out, while most of us are enjoying the leisure of hours after work and of weekends, 470,000 Army and Air National Guardsmen are giving unselfishly of their time in the most vigorous training program of their organization's history. They know that in modern warfare a citizen must be not only willing, but prepared to fight as well.

They go about their tasks quietly and unobtrusively and we seldom know they are there. Every once in a while disaster will strike locally and they will go into action again, saving lives, guarding property, and restoring order, and we read about their deeds and we praise them. And then we forget; we take them for granted.

Let us remember. Let us honor the past contributions of our National Guardsmen and acknowledge their present-day efforts.

We are much safer for having them.

American Bar Association Speaks

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. SCHERER. Mr. Speaker, yesterday the American Bar Association, at its midwinter meeting in Chicago, overwhelmingly adopted the report of its special committee on Communist tactics, strategy, and objectives. This excellent report, resulting from an exhaustive study by this most competent committee, calls for legislative action by the Congress. It should be read and its recommendations carefully considered by every Member of the House and the Senate:

AMERICAN BAR ASSOCIATION REPORT OF THE SPECIAL COMMITTEE ON COMMUNIST TACTICS, STRATEGY, AND OBJECTIVES

FOREWORD

International communism continues its worldwide conquest with the same vigor which has enabled it to bring 900 million people under its control while covering one-quarter of the earth's surface. In these United States its threat increases as far too many of us fail to comprehend its sinister purpose. The objective of worldwide communism has never changed—only do its tactics change in order to more effectively infiltrate life in America, to lower resistance to its propaganda, and to cripple our defenses against this tyrannical and deadly way of life.

There is not one home in our land which is not affected by communism in some manner. Above all, our national economic security has been undermined by the necessity of building our defenses against the threat of Soviet aggression and through the Red impact on world trade. The U.S. gold reserves are becoming alarmingly low. Our country is the lone nation in the civilized world which admits foreign capital from undisclosed owners.

Our internal security has been weakened by a lackadaisical attitude on the part of the public and technicalities raised in judicial decisions which too frequently in the public mind have had the effect of putting on trial the machinery of the judicial process and

free the subversive to go forth and further undermine our Nation. Lenin once stated as a prerequisite for a revolutionary situation which the Communists could exploit, the fact that the ruling classes can no longer govern. Must we admit that we have reached that point?

The Soviet advances in seeking superiority in the control of space have doubtless been aided by the theft of secrets from American scientists in the same manner in which the Soviets gained the know-how to develop nuclear weapons. Should the United States come under attack, it will then be too late to allocate responsibility. Corrective action must be taken now. Time is running out on us.

It is now an established fact that every institution, every force, and every person actively engaged in the forefront of the defense of our country against the rising menace of communism becomes the target of attack and vilification by Communists, Crypto-Communists, fellow travelers, their stooges, and innocent but beguiled persons.

The agencies of Government charged with protecting our internal security have demonstrated by past performance their ability to protect our Nation. We take pride that a lawyer, Director J. Edgar Hoover, of the Federal Bureau of Investigation, and his staff, composed largely of lawyers and others with legal training, have been in the forefront most often under very difficult circumstances. In war and peace the FBI has demonstrated the ability to carry out its responsibilities to the American people in a truly American manner avoiding the excesses of both the NKVD and the gestapo. It, therefore, merits the wholehearted support and continued confidence of the bar and of the American public.

The fight to keep America free and secure must be strengthened by providing those agencies of our Government which are responsible for our internal security with the means to maintain the security of our shores, the fight for a free America cries out for a furthering of the educational program to combat the evil ideas of communism with truth, and the American bar's responsibility has never been so great as at the present time to assume leadership in the preservation of the freedoms so gallantly won by our forefathers.

RECOMMENDATIONS

I

Whereas the Supreme Court of the United States and an independent judiciary created by the Constitution have been and are the ultimate guardians of the Bill of Rights and the protectors of our freedom, and as such it is the duty of the members of the bar to defend the institutions of the judiciary from unfair and unjust attacks; and

Whereas this association recognizes that sharp differences have been expressed as to the soundness of some of the recent decisions of the U.S. Supreme Court affecting the national and State security, with particular reference to the activities of domestic and foreign Communists within our country; and

Whereas such differences have given rise not only to severe criticisms of the decisions, but unfortunately to condemnation of the Court itself, and to omnibus proposals for limiting its appellate jurisdiction; and

Whereas while members of this association view some of the decisions to be unsound and incorrect, they deem such broad omnibus proposals at this time unwise and likely to create more problems than they will solve: Therefore, be it

Resolved, That the American Bar Association disapprove proposals to limit any jurisdiction vested in the U.S. Supreme Court; be it further

Resolved, That wherever there are reasonable grounds to believe that as a result of court decisions, weaknesses in internal security have been disclosed, remedial legislation be enacted by the Congress of the United States, including a specific pronouncement of congressional intention that State statutes proscribing sedition against the United States shall have concurrent enforceability.

II

Whereas recent declarations by the U.S. Supreme Court (notably in *Watkins* v. *U.S.*, 354 U.S. 178) have been construed as holding that the House of Representatives has not spelled out with sufficient clarity or detail the authority granted to the Committee on Un-American Activities and queries whether the said committee has been carrying out properly its congressional mandate, which interpretation has resulted in the reversal of trial court convictions for contempt of Congress; and

Whereas it has been deemed by many Members of the Congress, the bar, and the public that such declarations and interpretations thereof tend to impede the work of the Congress through its committees and thereby create a problem, the solution to which must be found; and

Whereas it is the view of this association that the quickest and best solution is for the House of Representatives to rewrite its resolution of authority to its congressional committee investigating internal security and Communist activities in terms so thoroughly, carefully, and precisely worded as to leave no area for reasbnable misunderstanding or evasion: Now, therefore, be it

Resolved, That this association recommend to the Congress that the House of Representatives rewrite and adopt its basic resolution of authority for the Committee on Un-American Activities under the same name or such name as such legislative body shall designate setting forth that the purpose in creating said committee is to study the operation of existing laws and the requirements of further legislation, in addition to defining clearly and adequately the powers of such committees.

III

Whereas your committee deems it advisable that the precise terms of the basic authority of the congressional committee which subpenas the witness to appear and testify should be made available to each witness subpenaed, for his enlightenment in advance of the hearing: Now, therefore, be it

Resolved, That this association recommends to the Congress that whenever any of its committees subpena a witness to appear and testify or to give evidence, such committee should furnish the witness at the time he is subpenaed with a copy in writing of the precise terms of the basic authority of the committee.

IV

Whereas recent decisions of the U.S. Supreme Court, in cases involving National and State security and with particular reference to Communist activities, have been severely criticized and deemed unsound by many responsible authorities; and

Whereas problems of safeguarding National and State security have been exposed or created thereby which this association feels would be best solved by the careful study of each decision, and the prompt enactment of sound amendments to existing laws within the constitutional powers of the Congress: Now, therefore, be it

Resolved, That this association recommend to the Congress the prompt and careful consideration and study of recent decisions of the U.S. Supreme Court and the preparation and passage of separate amendments to the laws involved so as to remove any doubt as to the intent of the Congress, and to remedy any defect in the existing law revealed by the decisions; be it further

Resolved, That legislation be promptly enacted to eliminate obstacles to the preservation of our internal security in the following areas:

(a) Amend the Smith Act to define the word "organize" to include the recruitment of new party members, the formation of new party units, and the regrouping, expansion, or other activities of an organizational nature performed by members of existing clubs, cells, classes and other units so as to insure the applicability of this section of the act to Communist actionists, agents, organizers, colonists, or members currently performing organizational work;

(b) Amend the Smith Act to make it a crime intentionally to advocate the violent overthrow of the Government of the United States or to teach the necessity, desirability, or duty of seeking to bring about such overthrow; in order that (1) this Nation might take protective steps to prevent acts which, if not prevented, could result in bloodshed and treachery; and (2) this Nation need not be forced to delay the invoking of the judicial process until such time as the resulting damage has already been wrought. (See *Yates* v. *U.S.*);

(c) Establish the right of each branch of government to require as a condition of employment that each employee thereof shall not refuse to answer a query before a duly constituted committee of the Congress or before duly authorized officers of either the executive or judicial branches of the Government with respect to Communist, Communist front or other subversive activities or any other matter bearing upon his loyalty to the United States, as the Government has a right to know his record;

(d) Invest in the executive branch of the Government the right to protect our internal security against the activities of aliens who were or became Communists at any time subsequent to their entry into the United States by providing for their deportation without any deprivation of due process; and the right to make and enforce reasonable restrictions on aliens awaiting deportation to prohibit them from engaging in any activities identical or similar to those upon which the aliens' deportation order was based, with the further right fully to interrogate aliens awaiting deportation concerning their subversive associates or activities;

(e) Strengthen the effectiveness of the Foreign Agents Registration Act of 1948 by a requirement that political propaganda by agents of foreign principals be labeled for what it is where such agents are situated outside the limits of the United States, but nevertheless directly or indirectly disseminate such propaganda within the United States.

V

Whereas, the respective records of the Subcommittees on Internal Security of the Senate Judiciary Committee and of the House Un-American Activities Committee both charged with the duty of investigating internal security and Communist activities are records of accomplishment and great service to the Nation; and

Whereas the continuation of the work of these committees is essential to the enactment of sound and adequate legislation to safeguard the national and State security: Now, therefore, be it

Resolved, That the American Bar Association recommends that the House of Representatives continue to maintain a committee to investigate matters relating to national security with particular emphasis on Communist activities invested with adequate jurisdiction to accomplish its purpose, and that the Senate continue to maintain and support its Subcommittee on Internal Security; and be it further

Resolved, That such committees maintain close liaison with the Intelligence and Se-

curity Agencies, as well as with the Attorney General of the United States, to the end that they may be kept advised as to legislative needs of the executive branch of the Government required to carry out its responsibilities for internal security.

REPORT

Inasmuch as the house of delegates of the association referred back to the committee on Communist tactics, strategy, and objectives, to study the recommendation that the association endorse H.R. 12949 and the recommendation that the association endorse S. 1411 in cooperation with the special committee on individual rights as affected by national security, this committee submits its recommendations with the body of the report. Such a procedure is followed because the two committees to which the recommendations were referred for further study have not had a sufficient opportunity to jointly discuss their findings. The recommendations are submitted herewith.

Be it resolved, That this committee recommends that legislation be promptly enacted to eliminate obstacles to the preservation of our internal security in the following areas:

1. Restore to the executive branch of our Government the right to determine and to dismiss, if required, those who are security risks in both sensitive and nonsensitive positions in the Government service.

2. Restore to the executive branch of government the right to deny passports to persons knowingly engaged in subversive activities, or activities designed or intended to further international communism by the establishment of criteria and standards to be applied in the issuance of denial of passports. These criteria and standards should be clear and unequivocal, and in addition contain a specific authorization to the Secretary of State empowering him or the Acting Secretary to withhold a passport in the national interest based upon confidential information and upon which he shall certify that it is contrary to the interests of this Nation that a passport be issued to the applicant; and further, to prevent foreign espionage agents from departing this country for the purpose of carrying out their espionage pursuits or to escape disclosure or prosecution; and that such legislation establish adequate appeal procedures which would insure due process of law so as to provide recourse to the individuals concerned in the event of any arbitrary and capricious exercise of discretion not properly founded.

It is with a profound sense of high privilege and grave responsibility that your committee submits the following report to the house of delegates and, through it, to the bar and to the public.

UNLESS

International communism will enslave the peoples of every nation of the free world—including the United States—unless they—

Awaken from their apathy and their indifference to the dangers that exist and threaten.

Learn and appreciate the freedom and the human rights they enjoy—and are determined and prepared to fight to preserve them for themselves and for their children.

Learn and appreciate the meaning of enslavement of the individual as it exists under communism.

Learn and appreciate the difference between the idealistic pretensions of communism and its inhuman reality.

Learn that the Communist ultimate goal of dominating and controlling every nation and every human being, never changes—though its tactics vary from day to day.

Understand that wishes and prayers alone wil not suffice to overcome communism or to avoid its menace.

Know that only by unity, determination, strength—moral, scientific, and military—and a willingness to state their position in advance, and to be ready to fight for it, can they best safeguard the free world and its institutions.

Remember that Communists respect only those with equal or greater strength.

Know that the plea for peaceful coexistence is a fraudulent tactic of international communism seeking to blind the American people to the Soviet record of broken promises and aggression and intended to paralyze and disarm the free world in advance of the coming Soviet onslaught.

Never forget that international communism—particularly the Soviet—has the worst record for broken treaties in all history.

Remember that communism has never sold itself on its merits nor has it ever been adopted by a free vote of a free people.

Realize that free industry and free labor unions in any country are free only so long as communism does not dominate there—and that both industry and labor carry grave responsibilities in the defense of their nations against communism.

Realize and warn that partisan politics by those occupying or seeking public office may be a great aid to international communism and a serious handicap to one's own country.

Remember that subversion—aided by treason and treachery of domestic citizens—has been the most successful tool and tactic of international communism in gaining control of new enslaved nations or in weakening or dulling the resistance by those nations which remain free.

Never forget that international communism still maintains as one of its fundamental tenets—where and when necessary—the overthrow by force and violence of any free nation when such overthrow can be successfully accomplished.

Know that one of the Communists' chief tactics is to keep the free world on the defensive by prodding and creating problem spots in every area of the globe.

Know that without sacrifice free nations cannot be protected or prepare themselves for defense from communism's constant assaults or against outright war.

Realize that the process of weakening the free nations is constantly carried out in many ways through subtle and persistent propaganda, and that the weapon of counter-propaganda by truth has not as yet been adequately or affirmatively used against the Communists.

Never forget that while from time to time we may have to confer and negotiate with Communist Russia or other Communist enslaved nations, their agreements have no sacred or serious meaning to them, will be breached when it is expedient for them to do so, and that such negotiations should be carried on by duly constituted officials of government and not by self-appointed apologists.

Remember that international Communists continue to talk peace but relentlessly wage war in its many forms at the same time.

Never confuse Communists with the freedom-loving peoples of the nations they dominate and control, or fail to appreciate that these peoples crave freedom and a better way of life, peace, and understanding with other nations. But, if the peoples of the free world are alert to what communism is and how it operates and what it costs in determination, dedication, toil, and sacrifice to protect our freedoms and our way of life, then the free world will survive and communism will ultimately dissipate or destroy itself and its devoted followers.

Most persons who are informed on communism think our country now faces its greatest danger. The thesis of J. Edgar Hoover's new book, "Masters of Deceit," is:

"Communism is the major menace of our time. Today it threatens the very existence of our Western civilization." [1]

Footnotes at end of speech.

In his speech to the 1957 national convention of the American Legion, Mr. Hoover warned:

"To dismiss lightly the existence of the subversive threat in the United States is to deliberately commit national suicide. In some quarters we are surely doing just that."

And on December 22, 1958, Mr. Hoover added:

"Sensing a more favorable atmosphere, the Communist Party, USA, and its dupes and sympathizers gained further courage and became more vocal in their attacks upon law enforcement and other professions which are dedicated to preserving our freedoms."

The lawyer-author of the Gaither report to the President on national security recently told our association:

"Our security is in unprecedented peril. * * * The ultimate objection of international communism is world domination, and the Soviet Union will pursue this objective ruthlessly and relentlessly employing every possible political, economic, subversive, and military stratagem and tactic." [2]

COURT DECISIONS RELATED TO COMMUNISM

Mr. Justice Jackson in *American Communications Association* v. *Douds* [3] concluded that the Communist Party, U.S.A., is not a political party but "is a conspiratorial and revolutionary junta organized to reach ends and to use methods which are incompatible with our constitutional system." Likewise, former Chief Justice Stone reached a similar conclusion several years earlier in *Schneiderman* v. *United States*.[4] So, too did former Chief Justice Hughes when, as Secretary of State, he refused to recognize the Communist Government of Russia, and former Chief Justice Vinson in *Dennis* v. *United States* [5] which decision upheld the convictions under the Smith Act of the American Communist leaders.

Similar pronouncements are contained in the preambles to many State sedition laws as well as in the preamble to the Communist Control Act of 1954, where Congress stated specifically that "the Congress finds and declares that the Communist Party of the United States, although purportedly a political party, is in fact an instrumentality of a conspiracy to overthrow the Government of the United States." Likewise, the Subversive Activities Control Board has, after protracted hearings, found the Communist Party to be a Communist-action organization required to register under the Internal Security Act of 1950.

In spite of this, much dicta has appeared in recent decisions of the Supreme Court to the effect that the Communist Party is a political organization of a lawful nature similar to the Republican, Democratic, or Socialist Parties, hinting that disclosure of membership therein or association therewith is entitled to the protection of the first amendment. While this view has not been actually held in any known case, language contained in many of the decisions has invited confusion.

Many cases have been decided in such a manner as to encourage an increase in Communist activity in the United States through invalidation of State sedition statutes, and limitation of State and Federal investigating powers in the field of subversion although these cases might readily have been disposed of without so broadly limiting National and State security efforts. The paralysis of our internal security grows largely from construction and interpretation centering around technicalities emanating from our judicial process which the Communists seek to destroy, yet, use as a refuge to masquerade their diabolical objectives. This trend was treated fully in the conference of State chief justices last year when they called upon the U.S. Supreme Court to exercise the power of judicial self-restraint. The dissenting opin-

ions of certain Supreme Court Justices have been crystal clear in charting the effect of the failure of the majority to recognize the underground forces that are at work and to appreciate how these decisions affect our internal security.

It has frequently been said that "justice delayed is justice denied." The delays in arriving at final determinations in criminal proceedings have invited criticism of the American judicial process. In no area has this been more tragically illustrated than in cases dealing with Communists. The proceeding against the Communist Party before the Subversive Activities Control Board is a case in point which makes a mockery of justice. Eight years have now elapsed since the enactment of the Internal Security Act of 1950. The status of the Communist Party continues to remain unadjudicated. The constitutionality of the act remains to be determined by the Supreme Court of the United States. The Communists have used every tactic to delay the determination of this case and subsequent enforcement of this act.

Your committee wishes to make clear that this delay is not the fault of the Subversive Activities Control Board itself which is composed of men and women of great talent who have diligently and courageously maintained a rare judicial attitude and composure despite the Communist vilification which has been heaped upon the Board and the members personally. They have endured frustrations imposed upon them by judicial delays and failures to meet the issues in a decisive manner so that justice might inure to the American people as well as to the accused.

The Subversive Activities Control Board, under the mandate of the Internal Security Act of 1950, issued its order on April 20, 1953.[6] That order, issued after exhaustive hearings and documented in a scholarly manner on a legal basis, found that the Communist Party, U.S.A., was a Communist-action organization and directed that it must comply with the act. This order remains to be enforced. We reassert the views stated in the brief which the American Bar Association filed in the U.S. Supreme Court in support of the Internal Security Act of 1950. If any part of the said act violates the Constitution, the courts should so hold. Congress should then enact new legislation or amend the present act to conform to any constitutional requirements as determined by the courts. If the act is constitutional, the Communist Party should not continue to enjoy immunity from its security provisions during many years of protracted legislation.

The importance of the Communist Party proceeding before the Subversive Activities Control Board justifies a brief résumé of this matter:

1. The Supreme Court did not determine the constitutionality of the act but rather remanded the case to the Board for exploration of charges supported by affidavit made by the party in the court of appeals concerning the credibility of three Government witnesses, namely, Crouch, Johnson, and Matusow. The charges made by the Communist Party in the court of appeals were not controverted by counteraffidavit of the Department of Justice for the reason that there was other overwhelming evidence to sustain the Board's order. The Supreme Court stated that since the assertions were not challenged by the Department it must remand the case to the Board for exploration.

2. When the case was returned to the Board the Department of Justice did not undertake to challenge the veracity of the charges made against these three witnesses. Accordingly under the Supreme Court's opinion the Board had no alternative but to expunge their testimony in its entirety from the record, and on the basis of the remainder of the evidence—testimony and documentary—the Board entered a new order.

3. The case again was argued before the Court of Appeals. After oral argument there and prior to decision by the Court of Appeals, the Supreme Court handed down its opinion in the Jencks case (noted later in this report). The party thereupon filed motions invoking the Jencks doctrine. The Court of Appeals then remanded the case to the Board for production of documents in relation to witness Mary Markward. The Communist Party then filed a petition for rehearing and a motion to adduce additional evidence in relation to witness Budenz. In the course of preparing a reply to the petition for rehearing and the motion the Department discovered the existence of a recording of the initial interviews with Budenz after he left the party, the substance of which had been previously reported. This discovery was made known to the appellate court and it thereupon remanded the Budenz question also for production of documents.

4. All documents ordered by the court to be produced have been furnished by the Department to the Subversive Activities Control Board in relation to the two witnesses. It developed, however, that Budenz was unavailable for further cross-examination due to a grave heart condition. The party now has a motion pending to reopen the case for cross-examination of all FBI agents who interviewed Budenz, claiming among other items that there are inconsistencies between the documents produced and the testimony of Budenz before the Board.

5. On February 9, 1959, the SACB in an order for the third time after months of additional study, required the CPUSA to register in accordance with the Internal Security Act of 1950. In its most recent order, the Board rejected the Communist Party claim that false testimony had been given by a witness in another proceeding. Another round of appeals no doubt will be sought by the Communist Party to further delay a final adjudication of this case.

The following are the principal cases that have been criticized by the public, public officials, and the bar in varying degrees as illustrative of how our security has been weakened:

1. *Pennsylvania* v. *Steve Nelson* (350 U.S. 497 (Apr. 2, 1956)): The Court held 6 to 3 that the Federal Smith Act which prohibits the knowing advocacy of the overthrow of the U.S. Government by force and violence, suspends the enforceability of the Pennsylvania Sedition Act in certain respects—which act proscribes the same conduct—on the grounds that Congress has preempted the field of sedition against the United States to the exclusion of parallel State legislation that the dominant interest of the Federal Government precludes State intervention, and that the administration of the State act would conflict with the operations of the Federal plan. Three Justices dissented in every respect and pointed out that the Court should not void State legislation without a clear mandate from Congress.[7]

2. *Communist Party U.S.A.* v. *Subversive Activities Control Board* (351 U.S. 115 (Apr. 30, 1956)): The Board found the Communist Party to be a Communist-action organization subject to the registration provisions of the Subversive Activities Control Act of 1950. The Communist Party appealed to the U.S. court of appeals and filed a motion for leave to introduce additional evidence before the Board alleging that three Government witnesses had committed perjury in other similar cases which motion was denied. The Government did not challenge the allegations in the motion, but simply contended that the Board's order was amply supported by evidence other than the testimony of the witnesses in question. The Supreme Court held 6 to 3 that the court of appeals had erred in denying the motion and remanded to the Board to permit the evidence to be introduced. Three Justices dissented on the grounds that denial of the motion was within the lower court's discretion and that there had been no abuse of discretion. The dissent criticized the refusal of the majority to deal with the constitutional issues presented.

3. *Watkins* v. *U.S.*, 354 U.S. 178 (June 17, 1957): A union officer appearing as a witness before a subcommittee of the House Committee on Un-American Activities refused to answer questions as to past Communist Party membership of certain persons, objecting on grounds of lack of pertinency to the subject under inquiry by the subcommittee. The Supreme Court held 6 to 1 (two Justices not participating) that under the applicable statute a congressional investigating committee must upon objection of a witness on the grounds of pertinency, state for the record under inquiry at that time and the manner in which the propounded questions are pertinent thereto. The Court stated that the phrase "un-American activities" was vague and that the evidence failed to show that the question under investigative inquiry was ever made specifically known to the witness. The dissent declared that the pertinency of the questions asked to the matter under investigation had been sufficiently shown. (This decision has led to a continuing discussion and challenge by witnesses as to the "pertinency" of questions. No court could function smoothly under such an impediment.)

4. *Cole* v. *Young*, 351 U.S. 536 (June 11, 1956): An employee in the U.S. Health, Education, and Welfare Department, who was charged with "sympathetic association" with individuals reliably reported to be Communist and making contribution to an allegedly subversive organization, was summarily dismissed by the agency head under the authority of the Summary Suspension Act of 1950, which authorizes heads of specified agencies to summarily dismiss employees "in the interests of the national security of the United States." The act provides that the determination of the agency head is conclusive and final. The Supreme Court in a 6 to 1 decision overturned the dismissal on the ground that the Summary Suspension Act has reference only to those activities directly concerned with the Nation's safety, and that the employee in question did not occupy a "sensitive position." Three Justices dissented, holding that the clear purpose of Congress was being frustrated in that the statute had been intended to authorize summary dismissal of employees whose retention would be inimical to the national interests regardless of the sensitivity of their positions.

5. *Leedom* v. *International Union of Mine, Mill & Smelter Workers*, 352 U.S. 145 (December 10, 1956): The National Labor Relations Board after an administrative investigation and hearing found that an officer of the plaintiff union had filed a false non-Communist affidavit. The Board, in accordance with the National Labor Relations Act which denies the benefit of the act to unions whose officers have not filed such affidavits and makes union officers who have filed false affidavits subject to criminal penalties, issued a decompliance order barring the union from the benefits of the act until it complied. The U.S. Supreme Court held that this order was beyond the Board's authority and that the only remedy which the act permits in the case of false affidavits is the criminal penalty.

Footnotes at end of speech.

6. *Amalgamated Meatcutters and Butcher Workmen of North America* v. *National Labor Relations Board*, 352 U.S. 153 (December 10, 1956): An officer of plaintiff union had been convicted of filing a false non-Communist affidavit. The Board issued an order directing the employer to correct an unfair labor practice. The court of appeal refused to enforce this order on the ground that the union was not in compliance with the act and thus not entitled to its benefits. The Supreme Court reversed, reiterating the view stated in the Leedom case that the sole penalty for false filing of a non-Communist affidavit is the criminal penalty.

7. *Gold* v. *U.S.*, 350 U.S. 985 (January 28, 1957): Defendant president of a labor union was convicted of having filed a false non-Communist affidavit with the N.L.R.B. On defendant's appeal to the U.S. court of appeals the conviction was affirmed. It appeared that an FBI agent investigating another similar case telephoned or visited three members of the jury during defendant's trial and inquired whether they had received any propaganda literature. The issue reaching the Supreme Court was whether the impact of these contacts on the jurors was so prejudicial as to require reversal. The Court so held in a per curiam opinion. Four justices dissented on the ground that no effect upon the jurors adverse to the defendant could reasonably be anticipated by virtue of the accidental intrusion on their privacy.

8. *U.S.* v. *Witkovich*, 353 U.S. 194 (April 29, 1957): The Immigrational and Nationality Act of 1952 requires that an alien against whom a deportation order has been outstanding for more than 6 months shall be required "to give information under oath as to his nationality, circumstances, habits, associations, and activities, and such other information, whether or not related to the foregoing, as the Attorney General may deem fit and proper." Appellee being an alien against whom a deportation order had been outstanding for more than 6 months refused to answer questions put to him by the appropriate immigration authorities regarding his present Communist relationships. He was indicted under the criminal provisions of the act. The Supreme Court held, 6 to 2, that the statute authorized only questions reasonably calculated to keep the Attorney General advised regarding the continued availability for departure of aliens whose deportation is overdue and ruled for dismissal of the indictment. Two justices dissented expressing the view that under the statute an alien could properly be questioned as to activities indicated by past conduct and that the statute raised no constitutional question.

9. *Schware* v. *Board of Examiners of New Mexico*, 353 U.S. 232 (May 6, 1957): Schware's application to take the New Mexico bar examination was denied on the ground that petitioner had not shown good moral character in view of his past membership in the Communist Party, his use of aliases and his record of arrests. Schware, unlike other individuals, did not invoke the fifth amendment and was frank and candid with regard to his past Communist activities. While the petitioner made out a good case on his conversion from Communist ideology, nevertheless the decision casts grave doubt on the propriety of the Supreme Court to substitute its standard of fitness for the bar of New Mexico in place of the standard established by the bar and the courts of New Mexico. The Supreme Court reversed the State Supreme Court of New Mexico holding that Schware's exclusion violated due process, stating that the record did not support the State court's conclusion that petitioner had not shown good moral character.

10. *Konigsberg* v. *State Bar of California*, 353 U.S. 252 (May 6, 1957): Petitioner refused to answer questions as to present and past membership in the Communist Party put to him by the California State bar examiners. He was thereupon refused admission to the bar on the grounds that he had failed to prove that he was of good moral character and did not advocate the overthrow of the Federal or State governments by unconstitutional means. Five Justices of the Supreme Court overruled the California Supreme Court holding that petitioner's right of due process had been violated since the evidence did not rationally support the finding that he had failed to prove that he was of good moral character and that he did not advocate the overthrow of the Federal or State government by force and violence. Two Justices dissented on the ground that refusal to answer questions relevant to fitness without constitutional justification justified the committee's refusal to certify petitioner for admission to the bar. One Justice dissented on procedural grounds. (This decision is the greatest inroad on the traditional right of each State to establish its standard of fitness for its own bar and was severely criticized by former President David F. Maxwell in his annual address to this association.)

11. *Jencks* v. *U.S.*, 353 U.S. 657 (June 3, 1957): An officer of a labor union was indicted for filing a false non-Communist affidavit with the NLRB. At his trial he filed a motion requesting an inspection of reports made to the FBI by Government witnesses as to event and activities to which they had testified at the trial. His motion was denied and he was convicted. The U.S. Supreme Court overturned this conviction, five Justices concurring, stating that the defendant was entitled to examine these reports. The former practice of submitting Government documents to the trial judge for his determination of relevancy and materiality was disapproved and the Court held that if the Government wished to exercise its privilege to withhold the reports in the public interest then the criminal action must be dismissed. Three Justices dissented in part, holding that the documents should be produced for the examination of the trial court in camera to determine their relevancy as well as the applicability of the Government's claim of privilege in the public interest. One Justice dissented en toto.

12. *Service* v. *Dulles*, 354 U.S. 363 (June 17, 1957): Plaintiff, a foreign service officer, was on numerous occasions investigated as to loyalty and standing as a security risk. These investigations involved extensive hearings. In the most recent one the State Department gave him clearance and this action was approved by the Deputy Under Secretary. However, on a post audit the Loyalty Review Board of the Civil Service Commission made unfavorable findings and recommended his discharge. The Secretary of State accepted these findings without making an independent review of the evidence. The U.S. Supreme Court reversed the action of the Secretary of State and of two Federal courts holding that Dulles' action was in violation of the loyalty and security regulations under which the Secretary of State was bound to make an independent determination after a review of the evidence.

13. *Yates* v. *U.S.*, 354 U.S. 298 (June 17, 1957): Defendants were charged with conspiring to advocate and teach the forcible overthrow of the Government of the United States and to organize as the Communist Party of the United States, a society of persons who so advocate and teach, all in violation of the Federal Smith Act. The Supreme Court reversed convictions in two lower Federal courts and held that teaching and advocating the abstract doctrine of the forcible overthrow of the U.S. Government was not punishable under the Smith Act as long as it was "divorced from any effort to instigate action to that end." The Court further held that the term "organize" as used in the Smith Act referred only to acts entering into the creation of a new organization and stated that since the Communist Party was organized in 1945 and the indictment not returned until 1951, that the prosecution on this charge was barred by the 3-year statute of limitations. This decision is characterized by numerous partial dissents and partial concurrences on the part of the various justices. Two justices in dissent stated that overt acts in furtherance of the conspiracy could be proved from the record.

14. *Raley, Stern & Brown* v. *Ohio* (354 U.S. 929): The Supreme Court vacated the judgment of the Ohio Supreme Court and remanded for consideration in the light of *Sweezy* v. *N.H.*, a case concerning the conviction of three men who had refused to answer questions about Communist activities put to them by the Ohio Un-American Activities Commission. One justice dissented for the reasons stated in his dissenting opinions in Sweezy and Watkins and another justice dissented indicating his desire to note probable jurisdiction and set the case for argument. On remand the Ohio Supreme Court reiterated its earlier conviction and the case is once more pending appeal.

15. *Sweezy* v. *New Hampshire* (354 U.S. 234 (June 17, 1957)): In the course of an investigation of subversive activities in New Hampshire a witness refused to answer questions concerning a lecture given by him at the State university and questions concerning the Progressive Party and its adherents asked by the New Hampshire attorney general acting as a one-man legislative committee. The Supreme Court reversed the contempt conviction by the State court, four justices basing their decision on the ground that the State legislature had not made clear in the authorizing legislation that it desired the information sought by the attorney general and deemed the lack of authorization to be a lack of authority on the part of the attorney general. Two justices dissented from this reasoning saying that the distribution of powers on the State level is not a matter of Federal concern, but concurred in the result on the ground that the State had failed to show that the protection of State interests justified the invasion of the witness' constitutionally protected academic and political freedoms. Two justices dissented from the result in its entirety.

16. *Slochower* v. *Board of Education of the City of New York* (350 U.S. 551 (April 9, 1956)): Under the terms of a New York City charter provision which had been long in effect a City College professor was discharged without notice or hearing for claiming his privilege against self-incrimination when asked about Communist Party membership by a congressional committee investigating matters of national security. It seemed that the professor had answered similar questions put by a State investigating body and that this information was in the hands of city authorities at the time of his discharge. The Supreme Court reversed the decisions of three New York courts and held that this automatic discharge was unconstitutional because of alleged lack of due process. Four justices dissented.

17. *United Mine Workers* v. *Arkansas Oak Flooring Co.*, 351 U.S. 62 (Apr. 23, 1956): Louisiana State courts had enjoined picketing by a union which had failed to file the non-Communist affidavits and other data required by the National Labor Relations Act. The Supreme Court held that the State courts had no power to enjoin the picketing on the ground that while the union could not resort to the N.L.R.B. because of its failure to comply with the filing requirements, it could nevertheless take other lawful action, e.g. peaceful picketing. One justice dissented on the ground that the said act contained no implied limitation on the State power exercised under these facts.

18. *Sacher* v. *U.S.*, 78 S. Ct. 842 (May 19, 1958): Sacher refused to answer three questions put to him by a subcommittee of the Internal Security Subcomittee of the Senate

Committee on the Judiciary. His contempt conviction was upheld by the Court of Appeals. The Supreme Court remanded the case for reconsideration in the light of *Watkins* v. *U.S.* The case was reargued before the Court of Appeals and the conviction reaffirmed. The Supreme Court again reversed the order of conviction and found that questions relating to proposed legislation barring Communists from practice at the Federal bar constituted an excursion outside the committee's authorized scope of inquiry. The grant of certiorari and reversal order were made at the same time and in the same per curiam decision. Two justices dissented on the grounds that the questions were pertinent to the authorized inquiry and that the court had refused to hear argument from Government attorneys.

19. *Kent & Briehl* v. *Dulles*, 78 S. Ct. 1113 (June 16, 1958): The Secretary of State turned down passport applications of Kent and Briehl on the grounds that they were Communists and that they had had constant and prolonged adherence to the Communist Party line. The Supreme Court reversed two lower Federal courts and held that since statutes provided that it is unlawful for a citizen to enter or leave the United States without a valid passport, the Secretary of State did not have authority to promulgate regulations denying passports to Communists or to persons whom evidence showed were going abroad to further Communist causes, or regulations demanding non-Communist affidavits from citizens applying for passports. Three justices dissented in all regards stating that the Secretary of State's passport power permitted the regulations in question.

20. *Dayton* v. *Dulles*, 78 S. Ct. 1127 (June 16, 1958): Dayton, a native born citizen, is a physicist who has been connected with various Federal projects. He applied for a passport to enable him to travel to India in order to accept a position as a research physicist there. This application was turned down by the Secretary of State for three reasons: (1) His alleged association with various Communists, (2) associations with persons suspected of being part of the Rosenberg espionage ring, (3) his alleged presence in an apartment in New York which was allegedly used for microfilming material obtained for the use of a foreign government. Basing its reasoning on *Kent* v. *Dulles*, the Supreme Court overruled two lower Federal courts and held that the passport could not be denied to a U.S. citizen on the ground that it was believed he was going abroad to engage in activities which would advance the Communist movement. Four justices dissented on the same grounds as the dissent in *Kent* v. *Dulles*.

21. *Yates* v. *U.S.*, 78 S. Ct. 128 (November 25, 1957): Yates and 13 others were indicted and convicted of conspiring to violate the Smith Act. In the course of the trial Yates refused to answer 11 questions relating to whether other persons were members of the Communist Party. The trial court held her in contempt for each refusal and imposed 11 concurrent sentences of 1 year each. Supreme Court reversed two lower Federal courts holding that this action constituted an improper multiplication of contempts because the witness when first inquiry was made stated that she would not identify any Communist Party members. The Supreme Court reversed all but the first conviction which was vacated and remanded for resentencing "in the cool reflection of subsequent events." Three justices dissented to the remand of the first conviction holding that all the convictions should be thrown out.

22. *Bonetti* v. *Rogers*, 78 S.C. 976 (June 2, 1958): Bonetti was an alien admitted to the United States for permanent residence in 1923 who joined the Communist Party in 1932 and left it in 1936. In 1937 he went to Spain to fight the Spanish Civil War. In 1938 he returned and was admitted for permanent residence as a quota immigrant and thereafter continued to reside in the United States, except for a 1-day visit to Mexico in 1939. The Internal Security Act of 1950 provides for deportation of any alien who was at the time of entry into the United States, or has been "at any time" thereafter a member of the Communist Party. The Supreme Court reversed two lower Federal courts and held that plaintiff's time of entry for purposes of the act was 1938 not 1923, and not having been a party member then or subsequently, was not deportable. Three justices dissented stating that this construction deletes the phrase "at any time" out of the act and reads the word "last" into the statute and thereby "cripples the effectiveness of the act."

23. *Flaxer* v. *U.S.*, 79 S. Ct. 191 (December 15, 1958): Flaxer was convicted of contempt of Congress and failing to produce pursuant to a subpena duces tecum issued by the Senate Internal Security Subcommittee records of his union showing names and addresses of members employed by the Federal, State, or local government. The Supreme Court remanded the case for reconsideration in the light of Watkins. Upon reaffirmation of Flaxer's conviction the Supreme Court reversed on the ground that the indictment named October 5, 1951, as the date of contempt when actually the subcommittee had given him 10 days from that date in which to comply. The Court states "Yet for all we know, a witness who was adamant and defiant on October 5 might be meek and submissive on October 15."

24. *Uphaus* v. *Wyman*, 355 U.S. 16 (1957) (pending): Appellant Uphaus appealed from affirmance by the New Hampshire Supreme Court of his conviction of contempt of court for refusing on grounds of the first amendment to produce in response to subpena duces tecum, a guest list and certain correspondence with speakers at World Fellowship, Inc., a summer camp in Albany, N.H., of which appellant was executive director. The documents were subpenaed by a State legislative committee in the course of a State investigation of subversive activities. The U.S. Supreme Court without hearing argument on October 14, 1957, vacated the judgment of the New Hampshire Supreme Court and remanded the case for further consideration in light of *Sweezy* v. *N.H.*, whereupon the New Hampshire Supreme Court reaffirmed its former decision and appellant again appealed. This case was argued before the U.S. Supreme Court on November 15, 1958, and a further decision is now pending.

The Sheiner case (Florida). In accordance with the resolution of the house of delegates and authorization of the board of governors, our committee—on the request of the State attorney for cooperation—applied for and obtained permission to appear as amicus curiae in the appeal pending in the Supreme Court of Florida from the order of dismissal of the disciplinary proceedings against Leo Sheiner. Leo Sheiner had twice previously been ordered disbarred by the Circuit Court of Florida.

Our committee prepared and submitted a brief to the supreme court of Florida in which its views were set forth with relation to the duty of the bar and of the courts concerning the responsibilities in maintaining the high standards of fitness required of lawyers. The committee further defined its concept of an acceptable standard for attorneys. Any member of the bar who, in appropriate proceedings persists in refusal to answer pertinent questions concerning his activities in the Communist Party or Communist-dominated fronts on the ground that his answers to such questions concerning his activities might tend to incriminate him is unfit. It is inconceivable to us that an attorney and officer of the court may continue in good standing while he pleads self-incrimination in refusing to answer questions relating to subversive activities.

The brief pointed out that labor union officials, teachers, Government employees, and employees of private industry, have been safeguarded in invoking the fifth amendment to inquiries which might tend to incriminate them. However, in so doing, they demonstrate lack of candor required of attorneys and forfeit their positions of trust and responsibility. The Sheiner case is most important to the bar. Other States having such problems await the final decision.

The appeal was argued before the supreme court of Florida on February 8, 1958. Julius Applebaum, a member of our committee, argued as amicus curiae for this association. On July 24, 1958, the court ordered further argument on September 5, 1958, and requested supplemental briefs as to the application of three decisions, *Max Lerner* v. *Hugh J. Casey, et al.; Herman A. Beilan* v. *Board of Public Education, School District of Philadelphia;* and *Milton Knapp* v. *Mitchell D. Schweitzer, et al.*, rendered by the U.S. Supreme Court on June 30, 1958. Our committee prepared a supplemental brief on behalf of the association and participated in the supplemental argument. As of this writing, the supreme court of Florida has not yet rendered its decision. The committee is willing to appear in similar cases upon direction of the house of delegates or board of governors.

In sharp contrast to the due process afforded Sheiner is the Associated Press dispatch of September 16, 1958. By decree of the Communist regime in Hungary, 3,500 lawyers were disbarred. They were deemed to lack approved political qualifications.

COMMUNIST TACTICS

The Communists have set forth their master plan of world conquest even more forthrightly than did Hitler in "Mein Kampf." The Communist Manifesto is specific: "The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forceable overthrow of all existing social conditions."[8] Communists have never deviated from the theory enunciated by Marx and the strategy devised by Lenin.

The Communist master plan for world conquest has been outlined by both Lenin and Stalin as entailing the violent smashing and overthrow of all non-Soviet governments, including those of Great Britain and the United States. Prior to this overthrow and to prepare for it in each instance, the Communist Party is to make "transmission belts" of all possible nonparty agencies for the diffusion of the Communist line, weakening the country to be overthrown. Already this has become a historical fact to which once free peoples, now enslaved, can testify. Need we have more evidence of Soviet intent?

During the last 25 years, the United States has participated in hundreds of meetings with the Communists, including those held at Teheran, Yalta, Potsdam, Panmunjom, and Geneva. All this talk has led to many major agreements and Soviet Russia has broken almost all of them. The Communists have followed Lenin's dictum about treaties and agreements: "Promises are like pie crusts—made to be broken."[9]

The United States has met on countless occasions with the Chinese Reds to negotiate the release of American prisoners. The record is a dismal one. In June 1954 a total of 76 Americans were held in Red China. On August 1, 1955, 35 were released. An additional 28 were released at the end of 1955. Since then nine more have been released.

Footnotes at end of speech.

On January 9, 1958, the Reds in China were holding four Americans and in October 1958, had arrested a fifth American, a Roman Catholic priest. The Communists have followed Stalin's principle of diplomatic intercourse:

"Words must have no relation to action—otherwise what kind of diplomacy is it? Words are one thing, actions another. Good words are a mask for concealment of bad deeds. Sincere diplomacy is no more possible than dry water or iron wood." [10]

HINDSIGHT OR SOUND APPRAISAL

On June 17, 1958, when the Soviet news agency, Tass, announced the executions of former Hungarian Premier Imre Nagy, Gen. Pal Maleter, and two other leaders of the anti-Communist rebellion of 1956, Western leaders expressed shock and dismay. General Maleter, the hero of the rebellion, had been seized by the Soviets when he met with them under a flag of truce to negotiate the withdrawal of the Red army from Budapest. Nagy and his associates were executed, although they had received in advance a written guarantee of safe conduct when they left their asylum in the Yugoslav Embassy.

In March 1945, 16 top leaders of the Polish Government were invited to Moscow to participate in the conduct of negotiations. They were promised on the word of honor of the Soviet Government that they would be afforded safe conduct. All 16 were arrested and then vanished. Nothing further was heard of any of them until 10 years later, when the wife of Gen. Leopold Okulicki was notified of his death 9 years before in a Soviet prison.[11] Since the Katyn Forest massacre, which came to light in 1943 (where thousands of Polish officers who were prisoners of the Soviets were shot and buried in a trench), it has been obvious that coexistence with communism is a contradiction in terms.

Marx and Engels stated this objective in the Communist Manifesto: "The theory of the Communists may be summed up in the single sentence: Abolition of private property." [12]

Lenin gave this command to Communists: "It is necessary to agree to any and every sacrifice, and even, if need be—to resort to all sorts of stratagems, maneuvers, and illegal methods, to evasion and subterfuge." [13]

On another occasion, Lenin added: "As long as capitalism remains we cannot live in peace. In the end one or the other will triumph—a funeral requiem will be sung over the Soviet Republic or over world capitalism." [14]

On September 17, 1955, Nikita Khrushchev warned us: "If anyone thinks that our smiles mean the abandonment of the teachings of Marx, Engels, and Lenin, he is deceiving himself cruelly. Those who expect this to happen might just as well wait for a shrimp to learn how to whistle." [15]

Khrushchev made this statement to Western diplomats at a Moscow reception on November 18, 1956: "If you don't like us, don't accept our invitations and don't invite us to come to see you. Whether you like it or not, history is on our side. We will bury you." [16]

Khrushchev appeared on our American television screens on June 2, 1957, and confidently told us: "Your grandchildren will live under socialism."

William Z. Foster dedicated his book "The Twilight of World Capitalism," to his great-grandson, "who will live in a Communist United States."

The key to Communist tactics is the dialectic, expressed through what is known as historical materialism. By constant examination of the directive documents which flow from Moscow to the Communist Parties of the world, and adapted in turn by them to the conditions of each country, we see the dialectic at work through the Communist line.

Under the theory of the dialectic, as it allegedly works in society and history, the triumph of the world Soviet dictatorship or socialism, leading to world communism, is inevitable. No action of any human agency can halt this fatalistic process. But it is not a progress that is made on a straight line or even on a curve; it is a zigzag movement due to the struggle of contending forces and their relative strengths from time to time, a course which, however, leads ever onward toward world dictatorship. This results at times in Communist advances, at times in retreats. Each development must be taken advantage of by Red tactics and strategy to forward the course of world dictatorship to the maximum under the prevailing conditions.

Stalin has stated clearly the object of the strategy of retreat or apparent retreat when he says: "The object of this strategy is to gain time, to demoralize the enemy, and to accumulate forces in order later to assume the offensive." [17] This follows Lenin's tactics which have been described in his work "One Step Forward, Two Steps Backward." [18]

The result of the strategy and tactics thus devised, to take into account the relationship of forces at any particular time, is the appearance of forward and backward movements, which are all designed by their zigzag course to lead to furthering Soviet advances. Because of the general lack of knowledge in the United States of these tactics and strategy, as laid down by Lenin and Stalin and summed up in the latter's Foundations of Leninism, the Soviet advance made during the past 25 years has been little less than amazing.

History now records the facts of Communist dialectics at work. Under Stalin the change from hostility to apparent friendship and back to hostility were changes by periods. There was the Hitler-Stalin pact period (time of hostility), the World War II period (time of apparent friendship), and the postwar period (time of hostility again). Under Khrushchev, Stalin was damned, Lenin exalted, and then at a 1957 diplomatic reception Khrushchev switched and said, "God grant that every Communist should fight for the interest of the working class as Stalin did." The Communist strategy under Lenin, Stalin, and Khrushchev is to use both hot and cold methods at once. Thus in the past few months we have witnessed the shelling of Quemoy and threats to Berlin coupled with cultural exchanges and the trip of Soviet Deputy Premier A. I. Mikoyan. We saw his smiles and snarls. The Communists aim to keep us complacent until the choice is annihilation or surrender, at which time they confidently expect us to submit to a negotiated surrender.

Also during the past year, the Communists went forward with the rocks and garbage thrown at Vice President NIXON in South America; backward with the smiles of Menshikov; forward with the executions of Nagy and Maleter; backward by allowing Tito to make a few anti-Soviet statements; forward with the defeats of anti-Communists in Syria and Indonesia—all with the same unity of purpose that makes everything contribute to their plan of world conquest.

Current Communist tactics include the following:

1. Nullification of the Smith Act and other anti-Communist legislation: FBI Director J. Edgar Hoover testified January 16, 1958, at a House hearing made public in May, that 49 of the 108 Communist leaders convicted by Federal juries under the Smith Act have been set free by Supreme Court decisions.[19] As of January 25, 1959, only 33 convictions of Communists remain as such while of the 108 convicted, 75 have been released. Judge Richard H. Chambers, of the U.S. Court of Appeals, in a decision releasing 11 of these convicted Communists, said that Supreme Court decisions have left the Smith Act, as to any further prosecution under its provisions, a virtual shambles.

J. Edgar Hoover has testified that a top Communist functionary described the Supreme Court decision in the Smith Act case of June 17, 1957, as the greatest victory the Communist Party in America has ever received.[20] The Daily Worker summed up the Yates, Watkins, and other cases of that same day in these words: "The curtain is closing on one of our worst periods." [21] The Sunday Worker of May 11, 1958, contains strong opposition to any legislation to overcome the Supreme Court's rulings on internal security.

Other anti-Communist laws which have been targets of the Communist Party and which are now nullified or weakened by the judicial decisions are the Subversive Activities Control Act of 1950, the anti-sedition laws of 43 States, and Hawaii, key security provisions of the Immigration and Nationality Act of 1952, and the Summary Suspension Act of 1950.

2. Muzzling the FBI and congressional investigations: For years the Communist Party has poured out its most hysterical language against that which the Reds call the Gestapolike FBI, and congressional inquisitions and witch hunts. This tactic has been so successful that it is now said that the Communists don't have to tell congressional committees anything. The effectiveness of the Communist propaganda machine is attested to by the frequency of attacks from sources of presumed respectability. It is significant to note the similarity of these so-called respectable verbal and written brickbats with Communist poisoned darts. As the world Communist onslaught continues, an intensification of attacks on the FBI, congressional committees and indeed all other effective anti-Communist forces can be expected. In fact an excellent criteria of the effectiveness of any group which labors to preserve the American way of life is the intensity of Communist and radical attacks directed at them.

Judge Robert Morris, chief counsel for the Senate Internal Security Subcommittee for 6 years, said: "The power of the Congress to learn the underlying facts of the [Communist] conspiracy has been hamstrung since the decision in the Watkins case."

There appears to us to be little question that the dicta in such cases as Watkins and Sweezy have compounded the difficulties of investigating committees in the security field. Witnesses, dominated by the Communist Party, have used the dicta to impede the function of Congress in its legislative responsibility. On this basis Communists have adopted the tactic of invoking the first amendment rather than the fifth amendment in refusing to answer obviously pertinent and important questions.

In the first session of Congress subsequent to the Watkins decision, hearings by the House Un-American Activities Committee was practically brought to a halt and the Senate Internal Security Subcommittee suffered a similar plight. On July 5, 1958, the press reported that congressional investigations into the Communist conspiracy have reached an all-time low for the last two decades. However, committee files are bulging with data on the conspiracy which are crying for exploration to form the basis for corrective legislation.

The experience of France, and more particularly Germany, show the danger of restricting legislative investigations.[22] Bismarck so feared the power of parliamentary investigation that he dissolved the Prussian Parliament when it attempted to assert its right of investigation. Historians agree that the lack of legislative investigation was the greatest single cause for the authorization of Imperial Germany.

Footnotes at end of speech.

When the Weimar Republic was created, article 34 of the Constitution granted the Reichstag the power "to appoint investigating committtees." When the Reichstag attempted to exercise its constiutional right, the German Constitutional Court, in two key cases, narrowed the scope of parliamentary inquiry so considerably that the investigating powers of the Reichstag were inadequate to its tasks. As a result, the Reichstag never exposed the Nazi, purges by Hitler, concentration camps, and secret police. The success of the Nazi conspiracy taught the German Supreme Court a lesson. On August 17, 1956, it handed down a scholarly 375-page opinion which outlawed all activities of the Communist conspiracy in West Germany.

Notwithstanding some mistakes—fewer than generally charged—the service to our country by the Senate Internal Security Subcommittee and the House Un-American Activities Committee has been incalculable and worthy of far greater praise than has been accorded to them. The Communist and radical propaganda against these committees has never subsided. Our committee, therefore, recommends the adoption of Resolution V.

This committee has been astonished to read the proposal to the Congress that one of its committees charged with investigating National and State security and Communist activities be discontinued. We regard any attempt to terminate or to curtail the work of the committee of each House charged with this vital duty as a distinct disservice to the Nation.

3. Ultimate elimination of Federal and State security programs: This tactic has been successful with regard to nonsensitive positions in Government and evidence is abundant that the Communist conspiracy considers nonsensitive positions vitally important. Government employment is not a right but a privilege.

4. Communism is worldwide in its scope of operations which require travel on the part of its propaganda and espionage agents: For this reason Communists and their dupes aided by innocents have long been carrying on a vigorous campaign to break down, or weaken, passport control in the United States. Meanwhile, they maintain strict controls in the Soviet Union, Red China, and other satellite countries.

5. The peace offensive: On April 1, 1951, the House Un-American Activities Committee issued a report called "The Communist Peace Offensive; a Campaign To Disarm and Defeat the United States." This document showed in detail how intellectuals, professors, writers, and others who influence public opinion, were attracted to various Communist peace fronts. This report said: "The most dangerous hoax ever devised by the international Communist conspiracy is the current worldwide peace offensive."

Today, under the slogans "peace" and "peaceful coexistence," we are witnessing an intensification of this Communist peace offensive. The Czechs and Hungarians found that coexistence with communism is enslavement. Peaceful coexistence means Communist conquest without war. In his February 1956 report to the 20th Congress of the Communist Party of the Soviet Union Khrushchev asserted in Aesopian language that peaceful coexistence would lead to the victory of world communism.[23]

Dr. Fred C. Schwarz, in his testimony before the House Un-American Activities Committee, has accurately described what the Communists mean by peace. "Every act that contributed to the Communist conquest is a peaceful act. If they take a gun, they take a peaceful gun, containing a peaceful bullet, and kill you peacefully and put you in a peaceful grave. When the Chinese Communists murder millions, it is an act of peace. When the Russian tanks rolled into Budapest to butcher and destroy, it was glorious peace." This is what J. Edgar Hoover calls semantic sabotage.

In describing the recent case involving the Communist spy Rudolph Ivanovich Abel, J. Edgar Hoover testified: "I mention this case particularly, Mr. Chairman, because there are some people who think that the matter of Soviet espionage is a thing of the past and no longer exists in view of the theme of peaceful coexistence the Soviets continue to expound. Many of the incidents in the Abel case occurred in 1957." [24]

We must realize that Communist governments resort to blackmail, counterfeiting, forgery, kidnaping, lying, mass murder, slavery, subversion, theft, and treaty-breaking as part of their official state policy. It is a matter of historical record that the Kremlin blackmailed the Allies into concessions during World War II by threatening to sign a separate peace with Hitler; that Communist governments have counterfeited American money and forged American passports; kidnaped American citizens and held them for ransom; kidnaped 28,000 Greek children in the most cruel mass abduction in modern history; murdered thousands of Polish officer at Katyn Forest,[25] 6,112 American soldiers whom they captured in Korea,[26] and thousands of boys and girls in Hungary; forced millions of Polish, Latvian, Lithuanian, Esthonian, Czech, Hungarian, and Ukrainian citizens to work as slave laborers in Siberia; stole 600 tons of gold bars worth $600 million from the Government in Spain in 1936; [27] destroyed by subversion the postwar Republics of Bulgaria, Czechoslovakia, Hungary, and Poland; and violated 50 of their last 52 treaties.

6. Summit conference: Pressures exercised to influence the President of the United States to arrange for a summit conference with Khrushchev are unfortunate. Such pressures have been applied by friendly nations and by some inexperienced but well-meaning citizens. Communists have the most deplorable record in all history for violation of sacred treaties. It is the policy of Communists to promise anything and to perform nothing unless it serves their immediate needs. Communists should first demonstrate by concrete actions their good faith in their stated desire for peace. Without such evidence of good faith any conference becomes merely a Communist vehicle for their propaganda purposes. It is hopeless and futile to rely upon voluntary compliance with treaties by Communists. The Communists, through Khrushchev can free East Germany, Hungary, Poland, Czechoslovakia, and other enslaved nations and thus demonstrate in 24 hours their good faith and a true desire for peaceful coexistence.

Experts on communism testified before the U.S. House Un-American Activities Committee on April 30, 1958, that the Kremlin looks upon a summit conference solely as another weapon in its program for global conquest. Time will tell us the influence which the Soviet Deputy Premier A. I. Mikoyan, in his open sesame tour of the United States last January has exerted to entrap the United States into another summit conference.

7. Cultural exchanges: Nikita Khrushchev's famous report of 1956 lists cultural and business exchanges as one of these developments which will bring about the growing weakness of the United States and advance world socialism. On June 2, 1957, Khrushchev appeared on American television screens and called for a wider exchange of cultural delegations.

On December 22, 1957, the Communist Daily Worker desecrated the greatest religious holiday in Christendom by declaring that perhaps the best Christmas present Santa Clause will bestow on America will be the widespread cultural exchange of certain Americans with Soviet agents coming to this country.

On January 27, 1958, the United States signed a 2-year agreement with the Soviet Union for the exchange of persons in the cultural, scientific, technical, and educational fields. The primary activity of every one of Moscow's cultural delegates while in this country is to promote the Communist world revolution. E. H. Cookridge, former British Secret Service agent and an authority on Soviet espionage, had this to say: "Every Soviet football team, every athlete competing at an international sport event, Soviet scientists attending a congress abroad, the Moscow Ballet performing in a western capital or a group of Soviet artists at a film festival are invariably accompanied by special agents of the Soviet secret police. Judge Robert Morris, who has spent the last 17 years intensively studying and exposing the Communist conspiracy, said: "In past years of the exchange, secret police have passed as farmers, ice skaters, clergymen, and scientists, for the purpose of conducting espionage operation in this country." Prof. Seymour Mellman, of Columbia University, at a disarmament conference held in Washington, D.C., on January 23, 1959, stated (as reported in the Washington Daily News of that date) that: "Owing to the possibility of moving nuclear warheads in small containers, it is not excluded that the principal cities of the world may already be mined with atomic warheads and their appropriate firing devices." Under these circumstances, what guarantee do we have that Soviet visitors may not engage in such destructive practices? AFL–CIO President George Meany said, on cultural exchanges: "No believer in the basic principles of free trade unionism could today conceivably desecrate these principles by undertaking to visit a country whose tyrannical leadership has for the 40 years of its existence been the avowed and uncompromising enemy of all human rights."

Cultural exchange with Soviet Russia should not be a one-way street. There can be no doubt that understanding could come from an honest two-way cultural exchange program where there is a full disclosure of the identities of visitors to any country. So when a Mikoyan visits the United States, those who fete him should know who he is and that for which he stands.

The responsible Newsweek magazine has this to say about Mikoyan in its issue of January 12, 1959: "Mikoyan is one of the butchers of Budapest. It was he who helped engineer the great double-cross that crushed the Hungarian revolt in October 1956. To lull the leaders of the revolt Mikoyan endorsed Imre Nagy as the new premier; at the same time, he made plans for the Communist puppet Janos Kador to take over. His promise to withdraw the Russian forces from Hungary lured Nagy's Defense Minister to a meeting where Soviet troops could arrest him."

Henry A. Wallace, in a frank article published in 1952, related that he did not realize during his tour of Soviet Russia how the Communists were making feverish efforts to hoodwink him. Wallace said that it was only much later that he learned how a Communist slave labor camp had been transformed into a show city, with prisoners herded out of sight and watchtowers torn down, merely to deceive the American Vice President. Elinor Lipper verifies this in her book "Eleven Years in Soviet Prison Camps." As a prisoner in a slave camp visited by Wallace, she gives an inside account of how American tourists in Russia are deceived.

8. Recognition of Red China: Much of the propaganda in this country which supports recognition of Red China is Communist-inspired or encouraged. Diplomatic recognition is helpful to Communist subversion. The Communist espionage apparatus uses

Footnotes at end of speech.

the diplomatic immunity of its embassies and consulates to establish spy centers. It requires the unbroken seal of the diplomatic pouch to transmit orders to its spies and to receive in turn their reports and microfilmed documents.

The Red diplomatic apparatus functions are described in detail in the report of the Canadian Royal Commission [28] which investigated code clerk Igor Gouzenko's revelations. They may be found, too, in the Report of the Australian Royal Commission [29] which investigated Embassy Secretary Vladimir Petrov's confession. They are told as well in the Senate Internal Security Subcommittee investigation of U.S. Communists working for the U.N.[30] conducted by Senator Herbert O'Conor, immediate past chairman of this committee:

That Red China will model her tactics after the tactics of Soviet Russia is made clear by the statement of Premier Chou En-lai in the Communist magazine International Affairs:

"The great Communist Party of China, organized by progressive elements of the Chinese people, was founded and developed under the influence of the October revolution, and was modeled on the Communist Party of the Soviet Union." [31]

The most important loss that would be sustained by our recognition of Red China would be (1) the prestige that the Communist Regime would attain therefrom and (2) the demoralization of and hurt to the free nations—particularly in Asia. Moreover, can we give recognition to a government that is presently destroying the very fabric of human relations—the family—and enslaving its people in the manner that even the Communist rulers in Russia have not dared attempt? Responsible governments of free nations still have some responsibility to mankind and civilization. History has shown the recognition of the Soviet Union to have been a grievous error. We should not repeat that error with Red China.

9. Halt nuclear tests: The Communist tactic to obtain an agreement with the West halting nuclear tests is similar to Soviet exploitation of the agreement made at panmunjom, namely not to rearm the North and South Koreans with jet planes and other modern weapons. The Soviets promptly violated this agreement. Then they violated its inspection clause by refusing to permit the neutral inspection team to inspect North Korean airfields.

The suspension of nuclear tests without complete inspection would result in the U.S. termination of testing. However, within the vast, isolated Soviet land mass, there would be a circumvention of this ban on testing.

10. East-West trade: Khrushchev's report of February 14, 1956, before the 20th Congress of the Communist Party of the Soviet Union calls for East-West trade; [32] and this has been a part of the Communist line for many years. Foreign trade, to a Communist country is a political weapon to be turned on and off in accordance with its military strategy as a means of waging cold war. It is a means of obtaining from the outside world the strategic materials with which it can arm itself for world conquest. Trading with the Communist bloc would be a psychological as well as a military defeat for the United States. The goods we might sell to the Communist bloc will be used against us just as the superb Rolls-Royce jet engines sold to Russia were used to power the Mig 15's against us in Korea.

In May 1958, Khrushchev sent an 8-page letter to President Eisenhower in which he brazenly suggested that the United States grant Soviet Russia long-term dollar credits in order to finance trade with the United States. We would not gain by trading our machinery for Soviet IOU's or even Russia's raw materials. The Senate report on the "Accessibility of Strategic and Critical Materials" issued July 9, 1954, shows that the Western Hemisphere contains all the 77 critical and strategic materials needed for military security. The bait of foreign trade is held out with the objective of developing pro-Soviet sympathy within the United States and thus undermining our national unity.[33]

11. Propaganda: Communists are spending billions annually on propaganda around the world and it is reaching every city and hamlet in our Nation. This propaganda comes not only from the Soviet Union but also from Red China, from Iron Curtain countries, and from Western Europe. Much additional Red propaganda is published in the United States by Communist publishers.

12. Humiliation: The Communists use the tactic of humiliation. This tactic had already been used by the Communists on American prisoners in Korea. Communists have been active in supporting insulting demonstrations all over South America. On July 18, 1958, a mob of 100,000 Communists gathered in front of the American Embassy in Moscow and threw ink bottles and stones which shattered many of the windows on the first five floors. There has been a wave of demonstrations against the American information agencies in various parts of the world, accompanied by burnings of the American libraries. A number of Americans are being held captive behind the Iron Curtain.

13. The Communist tactic of vilification: One of the most constantly used tactics and tools of the Communists—and those deliberately aiding them, or misled by them—is the effort to defame, destroy or becloud the reputation of anyone—whatever his position or standing—who exposes or fights communism. No regard for truth is ever permitted to halt such campaign. Lies and half-truths are effective with the unthinking of the indifferent.

Example after example can be cited. Every member of congressional investigating committees has been the victim of this tactic. The FBI and its dedicated Director have been a prime target—and will continue to be so long as they are effective in combating communism. Every judge who did not respond to their arguments became a subject for this tactic.

The irony of fate has frequently decreed that this tactic be used by ruling Communists—temporarily in power—against their Comrade-rulers of yesterday when the simple struggle for power makes their comradeships a threat within the ruling clique. The guillotine of office or rank—followed by the routine, groveling, demoralizing confession is frequently not enough. The campaign of vilification and defamation must still be pursued. The degradation of Communists knows no bottom.

We plead with the bar—its leaders and members and the American people to understand this prime tactic of Communists and not to be misled by it. When the bar thinks and American agency or public official on Communist tastics, strategy, and objecerican way by going first to the public official or responsible administrator and call the facts to his attention. Perhaps there is another side to the issue. Those who charge violation of due process can strengthen their position by first practicing the principles of due process. When the enforcement machinery of our State, county, municipal, or Federal Government comes under unjust attack it is the duty of members of the bar as community leaders to come to their defense.

With each succeeding act of Soviet bad faith many western spokesmen express surprise. When anti-Communists reply "You should have expected this," the politically naive make a common rejoinder: "That is mere hindsight; no one could have predicted that the Communists could be that bad." It is appropriate to point out that informed anti-Communists have always known and publicly stated that it is impossible to negotiate with international communism.

It was not hindsight, it was sound appraisal when Secretary of State Bainbridge Colby said on August 10, 1920:

"The existing regime in Russia is based upon the negation of every principle of honor and good faith. * * * The responsible leaders of the regime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements. * * * Upon numerous occasions the responsible spokesmen of this power, and its official agencies, have declared that it is their understanding that the very existence of bolshevism in Russia, the maintenance of their own rule, depends, and must continue to depend, upon the occurrence of revolutions in all other great civilized nations, including the United States, which will overthrow and destroy their governments and set up Bolshevist rule in their stead. They have made it quite plain that they intend to use every means, including, of course, diplomatic agencies, to promote such revolutionary movements in other countries. * * * We cannot recognize, hold official relations with, or give friendly reception to the agents of a government which is determined and bound to conspire against our institutions; whose diplomats will be the agitators of dangerous revolt; whose spokesmen say that they sign agreements with no intention of keeping them." [34]

It was not hindsight, but sound appraisal when Secretary of States Charles Evans Hughes stated on March 21, 1923:

"We are just as anxious in this Department and in every branch of the administration as you can possibly be, to promote peace in the world, to get rid of hatred, to have a spirit of mutual understanding, but the world we desire is a world not threatened with the destructive propaganda of the Soviet authorities, and one in which there will be good faith and the recognition of obligations and a sound basis of international intercourse." [35]

It was not hindsight, it was sound appraisal when Robert F. Kelley, Chief of the Division of Eastern European Affairs in the Department of State, wrote in a memorandum dated July 27, 1933:

"The fundamental obstacle in the way of the establishment with Russia of the relations usual between nations in diplomatic intercourse is the world revolutionary aims and practices of the rulers of that country.

"It is obvious that, so long as the Communist regime continues to carry on in other countries activities designed to bring about ultimately the overthrow of the government and institutions of these countries, the establishment of genuine friendly relations between Russia and those countries is out of the question." [36]

It was not hindsight, it was sound appraisal when U.S. Ambassador to Moscow Laurence Steinhardt reported, on June 17, 1941:

"My observation of the psychology of the individuals who are conducting Soviet foreign policy has long since conviced me that they do not and cannot be induced to reopen to the customary amenities, that it is not possible to create 'international good will' with them, that they will always sacrifice the future in favor of an immediate gain, and that they are not affected by ethical or moral considerations nor guided by the relationships which are customary between individuals of culture and breeding. Their psychology recognizes only firmness, power and force, and reflects primitive instincts and reactions entirely devoid of the restraints

Footnotes at end of speech.

of civilization. I am of the opinion that they must be dealt with on this basis and on this basis alone." [37]

CURRENT FALLACIES ABOUT COMMUNISM

So much misinformation is current about communism that it is appropriate to expose some of the major fallacies.

1. "Communism in the United States is dwindling in power because the party is dwindling in numbers."

This popular belief shows a complete misunderstanding of Leninism. Lenin's great contribution to communism was his principle of the dedicated few. He coined the expression "the fewer, the better." He originated the party of professional revolutionaries subject to military discipline. He rejected the idea of a popular party, and enunciated the principle that no one should be given party membership unless he was under discipline. This is how Lenin was able to establish communism in Russia with only a handful of supporters and later to take over Russia with only 40,000 followers.

It is just as false to measure the strength of communism in the United States by comparing the small number of party members with the large number of non-Communists, as it would be to measure the seaworthiness of a ship by comparing the area of its holes with the area of its hull. A few strategically placed holes can sink the largest ship.

A substantial strength of communism in the United States is the number of non-Communist organizations and individuals who will collaborate with the Communists. For every Communist Party member, there may be 10 non-Communists who will do the work of the Communists.

The Communists have had hundreds of fronts. In addition, they have fronts in front of the fronts. Making use of their fellow travelers and dupes, plus their united front tactic, the Communists boast they can have 50,000 letters on any issue sent to Capitol Hill or the White House inside of 72 hours.

The strength of the Communist Party was succinctly dealt with by J. Edgar Hoover in his book "Masters of Deceit" where on page 5 he states:

"The party's membership in this country reached a low in 1930 when it had 7,500 members, and a peak of 80,000 in 1944: Its membership at 5-year intervals since 1930 has been as follows: 1935, 30,000; 1940, 55,000 (a drop of 15,000 from 1939); 1945, 64,600 (a drop of 15,400 from 1944); 1950, 43,200; 1955, 22,600; and by the summer of 1957 membership had further declined.

"Fluctuations in the American Party parallel those in foreign countries. The record clearly establishes that Communist Parties have the power of swift and solid growth when the opportunity arises. The following figures reflect how party membership can dwindle and then spurt.

"In Italy, party membership went from 6,000 in 1943 to 2,500,000 in 1951; in France, from 20,000 in 1929 to 400,000 in 1956; in Syria, from 250 in 1931 to 10,000 in 1956; in Brazil, from 25,000 in late 1947 to 100,000 in 1956; and in Indonesia, from 30,000 in 1953 to 500,000 in 1956.

"When the Communist Party was at its peak in the United States it was stronger in numbers than the Soviet Party was at the time it seized power in Russia.

"The size of the party in various Soviet satellites at the time each came under Soviet control discloses how a well-organized band of revolutionaries can impose its rule over the majority population."

2. "The Communist Party is just another political party."

It has been established by the hearings of the Subversive Activities Control Board in 1951 and 1952, by 20 years of investigation by congressional committees, and by the prior decisions of the Supreme Court in *Dennis* v. *United States* [38] and in *American Communications Association* v. *Douds*,[39] that the Communist Party, U.S.A. is not just a minor political party like the Prohibition Party. In the Dennis case, Chief Justice Vinson rightly described the Communist Party as "a highly organized conspiracy, with rigidly disciplined members subject to call when the leaders, these petitioners, felt that the time had come for action."

	Date of Communist takeover	Communist Party membership on that date	Population on that date
Bulgaria	September 1945	20,000	7,020,000
Rumania	March 1945	800,000	16,409,000
Poland	January 1949	1,000,000	25,225,000
Czechoslovakia	May 1948	1,329,000	12,338,000
Hungary	August 1947	750,000	9,383,000
Albania	December 1945	12,000	1,120,000
Yugoslavia	Mid-1945	141,000	14,500,000

Like an iceberg, eight-ninths of the Communist Party has always been underground. The crypto-Communists who carry no cards, and whose names appear on no party records, are the most dangerous Communists. Top Communist agents such as Klaus Fuchs, Guy Burgess, and Donald MacLean never marched in a May day parade, never carried a hammer and sickle banner, never raised a clenched fist at a Red rally. They were effective agents because they were always underground conspirators, and never aboveground. Communism will never win or gain followers on the basis of merit of its ideology or of truth. Ironically there are also those who have been infected with the Communist propaganda of inevitability. Secretary of State John Foster Dulles dealt with this matter in a speech before the National Council of Churches in Cleveland, Ohio, last November when he said:

"There are some who seem to feel that because international communism is a powerful and stubborn force, we should give way before it.

"Nothing could be more dangerous than to operate on the theory that if hostile and evil forces do not readily change, it is always we who must change to accommodate them.

"But let us make our opposition not just a barren negative, but a positive alternative." [40]

3. "Poverty breeds communism."

This is the false stomach theory of communism. Communism is not a disease caused by an empty stomach; it is a disease of the mind and soul. Communism does not always originate with the poor, the uneducated, the exploited or the working class. These groups are the victims of exploitation by the Communists. On the other hand, the world's roster of Communists contains the names of many who were well educated and came from families of immense wealth. The list of important Communist agents who were once known as student intellectuals is an endless one. All that is needed is to call the roll of important Communist leaders and secret agents and among them will be found once well-fed ingrates who were traitors to their society, in their quest for personal power.

4. "The only alternative to peaceful coexistence is world war III with nuclear destruction of our cities."

The Communists do not want to destroy us or our cities if they can take our cities intact as they captured Prague and the giant Skoda munitions works. They plan to capture America with native Communists, just as they took Czechoslovakia with Czechs, China with Chinese, Indochina with Indochinese, North Korea with Koreans, and almost took Spain with Spaniards. Why should they want to destroy our productive might if they can win it by subversion and convert it to furthering the Communist world?

Sir Winston Churchill, whose ability to look ahead has been established as a historical fact said, more than 20 years ago:

"Communism is not only a creed. It is a plan of campaign. A Communist is not only the holder of certain opinions; he is the pledged adept of a well-thought-out means of enforcing them. The anatomy of discontent and revolution has been studied in every phase and aspect, and a veritable drill book prepared in a scientific spirit for subverting all existing institutions. The method of enforcement is as much a part of the Communist faith as the doctrine itself.

"At first the time-honored principles of liberalism and democracy are invoked to shelter the infant organism. Free speech, the right of public meeting, every form of lawful political agitation and constitutional right are paraded and asserted. Alliance is sought with every popular movement toward the left.

"The creation of a mild liberal or Socialist regime in some period of convulsion is the first milestone. But no sooner has this been created than it is to be overthrown. Woes and scarcity resulting from confusion must be exploited. Collisions, if possible attended with bloodshed, are to be arranged between the agents of the new government and the working people. Martyrs are to be manufactured. * * *

"Pacific propaganda may be made the mask of hatreds never before manifested among men.

"No faith need be, indeed may be, kept with non-Communists.

"Every act of good will, of tolerance, of conciliation, of mercy, of magnanimity on the part of governments or statesmen is to be utilized for their ruin.

"Then when the time is ripe and the moment opportune, every form of lethal violence from mob revolt to private assassination must be used without stint or compunction. The citadel will be stormed under the banners of liberty and democracy; and once the apparatus of power is in the hands of the brotherhood, all opposition, all contrary opinions must be extinguished by death.

"Democracy is but a tool to be used and afterwards broken; liberty but a sentimental folly unworthy of the logician.

"The absolute rule of a self-chosen oligarchy, according to the dogmas it has learned by rote, is to be imposed upon mankind without mitigations progressively forever.

"All this, set out in prosy textbooks—written also in blood in the history of several powerful nations—is the Communists faith and purpose." [41]

The need for all Americans is to know the Communist objectives and what they stand for. In 1937 Pope Pius XI asked a searching question about communism:

"How is it possible that such a system, long since rejected scientifically and now proved erroneous by experience, how is it, we ask, that such a system could spread so rapidly in all parts of the world?"

He answered his own question in these words: "The explanation lies in the fact that too few have been able to grasp the nature of communism."

Twenty-one years later, an additional 750 million human beings have been swept behind the Iron Curtain. But it is unfortunately still true that all too few people understand what communism is. Two years ago our committee reported:

"The greatest asset the Communists have at the present time is not the hydrogen bomb, certainly not Soviet satellites, but world ignorance of their tactics, strategy, and objectives."

When our enemy was Nazi Germany, our Government and military leaders studied

Footnotes at end of speech.

every detail of the enemy and his strategy. George S. Patton was one of the truly great generals of the European campaign. Early in World War II, when the Germans were advancing, General Patton was asked one day if he wasn't discouraged. His answer was precise:

"I have studied the German for 40 years. I have read the memoirs of his great men. I have studied every detail of all his military campaigns. I have attended some of his staff courses. I know exactly how he will react under any given set of circumstances. He does not know what I will do. For this reason, when the time comes, I shall beat the hell out of him."

And this he did. The tragedy is found in the fact that there are too few George Pattons.

We can no more save our Republic from communism merely by saying we are against communism, than parents can save their children from polio by fervently being against polio. To conquer any disease requires intelligent study to isolate the germ and discover the vaccine. As the No. 1 killer in the world today, communism is a disease which merits our urgent study.

REPORT ON COMMUNIST LEGAL SUBVERSION

On Monday, February 16, 1959, the House Un-American Activities Committee made public its report on "Communist Legal Subversion"—the role of the Communist lawyer.

We shall not attempt in this already long report to summarize this congressional report. The report should be read not only by every member of this association, but particularly by the officers of the various State and local bar asociations of which some of the attorneys mentioned in the report are members. The report does not name every attorney who is a Communist or a member of the Communist Party, but sufficient of them are named to constitute a challenge to the bar. The ABA, while ready to assist, nevertheless, has deemed it more properly to be within the jurisdiction of the State and local associations to take action of investigation and where warranted disciplinary proceedings concerning and against members on their rolls. Our committee feels that no new resolution need be passed by the house of delegates as it has already recommended proper action by the State and local associations against attorneys unworthy of membership by reason of their activities and their disloyalty to our form of government and to their oaths of office.

On this serious problem, the duty of cleansing our ranks of unworthy or questionable members is that of the bar, and the entire bar will suffer until the stigma on its rolls is removed. With sincere regret our committee must publicly state that the State and local bar associations have not fulfilled their duty to the public, the courts, or the bar.

CONCLUSION

Upon the bar of each nation primarily falls the duty to protect and defend its constitutional form of government and courageously to lead and soundly to advise the peoples and their governments. By their very training and experience, none more than lawyers should be aware of the dangers and the menace of international communism—and, therefore, none is more responsible for the protection of the free world.

Remember, there is no bar worthy of the name in Communist enslaved countries.

Only by alertness and dedication can the organized bar and each of its members perform their duty.

The danger and the menace of communism are worse than ever. Precious time is running out.

Wishes and prayers are not enough.

Respectfully submitted.

Peter Campbell Brown, Chairman; Julius Applebaum, James S. Cremins, Egbert L. Haywood, Ray Murphy, Louis B. Nichols, Kendrick Smith, Henry J. TePaske, Jackson A. Wright, Louis C. Wyman.

APPENDIX—RECOMMENDED READING

Books play a vitally important part in the history of government and economics. One need only mention "Das Kapital," "The Wealth of Nations," "Uncle Tom's Cabin," and the "Federalist Papers" to be reminded that books have started wars, changed the economy of great nations, and established new governments.

A number of books published in the past by some of the world's top experts on communism testify to the overriding importance of the Communist issue, and to the unhappy reality that the United States is losing the battle against international communism. A study of the following books and reports could halt the rising tide of world communism.

1. Congressional committee hearings and reports: For 20 years the House Un-American Activities Committee has been patiently investigating the Communist conspiracy. The reports of its hearings, and those of its Senate counterpart, the Internal Security Subcommittee, are an encyclopedia of information on this continuing conspiracy. The abuse which has been heaped upon these committees by the Communists and their fronts is itself an attestation of the value of these reports.

2. "Masters of Deceit: The Story of Communism in America and How To Fight It," by FBI Director J. Edgar Hoover (Henry Holt & Co., New York, 1958, $5). Mr. Hoover's preeminence as an authority on communism is unchallenged. This book provides us with a valuable primer on communism in the United States; its history, strategy, membership, and future. He describes the day-to-day operations of the Communist Party, what goes on underground, and how discipline is enforced. He shatters many anti-anti-Communist arguments and shows why this is no time for complacency regarding internal subversion.

3. "What We Must Know About Communism," by Dr. Harry and Bonaro Overstreet (W. W. Norton & Co., Inc., 1958, $3.95). These well known educators and foremost authorities in adult education examine communism and report from an educator's viewpoint in a clear factual manner. Many authorities on communism regard this book as one of the great contributions to anti-Communist literature.

4. "No Wonder We Are Losing" by Judge Robert Morris (The Bookmailer, New York, 1958, $2.50). Judge Morris has put into this book his personal record of 17 years' investigation of communism on behalf of the New York State Legislature, Naval Intelligence, and as chief counsel for the Senate Internal Security Subcommittee. Particularly important chapters concern the famous hearings on the Institute of Pacific Relations, communism's reach into education, and methods and rules of congressional committees.

5. "I Was a Slave in Russia," by John H. Noble (Devin-Adair Co., New York, 1958. $3.75). The author, an American citizen, was captured by the Russians just after V–E Day in 1945 and held prisoner for 9 years. In this book, he tells of his shocking experiences as a slave laborer in Siberia; of other Americans who are still there; and of the millions of political prisoners and how they are treated. This book is especially useful for those who believe in summit conferences and cultural exchanges with the Communists.

6. "Communist Psychological Warfare: Consultation With Edward Hunter," by the U.S. House Un-American Activities Committee (U.S. Government Printing Office, March 13, 1958). In 25 pages of testimony under questioning by Staff Director Richard Arens, Edward Hunter gives a brilliant analysis of current Communist strategy and how it follows here the pattern so successful in Asia. A distinguished journalist, author, and expert on communism in the Far East, Mr. Hunter first translated the term "brainwashing" from the Chinese. In this report he warns that Communist psychological warfare is now winning such extensive victories in the United States that the Red bloc will not need to employ direct military force against us in order to win the total war which they are waging.

7. "International Communism: Consultation With Dr. Fred C. Schwarz," by the U.S. Un-American Activities Committee U.S. Government Printing Office, May 29, 1957). Dr. Schwarz is an Australian physician who is one of the world's top authorities on communism, particularly on the Communist mind. In this testimony, Dr. Schwarz gives his expert diagnosis, prognosis, and recommended treatment for the disease of communism. He shows how the first step in the Communist conquest of every country is the ideological conquest of the student mind.

8. "A Guide to Anti-Communist Action," by Dr. Anthony T. Bouscaren (Henry Regnery Co., Chicago, 1958, $4). Dr. Bouscaren is the author of a number of authoritative works in the field of international Communist operations. He is a professor of political science at Marquette University, Milwaukee, Wis., and is currently teaching at the National War College, in Washington, D.C. This book provides specific answers to the question of how individual Americans can combat communism with knowledge and facts.

9. "The Naked Communist," by W. Cleon Skousen (the Ensign Publishing Co., Salt Lake City, Utah, 1958). The author was formerly with the FBI and on the faculty of Brigham Young University and now chief of police, Salt Lake City, Utah; has been a student of communism for the better part of his adult life. His book is a painstaking account of the rise of communism, its philosophy, methods and tactics. The book is well indexed and documented and belongs on the bookshelves of any one who has a desire to learn of communism and its worldwide objectives.

A New York Official's Views on Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a brief article which was published in the New York Daily Mirror on February 8, 1959. The article, written by Neal Ashby, deals with the problem of juvenile delinquency and some interesting views on the subject as expressed by Flavius N. Costerella, assistant State attorney general of New York.

I have known Mr. Costerella since my boyhood days and have had the privilege of working with him in the interests of various charitable, civic, and humanitarian causes. In 1936, he was a charter organizer with me of the Italian Board of Guardians, which is now affiliated with the Catholic Charities in Brooklyn, to help curb juvenile delinquency.

Mr. Costerella knows the problems of juvenile delinquency as well, if not better, than any other public official of New York, and for this reason his views and thoughts on the subject, as expressed in the article, should prove of considerable interest to all who are concerned with this problem.

The article reads as follows:

CHARGES YOUTH NEEDS UNMET

(By Neal Ashby)

The settlement house is just as rollicking, appealing and dependable a deterrent to juvenile delinquency as it was the day the first one came into being a century or more ago, and Queens needs a lot of them, believes one prominent borough neighbor, Assistant State Attorney General Flavius N. Costerella.

"The settlement house is the anchor around which families are helped in welfare, citizenship and community problems," declares Costerella, longtime Forest Hills dweller.

"Our present-day boys clubs are extremely effective, too, in meeting the basic needs of youth for physical exertion and a friendly social aggregation with which to become identified. But they don't serve the whole family."

And Costerella believes the whole family needs serving in a sobering number of cases. He charges:

"Parents spend their time watching television and don't pay attention to what their children are doing outside the home. These basic needs of youth are going unmet.

"Queens is seriously lacking in settlements and clubs, just as the whole city is. Every community should have one. The rate of juvenile delinquency is mounting every year. I think the emergency is so acute that the State should bear the expense."

He's in public life and active in politics and it's not surprising to find this energetic and ambitious attorney with native judicial bearing in the swim of community affairs. But settlement houses are a cause and a conviction to Costerella.

His near-religious belief in them carries all the way back to his own boyhood in cluttered Greenwich Village some 35 years ago. The capital of the forbidding world outside his modest home was for Bert Costerella the Greenwich House, still a citadel of good citizenship.

In the seven-story building on Barrow Street the Greenwich Village neighbors were provided medical and psychological services, a nursery for the toddlers, arts and crafts classes, athletics, clubs, entertainments and study groups—and they still are.

"I loved it," the attorney says fondly.

But, foreshadowing the course his adult life was to follow, it wasn't the games, parties, boxing matches or talent shows for which Costerella had the greatest affection but the workings of Greenwich House's self-government bodies in which he was always a leader.

He remembers business meetings, policy conferences and fundraising instead of handmade pottery, game-winning baskets or vocal solos.

"It's been proven that juvenile delinquency occurs least in areas where settlement houses are located," Costerella asserts, "even in the worst slums."

The attorney commends the Boys Club of Queens in Astoria for its effective program and points out that a similar club is being organized in South Jamaica. But he comes back to the fact that—

"Queens doesn't have a single settlement house. Just off hand, they're needed in Corona, Rosedale, Jamaica, and right in my own community of Forest Hills."

Costerella, assigned by the State attorney general to represent the mentally ill in the guardianship of their property and civil rights, lives with his wife, Theresa, and their daughter, Mary Anne, 9, at 68-49 Manse Street.

He remains an active alumnus of Greenwich House and further pursues youth work through the Italian Board of Guardians, Ferrini Welfare League, 112th Precinct Youth Council and the Italian Charities of America, Elmhurst. He is a director of the National Society for the Prevention of Juvenile Delinquency.

"Kids need a place where they belong," he concludes, "where they are kept busy and made a part of something."

Brooklyn's New Supreme Court Building

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. MULTER. Mr. Speaker, the ceremonies attendant upon the dedication of the new supreme court building in Brooklyn, N.Y., on January 5, 1959, were indeed fitting and most impressive. It is my pleasure to direct the attention of our colleagues to the remarks on that occasion of the distinguished presiding justice of the appellate division of the Supreme Court of the State of New York, the Honorable Gerald Nolan; the remarks of the Honorable John B. Johnston, former justice of the appellate division of the Supreme Court of the State of New York and presently the administrator of the courts of the State of New York; and the benediction of Dr. Alexander Alan Steinbach, the president of the New York Board of Rabbis. They are as follows:

Presiding Justice NOLAN. Ladies and gentlemen, I would like to say now just a few words about a man for whom we all have a somewhat special affection. I first met him many years ago when we were both much younger judges. I had the privilege later of serving with him in the appellate division. I soon found out, and not to my surprise, that he had the entire respect and the warm affection of all of his associates.

After he had finished what for a lesser man would have been a notable career, the State of New York was indeed fortunate in persuading him to take on the administration of other and very important duties. He brought to their performance a great ability, a tremendous energy, and a fine store of judicial experience.

It is with a great sense of pleasure that I present at this time the administrator of the courts of the State of New York, the Honorable John B. Johnston.

Hon. JOHN B. JOHNSTON. If it please Your Honor, my former and successor colleagues of the bench, my brethren of the bar, and friends, he would need to be a bolder man

than I who would attempt to add to what has been so appropriately and so eloquently said. But I would be less than candid if I failed to say that at this very moment I am stirred, perhaps beset, by conflicting emotions.

While I rejoice with you upon the erection and completion of this sorely needed building, I confess I have a grateful recollection and hence a genuine fondness for the old building across the street, for it was there, just about a half century ago, I tried my first case, and it was also there, 32 years ago this very forenoon, that I ascended the bench of this court, which is older than the State itself, the very bulwark of our judicial system, and the fame of many of whose jurists is not confined to the borders of this department or limited to the boundaries of this State.

While you and I share a justifiable pride in this beautiful edifice, it is well to remember that a courthouse, however ornate, is not merely a structure of steel and stone, mortar and marble. This building is a symbol. Yes, it is the embodiment of our American system which guarantees the safety of the individual and the security of his property. And it is more; it is a harbor and a haven for the people of all shades, the high and the low, the rich and the poor, the powerful and the less fortunate, to which they may take recourse for the vindication of their rights and the redress of their wrongs.

Just an additional word. Those who enter the portals of this building may not only be confident, but certain, that they will receive a patient and a fair hearing at the hands of the distinguished men, the justices of this court assembled here before me, who serve a single purpose, which is to do right and equity between man and man, and whose sole aim is to administer justice in humble imitation of the impartiality which is reigning on high.

Thank you. [Applause.]

Presiding Justice NOLAN. Today, as always, we ask for the guidance and the blessing of God, particularly today, that the building that we dedicate may stand throughout the years as a symbol of justice to all who pass through its doors.

We have had the privilege of hearing a very eloquent invocation from the bishop of the diocese of Long Island.

I think you will agree that it is only fitting and proper that we should pause at this time and hear from another of our clergy who have honored us with their presence on this occasion. The distinguished president of the New York Board of Rabbis, Dr. Alexander Alan Steinbach.

[All arose.]

Rabbi ALEXANDER ALAN STEINBACH. Eternal Spirit, Father of all mankind, so far above us and yet so deep within us, so great that our minds cannot fathom Thine infinitude, and yet so close that Thou art nearer to us than we are to ourselves, we thank Thee for the privilege of dedicating this structure in whose presence the administration of justice will become an inextinguishable flame.

May the distinguished judges who will sit here be motivated by the scriptural admonition, "The Lord is a God of justice. Therefore, justice, justice shall ye pursue." And may they interpret the law in consonance with the teaching of a Solomon. Thy righteousness is like the mighty mountains. Thy judgments are like the great deep.

Fervently we invoke Thy blessing and Thy guidance upon those in whose trusteeship will be placed the great pillars of jurisprudence.

May those who hold liberty precious in our free world labor together in that inner spiritual hemisphere of brotherhood and human understanding which recognizes that justice must always be the highest and the only expediency. Conformity with justice is conformity with the will of God. No government can be free that has not learned to be just. Therefore, Eternal Father, O God of all humanity, let Thine inevitable spirit hover over this majestic structure and in the hearts of those who will occupy it.

And let the light of Thy countenance shine upon those charged with the solemn and sacred responsibility to give to every man, whoever he is, his just due.

Dear God, let justice ever be the bread of our Nation, that everyone who hungers for this bread may come here and find it and eat of it and be satisfied. Amen.

Congress Should Authorize an All-Out Attack on Cancer

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FULTON. Mr. Speaker, I submit an article every American should read, "Trends in Cancer Control," from Progress in Health Services, February 1959, Health Information Foundation, 420 Lexington Avenue, New York, N.Y.:

TRENDS IN CANCER CONTROL

With the elimination of communicable disease as the leading cause of death, the rising death rate from cancer has made this disease a steadily increasing health problem. From seventh in 1900, cancer rose to become the second leading cause of death in 1938 and has remained there since. It is now the leading cause of death among women aged 30–54 and (excluding accidents) among school-age children. In 1900 this disease accounted for less than 5 percent of the deaths in this country, but by 1958 the comparable figure was 16 percent, or approximately one out of every six deaths.

Cancer took more than 250,000 lives in 1958, mainly in the middle and older years but including some 4,000 children under age 15. Its death rate is now higher among males than females, among nonwhites than whites, and is highest in the northeastern part of this country. Even though cancer mortality is rising, however, the prognosis for cancer patients is today much better than it used to be. Many forms of the disease previously incurable can now be treated.

Cancer is the generic name for a group of diseases characterized by the irregular and uncontrolled growth of cells. The invasive growth and metastasis (spread) of these cells, often through the lymph channels or blood, to other areas usually leads ultimately to death.

Cancer is the end-product of an exceedingly complex chain of circumstances. Research into the etiology of this group of diseases investigates mechanisms within the cell, stimuli arising outside the cell, and hereditary and environmental factors. Malignancies of specific sites have been associated with different agents. The list of biological substances and chemical compounds known to cause malignant tumors in animals is impressively large and growing. Nevertheless, the cause of the overwhelming proportion of the malignancies seen in human populations remains unknown.

In 1900 about 80 persons for each 100,000 of the population died from cancer. This rate climbed steadily early in the century and reached 114 by 1926. After some fluctuation up to 1933, the rate began to rise again, but more slowly. It reached 128 by 1957 but dropped to 125 in 1958.[1] These rates were about 60 percent higher than in 1900.

Part of this increase is undoubtedly due to improved diagnosis of the disease and to the development of better techniques for case-finding and detection. Thus many deaths perhaps erroneously attributed to other causes are today more correctly attributed to cancer. But part of the increase is probably real.

Mortality from cancer is low during infancy and the preschool years, and drops to its minimum level during the subsequent childhood period. In 1956 cancer caused 8 deaths per 100,000 among infants under 1, 11 at ages 1 to 4, and 6 at ages 10 to 14. At older ages the rate rose consistently to a peak of 1,464 per 100,000 at 85 and over. More than half the cancer deaths today are of persons aged 65 and over.

Women constituted a larger proportion of the cancer victims than men early in the century, but recently this has changed. Thus in 1900 the cancer mortality rate among females exceeded that for males by 65 percent. Later this ratio narrowed, and by 1946–47 mortality for the two sexes was at the same level. By 1956 the former positions were reversed—the male mortality rate now exceeded the female by 22 percent.

The female mortality rate from cancer, after rising continuously since 1900, began to level off during the late 1920's and early 1930's and has declined since then. In contrast, the male mortality rate has continued to rise steadily, in part because of the rapid rise of respiratory cancer among men, but also because in general cancers afflicting males more often occur in less accessible sites.

CANCER MORTALITY BY SITE

The distribution of all cancer deaths by primary site has changed greatly since 1930. For example, cancer of the respiratory system has become a more important part of the total picture. It accounted for only 3 percent of all cancer deaths in 1930, but by 1956 its proportion had risen to 13 percent. The death rates per 100,000 population for these years rose from 3.7 to 17.1. The rise in mortality from leukemia was also notable, from 2.3 to 6.0. However, death rates from cancers of the other major primary sites have generally been leveling off, and in some instances actually declining, since 1930.

The respiratory system has become one of the main cancer sites for males. Their mortality rate in 1956 was six times as high as 1930, while the rate for females doubled in the same period. In 1930 this site accounted for 5 percent of all cancer deaths among males, but by 1956 the proportion was 21 percent. For females the comparable rise was from 2 to 4 percent.

Although part of this rise may be spurious (because of better diagnosis, case finding, etc.), the strong sex differential and other factors suggest that most of the rise represents a true increase in incidence. This is the most rapid ever recorded for a noninfectious disease.

Recently a number of large-scale investigations have shown that lung cancer[2] occurs 5 to 15 times as frequently among cigarette smokers as among nonsmokers, and that there is a direct relationship between the incidence of lung cancer and the amount smoked. From a public health point of view, the conclusion of a cause-effect relationship between lung cancer and cigarette smoking has now been accepted by many responsible health agencies.[3]

But in addition, studies have shown other possible causal factors in the environment, especially motor-vehicle exhaust and other forms of air pollution. And also, specific factors in particular individuals may in-

---

Footnotes at end of speech.

crease their susceptibility to environmental influences.

LEUKEMIA DEATH RATE RISES

Recent increases in the death rate from leukemia [4] have also attracted considerable attention. The largest increases in leukemia mortality have occurred among children and older people, where the rates were highest to begin with. During the preschool years leukemia accounts for nearly 50 percent of all cancer deaths.

It is now widely accepted that exposure to nuclear and allied radiations (including X-rays used for medical diagnosis and therapy) can cause leukemia in man. The evidence for this is derived from extensive laboratory investigations on animals and from studies of the distribution of the disease in humans.

These studies have shown a higher mortality from leukemia among radiologists than other physicians, a decrease in incidence of this disease in proportion to the distance from the center of the atomic bomb explosion among survivors in Hiroshima and Nagasaki, and a relationship to past exposure to X-rays for various conditions (including children exposed in utero during X-ray examination of the maternal abdomen and pelvis).[5] Nevertheless, many aspects of this relationship remain unexplained, and many investigators do not accept a linear cause-effect linkage.

Although cancer mortality as a whole has risen, a decline has been recorded for the digestive system as a primary site, and this despite its relative inaccessibility.[6] This site today accounts for only about one-third of all cancer deaths, while in 1930 the comparable figure was about one-half. Mortality from cancer of the digestive system declined 33 percent among females from 1930 to 1956—from 55.4 deaths per 100,000 to 37.2. For males the comparable drop was only 13 percent—from 59.7 to 51.9.

In a similar manner, opposing trends for the sexes in mortality from cancer of the genital organs have contributed to the current excess of male mortality from cancer of all sites combined. While mortality from genital cancer rose for males, from 10.6 per 100,000 in 1930 to 15.3 in 1956, the rate for females declined about 25 percent, from 31.9 to 23.8.

The better female record probably results in part from recent advances in obstetrical technique, from their greater propensity to seek medical care (even exclusive of pregnancy), and also from the widespread use within the last 10 years of the Papanicolaou "vaginal smear test" for early detection of uterine cancer. Among males, most of the mortality from cancer of the genital organs (94 percent in 1956) is from cancer of the prostrate. Detection at this site often occurs at a late stage of the disease, when a cure is difficult to achieve.

Mortality from cancer of the breast—restricted almost entirely to females—has changed little since 1930, despite the accessibility of this site and intensive educational campaigns to promote early detection and case finding. In 1956 breast cancer caused 23 deaths per 100,000 females, and accounted for nearly one-fifth of the total female cancer mortality.

DISTRIBUTION AMONG POPULATION GROUPS

In 1914 (the first year these data were available), mortality from cancer among the white population exceeded the rate for nonwhites by 30 percent. But by 1950 mortality for the two groups was approximately the same. By 1956 the rate for nonwhites actually exceeded the white rate by one-eighth.

Much of the more rapid rise among nonwhites is attributable to their increased mortality from cancer of the digestive system, especially for males, in contrast to a decline among whites. Similarly, the rise among nonwhite males of mortality from cancer of the genital organs was more rapid. But cancer of the skin, an accessible site and only a minor component of the total of cancer mortality, is twice as frequent among whites.

Cancer mortality is highest in the urban and metropolitan areas of the United States and in the industrial Northeastern and North Central States. It is lowest in the South Central and Mountain States. The industrial Northeast exceeds the remaining regions of the United States, especially in mortality from cancers of the digestive and respiratory systems and the breast. The South, low in other forms of cancer, exceeds the national average in skin cancer incidence, especially among whites.

ILLNESS AND SURVIVAL

In 1959 over 700,000 Americans will be under medical care for cancer, and about 450,000 new cases will be diagnosed for the first time. More than 40 million Americans now living—one in every four, according to present rates—will eventually have cancers.[7]

No real cure is yet available for all cancers, and the results of treatment are still generally defined in terms of years of survivorship free of clinical evidence of the disease. However, the prognosis for cancer patients is more favorable now than formerly, especially where there has been early diagnosis.

A few years ago one cancer patient in four was being saved—alive 5 years after diagnosis. Today the proportion is one in three. Currently, the number thus saved is estimated at 150,000 annually. There are 800,000 Americans alive today who have been cured of cancer—free of the disease at least 5 years after diagnosis. And at least an additional 500,000 cancer patients, diagnosed and treated within the last 5 years, will live to become cured.

The record of improvement has been clearly shown in a study of survivorship in Connecticut. The portion of male cancer patients in that State surviving at least 5 years from the time of original diagnosis in 1935–40 was 24 percent; the figure rose to 32 percent for those diagnosed during 1947–51. For females the corresponding improvement was from 33 to 45 percent.[8] This improvement in survivorship has involved most of the major sites, including some of the more difficult, inaccessible areas. But the greatest improvements were reported for cases diagnosed at an early stage of the disease.

Surgery and radiation, still the only effective methods of cure, are successful only when the cancer cells have remained localized in areas which permit such treatment.[9] These techniques have become immensely more effective than in former years, partly because other scientific and medical advances now permit them to be used more extensively against tumors that were previously considered inoperable or inaccessible to radiation. The operative mortality rate has decreased, and great advances have been made in knowledge of the radiation sensitivity of different types of cancer.

One of the most promising fields for research, and one which has expanded greatly in recent years, is chemotherapy. Some therapeutic chemicals have already shown effectiveness in temporarily halting the progress of certain cancers, alleviating pain, and rehabilitating the body to provide greater chance for survival. These chemicals are now regarded as valuable supplements to surgery and radiation. Moreover, hormones as well as radioactive substances have proved valuable against some forms of malignancy.

FUTURE RESEARCH GOALS

Although much is being done against the disease today,[10] far more could be accomplished merely by bringing present knowledge more effectively to bear. Perhaps as many as 75,000 cancer patients will die this year who might have been saved by earlier and better treatment. The hope for the future lies in research into the nature and etiology of the disease, to discover an effective diagnostic test suitable for large-scale screening, and to find more effective therapies than those known at present.

---

[1] Comparisons of long-term trends are based on mortality rates adjusted to the age distribution of the 1940 U.S. population and, except for the discussion of specific sites, to the Fifth Revision of the International List of Diseases and Causes of Death. Data for 1958 are estimated by the research department of Health Information Foundation.

[2] As used here, this term refers to epidermoid and undifferentiated types of carcinoma of the lung, but not adenocarcinoma.

[3] Statement by Surgeon General Leroy E. Burney of the Public Health Service, Department of Health, Education, and Welfare, on Excessive Cigarette Smoking and Health, July 12, 1957; and statement by John Vaughan-Morgan, parliamentary secretary of the Ministry of Health, to the House of Commons, June 27, 1957.

[4] A malignant disease of the blood and bloodforming organs, involving the excessive formation of white blood cells.

[5] See W. M. Court-Brown, "Radiation-Induced Leukemia in Man, With Particular Reference to the Dose-Response Relationship," Journal of Chronic Diseases 8, 1:113–122 (July) 1958.

[6] This decline may be partly spurious, representing little more than improvements in the accuracy of reporting or changes in classification of primary site.

Dedication Ceremonies of the New Supreme Court Building in Brooklyn

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of some of the remarks made at the dedication ceremonies of the new Supreme Court Building in Brookyln, N.Y., which took place on January 5, 1959.

These include the observations of Presiding Justice Gerald Nolan of the supreme court's appellate division, second department; an address by Justice Anthony J. DiGiovanna, chairman of the board of justices of the second judicial district of the supreme court; and the benediction by the Right Reverend Monsignor Edward P. Hoar, one of Brookyln's most distinguished religious

leaders. All three are men of great esteem in Brookyln and I am privileged to know them all personally.

Their remarks are as follows:

Presiding Justice NOLAN. I, too, am sorry that Mayor Wagner was unable to be here today because I thought that we might have had the opportunity to express to him in person our deep gratitude for his many fine achievements in the aid of the administration of justice and the sponsorship of this magnificent Supreme Court Building. He cannot be here, so we shall proceed with the program.

I would like to say just a few words about one who comes last among your speakers but who is by no means least. Young in years, but old in judicial experience, an able justice of the supreme court, he takes the regular turn with the other judges. In addition to that, he sits on that great intermediate appellate court, the appellate term of the second department, which decides so properly and of course so correctly many important appeals from courts of limited jurisdiction.

In his spare time, after he has finished with those duties, he discharges a great quantity of other responsibilities. By the discharge of those responsibilities and the performance of those duties the supreme court of the Second Judicial District is enabled to run smoothly and has done so for many years, and I know it will do so in the future under his able guidance and leadership.

It is indeed a privilege and a pleasure to present at this time the distinguished chairman of the board of justices of the second judicial district of the supreme court, the Honorable Anthony J. DiGiovanna. [Applause.]

Hon. ANTHONY J. DIGIOVANNA. Reverend clergy, Judge Froessel, our visitor from across the river, our presiding justice of the first department, Justice Bernard Botein, the distinguished jurists, judges of the appellate division, my fine and esteemed colleagues of the supreme court, our visitors from the other and varied courts here in Brooklyn and throughout the city of New York, our distinguished presiding chairman and presiding justice of the appellate division of the second department, distinguished speakers, members of the bar, first of all, Justice Nolan, I thank you very much for the very kind expression of opinion which you have given the people who are kind enough to attend this morning concerning me and concerning the work of our supreme court. I am gratified to hear such expression, gratified to know what your feeling is concerning the work that has been done by our justices of this court.

Of course, credit does not go to me alone, but it does go and it should go to all the other 14 justices of the supreme court of the second judicial district who have done, as has been pointed out by our distinguished previous speaker, Andrew Roscoe, a great, a magnificent and a devoted job in trying to clear up the congested calendar as much as we have been able to accomplish.

The ceremonies today see realized a dream which has taken so many years in fulfillment, but which now supplies a concrete and realistic accomplishment in achieving a much needed Supreme Courthouse Building. This courthouse will provide more adequate and substantial judicial and trial facilities, and avoid the embarrassment and inconvenience which has resulted from our conducting the judicial and legal business in an antiquated, dilapidated and outworn building.

I extend my own personal thanks and those of my colleagues to the mayor of the city of New York, to Borough President John Cashmore, and to Commissioners Frederick Zurmuhlen and Joseph Spagna and to their representatives for their cooperation and help in the execution of plans and the furnishing of the equipment and courtroom and chamber facilities. I am certain that an inspection of our building will be most pleasantly revealing in its attractiveness and utility. Among its many unusual and startling features are six detention and confinement cells, as well as courtrooms panelled in eight different types of wood with indirect fluorescent lighting, acoustical ceilings, and marble walls and terrazzo floors.

Commissioner Zurmuhlen has told me that this is the first courthouse ever built in these United States which is completely air conditioned from top to bottom and throughout its corridors and courtrooms. The commissioner of public works can be justly proud of his tremendous contribution in the construction of our new courthouse.

I can not let this occasion go by without expressing my appreciation to those members of the judiciary who pioneered in the planning of this magnificent temple of justice. I do not know how many of you realize that for many years, even when I first became a justice of this court on January 1, 1949, there has been a new courthouse committee. It was and has been the function of this committee, selected by the board of justices, to work together with the mayor of the city of New York and with the various heads of his city departments in planning, designing, and constructing the proposed new courthouse.

Some of these justices are now retired, and, sadly, some of them have gone to their great reward and have passed from our midst. Happily, several of the former members of this committee, who are now justices of the appellate division, are with us today, and I would like them to know that the resident justices are ever mindful of the asistance they have rendered in making possible the erection of this building.

Of course, I cannot and should not forget to give credit to our present resident justices who have been members of this committee. I would like to single out its present chairman, Justice Vincent Keogh. All of the 15 justices of our court have, during the past 2 or 3 years, become architects, engineers, and interior decorators, and each has had his own ideas concerning how the building should be constructed and the manner in which the courtrooms, their facilities and their own individual chambers should be painted, decorated, and furnished. But Justice Keogh's patience and perseverance were able to successfully satisfy and compromise these minor criticisms, and his strong and enthusiastic leadership of the committee has evoked our unanimous commendation and approval.

I, therefore, take this occasion to express to him the appreciation of our board of justices for his unselfish, conscientious, and untiring efforts. And I may say that before we gathered here this morning, a presentation was made in the cloakroom of a gift from all the justices of our court to Justice Keogh in appreciation for his great work.

I take this opportunity, also, to give thanks to the general clerk, the Honorable James V. Mangano, and the personnel of the court who worked under his supervision and who were assigned to the committee for giving the committee their assistance and support.

I know that you will bear with me if, on this occasion, I express, as briefly as possible, the thoughts which impress me with the importance of these ceremonies. As we gather on this impressive occasion, whose dignity and importance is enhanced by the presence of so many eminent jurists, distinguished public officials, and members of the bar, we do well to pause to reflect upon its nature and significance.

We are assembled to dedicate a new courthouse of the Supreme Court of the State of New York. It is an event and purpose worthy of dedication. By its true and classical definition, a dedication implies the setting apart and consecration to high and noble purposes. It is a solemn act which is historically reserved for temples and places of worship.

Yet, it is indeed appropriate that we dedicate this courthouse, for it is a modern temple—a temple of justice. Here the majesty of the law will be invoked to safeguard the rights and freedoms of all peoples who seek its protection and demand the equal and impartial administration of justice.

As Judge Conway, our chief judge of the court of appeals, has so beautifully expressed it: "The history of the supreme court is a proud honored one. Its panorama must give pause to anyone who would, for whatever reason, weaken it or destroy it. Guardian of the right it has always been; impregnable in its virtue; impervious to passing fads and fancies; dispenser of even-handed justice; resolute and unchanging in its ideals despite wars, public clamor, social unrest; the resort of freemen who seek justice, confident of receiving it."

It is a place where the great heritage of liberty and freedom, enshrined in our Declaration of Independence and our Constitution, will be perpetuated for all generations to come.

Although this reflective inventory is of importance for all citizens, it is of particular significance to lawyers and judges, for they have devoted their lives to the study of the law of the land, and can best appreciate the role of the law in the maintenance of peace, tranquillity and order.

The greatness of civilizations and their people are often almost entirely judged by their contribution to the development of law and their ability to have substituted the rule of law for that of force and violence. In this respect, we are confident that future historians will portray the efforts of this generation, if not in glowing terms, at least approvingly.

The truth will reveal that, although we have not yet completely succeeded, no reasonable effort has been spared in our constant striving to improve the administration of justice.

This new building stands as eloquent testimony to our efforts and sacrifices in lifting the dignity of the law itself, and the place where it will be administered by devoted judges, and practiced by dedicated members of the legal profession.

Lawyers have reason to be justifiably proud in any ceremony which dedicates a temple of justice and upholds the dignity of the law and our cherished American heritage. In such an environment their thoughts naturally turn to the leading role that their profession has played in the growth, development, and survival of this great Nation which was founded upon a belief in God and the equality of man. It is in this connection that the American lawyer can proudly proclaim to the world that, of the 56 signers of our Declaration of Independence, 33 were lawyers, and that, of the 55 delegates to the Constitutional Convention which was held in Philadelphia in 1787, 34 were lawyers.

Let it be remembered, however, that the importance of this ceremony is not limited to bench and bar. It is not confied to any segment of our society. It is a ceremony for all Americans. It is a ceremony for all who reap the rich harvest of liberty and justice—the glorious bequest of our forefathers. It is, therefore, fitting that on an occasion such as this we should also emphasize our national ideals and rejoice in the benefits of liberty under law.

For all of this we are grateful and give thanks to Almighty God and to our forefathers who established this great Republic of ours and who have made our American

way of life beneficent and beneficial to all its citizens who have sought or will seek the fruits of a true administration of justice.

It is now our sacred duty to transmit this heritage of freedom and liberty under law to our children and all future generations. With God's help and our firm and resolute determination, we will perform it well. [Applause.]

Presiding Justice NOLAN. Ladies and gentlemen, during my spare time during these ceremonies, I have looked out over the audience. It has been a great pleasure to see here today so many past presidents of the Brooklyn Bar Association, so many of our distinguished practicing lawyers, so many fine, prominent, and distinguished citizens of the Borough of Brooklyn.

I wish that I could call on each and every one of you so that you might take some part in this very important and historic ceremony. I wish that I could call on my distinguished brethren of the bar for whom, of course, I have great respect and a very sincere affection. I would like to hear from each of them.

I am particularly annoyed that I have not had the opportunity to call on a representative of the ladies whose presence has made these ceremonies, I assure you, much more enjoyable. But I have been working, as you know, under orders from Judge Keogh, who is a tough boss, and I try to obey my orders, to the best of my ability.

I am going to break the rule just in one respect because I think that I should. We have many welcome visitors here today. I am not going to try to name them; that would be useless. But I am going to mention just one.

With his customary modesty he has told me, before the ceremonies commenced, that he did not wish to make an address, that he would like to sit quietly with his friends in Brooklyn and enjoy the dedication with them, the dedication of this courthouse.

I am going to respect his wishes. I am not going to call on him for an address, but we are highly honored that he is here today, and I am going to ask him if he will just rise for a moment so that I can present him to you.

We in our court have a very cordial relationship with the appellate division of the first department, with all the judges of the first department. The fact that we have that relationship is due in no small measure to the personality of the able and distinguished presiding justice of that court.

I am going to ask him if he just won't stand up for a second. Judge Botein. [Applause.]

The Judge, with his customary paternal spirit for the members of his court, has just informed me that Jim McNally and Owen McGivern are in the audience. Even with my bad eyesight, Bernie, I found that out. We are very glad to see them here.

May I say again that we are glad to see you here, Judge Botein.

Now, may I again have the privilege, in closing these ceremonies, of calling on, I think, Brooklyn's most beloved citizen to pronounce the benediction, the Right Reverend Monsignor Edward P. Hoar.

(All arose during the benediction.)

The Right Reverend Monsignor EDWARD P. HOAR. In the name of the Father and of the Son and of the Holy Spirit, Amen.

We give Thee thanks, Almighty God, in whom all things begin that are good, and by whom all things that are good are completed.

We thank Thee sincerely from the bottom of our hearts for giving us good purpose not only to see the culmination and the preparation of this temple of justice, but also to have realized by these speeches the ideals which are being practiced daily in this and other courts in our good land which is so much blessed by Almighty God that we feel that we can never express or practice the manifestation of our gratitude; for here justice is what it is supposed to be, not by the permission of any tyrant, no matter how much he might be apparently important in his own mind, or even by the immediate servants of his tyranny, but because these good men, the judges of this and other courts, realize that it is Almighty God who gives the justification for the justice that we know and live by.

We thank Thee, therefore, for having given us not only that marvelous gift, the Constitution made by the forefathers of our land, but also for the practice of the principles and the laws which that Constitution makes possible for all of us.

We thank Thee again for having let us know that You have given us a body of men through the ages since the old courthouse was built, and even before, who will be, no doubt, the predecessors and exemplars of another generation of judges and keepers of justice.

For that reason and for that hope we thank Thee, Almighty God, and trust that we will be always appreciative of it, because in this great land of ours we may say, as the inspired writer, "Justice and Peace have kissed."

In the name of the Father and of the Son and of the Holy Ghost. Amen.

Presiding Justice NOLAN. Ladies and gentlemen, I am now about to do what every sensible judge does at every possible opportunity. I am going to turn this meeting back, and the court back to the clerk of the court, the Honorable James V. Mangano, who has, I think, an important message for you.

Hon. JAMES V. MANGANO. Ladies and gentlemen, will you please remain standing while we recite the Pledge of Allegiance to our Flag, and upon concluding the recitation, will every one please remain in their seats while the justices leave the room.

Will you recite after me.

(Pledge of Allegiance recited by the audience.)

On behalf of the board of justices, I wish to express our best wishes to you for a very happy New Year, and thank you for your attentiveness and the manner in which you have participated and cooperated in these ceremonies.

Who Are the Jobless?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. MULTER. Mr. Speaker. We are all pleased with the news that the proposed march on Washington by the unemployed has been called off. Nevertheless, the problem exists and it requires our earnest attention. In this connection, I commend to the attention of our colleagues the following editorial which appeared in the New Republic of February 23, 1959:

WHO ARE THE JOBLESS?

As of last month, 76 of the 149 major areas on which the Department of Labor keeps unemployment records were ranked in the D, E, and F classifications, as having 6 percent or more of their labor force unemployed. Eleven of these areas were in the F grouping, with 12 percent or more of their workers looking for work and unable to find it: Detroit and Muskegon, Mich.; Huntington, W. Va.; Buffalo, N.Y.; five cities in Pennsylvania; and two in Puerto Rico.

In the week of January 11–17, 4,724,000 people were looking for work in a civilian labor force of 67,430,000, a rate of 7 percent compared with a 6.7 percent rate 1 year ago. Who are these unemployed; how long have they been without work; what are their regular jobs when they have them?

As of now, 3,282,000 of the jobless are men; 1,441,000 of them are women. Compared with last year, 141,000 more men are looking for work and 99,000 more women.

Unemployment is always a problem among the school-leaving young: this year, 216,000 boys between 14 and 17 are looking for work as compared with 145,000 last year. The girls are doing better: where 72,000 of them were jobless last year, only 48,000 are without work today.

Among workers over 18, the biggest group last year were the 752,000 unemployed 18–24 year old men; this year, the biggest group are the men between 25 and 34—730,000 of them. Among men aged 18 to 45, the 1,977,000 looking for work are 99,000 fewer than last year. Among women of these ages it's the other way: 121,000 more of them are jobless.

Among older workers, the men over 45 looking for work—1,089,000 of them—number 169,000 more than a year ago. The number of unemployed women—8,000 fewer—is 369,000.

This year's figures differ from last year's also in the length of time the unemployed have been looking for jobs. Last year 2,007,000 of the 4,494,000 unemployed had been job-hunting for only from 1 to 4 weeks; a further 1,622,000 had been out from 5 to 14 weeks; 556,000 from 15 to 26 weeks; 309,000 longer.

This January, many more people had been out for a long time: While 1,861,000 had lost their jobs within the last 4 weeks and 1,488,000 had been unemployed from 5 to 14 weeks, 557,000 were in the 15 to 26 week group, and the group without work for more than 26 weeks had jumped from 309,000 to 818,000.

Available figures on unemployment in various occupations gives some idea of which workers have shared in the business recovery, and which have been left aside. In steel, the unemployment rate, 11.2 percent in January 1958, has dropped to 8.2 percent (but in January 1957, it was only 2.6 percent); in autos, there has been an over-the-year improvement from 14.7 to 10.3 percent. For manufacturing as a whole, the year's increase has taken the rate only from 8.9 to 7.9 percent; in nondurable industries it is little changed at 7.5 percent, though in apparel an 11 percent rate a year ago has deteriorated to 12.5 percent.

Mining is worse off this January than last, with a 9.6 percent unemployment rate climbing to 11.7; construction, always badly off in cold weather, stands at 19.3 percent in comparison to 18.7 a year ago. Railway and railway express joblessness, at 9 percent last year, is now 8.4, but in other forms of transportation the rate has gone up from 5.7 to 8.4 percent.

Even in the service trades which, along with government employment, have fluctuated little recently, the rate is up from 3.5 percent last year to 4.7 now.

One cheerful note is the improvement in hours worked by employees who are on part-time for economic reasons: A pickup in the hard goods industries—fabricators of machinery and equipment for producers—where unemployment usually lingers longest after a business upturn, has reduced the number of part-timers from 1,953,000 a year ago to 1,255,000 today.

Morris Forgash: Champion of Our Railroads

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. DOLLINGER. Mr. Speaker, Morris Forgash, of New York City, whom I am proud to claim as a dear, personal friend, is one of the greatest businessmen of our day. He is hailed as the champion of our railroads and is determined to help put the railroads back on the tracks financially.

His rise in the transportation business was meteoric. He is president of the United States Freight Co., which position carries the responsibility of chief executive officer of all United States Freight subsidiaries. His business responsibilities are tremendous, but he unselfishly gives of his spare time to philanthropic and community endeavors. He is a man of integrity, honor, and kindliness, as well as of dynamic action and great capabilities.

The New York Times of February 22 carried an article about Mr. Forgash and I am including it in the CONGRESSIONAL RECORD so that all Members of Congress may read it:

[From the New York Times, Feb. 22, 1959]

PERSONALITY: CHAMPION OF THE IRON HORSE—FORGASH IS STRIVING TO HELP RAILWAYS, CURB TRUCKERS—UNITED STATES FREIGHT CO. HEAD IS BIG PROPONENT OF PIGGYBACK

(By Robert E. Bedingfield)

Morris Forgash is determined to help put the railroads back on the tracks financially and to confine the truckers to within a 400-mile radius of the spots where their cargoes originate.

The chief tool with which he expects to work these miracles is his ability as a salesman of transportation, sharpened during 41 years of working for the United States Freight Co. in capacities ranging from stenographer to president. He also will ring in the Interstate Commerce Commission if that is necessary.

Mr. Forgash tends to minimize the enormous obstacles in his path, because, as he puts it, "the economics of the matter" is on his side. Railroads, he said, in a recent interview, must stop thinking of pounds or even tons of freight and begin to think in terms of carloads, which are the smallest units that they really move. He concedes that trucks with their door-to-door mobility have a vast advantage over any distance that can be spanned between morning and night, but insists that after a day's move their inherently higher costs make them the least economic handlers of freight.

BIGGEST FREIGHT FORWARDER

Mr. Forgash is not to be taken lightly when he announces a program, no matter how ambitious. Under his guidance as president (1941 to date), United States Freight's annual gross revenues have grown from $50 million to more than $175 million. Moreover, in the last 5 years, while his company's gross has moved up 20 percent, net profits have jumped more than 100 percent.

U.S. Freight, through 31 subsidiaries, forms the Nation's largest freight-forwarding organization. The company's forwarding subsidiaries operate solely in the l.c.l. (less-than-carload) field. A carload is about 30,000 pounds. Using local and over-the-road trucks, the freight forwarder is the middleman in the transportation field. He picks up less-than-carload merchandise at a factory, consolidates it with other products going in the same direction, ships the lot via rail or truck and makes delivery to a consignee's door. He buys transportation wholesale, at the carload rate, and retails it at a higher price, roughly the l.c.l. rate.

The first point of his program to help put the railroads back on their feet is to have them take a more aggressive attitude toward handling freight in piggyback fashion—moving it in loaded highway trailers or containers on flatcars. About 48 of the Nation's 113 big class I railroads are using this method. The service has been growing rapidly in the last 3 or 4 years, but Mr. Forgash laments the railroads' cautious approach to it.

Last year, for example, about 1 percent of rail freight carloadings went piggyback.

"Yet, this type of service," Mr. Forgash said, "is the one way that the rails can say to the truckers 'I can do what you can do, only I can do it better.' "

PIGGYBACK ADVANTAGES

Piggyback's advantages include an incentive toward speed—within the last year under pressure to get the forwarders' business, the rails cut the time of Chicago-California shipments from fifth night delivery to third night and lowered terminal and handling costs.

The costs are lower all around—for shipper, forwarder and railroad—because the freight doesn't have to go through a series of costly and expensive switching operations in large terminal centers. Once a shipment reaches the city of destination, the piggyback freight train just stops and the truck tractors come along and take the trailers or containers off the flatcar and carry them directly into the consignee's plant or warehouse. Mr. Forgash has been endeavoring to show the railroads the extent of the available economies.

He cited the fact that in a recent month one of his company's subsidiaries moved 765 boxcars of freight from Chicago to Los Angeles, with an average loading of 19,633 pounds a car. The railroads received $658 a car, on average, for handling the movement. During the same month, however, the company moved 94 flatcars, each carrying two loaded highway trailers, piggyback between Chicago and Los Angeles. The average weight a car was 61,918 pounds. The average revenue paid the railroads was $1,009 a car.

In this piggy-back movement, United States Freight's subsidiary provided the railroads not only with the loaded trailers, but with the flatcars, too. This is what in the transportation industry is called plan IV piggybacking. There are three other types. Under plan I, the rails haul the trailers of the common carrier motor trucker. Plan II is strictly a railroad service, with the railroad moving the freight in its own trailers on its own flatcars. Plan III requires the shipper or forwarder to provide the trailer, but the railroad provides the flatcar.

Mr. Forgash favors piggybacking, so long as it isn't of the plan I variety. In fact, he means to go before the Interstate Commerce Commission very soon and demand that plan I piggybacking be stopped.

"When a motor carrier goes off the highway onto the back of a railroad," Mr. Forgash complains, "the trucker is no longer operating as a common carrier in accordance with his certificate [Interstate Commerce Commission authority]. The arrangement certainly isn't a true joint rate either in the accepted sense of the term. If you get down to the substance of the law, and outline what the motor carrier actually does alongside the forwarder as defined in the Interstate Commerce Act you will be hard put to tell the difference."

As for the other three modes of piggybacking, which Mr. Forgash concedes are legal, he prefers plan II or III. He expects plan IV to remain only so long as it serves an economic purpose. Plan IV holds an appeal to the railroad that isn't in a position to finance large amounts of new specialized equipment. It was inaugurated only last year.

HE GENERATES ENTHUSIASM

Mr. Forgash is a man able to generate a tremendous enthusiasm for any idea.

His mission of rescuing the railroads is not a vision of youth; he is 58 years old. He's assured of an income of $108,000 a year for the next 7 years as president of his company, $50,000 a year thereafter on his retirement, but still he goes about his work as if every day is most important of all. He's been going at everything he ever undertook at supersonic speed ever since he left Boy's High School in Brooklyn in 1918. The year of the Armistice he found his first job selling Florida water, a men's cologne.

But that was no challenge to the aggressive youth, so he promptly went to an employment agency which helped him get his first stenographic position at Universal Carloading and Distributing Co., a United States Freight subsidiary. He moved up the ladder in nonstop fashion and, by 1929, had reached the post of general manager. In 1931, he was made assistant to the president and 10 years later obtained his present position, which carries the responsibility of chief executive officer of all United States Freight subsidiaries.

Mr. Forgash was married in 1926 to the former Natalie Frendell. Mrs. Forgash has long since abandoned any ideas of slowing down her husband's hectic pace and so has the Forgash's chauffeur.

"When the boss gets in the car," the chauffeur says, "it is a lot easier to let him take the wheel and let him do it his own way than have him tell you how to do it."

Eulogy for the Late Bernard Austin

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. ANFUSO. Mr. Speaker, the late Assemblyman Bernard Austin represented the Fourth Assembly District of Brooklyn in the State legislature in Albany for many years. He died most unexpectedly on January 6, 1959, and his passing is a great loss to our community.

On February 26 the Williamsburg Post, No. 1004, of the American Legion, of which Bernard Austin was organizer and first commander, will hold a special memorial service for him. I have been invited by the post commander, Leo Price, and by Ira D. Brav, chairman of the memorial committee, to deliver a eulogy. I have prepared a few remarks expressing my feelings and thoughts regarding the deceased and wish to insert these remarks in the RECORD at this time:

EULOGY FOR BERNARD AUSTIN

I join with you on this sad occasion in paying tribute to the memory of a dear and departed friend with whom I was close for many years. His passing is a great personal loss to me. The 4th Assembly District, which he represented in Albany since 1935,

is a part of my congressional district. I shall always remember the many times when we campaigned together and when we collaborated in helping constituents with their personal problems, as well as the community at large in its welfare, educational, civic and other problems.

It is now close to 2 months since Barney Austin has left our midst and has gone to the Great Beyond. For me, it is still difficult to believe that he is no longer with us. In the prime of his life he left his dear ones and his numerous friends who knew him so well and loved him so much. He left a great void in their hearts—one which will never be filled, one which will never be healed.

How weak and fruitless must be any word of mine to console his near ones and dear ones from the grief of a loss so overwhelming. Yet, I cannot refrain from bringing to them the consolation that may be found in the fact that Barney Austin was loved and highly respected by all who knew him.

It is sometimes said that while, on the one hand, the Black Angel destroys a mortal, on the other hand it presents him to us in boldest relief. The living man is too close to us, too much a part of us, to be viewed objectively. Death reveals him in his entirety. Thus we now can visualize in its fullness and grandeur the unique personality that we knew as Bernard Austin. How rich and how beautiful was the life and the soul of him whose achievements meant so much to so many of his generation.

And what is it that stands out most in this hour of bereavement? It is the inner man himself, his honesty, his sincerity, his unselfishness, his wise counsel, his friendship. There was no cause touching upon the welfare of the people of our community that did not find in him a staunch and devoted supporter. He was a man of keen intellect, a person of good judgment, one who was able to see through a problem to its end.

When we think of Barney Austin, we think of the words of the poet who said:

"Here was a man whose heart was good,
Who walked with men and understood.
His was a voice that spoke to cheer,
And fell like music to the ear.
His was a smile men loved to see,
His was a hand that asked no fee
For friendliness or kindness done.
And now that he has journyed on,
His is a fame that never ends,
And leaves behind uncounted friends."

Barney Austin was indeed a man of leadership, one of whom it can be truly said that his noble deeds have won for him a devoted following. These noble deeds will live forever in the hearts and in the minds of his many friends who came to pay their tribute to him today. He was a pillar of strength in our community for many years, and here among his friends his name will always occupy a foremost place of honor and love.

"And now he rests; his greatest and his sweetness
No more shall seem at strife;
And death has moulded into calm completeness
The status of his life."

May his memory be blessed and honored.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

The Corregidor War Memorial Which Will Cost $17,500,000 Should Be Replaced With Something More Fitting and Modest, Says New York Times

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the New York Times advised us in an editorial on February 26 that protests are being made in Manila against the plan to spend $7,500,000 to erect an elaborate Corregidor-Bataan Memorial in honor of the Filipinos and Americans who died there together. It points out that suggestions have been made that the actual memorial be much more modest and that part of the funds be used for permanent projects in the public interest.

Even though the Armed Services Committee of the House has favorably recommended the proposed Corregidor-Bataan Memorial there does seem to me to be a number of reasons why further consideration should be given to this matter before it is voted on by this body.

In view of the deteriorating relations with the Government of the Philippines today it seems to me unwise to take any step, such as erecting a war memorial that has already inflamed the opinions of many, which conceivably might further unsettle things.

I include here the editorial from the New York Times, as well as the text of a recent report on the Corregidor-Bataan War Memorial which was given to the congressionally chartered National Music Council by Dr. Herbert Zipper, director of the Manila Symphony Orchestra:

[From the New York Times, Feb. 26, 1959]

THE CORREGIDOR MEMORIAL

Protests are being made in Manila against the plan to spend $7,500,000 to erect an elaborate Corregidor-Bataan Memorial in honor of the Filipinos and Americans who died there together. It has been suggested that the actual memorial be much more modest and that part of the funds be used for permanent projects in the public interest. In this country it has been suggested in some quarters that the memorial fund might endow a much-needed cultural center.

These objections to the memorial plan are valid. The monument to the men of Bataan and Corregidor ought to be a living thing, not some collection of lifeless marble. The money can be spent in a way that will do even greater honor to the men who are memorialized.

An attractive alternative is the construction of a good children's hospital and a convalescent home. "Topside," on Corregidor itself, would even be a possible location. These services are badly needed and their provision, surely, would be an ideal way to pay our tribute to the dead on behalf of the living. The Filipinos, we are convinced, would be in complete agreement with this viewpoint.

COMMUNITY MUSIC CENTER
OF THE NORTH SHORE,
Winnetka, Ill., January 27, 1959.

Hon. FRANK THOMPSON, Jr.,
Congress of the United States, House of Representatives, Washington, D.C.

SIR: Being aware of your genuine interest in cultural matters through the excellent bills you have introduced in Congress, I take the liberty of drawing your attention to the Corregidor-Bataan War Memorial as planned by the War Memorial Commission.

I am not exaggerating in stating that if the present plan is to come to fruition, it will do a great deal of harm to the prestige of the United States in the Far East. For this reason, I take the liberty of enclosing a report that I gave at the last general meeting of the National Music Council in New York and a copy of a resolution passed unanimously by that body.

For the past 20 years I have been the musical director of the Manila Symphony Orchestra in the Philippines, where I spend 3½ months every year; therefore, I am rather well acquainted with conditions in the Philippines and with the feeling in regard to the memorial of a goodly number of Filipinos in high places. The American community in Manila practically unanimously holds the views as expressed in the report.

May I assure you of the sincere appreciation of my associates and of myself for anything you can do to bring about a more realistic approach to the memorial question, and to make your voice heard when an appropriation for this project comes to the floor of the House.

Needless to say, I am at your service for any further information.

Believe me to be,
Yours very truly,
Dr. HERBERT ZIPPER.

CORREGIDOR-BATAAN WAR MEMORIAL

(A report given at the general meeting of the National Music Council on December 18, 1958, in New York City)

The United States is about to erect on Corregidor Island in the Philippines a war memorial of gigantic proportions. It appears that if present plans are not changed now in the 11th hour, we are bound to become, unwittingly, a party to a monstrosity that will do a great deal of harm to the prestige of the United States.

Instead of planning for a memorial that could be useful to the living, an abstract monument has been designed that will serve no useful purpose, to stand on a spot where it cannot be seen but by a few, on a rock in the sea far out in Manila Bay, remote and hardly accessible.

In 1953 the Corregidor Bataan Memorial Commission was created by act of Congress and charged with the task of making a study for the survey, location, and erection on Corregidor Island (in Manila Bay) of a building and other structures and the use of Corregidor Island as a memorial to the Filipino and American soldiers, sailors, and marines who lost their lives while serving in the Pacific area during World War II. This task should be accomplished, according to the act, in cooperation with a similar agency which may be appointed in the Republic of the Philippines.

Such an agency—the National Shrines Commission—was created subsequently by President Magsaysay in the Philippines.

In August 1957, President Eisenhower submitted to Congress a report of the U.S. Memorial Commission in which their accomplishments were enumerated: mainly, the holding of a national contest for an architectural design of the proposed memorial. Forty-three architects and architectural firms entered the contest which was judged by a jury of 11 members, seven of which were prominent architects of the United States and five high ranking officers of the U.S. Armed Forces. The winning design submitted by Naramore, Bain, Brady & Johanson, of Seattle, Wash., was awarded a prize of $10,000.

It is significant that, for some strange reason never made public, the contest was confined entirely to the United States. Filipino artists were not invited to compete in the contest nor invited to act as judges of the contest. In other words, the people of the Philippines were presented with an accomplished fact. Even the U.S. Memorial Commission did not accept in a formal meeting the winning design as the final plan for the erection of the monument, instead and I quote from the printed record: "Several attempts were made by the chairman (the Honorable Emmet O'Neal) to hold the meeting of the Commission members, but in each case a quorum could not be obtained. In lieu of a formal meeting, eight members were contacted personally and on May 21, 1957, these members of the Commission accepted the recommendation of the final jury of award and designated the design submitted by Naramore, Bain, Brady & Johanson, of Seattle, Wash., as the Commission's choice."

The Philippine National Shrines Commission did not give a formal approval of the design, although the chairman of the Philippine Commission was in Washington and had meetings with the chairman of the U.S. Commission on May 2 and May 9, 1957, the record states "concurrence in this choice has been requested of the Philippine National Shrine Commission but had not been received as of June 30, 1957."

As I have been told subsequently, a majority of the members of the Philippine Commission were dubious about the whole matter but they felt that at this point when the American Commission went as far as it did without Philippine participation, it would be impolite and embarrassing to raise objections or to tell the U.S. Government how to spend its money.

The winning design in the architect's description "Is essentially in the shape of outstretched arms, an inherent form of hope and supplication universally understood. It was intended that the form be abstract enough to permit the individual viewing it to read into it values of his own experiences."

The design was published in the Philippines during the past summer and it turns out, that viewed by Filipinos, the memorial looks like a pair of carabao horns (the carabao is a water buffalo, the working animal of the Philippines).

There is now legislation before Congress favorably recommended by the Armed Services Committee of the House that "authorizes that there be appropriated to the Corregidor-Bataan Memorial Commission an amount equal to amounts, not in excess of $7½ million, which may be received by the Secretary of the Navy from the sale of vessels stricken from the Naval Vessel Register."

These are the facts as of today. I should like to state, without hesitation, that the realization of the well-meant intentions to create a visible expression of the bonds that exist between the United States and the Philippines will not be achieved if the proposed monument is erected. The purpose, as stated by the Commission, that: "Corregidor, properly memorialized, will be extremely important to the Philippines and our foreign relations work in the Far East" will not be achieved if the proposed monument is erected. Present plans are ill conceived and the design adopted unfit for the Philippines.

Corregidor is a small island at the mouth of Manila Bay nearly 30 miles distance from the waterfront of Manila. The island itself can be seen from Manila only on very clear days. The monument, although 263 feet in height, contrary to the claims of the Honorable Emmet O'Neal will not be seen from Manila. The island is not easily accessible. The claim that it will attract a large tourist trade is wholly unrealistic and disregards the facts of geography and economy. The claim that it will be seen from the air disregards the fact that not a single major air line passes in sight of Corregidor. The claim that the memorial will serve as "A forum from which the doctrines of democracy can be proclaimed to the people of the Far East" is aptly answered by a columnist in the Manila Evening News: "To whom? The sea gulls?"

A special citizens committee in Manila formed last October gathered more than 10,000 signatures to seek reconsideration of the present memorial plans. Nevertheless the Chairman of the U.S. Commission, the Honorable Emmet O'Neal circularized all Members of Congress 3 weeks ago claiming enthusiasm here and in the Philippines for the present plan.

Senator PAUL DOUGLAS who until recently was a member of the Memorial Commission wrote to a friend of mine on December 4: "I am glad we are in agreement opposing the Corregidor-Bataan Memorial. The more I went into that matter, the more I became convinced that it had taken a form that I could not approve. After I was able to discharge my obligations to the group, I resigned."

I have been asked by the President of the American Chamber of Commerce in the Philippines, Mr. J. L. Mannings to use all avenues open to me to help bring about a reconsideration of the present plans. I have been told by our Ambassador to the Philippines, the Honorable Charles E. Bohlen that he shares the views of the chamber of commerce. I have been told the same by a great number of prominent Filipinos in government, civic and cultural affairs.

It is certainly not my intention to detract from the high purpose originally intended by the U.S. Congress, but I am pleading for a more realistic approach and a more useful expenditure of such a large sum. Naturally, an appropriation of $7½ million for memorial purposes would be economically beneficial to the Philippines. The greater part of the amount would be spent there and would help to boost their economy.

Manila was badly hit by the war; in destruction it was only second to Warsaw. Its only good theater, the Metropolitan, was destroyed and could not be rebuilt. Manila at present has no suitable place for the holding of concerts, operas, and other theatrical performances. Manila at present has no museum and no library. The American orchestras, ballet companies, and concert artists visiting Manila now on the President's special international program have to perform in gymnasiums. I feel, therefore, that a simple memorial on Corregidor costing a fraction of the amount of $7½ million, together with a large theater comparable to the War Memorial Opera House in San Francisco, placed in Manila on the edge of Manila Bay would be a fitting and practical memorial that would serve Filipinos and Americans alike. Above all, I plead for the drawing up of plans with full and equal participation of Filipinos because in the final analysis it does not matter how much approval the present plans may receive in this country; after all, the memorial will not be erected in the United States, but on Asian soil, and, therefore, should also have approval of the people who live there. The present plans tend to make the memorial and, with it, the U.S. Government an object of ridicule.

RESOLUTION UNANIMOUSLY ADOPTED AT THE GENERAL MEETING OF THE NATIONAL MUSIC COUNCIL ON DECEMBER 18, 1958, IN NEW YORK CITY

Whereas the Corregidor Bataan War Memorial Commission has adopted a design as the Commission's choice for the war memorial to be erected on Corregidor Island; and

Whereas there is now legislation before Congress to authorize that there be appropriated to the Corregidor Bataan War Memorial Commission amounts not in excess of $7½ million for the erection of said memorial; and

Whereas, in the judgment of the National Music Council, a portion of the funds available for the purpose can be better employed for the construction of a war memorial more useful to Filipinos and Americans: Now, therefore, be it

Resolved, That in full recognition of the high purpose of the U.S. Congress, the present plans be revised to the extent that a smaller portion of the available funds be used for the erection of a simple memorial on Corregidor Island; the remaining portion to be used for auditorium for the performing arts in Manila in replacement of facilities destroyed during World War II, and dedicated as war memorial, and that the choice of the purpose and the choice of design for said building be accomplished with the active participation of Philippine citizens.

Address by Hon. Stuart Symington, of Missouri, at Indiana State Jefferson-Jackson Day Victory Dinner

---

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. HARTKE. Mr. President, on February 14, 1959, I had the pleasure of introducing the very distinguished junior Senator from Missouri to the Indiana State Jefferson-Jackson victory dinner at Indianapolis. His remarks were inspiring and thought-provoking. Accordingly, I ask unanimous consent to have these remarks of Mr. SYMINGTON printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. STUART SYMINGTON, OF MISSOURI, AT JEFFERSON-JACKSON DAY VICTORY DINNER, INDIANAPOLIS, IND., FEBRUARY 14, 1959

Thank you for the great honor of being with you tonight at your victory dinner.

You Democrats of Indiana certainly have a real victory to celebrate. In just one election, you have taken a Republican stronghold and made it Democratic. If anybody wants to know how the country is going politically, I suggest they take a look at Indiana.

Let me salute your successful candidates.

I salute this young man here who is already making a name for himself in the Senate as a hard worker, a gracious gentleman, and a faithful servant of the people, VANCE HARTKE.

I salute your able and vigorous Hoosier Congressmen: WINFIELD DENTON, RAY MADDEN, JOHN BRADEMAS, ED ROUSH, FRED WAMPLER, EARL HOGAN, RANDALL HARMON, and JOE BARR. There are 8 names on that honor roll—8 Democratic Congressmen out of 11—and last year there were only 2. Keep up the good work, and next time you will have all 11—and a Governor. And then, 2 years after that, you can elect yourselves a second Democratic Senator.

We have been working along this line in Missouri. Now we have only one Republican Congressman left; and we expect next time to make it unanimous. Of course, out in Missouri, we are helped by having in residence the leading Democrat of the whole country, Harry S. Truman. We work all the harder for Democratic victories in Missouri, because we never want to let him down. You in Indiana know that he works at it, too, as his campaign trip here last fall amply demonstrated.

There is no mystery about the Democratic victories that swept the country last November. There is no mystery about the rising tide of Democratic sentiment throughout the Nation. It is no secret that we are going to put a Democrat in the White House in 1960.

The reasons for all these things are out in the open, and apparent to everybody. The people have been oversold on what is really a second-best, do-nothing administration. They were taken in by the fancy packaging, and they bought it. But the product inside was below American standards. So now they are shopping for the genuine article—for a party and an administration that will represent the people, meet their needs, and offer real leadership. And that is exactly what the Democratic Party is going to give them.

If the times were not so dangerous, and the problems we face were not so serious, it would be pleasant to spend a little time discussing the woes of the Republican Party. We Democrats could offer them quite a little advice—in a helpful spirit, of course.

We might, for example, take part in the great debate that seems to be shaking the Republican leaders just now—on the subject: Is the elephant dead or merely sleeping?

Or we might offer our help to Mr. Arthur Larson, the apostle of modern Republicanism, who wrote a sensational book just a few years ago entitled "A Republican Looks at His Party."

We might help him gather material for the sequel, "A Republican Looks for His Party."

Or we might offer some amendments to the Republican theme song—you all have heard it—"There's No Business Like Big Business." Now that the party of big business is shrinking in size its members ought to be more sympathetic to the small businessman's problems. If the Republicans don't stop shrinking, pretty soon they themselves may be able to qualify for a small-business loan.

I have been told that the Republican Party is taking a poll—among people who will still admit they are Republicans—to decide what the public image of the Republican Party

should be. Now this phrase "public image" is a bit of Madison Avenuese that needs translation into plain English. It means not what you are, but what people think you are. So the Republicans are trying to find out what will be the best thing for people to think they are. I could give them the answer to that. It's very simple. Democrats.

And don't think that some of the Republicans haven't caught on—in fact, they are trying it out. There's a Republican governor in one of our eastern States who got elected recently by acting like a Democrat. But now, unfortunately, he has put forward a "soak the poor" tax program; and the voters are already beginning to wonder.

In my opinion, it's a mistake for the Republican Party to be looking for a new public image. It's not an image they need so much as a backbone. They need the determination to stand up to the problems we face—unemployment, high prices, poor schools, poor housing, depressed areas, flood control, declining agriculture, Russian arms, and international upheavals—to put forward some new ideas, and to take some action to solve them.

It is rather a sad business, my friends, to count up the losses we have suffered because of the inability of the Republican Party to cope with the problems of the present day. Step by step our national position has deteriorated until we are now in a mess at home and in danger abroad.

In 1952, America was by far the strongest of all nations. We stood at the head of a united free world, a free world which had stopped Communist aggression in its tracks. We had full employment, full parity on the farm, and a Government that worked for the people. Most important, we had the spirit to push ahead, with all our resources, to make America a better place to live.

And what have we today? Nearly 5 million unemployed. National output lagging. Inflation still unchecked. Four million farmers driven off their farms because of this administration's indifference to their problems. Stagnation in some of our key industries, and economic depression in some areas. A diplomatic crisis in almost every part of the globe.

These things would be a big enough price to pay, without more, for a Republican administration. But there is more—a lot more. The most ruthless and most successful dictatorship known to history has now broken through, in the scientific and technological fields, to possess itself of weapons of unbelievable power and deadliness. These new weapons, added to its admitted superiority in submarines and land armies, make the Soviet Union more than ever formidable, in its attempt to communize the world.

I know that this is bad news; and a lot of people would rather not think about it. But the job of a Senator is not always pleasant. And if the country is in danger, it is the duty of every knowledgeable citizen to present the facts to the people. A second-best defense is no good to us. As has been well said, it is worth exactly as much as the second-best poker hand. And the task of creating a first rate defense is a task the Republican administration is failing to perform.

In fact, the Republican administration has not only been failing to perform this task—it has been striving to hide the whole problem from the people. The Republican Party has been feeding us tranquilizing pills compounded of evasion, and at times outright inaccuracies. They try to surround the whole question with a fog of complacency, along with an iron curtain of security.

But when you penetrate these defenses, get to the heart of the matter, and ask them why this task is not being performed, they come up with a curious answer. We cannot have a first rate defense, they say, because we cannot afford it.

And this same answer is given, in the President's budget, to all the important problems of our time. They say we cannot afford to stay in the missile race with Russia. They say we cannot afford to invest in an adequate educational system for our young people. They say we cannot afford to erase unemployment, or step up the fight against disease, or renew our cities, or control our rivers, or put our depressed areas back on their feet.

If this were true, then our Nation would be bankrupt. If a man can't afford a decent house, an education for his children, and can't pay his doctor's bills, we say he is broke. And so it is with a nation. But is the United States of America really broke—as the Republicans would have us believe? Of course not. We can afford these things. America is the richest and the greatest country on earth. We can afford to do whatever we must do, for our security and our welfare.

I think I know why the Republicans give this curious and defeatist answer to the growing needs of the country. They are either unable or unwilling to understand the economic systems of these United States. They fail to understand that government and business must work together for the great goals of national security and domestic prosperity—and that if they do work together, there is no limit to our future progress.

I spent many years in private business, most of them in an effort to convert run-down businesses into going concerns. There is a great deal of difference between rehabilitating a company, and running a country; and I do not pretend to know all that must be done for either. But if there is one concept which would get this country back on the beam again, it is this: Full production.

Today, more than 20 percent of our Nation's industrial capacity is idle. In the steel mills, in the automobile factories, in the textile plants, our production capacity is not being used. Let's look at it this way. We have a machine which could produce 1,000 units. But it is only producing 800. The machine itself is just as expensive, even though it is producing less. And as we all know, if it does produce less, unit cost goes up. This is just not good business.

Let us take the men that are idle, and the production capacity that is idle—and in the interest of our security, as well as our prosperity—put them back to work.

America has more productive ability than any nation on earth. During the war, and afterward, we achieved a miracle of production. And we can do it again. We have the wealth, the manpower, and the skill to accomplish whatever we want. What we lack—and have lacked for the past 6 years—is the leadership.

If this Nation plans successfully to operate at full production, it will remain the world's No. 1 economic system, far, far ahead of the Communists. Khrushchev's goal of catching up with us in industry and agriculture in 7 years will never be realized.

Full production would lick unemployment, and eliminate the pool of chronic joblessness in our small and large cities that is being predicted for the next 2 years. Every able-bodied man and woman anxious to work would be able to work, and at a wage compatible with self-respect. With full production, inflation could be checked, because the new flow of goods would bring supply in line with demand. And finally, the heavy new tax revenue generated by full production, swelled by the very growth of our economy, would pour into the Treasury. That new money could finance both our current necessary expenditures and our needed new ones. We would then have a real chance to balance the budget.

The Democratic Party wants to balance the budget just as badly as do the Republicans. But we want to do it by expanding the economy—and the Republicans want to do it by shrinking the economy. We intend to take the economy out of the Republican straightjacket and put it on a Democratic launching pad.

Our problems abroad are even more complex than those at home. But the application of the principles of the Democratic Party can lead us to their ultimate solution. Let us apply the basic principle of Thomas Jefferson: "The cherishment of the people." From Woodrow Wilson through Franklin Roosevelt to Harry Truman, the foreign policy of the Democratic Party has always been based on sincere concern for the people of every nation in the world.

The greatest task facing the world today is the attainment of a just and lasting peace. The first part of that task is the negotiation of a meaningful disarmament agreement. Ten years of negotiation have taught us that negotiating disarmament with the Communists is not easy. It is frustrating and often heartbreaking. A meaningful disarmament must be mutual. It must be continuous. It must be based on a foolproof system of inspection. And it should include as many countries as possible. Every possible effort should be made to reach this kind of agreement.

If America could take just one-tenth as much as it spends each year for arms, and contribute that money to a world development fund, we could advance world progress 50 years; and at the same time bring underdeveloped countries into the 20th century.

The markets this would open up for American goods could only add to our own prosperity, and the upsurge of economic activity this would produce would liberate the masses of the people in the poorer nations from much poverty—and would aid in turning back the political tides of communism. When the day comes when there can be a reduction in the arms burden, there could well be an easing of the present rate of taxation, and still plenty left over for the great unfinished business of the country—better education, improved health care, security for our older people, and a massive attack on the poverty which still exists in America.

At first glance, it might seem illogical to say that on the one hand we must have more missiles; and on the other, we should continue negotiations for the limitation of arms. But 14 years of cold war makes nothing more certain than this: In order to have any chance of successfully negotiating world disarmament, we must be so strong that the Communists know, if they attack us, they are insuring their own destruction. The reason, therefore, that we should sustain our arms effort is to be able to negotiate for peace from a position of relative strength instead of relative weakness.

If America can bring the world two accomplishments—peace and economic security—then all the effort, all the money, and all the patience will have been more than worthwhile.

This, then, is the Democratic policy: Full production at home. And in the interest of lasting peace, a secure foundation abroad. This challenge is bigger than politics. But at the same time it is part of politics; for as long as the Republicans refuse to face the challenge, as long as they continue to permit America to fall behind, we Democrats must exert even greater effort to win back control of the Government. We of the Democratic Party are ready for this challenge. We have met it and conquered it before. We can and will do it again.

Let us all tonight, as Democrats, and even more important, as Americans, dedicate ourselves to a strong Nation—an America economically, physically, and spiritually strong. In that way, we will be sure to preserve our individual and our national freedom.

Address by Hon. A. Willis Robertson, of Virginia, at Finance Industry Staff Conference

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. FULBRIGHT. Mr. President, on Friday, February 20, the chairman of the Senate Committee on Banking and Currency, the Senator from Virginia [Mr. ROBERTSON], made one of his first statements since he became chairman of the committee, before the Finance Industry Staff Conference held in Washington under the sponsorship of the U.S. Chamber of Commerce.

I ask unanimous consent that this very fine statement by the Senator from Virginia be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF HON. A. WILLIS ROBERTSON, OF VIRGINIA, CHAIRMAN, SENATE COMMITTEE ON BANKING AND CURRENCY, AT THE FINANCE INDUSTRY STAFF CONFERENCE, FEBRUARY 20, 1959

It is a pleasure for met to meet, on one of the first such occasions since I became chairman of the Senate Committee on Banking and Currency, with executives of the banking trade associations under the sponsorship of the chamber of commerce. It is also a pleasure to see representatives of publications interested in banking legislation.

Of course, my succession to the chairmanship of the committee did not mark the beginning of my interest in banking legislation. I have had an interest in this subject which long antedates my election to the Senate. After my election to the Senate, I sought and obtained membership on the Committee on Banking and Currency, and it has been one of my ambitions to succeed, one day, to the chairmanship of that important committee.

Ever since I have been a member of the committee, and even while I was a relatively junior member, I have carried a substantial burden of the workload of the committee in the banking field. During my entire membership on the committee, under Democratic chairmanships, I have served as chairman of either the Federal Reserve or Banking Subcommittees.

Although some of the activities of the committee may seem more glamorous politically than banking matters, there are none, in my opinion, which are more important.

The banking field, as you know, involves the money power of the Federal Government. The money power controls the economic lifeblood of the Nation. This has been true throughout our history. It was no accident that the struggles of the American colonists, which culminated in the Constitutional Convention, followed almost a century of disheartening monetary experience. The desire to obtain a sound and freely circulating currency was one of the mainsprings behind the movement toward federalism. The keynoter of the Constitutional Convention, Edmund Randolph, listed what he called the havoc of paper money high in his enumeration of the inadequacies of the Articles of Confederation.

Throughout the history of this country since that time, from the case of *McCulloch v. Maryland* through the political and economic struggles over the Bank of the United States; from the populism of William Jennings Bryan to the battles of Woodrow Wilson and Carter Glass to establish the Federal Reserve System, to the bank holiday of Franklin Roosevelt—during all our history—the money power has been the subject of contention and one of the focal points of political decisions until the present day.

The power of the Federal Government in this field, as it developed through all these years, was summed up by Mr. Justice Jackson shortly before his death. In 1955 he wrote:

"Two of the greatest powers possessed by the political branches, which seem to me the disaster potentials in our system, are utterly beyond judicial reach. These are the war power and the money, taxing, and spending power, which is the power of inflation. The improvident use of these powers can destroy the conditions for the existence of liberty, because either can set up great currents of strife within the population which might carry constitutional forms and limitations before them.

"No protection against these catastrophic courses can be expected from the judiciary. The people must guard against these dangers at the polls."

The money power, of course, includes these other powers: The power to tax and the power to spend. As a Member of the House, I served on the Committee on Ways and Means, and, as a Member of the Senate, I have served on the Committee on Appropriations. I have had some experience, then, with the powers of taxing and spending. My present position complements this experience, because it is through the banking system that the money supply is regulated.

I make these opening remarks, emphasizing the importance of the money power, for the purposes of assuring you of my appreciation of the responsibilities of my position and of my humility in the face of them.

Now I should like to discuss with you briefly some of the particular legislative items in which I know you are interested.

As you all have seen in the newspapers recently, the leadership of the Senate apparently has given clearence to the Joint Economic Committee to undertake a full-scale study of our economic system. You will recall that for several years there has been agitation for a National Monetary Commission to undertake a similar study. President Eisenhower proposed in the last Congress that this study be undertaken by a commission of his own appointment. There have been other proposals for joint Senate and House committees, or mixed commissions of private citizens and public officials. The Committee on Economic Development has organized a private study and, as you know, the President has appointed a Cabinet committee to be headed by the Vice President.

It is one of the misfortunes of our present divided Government that we have been unable to reach agreement on a truly nonpartisan and objective study of our economic system, which many of your organizations have advocated for many years. I do not think there is much disagreement on the need for such a study. There is only disagreement about the way in which it should be done and mistrust of the objectives of its various proponents.

Almost 10 years ago, on June 1, 1949, I reported from the Committee on Banking and Currency a bill which would have provided for the establishment of a National Monetary Commission along the same organizational lines as the Hoover Commissions on Government Organization. The Senate passed this bill, but it failed in the House. I often have wondered how the course of our economic system might have been affected had the Commission then proposed succeeded in its objectives.

As to the studies which have been, or are about to be undertaken, I will follow them with great interest. For while these committees and commissions may propose, to a large measure, the committee of which I am chairman, will dispose. To the extent I am able to do so as chairman, be assured that I shall weigh any proposal which affects our jurisdiction most carefully. In this connection, I have directed the staff of the Committee on Banking and Currency to observe the proceedings of these committees and commissions carefully and to give me periodic reports on them.

Some of you may be interested in my attitude toward reviving the Financial Institutions Act which passed the Senate in the last Congress. I still believe firmly that this act is a much needed one. I do not intend to reintroduce it, but I would like to see it introduced on the House side and sent to us for concurrence. It is a good bill and should be enacted into law. In the meantime there may be opportunities to enact some of its substantive provisions as separate bills.

For example, with the cosponsorship of Senators FULBRIGHT and CAPEHART, I have reintroduced our bank merger bill which has passed the Senate on two separate occasions. In view of the renewed interest in the problem of bank mergers, it would seem to me that the approach of this bill ought to enlist the support of all bankers and bank organizations. While it may not be perfectly satisfactory to all, it already enjoys the support of most of you, and it seems to me to be the vehicle by which the public demand for control of bank mergers can be satisfied, and that mergers can be controlled under it in an effective way which takes into account the peculiar nature of banking.

The alternative, it seems to me, is a much different kind of control, one which would treat a bank as an ordinary commercial enterprise and would not take adequately into account the nature of banking as an institution affecting, most vitally, the welfare of the depositors and general public. I urge your support of this bill.

Yesterday I introduced a bill to amend the Federal Reserve Act provisions concerning member bank reserves. The bill was proposed by the Federal Reserve System, as a result of an exhaustive study.

The bill would make three changes in present law. First, it would authorize the Federal Reserve Board to permit member banks to include all or part of their vault cash holdings in their required reserves. Second, it would change the reserve requirement for demand deposits of central Reserve city banks from the present rate of 13 to 26 percent to a range of 10 to 20 percent, the same range as Reserve city banks. Third, it would give the Board more flexible authority to permit individual member banks in central Reserve or Reserve cities to carry reserves at the lower requirement levels specified for Reserve city or country banks.

The statutory provisions for reserves have been the subject of discussion for many years, and the provisions have been changed from time to time in the past. However, no major revision in the reserve requirements has been made since the Banking Act of 1935, and it is necessary to bring these reserve requirement provisions up to date, in the light of present day conditions and needs.

I hope hearings on this bill will result in a reconciliation of the views of all interested parties.

There are, of course, many other matters within the jurisdiction of the Banking and Currency Committee which will be of interest to you as this session of Congress progresses. Time does not permit me even to mention all of them.

These will include, of course, any number of proposals for new Federal credit programs and the expansion of existing ones. With

respect to these, my own position will be, as it has in the past, one of determination to serve the needs of a sound economy.

In this connection, although I am no disciple of his, let me quote a remarkably apt comment of John M. Keynes. He said:

"There is * * * an unbroken chronicle in every country which has a history * * * of a progressive deterioration of the real values of * * * money."

He went on to say that this was no accident, but had behind it as one of its driving forces, what he called "the impecuniosity of government."

So far as I am concerned, I shall resist this force. No group of citizens, public or private, has a greater stake in this struggle than those who make up your organizations.

Equal Protection Upheld as Citizen Council Goal

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. THURMOND. Mr. President, many Members of the Senate will recall "Cotton Ed" Smith, of South Carolina, who served in this body for six terms—from 1908 to 1944. The late Senator Smith's son, Farley Smith, of Lynchburg, S.C., last week accepted the position of executive secretary of the South Carolina Citizens' Council. The citizens' councils, and they exist in every county in the State, have in their membership many of the State's finest people.

The leadership which the eloquent Farley Smith will give this movement will, I hope, spread to other States desiring a return to constitutional government.

I ask unanimous consent that a statement issued by Farley Smith on accepting the executive secretaryship of the South Carolina Citizens' Council be printed in the Appendix of the RECORD under the title "Equal Protection Upheld as Citizen Council Goal."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EQUAL PROTECTION UPHELD AS CITIZEN COUNCIL GOAL

Farley Smith, of Lynchburg, has issued the following statement:

"In accepting the executive secretaryship of the South Carolina Citizens' Councils, I do so with the full realization that no people on earth are more independent, individualistic, than the liberal-minded, freedom-loving South Carolinians. We deplore the fact that present conditions make it imperative that we organize ourselves as an effective force to combat highly organized outside influences.

"These influences are constantly attempting not only to disrupt the peaceful and harmonious relationship between the races, which has contributed so much to the advancement of all our people but, if left unchecked, will eventually destroy the very foundations of constitutional government itself, and with it will be destroyed all human dignity and liberties.

"We are steadfastly determined that violence, bitterness, and hatred shall be only the weapons of our enemies; for we do not believe that overthrow is requisite nor fire must burn nor blood must run on some new deceitful altars.

"Our mission is not to destroy the laws of the old prophets but to fulfill them. Uncompromisingly dedicated to the principle of equal protection under the law to all citizens regardless of race, creed, or color, we are just as uncompromisingly dedicated to the principle of the separation of the races, not only as a constitutional guarantee nor as a manifestation of bigotry and prejudice, but as the only proven working solution that will assure the advancement of both races with mutual respect and understanding.

"We do not adhere to the modern sociological theory that all change is progress nor that all progress necessitates a violent change.

"In stormy, savage times when the equilibrium is disrupted, the individual must choose one side or the other. When prosecution, hypocrisy, and stupidity tend to suppress the human mind and spirit, when the destruction of everything traditional becomes a dominating trend as in America today, men of good will regardless of race or creed must stand ready to work to the point of martyrdom to protect and preserve the fundamental principles of our constitutional form of government which has made America the greatest nation on this earth."

Why the Dollar Price of Gold Must Rise

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Why the Dollar Price of Gold Must Rise." The article was written by Sir Roy Harrod, one of the foremost experts in the world on the question of the price of gold.

The article appeared in the September 1958 issue of Optima, a quarterly publication which deals with the major problems facing the Nation. Sir Roy Harrod is a lecturer in economics at Christ Church, Oxford University, and is joint editor of the Economic Journal.

Mr. President, problems of trade and inflation will continue to plague the world until we recognize the natural evaluations which people place upon gold. The article by Sir Roy Harrod should be read by everyone who is concerned with these problems; and I am glad to make the article available, through the columns of the CONGRESSIONAL RECORD.

I am informed by the Public Printer that the printing of the article in the Appendix of the RECORD will require 2¾ pages, at a cost of $60.75. In accordance with the tradition and the rule, I ask unanimous consent that, notwithstanding the fact that the printing of the article will exceed by three-quarters of a page the ordinary allowance, it be printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY THE DOLLAR PRICE OF GOLD MUST RISE
(By Roy Harrod)

The acute shortage of gold in the world—because its currency value has not been adjusted in line with the fall in the goods value of the various currencies—has been a familiar fact for some time now. None the less, it may be useful to recapitulate by reference to certain salient features of the situation.

Unfortunately, it is not possible to use any particular past period as a yardstick of absolute validity for measuring the present gold shortage. But I believe it will be agreed that the interwar period was not one of undue abundance. In the twenties experts pointed out that the gold stock was not increasing as rapidly as the flow of commodity trade; some easement was caused in the thirties by Roosevelt's devaluation of the dollar, but this was not sufficient to remove all embarrassment; there is no doubt that the trend toward bilateralism in commercial arrangements was due in part to the inadequacy of gold reserves. In putting forward his plan for a Clearing Union, Keynes had in mind that, if it was to be possible to implement the keen American desire for the restoration of fully multilateral international trade, it would be essential to increase the liquid reserves available to each country, by comparison with the prewar situation. Consequently, an estimate of the existing shortage based on a comparison with 1937 is likely to understate that shortage.

The figures in table I are extracted from International Financial Statistics (International Monetary Fund). World exports f.o.b. are taken as an index of world trade, owing to well-known difficulties arising from the c.i.f. valuation of imports.

The failure of monetary reserves to rise in proportion to the dollar value of world trade is sufficiently evident from the table. The increased holding of foreign exchange as a medium of reserve has not gone far to fill the gap. It may be well to specify more particularly the nature of these foreign exchange holdings, as shown in table II.

TABLE I.—*Exports and gold since 1937*
[1937=100]

(i) Dollar value of world exports:	
1950	234.9
1957	455.3
(ii) Dollar value of monetary gold (including gold held by international institutions):	
1950	139.1
1957	152.4
(iii) (ii) plus dollar value of foreign exchange holdings of central banks, treasuries, etc.:	
1950	169.3
1957	190.9

The gold held by the international institutions is included in the second column. It seemed right not to include in the third column the foreign exchange holdings of the international institutions (mainly the International Monetary Fund). These are referred to later in the text.

TABLE II.—*Distribution of reserves percent*

	(i) 1937	(ii) 1950	(iii) 1957
Gold	91.337	72.43	70.80
Foreign exchange	8.663	27.57	29.20
Total	100.000	100.00	100.00
Of which—			
Dollars		9.62	15.15
Sterling		16.00	10.81
International institutions		1.95	3.24
Total		27.57	29.20

The increased proportion of foreign exchange holdings in 1950 was, in major part, due to the existence of the sterling balances. The growth in these was not normal, but due to the special methods used by Britain to finance her war effort on the external side. Their large size has been an embarrassment to Britain. For a number of years the balances held outside the sterling area exceeded her own gold reserves; thus she was in a true sense a factory of liquidity for the rest of the world; but in this part of the period they could be sold only at a substantial discount against gold or dollars, so that they ought not, in those years, to be reckoned as part of the world's liquid reserves for international settlement in the fullest sense. More recently they should be so reckoned, as the British authorities have been willing to convert them into gold or dollars at a very small discount.

The British have continued to feel that they should have a larger gold holding as a reserve against these liabilities. Accordingly, it is likely that in the coming period Britain will wish to increase her holding of gold by more than the amount of the normal increment of gold reserves required to match the growing gold value of her foreign trade, unless the external sterling liabilities are greatly decreased. Either way—namely, whether Britain increases her gold holding by more than the normal amount or the external sterling liabilities are drawn down—the rest of the world will experience a loss of liquidity.

SHOULD NOT TRY

In my own person I hold that Britain should not make this attempt, but this is a minority opinion. I hold that, on grounds of good neighborliness, she should not seek to increase her net reserve (viz, her gold and dollar holdings less her short-term sterling liabilities outside the sterling area) by more than some sum such as £50 million a year, which would represent roughly the proportionate fair share of the sterling area in the annual additions to the world's monetary gold stocks. But that would be asking much of Britain in her capacity of good neighbor, since her existing net reserve is minimal. This policy would require exceptionally strong financial leadership, such as is not always forthcoming.

Anxiety about her reserve position has been a contributory cause of her maintenance of a tight monetary policy recently after the need for it, from a purely trade cycle point of view, had passed. Thus here industrial production has been stagnant for 3 years, during which, but for repressive measures, it would undoubtedly have expanded strongly, thereby entailing the need for higher imports. The failure of British imports to rise at a normal rate has, in its turn, been a contributory cause of the current world recession.

But Britain is not alone in this position. Other European countries have had similar anxieties. The flattening off and decline in the European demand for imports in 1957 was the cause of the recession of world commodity prices to levels below the pre-Suez period. The American recession came later and could not have been the cause of the world recession, since her imports, both in total and from all the different regions of the world except Canada, continued to rise until the end of 1957.

RESTRICTIONS SEEN

Thus the shortage of reserves has already played its part in setting up a world-wide recessive tendency. Unless new forces of revival come into play quickly (June, 1958), the shortage of reserves is likely to play an increasing part in accelerating the downward spiral, since each country will be compelled to impose restrictions—which hurt others—much more quickly that it would be disposed to do if its reserves were at a more normal level.

The British contribution to liquidity (rise of sterling balances) occurred for the most part during the war. External dollar holdings also rose during the war, remained stagnant in the post-war quinquennium, but have risen notably again since 1950. None the less, they have made only a small contribution to the world requirement for liquidity (tables I and II).

For many years foolish statements have been made by non-Americans, and indeed by Americans themselves, about the vast hoard of gold in Fort Knox. By spending so much overseas on the defense of the free world and by the generous continuance of aid, the Americans have, in effect, made what can be spared from this hoard available for the rest of the world; this has been effected, not by an actual withdrawal of gold, but by the external holding of dollars.

EXTERNAL HOLDINGS

Official external holdings of dollars rose from $4,600 million at the end of 1950 to $8,200 million at the end of 1957. (International Financial Statistics, May 1958, p. 17). But there were also unofficial holdings, and the two together rose from $7,100 million (1950) to $13,600 million (1957). (The same source, pp. 238–239.)

At the end of December, United States gold holdings were $22,900 million. Adding her short-term foreign assets and substracting short-term foreign liabilities, one gets a net reserve of $11,500 million.

The law requires the Federal Reserve System to hold a 25 percent reserve of gold certificates against notes and deposits, by no means an exorbitant requirement and one reduced from former days. This law would require at present a gold holding of about $11,000 million. Thus, if one reckoned only the net reserve as available to fulfill the legal requirement, as would be strictly proper, the United States is already very near the bone.

Be that as it may—since reserve requirements against internal liabilities are now thought obsolete in many quarters—if her net external liability increased in the next 7 years by as much as it has in the last 7 years, this would undoubtedly cause her grave misgiving.

Before developing that argument, it may be well to consider the gold position further.

A comparison of table III with table I shows that, if the dollar price of gold had been raised in line with the deterioration of the goods value of the dollar, the major part of the world liquidity shortage would have been solved, but not the whole of it. There would probably remain a true gold shortage problem, as there was between the wars, additional to the artificial problem that has been created by the failure of the American authorities to alter the dollar price of gold.

TABLE III

(To be compared with table I)

Assumption that the dollar price of gold had risen in line with the dollar prices of U.S. exports viz 2.1 times.

[1937=100]

(i) Dollar value of world exports: 1957	455.3
(ii) Dollar value of monetary gold (including gold held by international institutions): 1957	319.8
(iii) (ii) plus dollar value of foreign exchange holdings of central banks, treasuries, etc.: 1957	340.8

However, other matters have to be brought into the reckoning. Had the dollar price of gold been adjusted, gold production would have been higher, and not so much gold would have disappeared into private hoards, since private hoarding has been stimulated by the belief that the current undervaluation of gold will be revised. In table IV I have taken the average ex-Soviet gold production for 1937–40 (I.M.F. staff papers, O.L. Altman, p. 259) at $1,175 million, and supposed this rate maintained till 1957. The Orange Free State gold production would have helped it along. I have deducted 10 percent as the normal demand for industrial use and a little bit of private hoarding. In column (iii) I have added in the actual increased holdings of foreign exchange. In column (iv) I have supposed that, under the beneficent influence of the larger gold stocks, countries would have felt willing to carry larger holdings of foreign exchange in absolute amount, but still no more than 29.2 percent of gold reserves, as shown in column (iii) of table II.

TABLE IV.—*Increase of reserves on certain assumptions*

[1937=100]

(i) Dollar value of world exports: 1957	455.3
(ii) Dollar value of world gold, supposing price raised in proportion to price rise of U.S. exports, production in 1937–57 at 1937–40 level, and 90 percent of it available for monetary stocks: 1957	385.2
(iii) (ii) plus actual current value of foreign exchange holdings: 1957	409.2
(iv) (ii) plus value of foreign exchange holdings, if these constituted 29.2 percent of total reserves, as they did in 1957: 1957	496.9

Thus, on these assumptions, which are not inherently unreasonable, the liquid reserve position would now be fractionally better than it was in 1937. It is, therefore, not groundless to attribute the present frightful shortage at root solely to the failure to mark up the dollar price of gold to match the depreciated goods value of the dollar.

SHORTFALL NOTED

Let us now look at the matter in another way. In 1937 the official gold holding amounted to $25,300 million. If this was to be increased to match the enhanced dollar value of world trade, it would now have to stand at $115,100 million; actually it stands at $38,550 million. Consequently there is a shortfall of $76,550 million.

Foreign exchange holdings in 1937 are stated to have amounted to $2,400 million. If they were to be increased to match the enhanced dollar value of world trade, they would now have to stand at $10,900 million. Actually they stand at $15,900 million. Thus, owing to the growth of sterling balances under the force majeure of war and owing to the willingness of many to increase their holdings of dollar balances during the war and again since 1950 in lieu of gold, there has been an out-of-the-trend increase of foreign exchange holdings of $5,000 million (viz. $15,900 million less $10,900 million).

The importance to the world of the increase in foreign exchange holdings, which have caused some embarrassment to Britain and meant the making available by Americans of almost all their spare gold reserves for the outside world, should be carefully noted. The increase in question consisted of $5,000 million. This must be compared with the shortfall of $76,550 in the dollar value of gold reserves, owing to the dollar value of those reserves not having risen in proportion to the increased dollar value of world trade. With all respect to the embarrassments of Britain—and it must be said that there was an element of good neighborliness in her refusal to take the sterling balances out of the world monetary system after the war, as she was strongly advised to do—and with all respect to the United States, which has generously continued aid, despite an overall adverse balance of external payments, it must be said that these additional foreign exchange holdings of sterling and of dollars have made but a trifling contribution towards easing the shortage of

reserves owing to the shrinking of the value of gold stocks—a contribution of $500 million against a shortfall of $76,550 million.

In addition to the foreign exchange holdings mentioned above, countries were given drawing rights, amounting in all to $9,016 million, in the International Monetary Fund. Of these only $4,096 could be honored in gold or hard currencies. These do not go very far to fill the gap either.

In his proposal for a "clearing union" Keynes wrote as follows:

"We need a quantum of international currency, which is neither determined in an unpredictable and irrelevant manner, as, for example, by the technical progress of the gold industry, nor subject to large variations depending on the gold reserve policies of individual countries; but is governed by the actual current requirements of world commerce, and is also capable of deliberate expansion and contraction to offset deflationary and inflationary tendencies in effective world demand."

KEYNES' HOPE

Despite the neutrality of this wording it can be stated that he hoped that the "clearing union" would add something to the quantum of reserves available, before the war, for international settlement, and he hoped also that the International Monetary Fund, although designed on a smaller scale than his plan, would do the same; and it was for this reason that he regarded its acceptance as a precondition for Britain and other countries reverting to the principle of nondiscrimination in commercial policy, so much desired by the Americans. Alas, he had not had time, for all his wise prescience, to foresee that the increased liquidity involved in his proposal, or in the Harry White proposal, or in any other acceptable proposal, would be far more than offset by the change in the gold position. This may not be quite fair to his own proposal in which drawing rights were to rise in proportion to the increase in the value of world trade, which increase has been very great since Bretton Woods (1944).

Recently there have been suggestions that, as an alternative to a rise in the dollar price of gold, the resources of the International Monetary Fund should be increased or some new international institution established. I believe that these proposals reflect the fact that eminent bankers or economic experts sometimes fail to appreciate the quantitative aspect of global totals. We are dealing with a shortfall of $76,000 million.

It is not within the realm of practical politics that any new institution would have a capital of the order even of $50,000 million. And even if it did, it has not yet been made clear precisely how this would increase net liquidity, since the newly created assets would also be the liability of someone. So far as new institutions are concerned, these figures belong to the realm of fantasy. But a doubling of the dollar price of gold could make a difference of this order of magnitude, partly at once and partly in the coming decade.

If it is objected that a considerable part of the gain would go to the United States, owing to her large holding, it must be remembered that this would render possible something that is now quite impossible—namely, a considerable acceleration in the growth of the dollar holdings of the non-dollar world (through, for example, an enlargement of U.S. investment), allowing a corresponding increase in the value of liquid world reserves to happen, without placing the United States in Queer Street.

BRITISH QUESTIONS

Some British experts have argued that a rise in the dollar price of gold would not greatly benefit Britain in particular, since her current holdings are relatively small.

Would it make no difference to her, with her vast exports, that the rest of the world would be less inclined to clamp on import restrictions on the occasion of the most trifling oscillation in the balance of payments? Would it make no difference to her, with her great external sterling liabilities, that the countries would be less often driven to convert their sterling balances into gold or dollars? Would it make no difference to her, as a great exporter, that a world recession, like the present, would not be aggravated by each country being driven at an early stage to impose restrictions? Would it make no difference to her, as the world's greatest gold bullion market, if the value of the gold annually coming to her were doubled, or, allowing for higher production and less disappearance, trebled?

These rhetorical questions may serve to introduce a reference to the future. Table IV suggests that, if only the dollar price of gold had kept pace with the deterioration in the goods value of the dollar, the present liquidity position might be as good as, even better than, the prewar position. The future prospect is not quite so cheerful.

INFLATION

The increased requirement for gold now, as compared with 1937, is in part due to the inflation of dollar prices. We ought not to budget for any further inflation. Since 1937 the volume of world trade, or its value at constant prices, has increased at the rate of about 4 percent per annum. If we assume the requisite reserves now to be $115 billion (see above), on an arithmetical calculation we should require an annual increase of gold stocks of $4,600 million a year. In the years from 1950 to 1957 the annual increase in gold stocks was $464 million. According to this calculation the annual increase would require to be raised tenfold, and that appears a hopeless proposition. But this extreme figure should be modified in a number of ways.

(i) If foreign exchange holdings carry part of the burden (and assuming that the British do not try to increase their net reserve too much), we should need an annual increase of only 70 percent of the aforementioned amount, viz. of $3,220 million. (See table II, col. iii.)

(ii) The annual increase in the volume of world trade from 1937 to 1957 of 4 percent may well be abnormal. It may be sensible to take 3 percent as a target figure, reducing the requirement for an increase in reserves to $2,415 million.

(iii) If reserves are not increased above their present level by far more than anything that can be done by raising the resources of the International Monetary Fund or establishing ancillary banking institutions, I dare predict that within a decade foreign trade will have degenerated into a restrictive bilateralist, and indeed totalitarian, system. Each country will have to tailor its demand for foreign goods administratively by reference to resources currently accruing; no room will be left for free enterprise in importation. But hard experience may have taught the central authorities to get along, on a free enterprise basis, with less than the prewar ratio of reserves to turnover. Everyone will have, in this modern world, to pursue the bold policy of living dangerously. I suggest that on this ground the required annual increase in liquidity can be reduced to $2 billion.

(iv) Mr. Altman (op. cit.) has estimated the likely increase in coming years to be above that previously prevailing, viz. a minimum of $500 million per annum and a maximum of $920 million per annum, and he suggests a probable figure of $730 million per annum.

(v) If the dollar price of gold were doubled, this last-mentioned estimate would be raised to $1,460 million per annum.

(vi) If the raising of the dollar price of gold led to an eventual increase of production and to diminished private hoarding, the annual accretion to world stocks might well be not far below the target ((iii) above) of two thousand million dollars.

BARE MINIMUM

I should regard the doubling of the dollar price of gold as the bare minimum required to salvage the system of free enterprise. In the worldwide conflict between the idea of totalitarian planning and that of a competitive system, which, by its essential nature, requires a certain amount of free play for trial and error, I am convinced that the issue depends precisely on this: on whether the U.S. authorities decide to double the dollar price of gold, as a bare minimum.

But, owing to the leeway that has to be made up, as we have seen from table III, owing to the fact that, under the maximum of full employment, which is, rightly, here to stay, more reserve is required than in prewar conditions, and owing to the eminent desirability of having a slight margin above bare requirements, if I were an authorized and detached mentor to the U.S. authorities on behalf of the world economy, I should recommend an increase in the dollar price of gold by two-and-a-half times, or even a rise to the convenient figure of $100 an ounce.

Now we must return to the hub of this matter. What are the U.S. authorities likely to do in the years immediately ahead? Practical pressure is likely to account for more there, as elsewhere, than abstract argument.

U.S. CONFIDENCE

The existing world recession may bumble along at about its present level, or deepen; no forces making for strong revival are yet apparent. The United States has remained confident on the basis of what has now become a narrow net gold reserve, partly, indeed, because that country has not yet come to appreciate how narrow it is, but also because there is the feeling that a world recession is likely to improve the external U.S. balance of payments, while those of other countries decline. Thus the recession does not cause her exchange anxieties, although it does cause her other grave anxieties.

But the recession will not improve her external balance by very much. For the other countries of the world are running their commerce on the basis of reserves that are narrower than they have ever been before, and import restrictions will accordingly be imposed more rapidly on the occasion of a recession of exports. If the United States is participating in the recession, the reduction in her exports entailed by the import restrictions elsewhere will exacerbate matters. This fact she is likely to observe. Proposals may then be made for giving large funds to international agencies or setting up new agencies. But there are two factors militating against this solution.

One is that, so long as the United States is herself the victim of recession, home opinion is likely to favor the using of any additional funds, which will necessarily involve a cash deficit for the Federal Government, for giving work to American citizens rather than for additional external aid. This opinion is sound, not only from a nationalist, but also from a cosmopolitan, point of view. The maintenance of U.S. imports, by the boosting of her internal economy, is likely to be of much more help to the outside world than the expenditure of an equivalent sum in external aid; for the spending upon imports has a more prompt effect, since it gives income to those who have the goods ready to consign.

QUANTITATIVE EFFECT

The other point which militates against the solution of providing more funds for in-

ternational agencies, is that the quantitative effect will be very small, by comparison with even a moderate rise in the dollar price of gold. It is true that, in the preparation of public pronouncements, spokesmen and experts are apt to be blindly impervious to quantitative arguments. But I do not believe that this imperviousness extends so often to practical decisions. In the furnace of pressing day-to-day events, in war, when to do or not to do makes a vital difference, the human being has a hunch, perhaps provided by his own electronic brain, for what is quantitatively important. He will not bother so much about international agencies, with their chicken feed, when there is all the time lying to hand the dollar price of gold, a rise in which can bring in so much larger returns.

If, on the other hand, there is a marked world revival, or, alternatively, if the recession does not have any strong effect in improving the U.S. balance of payments, then the increase in external dollar holdings, such as occurred between 1950 and 1957, will presumably continue. The effect of this may be slow, but it will be sure. Gradually the time must come when the U.S. net reserve sinks to a demonstrably dangerous level, or to zero. It will then become evident that the price of gold must be marked up.

PROPOSAL BRUSHED ASIDE

The matter might be precipitated. So far the proposal for a rise in the dollar price of gold has been brushed aside as a bee in the bonnet of South African gold producers. But coming events are bound to give it more serious consideration. This may lead nonresident holders of dollars to cash them, from a precautionary motive. Something of that sort has happened already. To cash dollars for gold does no injury to the United States, since she loses nothing by discharging a gold liability in gold—unless it be deemed an injury to provoke what is always a painful process, that of hard thinking. The thought provoked by an outward drain of gold from the United States might cause a revaluation of the dollar to come earlier than it otherwise would. That it will come in the end I believe there can be no doubt.

The obstacle to revision is in part mere inertia. One has to produce some head of steam to get an old-established thing changed. There are also deep prejudices, which one might perhaps dub as theological, though they may have a backing in the unconscious mind, which a layman is not capable of analyzing. There is a rational although unsound argument that to raise the dollar price of gold would benefit the Russians. To deny so great a benefit to the rest of the world, in order to avoid giving gain to the Russians is surely rather curmudgeonly in peacetime. The case of war has to be considered, although I regard this as extremely unlikely. In a press-button war, which lasted but for a few weeks or months, the gold position would presumably be irrelevant. In a longer war all would depend on whether it was the United States or Russia that was in trading relations with the major part of the neutral world. If it were the United States, then to have raised the dollar price of gold before the war, and thereby the goods value of her existing gold reserve, would bring greater gain to her than it would to the Russians. It may be objected that it would do for this purpose to raise the dollar price of gold after the war had broken out; but to do this at a time when gold had to be paid out in discharge of dollar commitments would savour of sharp practice and might not be accepted by neutrals, if they felt strong enough to say "No." From the war point of view, it would be much better to raise the dollar price of gold in advance, at a time when there is no immediate prospect of war. That would add to the sinews of war both of the United States herself and of her potential allies.

In his funny, tortuous way man is a rational being. What is so eminently rational as an increase in the dollar price of gold must surely come in due course.

Our Friends From Puerto Rico

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. IRWIN. Mr. Speaker, in recent years thousands of people have come to the United States from the Commonwealth of Puerto Rico.

According to the latest figures, our friends from Puerto Rico are still migrating to this country at the rate of 24,000 annually.

Their lot has not always been an easy one, but I am pleased that at long last there are indications that a brighter future is ahead for our Puerto Rican friends.

In introducing the following editorial from the February 24 issue of the New York Times, I am certainly in hearty agreement that the Puerto Rican people now in the United States are a part of the American race that is still in the making.

The editorial follows:

OUR FRIENDS FROM PUERTO RICO

This country's latest immigration group consists, as we all know, of people from the Commonwealth of Puerto Rico. So many Puerto Ricans have come to New York City and to 38 other mainland cities that they have seemed to some impatient souls a problem. This week spokesmen from our town, and from the other towns which have sizable Puerto Rican populations, are attending a police seminar in San Juan to find out how Puerto Ricans live, work, and play in their own cities and villages.

It should be reassuring to the Puerto Ricans and their spokesmen to realize that they are like a great many other immigrants who came to this country, beginning with the Pilgrim Fathers in 1620. The Indians didn't always care for the Pilgrim Fathers, despite the friendly relationships of the first critical years. We were a mixed race at the time of the Revolution and we have grown more mixed. The Africans, the Irish, the Germans, the Italians, a few Orientals, some Mexicans, and other Latin Americans, and a numerous assortment of other races and nationalities have made us the nation that we are today. Yet the adjectives applied, from time to time, to most of our ancestors on this continent are extremely unflattering. We can't tack any epithets on today's Puerto Ricans that were not applied to our own fathers or grandfathers. Nor can certain native-born Americans, who often cheat and exploit the Puerto Ricans, do much worse than was done to those who came earlier.

It is hard for people to be patient when they are having a rough time of it. On the record, however, our friends from Puerto Rico who have been coming here for some years at an average annual rate of about 24,000, may look forward to a brighter future. Time always cures the kind of situation in which they find themselves. They are a part of the American race that is still in the making.

Industrial Development of South Carolina

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the February 25, 1959, issue of the State, of Columbia, S.C., entitled "South Carolina Leads." This outstanding newspaper is ably edited by Samuel L. Latimer, Jr.

The editorial from the State presents factual data which completely refutes the argument of integrationists that the South's stand, and particularly that of South Carolina, against integration of the races is detrimental to industrial development. In fact, Mr. President, the South's stand in favor of the principles of constitutional government has played a prominent part in the industrial boom which is increasing year after year. I am particularly pleased that South Carolina, one of the smallest States in the South, is leading the South in the rate of industrial expansion.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH CAROLINA LEADS

Antisouthern liberals warn menacingly that unless the South sacrifices its biracial traditions and institutions, the section will be doomed industrially.

Their crocodile tears are shed in vain.

In the midst of the tumult caused by the campaign to crush southern defenses against forced integration, the South is growing stronger industrially and economically.

Its industrial progress is greater than that of any other section of the country except the West, where population migration is most numerous. (In the West, unemployment is not a serious problem, except in a few spots. In the South, it is rapidly disappearing.)

Industry is looking south because of this section's soundness, mounting prosperity, and its proven advantages over other parts of the country whence the wails of self-righteous indignation are loudest.

The highly respected and reliable magazine, U.S. News & World Report, made a survey and came up with these significant findings:

"The South's industrial boom keeps rolling. * * * Despite all the race problems, industry keeps pouring money into the South, opening plants at the rate of three a day. * * * Southern growth gained momentum in 1958, a year of recession as well as school crisis. * * * The Southern States did better last year, as a group, than the country as a whole. * * * In 11 Southern States, 8 percent more new plants were established in the recession year 1958 than in the boom year of 1957."

Speaking specifically of this State, the magazine said:

"The upswing in new plants in South Carolina—from 32 in 1957 to 58 in 1958—was accompanied by a rise in manufacturers' outlays. These nearly doubled, going from $67 million to $129 million, according to the State development board.

"The official business indicators show that South Carolina in 1958 fared a little better than the Nation as a whole in new construction and nonfarm employment, not quite as well in gain in personal income."

The Southern State statistics paint an even rosier picture of South Carolina.

Here is the scoreboard on new plants of 25 or more employees established in the last 2 years, listed in order of the geographical sizes of the 11 States:

Southern States	New plants in 1957	New plants in 1958	Percent change
Texas	188	257	Up 36.7.
Georgia	139	169	Up 21.5.
Florida	232	201	Down 13.3.
Arkansas	99	74	Down 25.4.
North Carolina	80	122	Up 52.5.
Alabama	134	74	Down 44.7.
Louisiana	52	42	Down 19.2.
Mississippi	59	86	Up 45.7.
Tennessee	96	108	Up 13.6.
Virginia	48	64	Up 33.3.
South Carolina	32	58	Up 81.2.

The figures show that South Carolina, the smallest State among the 11, is leading the South in the rate of industrial expansion. South Carolina is also the heart of that section of the South which is making the fastest progress. And if the data were available for all 49 States, South Carolina probably also would be revealed as the leader in the Nation.

Both races are benefitting from the advances, working in harmony and without frictional crises.

A Veteran's Gratitude

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. HOSMER. Mr. Speaker, I have been requested by a veteran, Mr. William E. Watilo, of Lakewood, Calif., to express to Members of Congress his gratitude for making it possible, through Public Law 550, for him to obtain an education. His letter, which follows, speaks eloquently of this young veteran's appreciation:

LAKEWOOD, CALIF., *February 20, 1959.*

DEAR CONGRESSMAN HOSMER: Today my final check arrived for training allowance under Public Law 550, and I request that you either represent me before the Congress of the United States in offering my gratitude, or represent the Congress in accepting my deep thanks for the life that lies ahead for the five of us.

The sum expended on me would scarcely make a dent in the cost of one missile, and proportionally that missile has a far greater opportunity to be felt around the world than I do. However, in aiding human lives, we can see that that money will show a good return in the higher financial, educational, and humanistic values of my family, and Providence willing, of my future pupils.

Never would this have been possible on my own. My education is not over; no degree will end it, but now I will be able to continue from here. For the helping hand when it was most needed, I say, thank you gentlemen. May I always be able to live up to the faith that Congress showed in creating opportunities for a man to answer the questions he finds within himself.

Sincerely,

WILLIAM E. WATILO.

Mr. Speaker, it is, however, his fellow Americans to whom Mr. Watilo's gratitude actually is to be expressed. The American people acting by and through their elected representatives decided to embark upon a program of educational assistance to veterans. It is the American people, who, through the taxes they pay, finance the program.

Intelligent Citizen Action

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. IRWIN. Mr. Speaker, it gives me a great personal pleasure and pride to pay tribute today to two distinguished All-America Cities in my State—Westport and New Haven, Conn.

Both these fine communities, one of which is in my own congressional district, have been chosen, with nine other cities throughout America, for the Look magazine awards for intelligent citizen action in 1958.

On Friday, February 27, the good people of Westport will stage a community celebration in proud recognition of the honor bestowed upon their town.

Westport, Mr. Speaker, is a good town to live in and a community in which its citizens can be justly proud.

In honor of this great celebration on Friday, I am introducing into the RECORD the front-page news story heralding Westport's selection as one of the All-America Cities, along with an editorial commenting on the honor from the Town Crier, Westport's hometown newspaper.

Both the news story and the editorial appeared in the Town Crier's issue of January 22:

WESTPORT ALL AMERICA CITY FOR INTELLIGENT CITIZEN ACTION IN 1958—TOWN AND NEW HAVEN FIRST CONNECTICUT RECIPIENTS OF 9-YEAR-OLD NATIONAL AWARD

Westport, long celebrated as the happy home of artists, writers, and Madison Avenue communicators, and more recently sensationalized as the locale of a litter of novels featuring martinis, marital tangles, and other exurban pastimes, has been named as one of 11 All America Cities honored for progress achieved through intelligent citizen action during 1958. The coveted award was announced today by the National Municipal League and Look magazine, cosponsors of the competition.

Much as an Iowa quarterback awaits the Grantland Rice all-America selections for the gridiron, so did Westporters who knew that Westport was one of the finalist cities quake while the board of judges, headed by Dr. George Gallup, picked the first team from the list of 100 entries.

This year, for the first time in the 9-year history of this national contest, two Connecticut cities broke into the charmed backfield. Both Westport and New Haven were chosen as 2 of America's 11 most farsighted and progressive communities.

The rest of the team is composed of Bloomington, Ind.; Columbus, Ohio; Granite City, Ill.; Hayden, Ariz.; Highland Park, Ill.; Huntington, W. Va.; Leadville, Colo.; Phoenix, Ariz.; and Sheridan, Wyo.

At high noon on Saturday, First Selectman Herbert E. Baldwin will receive the pennant emblematic of the All America City Award, and will raise it on the flagstaff in Parker-Harding Plaza. The flag-raising ceremony, first of a series in recognition of the award, will take place in the Plaza, and will feature a color guard of local Nike troops, and units of the police and fire departments. Musical entertainment will be provided by members of the U.S. Army Air Defense Command choral group, a singing organization designed to contribute to the morale of guided-missile personnel at installations throughout the Nation.

Before the presentation of the banner, which will fly under the Stars and Stripes, Dr. Ralph Bishoff, of Kings Highway, who is serving as cochairman of a committee in connection with local observances of the event with Albert Dorne, president of the Famous Artists School, will make a short address. The official notice of the award will be read by Richard Holmquist of the planning and zoning commission. The public is invited to attend the ceremony.

Westport's claim to the award was compiled by a committee consisting of Dr. Guy Robbins, past president of the citizens planning association, R.T.M. member Fred White, William Leonard, Holmquist, and CPA Executive Secretary Dominic Del Guidice, and was presented to the National Municipal League's annual meeting in Colorado Springs, Colo., held last September, by Holmquist.

Westport was cited by the jury of 12, headed by Dr. Gallup, for "successful citizen action in solving problems stemming from a rapid population growth, and outmoded city government, and inadequate city services."

"It gives me great pleasure to notify you that Westport has been named an All America City for 1958 by the National Municipal League and Look magazine.

"This decision was reached by the All-America Cities Award jury, of which I was foreman, at Colorado Springs last September following the presentation of your story by Mr. Richard Holmquist. Subsequent investigation confirmed our judgment.

"As you know, the awards are given for citizen teamwork rather than municipal perfection. To be selected an All-America City, a community must show noteworthy accomplishments through alert, continuing citizen participation. Such is the only way to make self-government effective.

"I salute the citizens of Westport whose effective action has won this award and sincerely hope they will continue to play a positive role in the affairs of their community.

"GEORGE M. GALLUP,
"Chairman."

Cited specifically were the accomplishment of a new town charter, progress in town planning, a program for tax reform, educational progress including the new high school, a successful effort to correct poor garbage disposal techniques, new recreational areas, and a reorganized police department. The Citizens Planning Association was credited with stimulating of the activity, and Dr. Guy Robbins previously was given an individual award for outstanding citizen service.

New Haven was honored for what Look will call, in its issue of February 17, a bold attack on blight and deterioration. The

program undertaken in New Haven to defeat decay and traffic congestion would, according to Look, do credit to a city many times the size of New Haven. The present mayor, Richard C. Lee, was given special credit for supplying leadership.

The Westport committee on arrangements for the celebration have announced a town-wide event for the evening of February 27, featuring a dinner at the Woman's Club, a formal presentation in Staples Auditorium, and a dance in Staples Cafeteria. At this time, the award will be made by Vernon Meyers, publisher of Look, and distinguished guests will help Westport note the event. Additional details will be published soon.

A number of other plans are in the works, including highway signs, a special postage meter cancellation, buttons for the schoolchildren, and a special commemorative edition of the Town Crier, due for publication on February 26.

The All America Cities Awards were inaugurated in 1949 by the National Municipal League, and for the past 8 years have been cosponsored by Look.

The jury selecting the all-America cities for 1958 included Dr. Gallup, jury foreman; Mrs. Dorothy Brimacombe, treasurer, Federation of Business and Professional Women's Clubs; John C. Cornelius, president, American Heritage Foundation; Mrs. Frederic Gilstrap, vice president, American Association of University Women; Mrs. Alf Gundersen, vice president, League of Women Voters of the United States; Willard V. Merrihue, manager of personnel practices and community relations services, General Electric Co.; Vernon C. Myers, publisher, Look magazine; Quigg Newton, president, University of Colorado; H. Bruce Palmer, president, Mutual Benefit Life Insurance Co.; Philip M. Talbott, chairman of the board, Chamber of Commerce of the United States; Donald H. Webster, director, Bureau of Governmental Research and Services, University of Washington; and Arnold S. Zander, president, American Federation of State, County, and Municipal Employees, AFL-CIO.

On the First Team

As readers of the front page will already know, Westport has made the first team in the annual all-America cities competition. It has been named by a body of jurors selected by the National Municipal League and Look magazine, co-sponsors of the competition, as one of the 11 American cities which made the greatest progress during the past year. Westport and New Haven, which also was honored for its extensive redevelopment program, have thus become the first two cities in Connecticut to be cited in the history of the award.

Westport's national publicity usually consists of hypoed-up, phoney baloney about gallons of martinis, two sport cars to every barn, and a theoretical existence of irresponsible gaiety that most of us have little time for. It is, therefore, especially heartening to see the town recognized for what it is—one with an unusually high quota of civic pride and an exceptionally large share of imaginative and intelligent citizens who are willing to work to make their community a better place in which to live.

For the award is not undeserved. Skeptics will rightly point out that a number of the areas in which the town has been applauded are far from finished business. That's so—and no one would claim otherwise. The award is for significant progress, not the achievement of the millenium. And, further, it should be clearly noted that many of the achievements cited were not accomplished within the 12 months to which the award applies. They are cumulative in the best sense; persistent citizens have been working at them for years. While Westport has certainly not finished its job, neither can its present progress be called a flash-in-the-pan.

The town has been specifically cited for advances in the areas of governmental structure, rational land use, tax reform, school improvement, better refuse disposal, and a sounder police organization. Each one of these can be fully justified.

With its new charter, Westport has an entirely modern form of small city government, which can operate as effectively as the voters staff it. The town's form of government is, in the very least, no longer an obstacle to coping with the problems of its growth; on the other hand, it can be a very useful tool. And those who fought for the charter, as well as those against it, realize that constructing it and passing it was a long and arduous task.

Under the planning and zoning commission's regimes of Cutler, Mackie and Dreyfous, Westport has take giant steps toward more adequate zoning and more comprehensive planning. By this summer, the town hopes to have completed an overall town plan.

Largely because of the efforts of a typical Westport volunteer committee, the town is currently getting its tax asessments in order. To say that taxes have been unfair is putting it a litle bit strongly, because they have been inequitable only in the sense that the town has grown a little faster than assessment procedures have developed. But we are now clearly on the way to a really professional revaluation in all categories of property.

Westport schools have long been of much better than average quality. Here the reward must certainly relate to cumulative efforts of Westport's boards of education and school administrators over the last decade. Progress has not stopped, but no one year is more notable than the other.

Some will be surprised to see refuse disposal mentioned in the list of positive factors. They should be reminded that, less than 2 years ago, Westport was conducting a smelly and sloppy dump; now, it is applauded for the best sanitary land-fill operation in the State. The fact that the town has not been able to settle on future sites as yet in no way should take away the credit for a professional technical job.

The police department also deserves its nod. Procedures have been modernized, morale has been improved, and leadership is sounder. The results are beginning to become apparent in an improved safety record and more efficient operation.

The credit for these achievements goes to the whole town—not just its officialdom or pundits. Town officials, town boards, volunteer study committees, unofficial committees to get things done, organizations like the CPA, the LWV, the PTA, and the women's groups, behind-the-scenes encouragers and schemers, those who keep our political parties vital, and the thousands of volunteer workers and voters who have contributed in one way or another, can all take satisfaction in Westport's selection for the first team—and we hope that plans are underway so that they can all share in the celebration.

The Town Crier has reason to be particularly proud and well-satisfied at this award. During the last 5 years, this newspaper has, as any good citizen should have, been active in promoting the progress of Westport. Some of the things accomplished, we initiated; and in none of the major victories for the cause of good town government did we fail to explain and support. These are, after all, a newspaper's principal obligations—to contribute to an enlightened democracy through clear and accurate presentation in an understandable manner, and to act as coach, cheerleader, and encourager to all those individuals and groups who are working for a better town.

We knew Westport was a good town to live in, before the award. But we also know it can stay that way only if it realizes that it must win a hypothetical award every year. Knowing Westport as we do, we have a hunch that it will stay on the first team of civic progress as long as have old pros like Sammy Baugh and Frank Gifford persisted in the top ranks of professional football.

Urban Renewal Needs

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. ROBERTS. Mr. Speaker, the mayor of Anniston, Ala., the Honorable George T. Morris, delivered a statement stressing the need for adequate funds for urban renewal, during the recent meeting of the Alabama League of Municipalities with Alabama Congressman here. Under leave to extend my remarks, I am pleased to include this very fine statement:

OUR URBAN RENEWAL PROGRAM MUST HAVE ADEQUATE FUNDS

(By George T. Morris)

Our urban renewal and slum clearance program is at the cross roads. It is a fundamental policy question on which we must make a final decision.

Happily both Houses of our great Congress are showing a willingness—even an eagerness—to make this decision once and for all. The Senate bill would provide $350 million for title I slum clearance grants annually over a 6-year period. The House bill as approved by the Rains housing subcommittee would provide $500 million for 3 years.

Both of the bills stress two fundamentals. First we must provide adequate funds to get the job done. Our cities are just too hard pressed to raise the necessary funds themselves. Unless the Federal grant program continues on an effective scale, we will never even scratch the surface of eliminating our cancerous slum problem.

PROGRAM MUST HAVE CONTINUITY

The second fundamental truth is that to be successful the slum clearance program must have continuity. These vast programs of slum clearance and urban renewal require planning and an orderly process of rational development. They cannot succeed on a stop and start basis.

Both the Senate and House bills have excellent slum clearance titles, but if we accept these two fundamental principles, I think it fair to say that the Senate bill with the 6-year period is more satisfactory from the point of view of program continuity, whereas the Rains bill on the House side is much more acceptable in terms of the size of the annual authorization. I am confident when the two Houses meet in conference that our two great Alabama legislators—JOHN SPARKMAN on the Senate side and ALBERT RAINS on the House side—will mesh the two bills together so as to achieve a final result which will provide both necessary continuity and ample program funds.

I am delighted that both Houses have rejected outright the administration's proposal to reduce the Federal contribution from two-thirds to one-half. I can think of no single

item better calculated to stop the urban renewal program in its tracks.

THE PRESIDENT HAS BEEN POORLY ADVISED

I can only conclude that the President's advisers have misled him. Any one at all cognizant with the facts of life of municipal finance knows that we have no further tax resources available to us. If our cities are forced to put up a larger share under the urban renewal program, the program will die and our slums will gradually engulf us all.

I am pleased to see that both the Senate and House bills contain a number of important and perfecting amendments which will make the urban renewal program more workable. Frankly, gentlemen, it is a horror of bureaucratic redtape at the present time. The dead hand of Federal bureaucracy has slowed progress to a snail's pace and I am hopeful that congressional action will get faster results from Washington.

I am hopeful that in the current legislation and in future legislation, the Congress will continue to search for ways to make better financing programs available in order to encourage the rehabilitation of existing dwellings. One of the great unsolved problems we face is how to prevent the constant slide of neighborhoods into a stage of blight and deterioration.

I am convinced that the Congress is demonstrating the courage and drive which we must never relinquish if we are ever to rid our cities of slums and blighted areas. Our greatest enemies are the timid and half-hearted proponents of half measures. We must brush them aside and approach the future with a confident, vigorous, and expanding urban renewal program.

HOW ALABAMA COMMUNITIES HAVE GONE FOR PROGRAM

You gentlemen will be interested in the fact that Alabama municipalities have taken a leading role in urban renewal since the enactment of the Housing Act of 1949. Mobile and Montgomery started planning activities for slum clearance projects in 1950. Birmingham and Florence in 1951, and Gadsden initiated two projects in 1952. To date, acting through their housing authorities, 19 Alabama cities have received advances of funds for the planning of 30 urban renewal projects. For these 30 projects, a total of $1,091,090 in planning advances has been approved and $14,581,805 in capital grant reservations has been made available. Alabama has more urban renewal projects in actual execution (23) than any other Southern State. The Hare project in Auburn enjoys the distinction of being the first urban renewal project in the South to be completed and closed out, and Florence's Handy Heights project and Birmingham's medical center should be closed out by June 30 of this year.

I am not going to take up more of your time to read the statistics, but I have listed them here for the record and you may see the extent to which we have gone in using the advantages of this wonderful program.

The following is a breakdown of the 30 projects by congressional districts:

Congressional district	Number of cities	Projects	Planning advances	Capital grant
1st	3	4	$107,610	$1,223,088
2d	1	2	102,570	2,086,358
3d	5	5	140,910	1,193,452
4th	0	0	0	0
5th	1	2	78,280	1,100,963
6th	0	0	0	0
7th	1	2	37,121	281,779
8th	5	9	252,874	2,629,175
9th	3	6	371,725	6,066,990
Total	19	30	1,091,090	14,581,805

OUR CITIES PARTICIPATE IN WORKABLE PROGRAM

Alabama towns and cities were quick to grasp the workable program for urban renewal concept and have utilized the workable program as a guide for sound community development, both in the present and for the future. As of January 15, 1959, 68 Alabama communities had workable programs in effect, or submitted for approval. The distribution by congressional districts follows:

Congressional district:	*Workable programs*
1st	4
2d	7
3d	15
4th	6
5th	5
6th	9
7th	12
8th	7
9th	3
Total	68

USE OF SECTION 221 HOUSING IN STATE

Section 221 is a mortgage-insurance program of the Federal Government under a special section of the National Housing Act to help private industry provide low-cost relocation housing for sale or rent, through new or existing construction. The program authorizes liberal terms for private financing of low-cost relocation housing for eligible displaced families and offers attractive opportunities for builders and lenders to participate in this undertaking. Twenty-one Alabama communities now have section 221 mortgage insurance approved. As of October 31, 1958, this represented more "221 cities" than any other Southeastern State. A breakdown by congressional districts follows:

Congressional districts	Cities	Number of units approved (white and nonwhite)
1st	2	1,258
2d	1	96
3d	7	334
4th	2	120
5th	1	700
6th	0	0
7th	1	8
8th	5	1,151
9th	2	2,720
Total	21	6,387

Milwaukee's Mayor Zeidler Points Up Real Issue in Chicago Bid To Divert Lake Michigan Water

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. PROXMIRE. Mr. President, Mayor Frank Zeidler of the city of Milwaukee has made an exceptionally able and succinct statement of the argument against the enactment of H.R. 1, which would authorize the city of Chicago to divert 1,000 cubic feet per second of Lake Michigan into the drainage system of the Metropolitan Sanitary District of Greater Chicago.

I ask unanimous consent that the statement by Mayor Zeidler be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY FRANK P. ZEIDLER, MAYOR, CITY OF MILWAUKEE, WIS., IN OPPOSITION TO H.R. 1, 86TH CONGRESS, TO REQUIRE A STUDY AND TO AUTHORIZE INCREASED DIVERSION OF WATER FROM LAKE MICHIGAN INTO THE ILLINOIS WATERWAY, PREPARED FOR THE COMMITTEE ON PUBLIC WORKS OF THE HOUSE OF REPRESENTATIVES

Bill H.R. 1 before the present Congress asks for an additional 1,000 cubic feet per second diversion of Lake Michigan water into the drainage system of the Metropolitan Sanitary District of Greater Chicago in order to test the effect of this fresh water supply and the oxygenation caused thereby on the drainage canal.

It seems to me that the determination of what the effect of introducing further Lake Michigan water into the district will be is largely dependent upon what is happening in the works of the Metropolitan Sanitary District of Greater Chicago. Obviously, the effects of added Lake Michigan water on the water in the Chicago Sanitary Canal will be profoundly influenced by the degree of efficiency which the sanitary district maintains in its operations and by many other factors under the direct and sole control of the sanitary district.

Thus, it seems to me to be an absurd proposition to ask the Secretary of the Army (acting through the Chief of Engineers) to investigate the effects of the additional diversion of water into the sanitary canal of Chicago if no one is to closely scrutinize and watch the operations of the sanitary district. The findings of the investigation can have no validity whatsoever if the operations of the sanitary district are not carried on at their highest degree of efficiency.

The Congress of the United States and various national governments have been reluctant to look into the operation and methods of the Metropolitan Sanitary District of Greater Chicago largely on the grounds that this agency is a creature of the government of the State of Illinois, is responsible to that State government, and also is responsible to the people in the Chicago area. However, one has but to point out the contradictory position of the officials of this sanitary district in the past to learn that the operations of the sanitary district are not uniform in their efficiency. While the district officials have claimed the highest efficiency, apparently from recent testimony this has not been so.

For instance, the testimony given by Casimir Griglik, a trustee of the district, before the Subcommittee on Rivers and Harbors of the Committee on Public Works of the House of Representatives on March 26, 1956 asserted that the Chicago Sanitary District was operating at a degree of efficiency of around 90 percent. However, news articles which appeared in two of the major Chicago papers, the Chicago Tribune and the Chicago Daily News on September 4, 1957, point out the fact that Chief Engineer Horace P. Ramey of this district appearing before a grand jury testified that the district was not operating at the efficiency which Mr. Griglik stated to the House subcommittee but was operating at much less efficiency and was dumping increasing tonnages of untreated sludge in the canal each day.

I submit that it is ridiculous and absurd for the U.S. Army Engineers to attempt to make any scientific determination of the effects of Lake Michigan water on the water in the sanitary canal, for the sanitary district can always demonstrate that the canal is in a state of pollution simply by dumping more sludge into the canal. The sanitary district, the city of Chicago, and the surrounding communities have no justification in asking for increased water diversion because they do not operate their sanitary system at its highest efficiency.

The city of Chicago still has many unmetered water outlets which increase the flow of water through district facilities and make the treatment and pollution problems more difficult for the sanitary district. The sanitary district, according to a report made by the Illinois legislative council in 1953, is not taking enough vigorous steps to reduce industrial pollution and, as it has lately been proven, has not operated its works at greatest efficiency.

How is the Congress of the United States going to insure the rest of the communities and States of the Great Lakes who also have an interest in the level of the lakes that the sanitary district and the Chicago communities within the district are engaging in a maximum effort to treat their sewage before pouring an effluent into the sanitary canal? No one yet has been able to make this district meet its obligations.

Since no other State has the right to interfere with the sanitary district and since the imperfect operations of this district are leading to incessant demands to diminish the rights of others in the waters of Lake Michigan and the Great Lakes, the only alternative left to communities outside of the District is a categorical opposition to the proposals to divert more water from Lake Michigan and the Great Lakes. This is the only means by which the people of Chicago and other communities will be brought to the realization that they are paying money for the operation of a sanitary district which is not carrying out its responsibilities.

It is not too much to suggest that if the Metropolitan Sanitary District of Greater Chicago, the Chicago people, and the Chicago newspapers (who are fooling the people by not reporting the full story of the operations of the sanitary district) insist on their demands for additional diversion of Lake Michigan water, then the rest of the States could demand that the sanitary system of Chicago be federalized in order to insure that the diversion of water from the Great Lakes is not taking place unnecessarily. H.R. 1 should be categorically opposed because it is absurd from a scientific point of view, and because the sanitary district still has much that it can do to end pollution in the sanitary canal before it should ask for more water from Lake Michigan to flush untreated sewage down to the Mississippi.

FRANK P. ZEIDLER.

Address of Mayor Willy Brandt, of Berlin, and Governor Stratton, of Illinois, at 150th Lincoln's Birthday Celebration at Springfield, Ill.

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. JAVITS. Mr. President, one of the most colorful and inspiring observances of the 150th birthday anniversary of Abraham Lincoln took place last Thursday in Springfield, Ill., the final resting place of the beloved Great Emancipator.

It was colorful because of the presence in Springfield of the governing Mayor of West Berlin, Willy Brandt, and of many of the ambassadors representing free nations throughout the world. It was one of the largest gatherings of foreign envoys ever witnessed in the Midwest.

The ceremony was inspiring, Mr. President, not only because of the occasion, but also because of the moving address delivered by Mayor Brandt and the distinguished speech of Governor Stratton of Illinois.

Mayor Brandt displayed at Springfield the same combination of toughness and vision that marked his discussions in Washington, New York, and elsewhere during his tour of the United States. This 44-year-old Social Democrat, who entered Berlin politics under the late Ernst Reuter, after World War II, and who was a voluntary exile in Norway during the Hitler regime, is a symbol of liberty to the 2¼ million free Berliners whose city is surrounded by a Communist police state.

Governor Stratton, who will celebrate his 45th birthday next week, is no stranger to many Members of this body. He served with distinction as a Member of the House of Representatives in the 77th and 80th Congresses. The son of the late William J. Stratton, who for many years was an illustrious Secretary of State of Illinois, Governor Stratton is now serving his second term as Governor of Illinois.

I ask unanimous consent to have printed in the Appendix of the RECORD a partial text of the Governor's address and newspaper reports on the observance, including an excerpt from Mayor Brandt's speech, which was published in the Chicago Sun-Times and the Chicago Daily Tribune.

There being no objection, the excerpts from the addresses and the articles were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS BY GOVERNOR WILLIAM G. STRATTON, OF ILLINOIS, AT THE ABRAHAM LINCOLN SESQUICENTENNIAL BANQUET IN SPRINGFIELD, FEBRUARY 12, 1959

We are privileged here tonight to have with us one of the largest assemblies of representatives from around the world ever gathered in our State. They have come with one purpose in mind—to honor Abraham Lincoln on the occasion of the 150th anniversary of his birth.

Why is this? Why do you from free nations gather and pay tribute to this humble Illinois citizen? There is but one answer—it is your respect for Lincoln's great gift to the world—his regard for human right and liberty, and his symbolic stand for unity in peace, born out of the rigors of war.

I bid you welcome to this land where Lincoln walked with life and where his spiritual presence still abides. I suggest that a gathering of this kind here every year might be beneficial to the world, for here tonight we emphasize the values of humility, of belief in the rights of all, of the might that is made by right.

In 1858, Lincoln said our reliance is in the love of liberty which God has planted in our bosoms. Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men, in all lands, everywhere. This is the principle at stake in Berlin today. It is the principle for which brave men gave their lives in Hungary. It has closed the ranks of free nations to an extent never before considered possible against the threat of a new era of depotism and slavery. Nations that once fought against each other have joined, not only in common defense of their security, but in united works for the human betterment of their peoples. The European economic community is a giant step forward toward asserting what Lincoln held to be, and I quote, "The natural right of man to eat the bread, without leave of anybody else, which his own hand earns."

The preservation of freedom cannot be achieved by static defense. Indeed, freedom cannot long survive if it is isolated from the mainstream of human needs and aspirations. Were he alive today, Lincoln would surely welcome the move toward unity on the European continuent represented by the European economic community. It can scarcely be doubted that he would consider this to be an opportunity to achieve an even larger unity of free men and a standard around which liberty loving peoples in every corner of the globe could be brought to rally.

The move toward closer unity in Europe brings within reach Lincoln's hope for wider freedom, political and economic, for the common man. There are different opinions today as to the relative military postures of the free countries and their adversaries, but there cannot be any argument as to the relative economic capacities. Our enemies are amply equipped to make war against small peoples and their political institutions and aspirations, but we are surely better equipped to make war against hunger and disease. This is a war that Lincoln would urge us to wage without stint in the world of today. Let us by all means maintain our common military staffs—for indeed this necessity is forced upon us—but let us also combine our best productive and economic minds in a joint chiefs of staff for the human betterment of humble peoples throughout the world—people whose judgment of freedom or slavery is measured by a piece of bread.

The great scientific and economic advances of the last hundred years have made it possible to translate many of Lincoln's hopes for humanity into reality. This community in which Lincoln's career as a young lawyer had its beginnings is now only hours away from the leading capitals of Europe. A hundred years ago, the State of Illinois was a figment of wild west literature to Europe's citizenry. Today, the State's colleges and universities include European, African, and Asiatic youth in their student bodies. A hundred years ago, this heartland of America defied access by any but the most hardy overland traveler. Today its airports accommodate the aircraft of every international airline and the St. Lawrence Seaway is a major artery through which oceangoing vessels of every land can bring passengers and cargo directly to the shores of Mid-America. These advances make it possible on a larger scale than ever before to further the personal bonds between the free peoples of other lands and their counterparts in the United States. More and more, in the days ahead, we must exchange farmers, and factory workers, students and professional people, as well as diplomats. Now, the smallest hamlet of inner America is as accessible as our larger cities, and from this accessibility can come a new perspective. Now the sum total of what America thinks and feels is open to visitors from abroad. It is up to us to use these advantages intelligently and for the common good. In groping for a modus vivendi with the Soviets, the United States has been able to win some agreement on exchanges of persons between the two countries. Such exchanges are desirable as far as they go, but are they really serving the purpose that the United States, for its part, hoped to achieve?

They do not appear to have changed any fundamental thinking in the Soviet Union. On the other hand, there is a great mutual benefit to be derived from a substantial increase in exchanges between the peoples of the free countries. Here, I would place

special emphasis on person to person exchanges between the free nations which have joined together in mutual commitments and those nations which, though retaining their freedom, remain uncommitted. These are countries, where, in the main, economic development has lagged, where living standards are low and individual privation is a constant target of alien propaganda aimed at the overthrow of democratic institutions. Here, too, is an area in which the free nations can and should join in common planning and common action. The experience and know-how of our combined foreign services add up to an immense reservoir of knowledge that can be put to valuable use in establishing a joint program for people-to-people exchanges between Europe and the United States on the one hand and those nations of Asia, America, and Africa where the will to freedom is still alight. By their visit to the final resting place of the humble man who will always be Illinois' first citizen, the distinguished representatives of our sister nations abroad have here pointed the way to that more personal relationship between their people and ours which will be so greatly needed in the days ahead to preserve freedom in a troubled world.

I thank these representatives of lands across the seas for joining with us in honoring Abraham Lincoln. Let us remember, from tonight, that Lincoln is actually a symbol of unity—of unity based on the highest ideals.

[From the Chicago Sun-Times, Feb. 13, 1959]

BERLIN'S BRANDT HAILS LINCOLN SPIRIT

(By Tom Littlewood)

SPRINGFIELD.—The leader of freedom's vigil in West Berlin fingered through the century-old lessons of Abraham Lincoln Thursday for inspiration and guidance in an anxious hour of crisis.

Most of the free men of the world were represented at a festive international banquet marking the 150th anniversary of the great prairie President's birth.

Men of many tongues and races journeyed to the resting place of the gangling country lawyer whose peculiar plainfolk genius was nurtured in Illinois.

It was in this community where Lincoln lived, practiced law, sharpened his political skills—and where his body was returned.

FOURTEEN HUNDRED AT DINNER

About 1,400 persons attended the dinner in the state armory, at which Mayor Willy Brandt of West Berlin delivered the principal address. Some 2,000 others watched from the balcony.

He called for flexibility—but with inflexible principles—to solve the problems of his divided city within a divided nation.

"For the days ahead, firmness, unity and patience are as important for the West as the willingness to examine changing conditions and to accommodate ourselves to them whenever possible," he said.

Neither an isolated nor a sudden solution is possible for Berlin, the mayor declared. "We must hope for gradual changes, for step-by-step solutions as the result of persistent negotiations," he added.

ELOQUENT TRIBUTE

The robust, square-jawed German delivered an eloquent tribute to Lincoln as the champion of self-government everywhere. Brandt recalled the words of Lincoln about "the electric cord that links the hearts of patriotic and liberty-loving men together throughout the world."

Lincoln sensed, too, Brandt said, that "there is much talk about freedom, but the concept of freedom is often filled with very different substance."

That is relevant today, Brandt said, in the Russian demand that Western powers leave Berlin to make it a "free" demilitarized city.

WANT UNILATERAL CHANGE

"Those who talked about a demilitarized city and who accuse the West of wanting to prolong artificially the occupation status, want in fact," asserted the mayor, "to squeeze Berlin like a lemon by means of the ring of Soviet divisions encircling the city."

The world must understand, he said, that "the East wants nothing but a unilateral change in circumstances to their own advantage and to the disadvantage of the West."

A new and permanent settlement cannot be built on breaches of justice and treaty law, Brandt stressed.

WON'T LOSE FREEDOM

"This can and will not come to pass," he said. "You can rely on the people of Berlin. We know how important it is to perserve peace, but we do not want to lose our freedom. If freedom is at stake, we will bend our knee to nobody."

Governor Stratton paid tribute to Brandt as a man in the Lincoln tradition who holds a position at the hub of the fight of the free world against human slavery.

The Governor said, "Our enemies are amply equipped to make war against small peoples and their political institutions and aspirations, but we are surely better equipped to make war against hunger and disease.

"This is a war that Lincoln would urge us to wage without stint in the world of today."

Brandt told of the freedom bell that hangs in the townhall of West Berlin, inscribed with Lincoln's words that the whole world "under God shall have a new birth of freedom."

"Each day at 12 noon," said the mayor, "we listen to the sound of this bell, which reminds us of what we have to preserve and what we have yet to achieve."

UNITER OF PEOPLE

Lincoln in martyrdom has gone down in history as the uniter of his people, Brandt noted.

"But this man belongs to all of us, above all to our young people, and he lives in the hearts of mankind everywhere.

"In Abraham Lincoln intellectual force was matched with moral strength. He understood the spirit as well as the needs of his time; and he was possessed of that pragmatic way of thinking which is conducive to successful action and which always stands the test if it is anchored in firm convictions."

SAYS GERMANS KNOW

The great majority of Germans know from bitter experience, Brandt said, Lincoln's mention of the duty of the whole people never to entrust "to any hands but their own * * * the preservation of their own liberties."

Brandt referred also to Lincoln's famous statement that a government cannot endure half slave and half free.

"The truths which Lincoln spoke here in Springfield in June 1858 are perhaps even more applicable to the present situation of the German people than to the one which he faced; that is, to the arbitrary disruption of their lives, for which, of course, they are not without guilt themselves.

"I can only tell you that the Germans in the East and in the West have not accepted this situation and that they will not accept conditions under which a son is separated from his mother, a brother from his brother.

REFUGEES IN OWN COUNTRY

"I can only ask you to imagine what it means when each and every day for 10 years and more hundreds of Germans become refugees in their own country, because they can no longer endure the tyrannical pressure put upon them in the part of Germany ruled by the Soviets."

The Thursday evening affair, sponsored by the Illinois Sesquicentennial Commission, highlighted the day's celebrations.

ENVOYS PRESENT

The international flavor at the banquet was provided by a delegation of foreign envoys from Washington.

Three—Ambassadors Sir Harold Caccia of Britain, Herve Alphand of France, and Ernest Bonhamme of Haiti—delivered toasts to Lincoln's memory.

Caccia said that "even in this tragic and bloodstained century," the cause of freedom has advanced. He said this has happened because the State has assumed a larger role in making the dignity of man a reality for all individuals, "and not merely a pious aspiration."

One of the emotional highlights of the evening occurred when Alphand climaxed his speech by turning to Brandt and declaring in a firm voice:

"Speaking as a Frenchman to a German, when we talk of freedom for all men everywhere, we are thinking above all tonight of the 3 million citizens of West Berlin, with the resolve to fight if need be for the preservation of their freedom."

The only Iron Curtain representative to accept an invitation, Dr. Carl Duda of Czechoslovakia, canceled out on the last day.

[From the Chicago Daily Tribune, Feb. 13, 1959]

BRANDT TERMS LINCOLN A WELL OF FAITH TODAY

(By Percy Wood)

SPRINGFIELD, ILL., February 12.—Voices of foreign envoys were heard here Thursday night in respectful and eloquent tribute to Abraham Lincoln on the 150th anniversary of his birth.

Governor Stratton presided at the event, a dinner by the Illinois Lincoln Sesquicentennial Commission at the State armory, which drew 1,400 people including diplomatic representatives of 21 countries. Hundreds of other spectators filled the galleries to hear speakers from Germany, France, and England.

Mayor Willy Brandt, of West Berlin, made the principal address, and toasts to Lincoln were given by Harold Caccia, British Ambassador, and Herve Alphand, Ambassador of the French Republic. Countries represented extended from Canada to Indonesia.

STRATTON SETS THE STAGE

Stratton keynoted the international character of the affair by saying that Lincoln is a symbol of unity based on the highest ideals—"his regard for human right and liberty, and his symbolic stand for unity in peace, born out of the rigors of war."

The war against hunger and disease, the Governor said, is one "that Lincoln would urge us to wage without stint in the world of today."

"Let us by all means maintain our common military staffs, for indeed this necessity is forced upon us," Stratton said, "but let us also combine our best productive and economic minds in a joint chiefs of staff for the human betterment of humble peoples throughout the world—people whose judgment of freedom or slavery is measured by a piece of bread."

Mayor Brandt, the 45-year-old German opponent of communism chosen as the dinner speaker because of the similarity of his position to Lincoln's "house divided," told the gathering that millions of freedom living men and women, worldwide, honor Lincoln "who in martyrdom has gone down in history as the united of his people."

LINCOLN NOT OURS ALONE

"But this man does not belong to you alone," he continued. "He belongs to all of us, above all to our young people, and he lives in the hearts of mankind everywhere. In Abraham Lincoln intellectual force was matched with moral strength.

"He understood the spirit as well as the needs of his time; and he was possessed of that pragmatic way of thinking which is conducive to successful action and which always stands the test if it is anchored in firm convictions."

In his address, Brandt said that while he felt his audience would not expect him to give an interpretation of Lincoln in terms of domestic American affairs, "yet even an outsider may venture the guess that those who stood 'on the other side of the barricade' during the Civil War would also agree today without hesitation that the United States could not have become a haven of freedom and the leading world power had the unity of the Nation been shattered.

WORDS MEAN MORE TODAY

"Lincoln spoke," the West German statesman continued, "of the eternal struggle between democracy and tyranny. We know that this struggle has torn apart the European Continent and that it has assumed worldwide dimensions. He quoted the passage from the Bible about the house divided against itself, and expressed his conviction that this Government cannot endure permanently half slave and half free."

These truths of Lincoln, spoken in Springfield in June 1958, "are perhaps even more applicable to the present situation of the German people than to the one which he faced," Brandt said, "that is, to the arbitrary disruption of their lives, for which, of course, they are not without guilt themselves.

SPIRITS STILL HIGH

"I can only tell you that the Germans in the east and in the west have not accepted this situation and they will not accept conditions under which a son is separated from his mother, a brother from his brother.

"I can only ask you all to imagine what it means when each and every day for 10 years and more hundreds of Germans become refugees in their own country, because they can no longer endure the tyrannical pressure put upon them in the part of Germany ruled by the Soviets. I must make you aware of the danger resulting from this arbitrary division. It is a threat to peace in Europe and to peace in the world."

Berlin has once more become the target of Soviet "probing and blackmail," Brandt declared, and he predicted that the climax of this Russian-provoked crisis has not yet been reached.

FAITH IN ALLIES GROWS

"I wish to say to you here in Springfield," the mayor added, "as well as to all the people of America, how greatly indebted we are to you. I have just passed several pleasant and encouraging days; and they have strengthened my conviction that Berlin can rely on its friends and that we shall march forward shoulder to shoulder, permitting nothing to come between us."

In other remarks, Brandt said Lincoln had been a friend of labor, having called "the free laborer a bulwark of democracy," and that he considered those particularly worthy to be trusted who toil upward from poverty.

"This spirit of impartiality and of faith in equal opportunity was also understood on the other side of the ocean. A police conference in Berlin in June 1865, however, regarded it as improper that the General Association of German Workers expressed its sympathy on the occasion of Lincoln's death in addresses to the American Government.

"ANOTHER HUNGARY PROTEST

"Perhaps we should also remember that Lincoln was one of those men in Springfield, more than 100 years ago, who put it on paper that Russian action with regard to the Hungarian freedom fighters of those days was an 'illegal and unwarrantable interference.'

"In other words, Lincoln and his friends avowed their solidarity with all those people in the world who fought for freedom, for human rights and for the right to self-policy have since borne the mark of this reliance. Important periods of American principle. The world would look bad indeed had not the American people and their Government been permeated by this basic attitude, especially during recent decades."

Heroic Work of U.S. Mail Carriers Along the Oregon Seacoast

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. NEUBERGER. Mr. President, as the third-ranking majority member of the Senate Committee on Post Office and Civil Service, I take pride in presenting for the Appendix of the RECORD an article from the Oregonian of Portland of November 30, 1958, which describes the heroic and valiant deeds of rural mail carriers during the frontier era along Oregon's rugged seacoast.

This article, by Marjorie Jorgenson, special writer of the Oregonian, tells of another vivid chapter of achievement in the efficient and effective delivery system of the U.S. Post Office Department. I know it will interest my colleagues, who only last summer passed our bill providing for a 10 percent pay increase for the underpaid men and women who sort, classify and deliver the U.S. mails. We also improved the mileage allowance of present-day rural mail carriers who use their own vehicles on Uncle Sam's business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON COAST

(By Marjorie Jorgenson)

At the turn of the century carrying the U.S. mail the 40 miles from Florence to Waldport was a rugged undertaking. The circuit followed the coastline north to Cape Perpetua, with an overnight stop at an Indian cabin, on to Waldport—then back again.

The postman's creed spoke strongly here. Men bid the job from Uncle Sam for $200 a year, covered the route every 4 days, fair weather or foul, even when there were only 20 families the whole distance to send and receive it. Often, "the sack weighed more than the mail," but it always went through.

A hazardous hurdle was the half-mile stretch around Cape Perpetua, the "windy cape." A narrow track blasted out of the cliff face was the trail. Not over 3 feet wide at any point, it was a shoehorn fit between rough rock wall and outer space. Often patches of horsehair were seen where the horse's flank rubbed as he hugged the cliff.

Heavy winds could billow a man to the ocean below.

At Yachats recently Mr. and Mrs. Nick Ludemann and Pete Jorgensen, pioneer residents, laughed over remembrance of the salesman who, in October 1897, essayed to follow Jorgensen on his mail run.

At Howell House, in Waldport, the stranger had inquired if someone could guide him to Florence. Mail carrier Jorgensen was walking through the lobby.

"I'm going to Florence. You're welcome to come along," he invited.

With a fresh horse from the livery stable, the salesman followed.

The first 12 miles lay along the beach, hard packed by rain and tide, with only the minor hurdle of Yaquina John Point, where you matched your time to the tide and raced the ninth wave to get around. Then the trail led abruptly upward over rock, through salal, Oregon grape, and huckleberry brush.

On a headland overlooking the gray and squally Pacific, Jorgensen dismounted. He tightened the horses' cinches, carefully tied their stirrups over the saddles, checked his mail-pouch fastenings. He took off his heavy rain slicker, rolled and tied it to his saddle. Now his neat black suit, his ankle-tie shoes, made odd contrast to the black "sou'west" strapped tight under his chin and glistening with seaspray and rain.

Nervously eyeing Jorgensen, then the blank cliff wall, the salesman blurted, "Where's the trail?"

"Right there." Jorgensen pointed to the rocky ledge which wandered out over the cliff face to a point in middle distance, abruptly disappearing as it rounded the cape.

"I'll find another way to Florence," the salesman said firmly. He turned his horse. Back at Waldport, he caught the stage inland to Corvallis, south to Junction City, west again to Florence. Six days and three mail runs later, Jorgensen bumped into him in Florence. But, do you know, he barely nodded.

Twice in the eighties horse, rider, and mail were lost without trace off Perpetua Trail. That was before the improved trail of 1897. But only twice. No other mail was ever lost except the contents of one lone packet spilled into the postman's leather pouch and trickled through a tiny hole in the bottom. The man to whom the package was addressed received only the empty envelope, but he got his value, anyway. It was a packet of seeds ordered from London—tiny English daisies, for which he was homesick.

A few years later the mail route was a wash of white flowerets. They spread out along the coastal communities. Today they are sometimes called bachelor buttons, and even the inland towns are often blessed, or cursed, with them popping up on lawns.

USIA Fails To Tell Other People of Respectable Position of Negroes

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. THURMOND. Mr. President, the well-informed Constantine Brown, national columnist, calls to the attention of his readers in a column published in the Washington Evening Star of Tuesday, February 24, the poor job being done by the U.S. Information Agency in explaining the plight of the Negro in the United States. Mr. Brown illus-

trates that the American Negro lives in far greater luxury than most of the foreigners who feel sorry for him, and also states that a large number of Negroes prefer segregation. These views are never given to our foreign friends; as a result, race relations in the United States are not helped by agitation from abroad.

I ask unanimous consent that Mr. Brown's column, entitled "USIA Seen Failing To Tell Other People of Respectable Position of Negroes," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GIVING WORLD TRUE U.S. PICTURE—USIA SEEN FAILING TO TELL OTHER PEOPLE OF RESPECTABLE POSITION OF NEGROES

(By Constantine Brown)

With the assortment of crises, dilemmas and issues which confront our Nation in almost monotonous regularity, the question is often heard, "What will our allies think of us?" or "This is grist for the Soviet propaganda mill."

American taxpayers have contributed millions of dollars to the U.S. Information Agency and its offspring, the Voice of America. Our USIA offices around the world and in every important capital are well staffed and, we hope, well supplied with all the information available to counteract Soviet propaganda and to explain some of the vital issues we must see in this country.

One of the most important issues in the last 3 years has been integration. When this reporter made his last trip around the world in the fall of 1958 he was asked in almost every country he visited about our racial problems. Far too often the questioner's tone of voice reflected a feeling that America was treating its colored citizens in a very shabby fashion.

In Karachi, Pakistan, for instance, the leading English language newspaper, Dawn, ran a lead editorial severely criticizing the United States on the subject.

In France I found people who actually believed that American Negroes were starving given no voting rights, and lived in ghettos, much like the Jews in Hitler's Germany.

In Tokyo I heard that many people believed that Negroes were lynched every day.

Nowhere did I find any attempt of the USIA to explain how well off American Negroes are comparatively; how many of them live in well-built houses, how many of them drive the most expensive cars. Nor that the majority of American Negroes live in far greater luxury than many of the foreigners who are feeling so sorry for them.

Neither did I find any evidence that our USIA was presenting to our friends both sides of our segregation question. To the people overseas it would seem that all of America's white citizens hate all American black citizens, and vice versa. It was never told to them, for instance, that there are a large number of Negroes who prefer segregation and who are working alongside and with the whites who also prefer it.

There is ample evidence which the USIA could present. A leading publisher of a string of weekly Negro newspapers, Davis Lee, has written several editorials on the subject. In one published in the Anderson, S.C., Herald on January 18, Mr. Lee said: "These (Negro) advocates of desegregation want to force white people to desegregate, but they haven't desegregated within our race. In some sections of South Carolina the yellow Negroes won't have anything to do with the dark Negroes. I know Negroes in Charleston who will not speak to other Negroes because they are of different stations in life.

"In some sections the yellow and mulatto Negroes have churches that dark Negroes cannot attend. The educated Negro shuns the uneducated of his race. The professional members of our race will rob and exploit the unfortunate members of our race. But they refuse to associate with them on an equal social basis. * * * At the rate they are going, in a few years there will not be a Negro race. You can hardly conceive of sensible leaders advocating a movement that is going to do away with our race. But that is what they are doing."

If the USIA wanted to present proof to our friends overseas that the American Negroes are not a downtrodden and starving minority in our country, they need only to quote Mr. Lee further. He wrote: "Ted Lewis is one of Atlanta's leading Negro businessmen. Some time ago he was having financial difficulty. He went to some of the city's leading Negro businessmen, including the bankers, and tried to borrow $2,500.

They turned him down flat. He went to the small-loan department of the C. & S. Bank. One of the officials went over his plans with him, and then recommended that he borrow $5,000 instead of $2,500. The bank let him have the money without questions. As a result he is a success today, a credit to Georgia and his race.

There are many things our USIA could do to let the world know that the American Negroes are respected, intelligent, and first-class American citizens. It is only a vocal few of both the black and white race who are giving our country a black eye on every continent of the world.

Social Security and the Municipalities

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. ROBERTS. Mr. Speaker, the mayor of Tallassee, Ala., the Honorable Roy C. Billings, delivered a statement showing the relationship of the social security program to the municipalities, during the recent meeting of the Alabama League of Municipalities with Alabama Congressmen here. Under leave to extend my remarks, I am pleased to include this very fine statement:

THE SOCIAL SECURITY PROGRAM AND THE MUNICIPALITIES

(By Roy C. Billings)

Thanks to the untiring efforts of the Alabama congressional delegation for years, the Federal social security law was finally amended in 1950 to make possible coverage of municipal government employees under the old-age and survivors insurance provisions of the law. Prior to that time all public employees were completely excluded from coverage under the program. Coverage now amounts to the only retirement plan for the overwhelming majority of city and town government employees in our State.

This coverage was available provided the States had enacted proper State enabling legislation to take advantage of such coverage. Alabama was one of the first States to get proper legislation passed which is known as Act No. 48, House Bill 34, Fifth Special Session, 1950.

The Federal Social Security Act amendment of 1950 made provisions for the coverage of State and local government employees under voluntary agreements made by the individual States with the Federal Security Administrator.

SAME BENEFITS AS WORKERS IN PRIVATE INDUSTRY

Employees covered through these voluntary agreements gain the same rights and benefits under the old-age and survivors insurance program as covered employees in private industry. The responsibilities of the State are similar to those of any large corporation which has branches in several geographical locations.

Naturally there are some features of the program for the coverage of State and local government employees which have no parallel in private industry because the organization of governmental units is not identical with that of private organizations and because certain functions and the way they must be carried on are peculiar to government. Also the election of coverage for employees of the State and its political subdivisions require that a State develop and put into operation procedures for the performance of responsibilities which are new to it—the responsibilities for negotiating agreements, for reporting wages and for paying contributions.

The State of Alabama entered into an agreement with the Federal Security Administration on July 6, 1951. This agreement has been amended from time to time at the request of the State with respect to bringing additional eligible coverage groups under the old age and survivors insurance program. The following is a breakdown of municipal governments and related instrumentalities now participating in the program by yearly operations—cities and towns, waterworks boards, gas departments, electric departments, municipal utilities boards, libraries, hospitals, housing authorities, city boards of education, park and recreation boards, city improvement authorities and city community centers:

Year	Number of reporting units	Number of employees	Total covered wages	Total tax remitted
1951	190	5,700	$11,443,432.55	$343,302.98
1952	258	9,800	14,885,034.98	446,551.05
1953	285	11,300	17,471,941.86	524,158.26
1954	327	14,100	19,362,141.79	774,485.67
1955	516	20,700	50,038,140.57	2,001,525.62
1956	601	48,100	61,591,039.51	2,463,641.58
1957	673	51,200	65,156,987.79	2,932,064.45
1958	690	64,000	68,228,989.46	3,070,304.53

ONLY 17 PLACES ABOVE 500 POPULATION NOT COVERED

At the present time there are only 4 cities with a population of over 1,000, and only 13 with a population of over 500, that are not participating in the program.

During the year 1958 the Federal law was again amended by the enactment of Public Law 85-226 (providing coverage to policemen and firemen on an elective basis) to certain States, one of which was Alabama. Seven Alabama political subdivisions extended coverage to policemen and firemen under the provisions of this legislation. At the present time only five political subdivisions with local retirement plans have not taken advantage of coverage for policemen and firemen.

There are certain items of particular interest that we would like to see enacted into law by amending title II of the Social Security Act which would, is passed, benefit many State and local government employees. They are listed as follows:

1. To provide legislation which will establish the same safeguards with regard to a statute of limitation for State and political

subdivisions as is now applicable in the case of private employers—that is, public bodies should be required to go back only 3 years, 3 months, and 15 days, after the year of occurrence of event, to correct errors in reporting employment, and taxes collected.

2. To continue opposition to any plan of annual reporting to the Internal Revenue Service as it affects State and local governments. Cities and towns remit social security taxes not to Internal Revenue but to Social Security Board through the State agency.

3. Remove limitation upon the amount of outside income which an individual may earn while receiving benefits. Some more reasonable limitation than the present regulations would be more realistic.

FULL BENEFITS FOR MALE EMPLOYEES ON REACHING 62

4. To provide that full benefits, when based upon retirement age, will be payable to both men and women at age 62. Women may now retire at 62.

5. To increase the number of years which may be excluded under the dropout feature in computing an individual's primary insurance so as to permit the computation of such amount on the basis of his 5 years of highest earnings. As it stand at the present time, it will be many years before an individual will be eligible to draw the present maximum benefit of $127. In fact, the $400 monthly average will generally not be possible for anyone who has attained the age of 27 before 1959. Payments based on the $400 average cannot be made unless all credits used in figuring the benefits are earned after 1958. In other words, if the 5-year dropout provision is not amended, it will be necessary for years of lower income to be used in computing benefits which would mean the individual could not receive the maximum benefit. The law increasing the maximum benefit to $127 per month did not make any provisions for increasing the number of years for dropout purposes.

6. To establish a program of insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance and disability insurance.

7. To permit the child of a deceased individual to continue to be eligible for child's insurance benefits after attaining age 18 and before attaining age 21 if he has regularly and continuously been a student during such period.

Retirement of Ray Conway, of Oregon State Motor Association, and Appointment of A. N. Weir as His Successor

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. NEUBERGER. Mr. President, as a member of the Roads and Highways Subcommittee of the Senate Public Works Committee, I realize the crucial need of an adequate network of roads in our great country. The leadership of our able subcommittee chairman, the senior Senator frim Michigan [Mr. McNAMARA] has been especially helpful in this regard.

But we also require able counselors throughout the Nation. Many of these have come from the ranks of the American Automobile Association, the famed AAA. One such leader has been T. Ray Conway, for many years manager of the Oregon State Motor Association. Mr. Conway is one of the men whose wisdom has been a factor in making Oregon the first State to finance its roads with a motor-fuel tax and also one of the foremost States in the development of its highway program.

In December of 1958 Mr. Conway announced his retirement. I ask unanimous consent that an editorial from the January 5, 1959, issue of the Oregonian of Portland, in tribute to Mr. Conway's foresight and leadership, under the title of "Ray Conway's Record," be published at this point in my remarks in the Appendix of the RECORD, together with an article from the December issue of the Oregon Motorist, giving the highlights of Mr. Conway's outstanding career.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian, Jan. 5, 1959]

RAY CONWAY'S RECORD

Ray Conway, who has probably traveled more of the highways and back-country roads of Oregon and the Northwest than any other Oregonian, has retired as manager of the Oregon State Motor Association so he and Mrs. Conway can do more traveling. Mr. Conway joined the infant association in 1927 and became manager in 1933. Except for two 3-year leaves of absence, to run the Oregon war bond drive and to be administrator of the liquor control commission, he has been promoting travel and recreation in Oregon's interest on a daily basis.

In those years, when travel and outdoor recreation grew into big business, Mr. Conway has chalked up a remarkable record of service. The Oregonian has cooperated with the motor association for 30 years, with staff members touring the State and region in white OSMA cars, taking pictures and getting stories for the popular Motorlogs.

Under Mr. Conway's management, the motor association sponsored a constitutional amendment adopted in 1942 to prevent diversion of gasoline tax and motor vehicle license funds to other than highway purposes. The association has always been in the forefront of good roads movements. It helped initiate and win an early bond issue to extend the primary highway system; the gasoline tax in which Oregon led the Nation; traffic safety programs to reduce the death and injury toll. The State is grateful to Mr. Conway and the association.

[From the Oregon Motorist, December 1958]

RETIRING MANAGER JOINED ASSOCIATION IN 1927

A staff of 8 persons and a membership of around 7,000 motorists constituted the Oregon State Motor Association when Ray Conway joined the young motor club in 1927 to serve in the public relations department.

With offices in the Terminal Sales Building, the association was just beginning to exert influence in the field of motoring in Oregon and in his capacity as public relations officer, Mr. Conway spent considerable time lecturing and showing his own motion pictures on the vacation and travel advantages of Oregon.

"There was very little promotion of travel in Oregon at that time," Mr. Conway remembers. "There was no formal State promotion program and it was up to interested groups such as chambers of commerce, and our own association to stimulate interest in our State as a travel and vacation area."

During his early years with the club, Mr. Conway traveled extensively over Oregon and became known for his wide knowledge on the recreation resources of this State. It was during this period that the famed Motorlog series of travel articles started in the Oregonian with the cooperation of the motor association. This series has been carried on continuously for 30 years during which time the motor association-Oregonian travel teams traveling in the well-known white travel cars, have covered every possible travel and vacation area in the West.

In addition to his activities in the public relations department, which included legislative representation at legislative sessions in Salem, Mr. Conway did editorial work on the Oregon Motorist.

He became manager of the motor association in 1933, succeeding Joseph Shelton.

The retiring manager has served continuously with the association since 1927 with the exception of 6 years leave of absence. During the years 1941–43, he was loaned by the association to serve as Oregon administrator of the war bond program for the U.S. Treasury Department.

Then, in 1943, he accepted the post of administrator for the Oregon Liquor Control Commission under Gov. Earl Snell. He held this position till 1946. During that time, he maintained his connection with the motor association by serving as a member of the board of directors.

During Mr. Conway's managerial career, the association consistently has taken a lead in motoring and highway affairs in Oregon. The association led many of the early battles for the improvement of the highway system in this State, including the initiated legislation for a bond program to finance improvement and extension of the primary system; gas tax and license fee proposals and activity on behalf of greater safety in traffic.

The association inaugurated the antidiversion amendment to the State constitution in 1942, whereby it was decreed that all motor vehicle funds must be used for highway purposes only. Sole exceptions, which the association took the lead in obtaining, were that motor vehicle funds be used to finance Oregon travel promotion advertising, for State park development, and State police.

Mr. Conway has been active in national AAA motor club affairs for many years and just recently was a member of 30 AAA Club officials chosen from clubs throughout the Nation to go to Europe under AAA auspices to inspect travel facilities in 9 countries.

"We have no definite plans other than to do some traveling and to take it easy," Mr. Conway says. "Both Mrs. Couway and I are intensely interested in travel and we hope to utilize part of our time in this fashion in the future."

Mr. NEUBERGER. Mr. President, the Oregon State Motor Association is indeed fortunate in having so able a man as A. N. Weir to fill Mr. Conway's shoes as manager. Mr. Weir has been with OSMA since 1939, and during World War II served as acting manager in Mr. Conway's absence. Since then he has held numerous important executive positions in the association.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Oregon Motorist describing Mr. Weir's wide background and experience and announcing his appointment as secretary-manager of the Oregon State Motor Association. The Oregon Motorist is the official publication of the Oregon State Motor Association and is ably edited by Mr. Sidney A. King.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEIR NAMED MANAGER OF MOTOR CLUB

The appointment of Assistant Manager A. N. Weir as secretary-manager, succeeding T. Ray Conway who is retiring at the end of 1958, has been announced by Charles E. Snell, president of the Oregon State Motor Association.

Mr. Weir will assume the duties of manager of the club January 1, 1959.

"The board of directors is sorry to see Mr. Conway leave the association, but his more than a quarter century of service to motoring in Oregon certainly entitles him to a relaxation from the rigors of executive leadership in the association," President Snell said.

JOINED ASSOCIATION IN 1939

"The board is most happy to be able to announce that Mr. Weir, who has been with the association since 1939, will take over the duties of the secretary-manager upon Mr. Conway's retirement. Mr. Weir is thoroughly experienced in every phase of the motor association's work and in addition, he has an intimate knowledge of AAA activities on a nationwide basis as a result of his service on national AAA committees.

"The board also is happy to announce that Mr. Conway has agreed to place his wide AAA club experience and knowledge at the service of the association and we deeply appreciate his willingness to counsel and advise in club matters in his retirement."

The new club manager first came to the motor association in late 1939 where he served in the accounting department and in the touring department. He later shifted to the emergency road service and official appointments department in which capacity he traveled over the entire State and became intimately familiar with motoring problems on a statewide basis. He has been able to maintain this knowledge through subsequent years as assistant manager with direct supervisory powers with the club's branch offices throughout the State.

SUPERVISES MOVES

Mr. Weir became assistant manager in 1942 in which capacity he had charge of personnel, office procedure, purchasing, and building supervision. As assistant manager, he supervised two moves of the association, the first from the Terminal Sales Building to the location at SW. 11th and Washington, and then to the present location of the new Portland headquarters in 1955. Mr. Weir also coordinated and directed much of the planning for the new headquarters building.

During World War II Mr. Weir served as acting manager for nearly a year while Manager Conway was on leave of absence.

The new club manager has had wide experience in AAA club affairs on a national basis through his membership on national AAA committees. He served 3 years on the AAA membership development committee, working with club officials from many States. He is at present a member of the AAA safety committee and has taken an active part in the planning and development of AAA safety programs and the formulation of national AAA safety policies.

ON NATIONAL COMMITTEE

Through his national committee activities, he has become acquainted with members of the American Automobile Association staff at Washington, D.C., headquarters, as well as with AAA club officials throughout the Nation and in western Canada.

Before joining the association staff, Mr. Weir served 3 years in the Regular U.S. Army, being a member of the old Motor Transport Corps and seeing service in the Pacific area.

Mr. and Mrs. Weir have two children, Mrs. John M. Donnell, whose husband is a practicing surgeon in Olympia, Wash.; and a son David, of Portland. They live at 9759 SE. 46th Avenue in Portland.

Forty-first Anniversary of the Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution which was recently adopted at a meeting of Lithuanian Americans of Greater Boston to commemorate the 41st anniversary of the independence of Lithuania.

This is one of many expressions of our American resolve to maintain the ties which we have always had with Lithuania and which have not been broken despite the long years of subjugation which that country has endured since its occupation in 1940.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION UNANIMOUSLY ADOPTED AT A MEETING OF LITHUANIAN AMERICANS OF GREATER BOSTON, HELD AT THE SOUTH BOSTON HIGH SCHOOL, ON SUNDAY, FEBRUARY 15, 1959

Recalling the invasion of the peaceful Republic of Lithuania by the military forces of the U.S.S.R. on June 15–17, 1940, by which the Soviet Union committed acts of unprovoked aggression in violation of numerous international commitments;

Reminding that the Soviet Union replaced the independent government of the Republic of Lithuania the very next day following occupation, by a new one composed of Communist sympathizers obedient to Moscow, and introduced a Communist regime in Lithuania in flagrant violation of the will of this nation;

Recalling further that the Soviet occupation authorities organized mock elections on July 21, 1940, in the presence of Soviet occupation forces and foisted upon the Republic of Lithuania, the so-called people's parliament, which, upon Moscow's orders, adopted Soviet-type constitutions and decrees of expropriation, called nationalization;

Having in mind that on August 3–5, 1940, the Supreme Soviet staged in Moscow a unilateral incorporation of the Republic of Lithuania into the Soviet Union, in spite of the explicit provisions of the Hague Convention, defining the rights and duties of the occupant, and that this act of force was not recognized by any Western great power;

Remembering that the prevention of the exercise of the rights of sovereignty in Lithuania went hand in hand with systematic violation of all civil rights and liberties as well as with mass deportations of political, social, economic, cultural and religious leaders and that this mass deportation has taken on dimensions aiming at the systematic destruction of Lithuania;

Considering at the same time that Lithuania has never ceased to protest against the subjugation of her homeland and Lithuanians living in the free world are observing the 19th anniversary of Lithuania's struggle for liberation;

Now, therefore, the Lithuanians of Greater Boston assembled on Sunday, February 15, 1959, at the South Boston High School in South Boston, Mass., in observance of the 41st anniversary of the independence of Lithuania, reaffirm their condemnation of Soviet aggression committed against Lithuania and call upon the United States to include in its foreign policy the liberation of Lithuania and other Soviet enslaved countries as an integral part of its program; and

That copies of this resolution be forwarded to the President of the United States, the Secretary of State, the United Nations, the Senate Foreign Relations Committee, Members of the Senate, the House of Representatives and Congress from this district.

ANTHONY MATIOSKA,
Chairman.
JACQUE SONDA,
Secretary.

The Democratic Party and the People

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. ERVIN. Mr. President, on January 17, 1959, the able and distinguished senior Senator from Nevada [ALAN BIBLE] spoke to the Young Democratic Clubs of North Carolina at Pfeiffer College at Misenheimer, N.C. As is always the case, the Senator from Nevada gave his audience much delight and enlightenment.

I ask unanimous consent that the address of the Senator from Nevada on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ALAN BIBLE, OF NEVADA, AT PFEIFFER COLLEGE, MISENHEIMER, N.C., JANUARY 17, 1959

Governor Hodges, Senator ERVIN, Mr. President, distinguished guests, and young Democrats, at the outset I want to thank Congressman ALEXANDER for his very gracious introduction. And I also want to tell you that I am not a total stranger to North Carolina. Four years ago I was in your wonderful State and was inducted as a chief in the Cherokee Tribe. The tribal headdress occupies a prominent spot on the wall in my office and is the center of attraction for the various Indian portraits that surround it. If I can just figure how to collect a few Cherokee votes out in Nevada, along with my normal complement from the Piutes, Washoes, and Shoshones, it might lighten my burdens the next time I run.

The tremendous victory recorded by our party last November was not the result of some magic formula. What happened was really quite simple. We had a message for the people—a message pointing to the fact that the Democratic Party is the party of the people. The big problem lay in getting that message across. And get it across we did. You young people demonstrated the importance of organization in disseminating those truths, and the results were dramatically found in the great sweep across the Nation.

I am proud to report that I am a charter member of the Young Democrats of Nevada. I look back with nostalgia on the many hot and heavy interparty fights we used to have. There were times when I thought that our only political enemies were not the Republicans, but members of some faction within our own party who were opposing us. I soon

learned, however, that we could close the ranks and move forward together when the chips were down in the general election.

A philosopher once said that a sure sign of growing old is to indulge continually in reminiscence. I will try to avoid that pitfall. It still disturbs me a little bit, however, to realize that I am now an honorary member of the Young Democrats of the District of Columbia—an honor to be sure but one that can only be gained by growing old.

Speaking of age, it is interesting to note the results of a postelection survey which showed that last year the Democratic Party elected 8 of the 10 youngest Governors, the 19 youngest U.S. Senators, and 12 youngest Congressmen. The Democrats elected 49 Congressmen of Young Democratic age, while 5 of the Nation's Governors and 4 U.S. Senators are also under 40.

Nelson Lancione, national president of the Young Democrats, commented that these election results clearly demonstrate the recognition which the Democratic Party gives to able young people. He added a significant footnote, however, and I quote: "The record of such revered and beloved senior Democrats as Speaker SAM RAYBURN, 77; Senator CARL HAYDEN, 81; Senator THEODORE FRANCIS GREEN, 91; and Senator JAMES MURRAY, 82; are postive proof that a youthful and progressive approach to politics is not just a function of age."

In our understandable elation over the election, we might tend to bask too long in the warm glow of victory, instead of getting on with the job to be done. The road ahead is not an easy road; nor can we travel it without constant plodding, persistence, and unflagging spirit.

The distinguished majority leader of the U.S. Senate, LYNDON JOHNSON, of Texas, set the tone for our legislative endeavors in a masterful address to the Democratic caucus just prior to the opening of this Congress.

"Our strength is what we are, and what we prove ourselves to be," he said. "What we hold we have earned. What we keep will be no more than what we deserve. That is our special challenge. Freemen can afford much. They can never afford the price of inertia." I agree with Senator JOHNSON and I am sure that my warm friends and colleagues from North Carolina share in that agreement.

As we probe the mysteries of the space age, the unlimited capacities of our young people will come more and more into play—boldness, imagination, vigor, and determination. From the campuses of colleges such as this one where we are gathered tonight will come the answers that the new age is clamoring for—not just in the fields of science and technology, but in all lines of human endeavor.

The advances made by the Soviet Union in the fields of missiles and outer space have made one thing crystal clear: We can no longer enjoy the luxury of a status quo attitude in America. We must reject the fallacy that we have the most and the best, and the future will take care of itself. Softness and complacency are the twin evils of our time. They must be struck down with the same tenacity and force that we would use in destroying any evil that would attack us. Survival is not determined by any timetable. Freemen are free only as long as they realize that freedom is not a birthright, but something that must be fought for continually.

The seeds of party responsibility that are sown in an organization such as yours inevitably flower into an even greater arena of human relationships. I refer to the field of politics as an honorable calling for any young man or woman. The urgency of our times has happily destroyed the old and unfair image of a politician as a glib, selfish type of individual, intent only upon plundering the Public Treasury and hoodwinking the gullible voters. Public enlightenment has served the very useful purpose of exalting, rather than demeaning, public office. More and more knowledgeable people are beginning to look at politics as a dignified profession of useful service.

Interestingly enough, the South has long held the concept that politics was nothing to be ashamed of—and the caliber of men you have sent to Congress over the years gives eloquent testimony to this fact.

During World War I President Woodrow Wilson leaned heavily on North Carolinians for the support of his programs. Senator Simmons of your State was chairman of the important Finance Committee and Senator Overman also held responsible posts that were of great benefit to the administration. Also occupying a high place in the Wilson councils was Josephus Daniels, editor of the Raleigh News and Observer, who served as Secretary of the Navy.

I have done some homework for this talk tonight. I learned, for example, that North Carolina provided more than 86,000 men in the service in the First World War, and more than 2,000 North Carolinians made the supreme sacrifice in that conflict. The record of your State in World War II, when 360,000 of your young men and women served around the world and more than 7,000 of them died, was equally heroic.

To show that I did more than surface digging, in the War Between the States, North Carolina furnished about one-fifth of all the southern soldiers, although it had only about one-ninth of the southern population. Approximately one-fourth of the Confederates killed in action—more than 40,000—were North Carolinians. It was no idle boast when they said that North Carolinians were "first at Bethel, farthest at Gettysburg, and last at Appomattox."

One occasionally reads of southerners being described as too sectional—that southerners in Congress are really ambassadors from their own States to a foreign nation headquartered in Washington. History belies this slander. When the war clouds were gathering in Europe in the late thirties, and in the war years immediately following, it was the voice and strength and unanimity of the South that led the way in responsible legislation for our Nation's security. Such was the courage and leadership of the South at this critical time that even a New York newspaper was moved to comment as follows:

"The recent record of the South in world affairs is inspiring. Lend-lease would have been beaten in Congress without southern votes. When the first year of the first draft expired, 4 months before Pearl Harbor, it was southern Members of Congress who insured its extension. When by one vote Congress decided not to send the soldiers home, it was the South that turned the scale. Representatives of 12 Southern States cast 102 votes in favor of extending the draft and only 6 votes against it."

There have been times in my Senate career when I have been criticized by some as voting like a southerner. Although I am sure it wasn't meant that way, I took this charge as a compliment and readily admitted its validity.

As a matter of fact, there is a natural affinity between the South and the Far West. Sparse in population as compared to the East, our voice in the Senate is nevertheless strong, thanks to our Founding Fathers who decreed that each State shall have two Senators, regardless of population.

The problems of the South and the West have been similar in many respects—the industries of both regions suffer from Federal tariff policies that encourage a steady flow of foreign products to compete with our domestic output. Our mining industry in the West today is staggering under the load of that unfair burden. And your great textile industry has also felt the oppressiveness of such a policy.

Beyond the similarities in the fields just mentioned, there is also the mutuality of interests in a traditional concept of government, which stresses the sovereignty of the State over the complete dominance of the Federal Government. As your own Senator ERVIN once said: "We wear our sovereignty under our own hat." And to that I say: "Amen."

As the sinews of the growing West become stronger, I envisage a shift in voting trends that will catapult that great area into a dominant position in determining the guidelines for American progress.

As this phenomenon develops, I hope that the natural affinity between the South and the West will become even more pronounced—to the point of forging an unbreakable alliance for mutual good. In suggesting this I by no means wish to imply that there should be an arbitrary exclusion of any other section of our country. I only suggest that the day will come when, politically speaking, the tail will no longer be wagging the dog.

Let us affirm that we are, first of all, Americans and our loyalty to the Nation is unswerving, while at the same time, as constitutional Americans, we zealously guard our rights as free citizens of the various States. There can be such a thing as too much government on a Federal level. There can be such a thing as too much so-called benevolence as a synonym for greater control. There can be such a thing as too much dominance from the top and too much submission from the bottom. As a moderate, I want to see a balance—a middle zone—where the States and the Federal government can meet to work for the general good of all the people.

In this connection, I would like to dwell briefly upon another problem that is growing to alarming proportions and can indirectly affect the overall strength of our Nation. I refer to those two distinct economic dangers: big government and big business.

Each passing day gives added evidence of the vast centralization of government in Washington and a corresponding relinquishment of power by the sovereign States. Those of us who believe that the best government is the one that is closest to the people have our work charted for us. Until the time comes when citizens decide to affirm that fundamental, independent concept, I can only predict more government, more red tape and more taxes.

As a member of the Senate's Select Committee on Small Business, I have had the opportunity to see first hand the dire plight in which the small business man finds himself. Our committee has held grassroots hearings all over the country. Out of the mass of testimony from small business men there emerges the unanimous and foreboding prophecy that unless drastic steps are taken we will witness the tragic economic irony of this century—the gradual disappearance of America's small producers during an era of tremendous business activity.

As I said at the beginning of my talk tonight, I have no simple formula to solve all the problems that beset us. I do know this, however. As members of a great political party, we can move forward with a strength of purpose and a dedication to duty that will translates the policies of our party into concrete action. We have the principles. We have the courage. And we have the will. Let's all roll up our sleeves and move forward with our party to meet the exciting challenges that lie ahead.

Thank you very much for your warm and courteous attention.

Policy Implications of the Economic Outlook

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD comments which Walter W. Heller, of the University of Minnesota, made during his participation in a panel discussion before the Joint Economic Committee of Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLICY IMPLICATIONS OF THE ECONOMIC OUTLOOK

(By Walter W. Heller, University of Minnesota)

In its preoccupation with the problem of inflation and the goal of price stability, the 1959 Economic Report provides a natural point of departure for a discussion of policies appropriate to the present economic outlook. For if price stability is not the transcendent economic issue of 1959 and if inflation is not a clear and present (or omnipresent) danger, the report has missed its mark.

That half of the President's letter of transmittal which lays down economic policy for the future is concerned entirely with stable prices as related to economic growth. "Price stability" and its synonyms appear 14 times during the 2 pages of policy discussion. Similarly, chapter 4, which programs future economic policy, presses home the case for price stability and the measures to promote it, before turning to other aspects of economic growth.

A balanced Federal budget is the chief offering at the altar of price stability:

"The principal means by which Government can express leadership in the effort to preserve price stability is to conduct its own financial affairs prudently. The budget submitted to the Congress for the fiscal year 1960, which balances expenditures with receipts at a level of $77 billion, seeks to fulfill this responsibility."

Are the sacrifices of military and civilian programs which lie behind the balanced-budget offering justified in terms of the present economic outlook? Would further deficits in the next 12 to 18 months run off in price inflation, or would they continue to stimulate production and serve the cause of recovery?

The answer lies largely in the amount of slack left in our economy and the rapidity with which natural economic forces will take it up. Substantial manpower slack is reflected in the current 6.1 percent adjusted rate of unemployment, the 40.2-hour manufacturing workweek, and the potential enlargement of the labor force. Even more slack is reflected in the figures on plant capacity: in the 17 basic materials industries (such as steel, copper, cement, textile, selected chemicals) on which the Federal Reserve Board maintains unofficial capacity and output indexes, current production represents only 76.5 percent of capacity (an output index of 140 against a January 1959 preliminary, capacity index of 183, both on a 1947–49 base.) It is hardly surprising that plant and equipment outlays continue to lag $8 billion, or nearly 20 percent, below their 1957 peak. Only a brisk revival of markets will bring full recovery here.

Finally, if the productive potential of our economy in mid-1957 was close to $450 billion, it will have risen to $500 billion by the end of 1959, taking account of (a) the accelerated growth rate we typically enjoy in climbing out of a recession, and (b) the intervening rise in the price level. The official Treasury forecast of a $480 billion gross national product rate at the end of the year implies that, apart from bottleneck problems, a substantial cushion to absorb the impact of rising demand will still exist. In short, the large amount of unused productive capacity throughout the economy provides substantial protection against demand-induced inflation in the near term.

As to cost-push inflation, our best defense is increased productivity. If we can increase the return of output per unit of input fast enough, we can satisfy the rising demands for higher wages, higher profits, and higher farm prices by sharing in expanding product rather than by pushing up the price level. Here, the immediate prospect is excellent. Productivity is rising sharply as the economy reaps the benefits from (a) the 1955–57 surge of investment in plant and equipment (as well as in professional and technical personnel, as the report cogently notes), and (b) recession-induced measures to cut costs and improve managerial efficiency. Also, as output rises toward optimal output-capacity ratios, unit costs will fall. These pleasant economic conclusions are reflected in Secretary Anderson's estimate of a jump in corporate profits from $36.5 billion in 1958 to $47 billion this year. The prospect for satisfying appetities for higher profits and higher wages without higher prices seems excellent at this stage of our economic recovery.

When total demand again presses hard against our productive resources, our monetary weapons will operate in a more favorable setting than during the boom following the 1953–54 recession; liquidity is lower in the household, business, and banking sectors; bank holdings of short-term Government bonds are relatively lower; saving continues at a high rate; and consumer expectations seem much more subdued than in 1955.

If the foregoing assessment of the economic situation is correct, an obsession with Federal expenditure cutbacks and early budget balance as a prerequisite to price stability is unfounded. Continued, though shrinking, budget deficits appear likely to be reflected in expanison of output rather than inflation of prices for some time to come. Budget cutting and budget balance may be urged to hold or cut the Government down to size, perhaps in the conviction that Government use of resources promises lower returns than private use of resources, or that expansion of Government endangers freedom. In our present external context—which confronts this country with the possibility of annihilation or humiliation—and in our present internal context—in which much of our affluence is being fritted away in indulgences, luxuries, and frivolities—I would sharply disagree with this position. But, at least, it would not be built on such an uncertain economic foundation as the stability argument for budget balance. (In addition to the basic deficiency of this position, the setting of the budgetary target for price stability in terms of the $77 billion administrative budget rather than the $93 billion cash-consolidated budget is a serious technical deficiency.)

In the projections of tax policy for the future, the President's Economic Report also employs questionable economic logic. For if deficits are injurious to price stability, as the report contends, symmetrical reasoning suggests that surpluses which develop out of boom conditions would be beneficial in dampening inflationary forces. Under these circumstances, it seems strange that the President should hold out the prospect that, given continued recovery and a tight rein on Federal spending, a significant additional step in tax reduction and reform can be taken in the reasonably foreseeable future.

It is worth noting that the peak budget deficit occurred in the second quarter of 1958, at $9.9 billion (as shown in the national income accounts, report, p. 120) and has been shrinking since that time, to $8.6 billion in the third quarter and $7.2 billion in the fourth. In a dynamic sense, therefore, the Federal budget has been a declining stimulus, which must be offset by other stimuli if recovery is to continue at a brisk pace.

The argument thus far questions the basis for concluding that inflation is such a clear and present danger as to call for Federal expenditure paralysis at the level of budgetary balance. But even if inflation were a more immediate and menacing problem, the President's report fails to give us a balanced basis for judging the primacy of price stability in current economic policy. To make this judgment requires a balancing of benefits against costs, of the risks we incur in biasing our policies toward price stability rather than, say, toward full employment.

Yet, the potential costs of a restrictive budgetary policy to promote price stability are great: Loss of production by slowing the pace of recovery; lower investment in public education and other public services that strengthen our long-run economic and military potential; attempts to push functions back on State and local budgets which are already under such extreme pressures, compounded by the adverse effects of recession, that at least two-thirds of the State legislatures must raise tax rates in 1959; and, perhaps tragically—if we are to believe the Gaither, Rockefeller, CED reports and General Gavin's statements on national security needs relative to Russia's advances—a laggard defense budget.

To the extent that these results are risked in the name of price stability and balanced budgets, they represent as great a risk, calculated or otherwise, as this country has ever incurred in peacetime economic policy.

No Presidential Platform

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. CAPEHART. Mr. President I ask unanimous consent to have printed an editorial entitled, "No Presidential Platform," which appeared in the Indianapolis Star on Tuesday, February 24, 1959, in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO PRESIDENTIAL PLATFORM

Someone of their political friends should tell Senators STUART SYMINGTON and HUBERT HUMPHREY that the best platform for the Presidency is not the prone form of a sick man. Their public comments regarding the replacement of Secretary of State John Foster Dulles leave much to be desired, and can at best be excused as little more than opportunistic politicking.

Senator SYMINGTON'S cure for the international problems of the Nation, and the world, has been the construction of additional bomber fleets, while Senator HUMPHREY has developed the knack of talking when he should be listening. He proved this in an 8-hour talkathon with the leader of Communist Russia.

These members of the Democratic Party should be reminded that an entire Nation forebore serious consideration of the illness

of a President at a time of equal international gravity. Secretary Dulles should at least be given an opoprtunity to receive the benefit of medical attention before his ouster is demanded. If he is not capable of properly performing his duties, Mr. Dulles would be among the first to recognize the need for a successor.

To date, Mr. Dulles has faced up to the Reds all over the world, an ability not exhibited by some of his predecessors in the State Department. Putting it baldly, John Foster Dulles in many respects is a better Secretary of State flat on his back in a hospital bed than some of the Democrat-appointed appeasers were standing on both feet. There is no reason to take seriously this comment from a pair of over-eager politicians who want to be President.

The Two-Package Approach to Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial which was published in the Denver Post on February 4.

I believe that the editorial presents convincingly the merits of the two-package approach to labor legislation this year.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S HAVE TWO LABOR PACKAGES

The last major change in the labor laws of the United States took place more than a decade ago, when the 80th Congress passed the Taft-Hartley Act over the bitter opposition of organized labor.

Since that time, a half dozen attempts have been made to subject Taft-Hartley to a major legislative facelifting. Every one of these efforts—whether by labor or management, Republicans or Democrats—ended in failure.

A minor noncontroversial change was made in the union-shop provisions of the act, but the big package proposals, with 19 or 20 major amendments, could never pick up the votes to pass.

Controversy and political bickering appeared to rise with the number of amendments proposed. Many Taft-Hartley strategists became convinced that the act could only be changed, one piece at a time.

In their new and separate attempts to win Taft-Hartley changes in the 86th Congress, both President Eisenhower and Senator JOHN F. KENNEDY, of Massachusetts, have unfortunately rejected the one-piece-at-a-time approach.

Their package proposals would bring about badly needed improvements in the labor statute. But, unless the size of the packages can be reduced, they may stir too much antagonism to succeed.

Both sets of proposals can be divided into two categories:

First, there are proposals based on the McClellan hearings. These aim at making unions cleaner, more democratic, and free from the control of racketeers.

Second, there are proposals based on a dozen years' experience with labor-management relations under the act.

They revive long-standing arguments over picketing, secondary boycotts, the structure of the National Labor Relations Board, and the rights of strikers. The relation of some of these subjects to the union corruption issue is remote.

In the first category, the President's proposals and those of Senator KENNEDY are not far apart. There are minor differences in the amount of information unions would have to make public and in the penalties that are provided. But it is likely that these differences can be composed in committee.

Unfortunately, these union-corruption proposals are tied up in the same package with proposals in the second category. This is where the major labor and management shafts will be aimed and where the whole package is in danger.

In this category, the Eisenhower and Kennedy proposals diverge in three major respects:

On picketing: The Kennedy bill would only regulate picketing for purposes of extortion. The Eisenhower bill takes in picketing for organizational purposes—as, for example, picketing resulting from interunion jurisdiction disagreements—and regulates it more severely.

The objectives of the Eisenhower picketing regulations are excellent. But the amendment is loosely drawn and could affect some legitimate kinds of picketing that shouldn't be banned.

On secondary boycotts: The Kennedy bill leaves this area untouched. The Eisenhower bill offers four constructive proposals, two favorable to management, two to labor. Management complains that the proposals don't go far enough; labor that they go too far.

Jurisdiction of the NLRB: The Eisenhower proposal would turn over to the States those cases rejected by the NLRB. The Kennedy bill would require the NLRB to take all cases, except where cession agreements can be worked out with States with labor laws similar to the Federal statute.

At these issues and a number of other highly technical ones raised by Taft-Hartley, Congress would be wise to take a separate look. They ought not to remain in the same package with the union-corruption proposals.

Senator KENNEDY has asked nine extremely competent labor experts to examine the noncorruption problems of Taft-Hartley and come up with recommendations.

Congress would be wise to defer action on picketing, secondary boycotts, and a number of other issues until those recommendations are in. But the proposals on union corruption ought not to wait.

Nineteen Hundred and Fifty-nine Voice of Democracy Contest

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. BARTLETT. Mr. President, on February 25, my colleague, Senator ERNEST GRUENING, of Alaska, was the principal speaker at the luncheon at which the semifinalists and the winner in the 1959 Voice of Democracy contest were named. Because his speech was so eloquent and what he had to say was so pertinent in these days when democracy is facing some of its sternest tests, I take pleasure in asking that the text of Senator GRUENING's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure and privilege to be present to honor the winners of the 1959 Voice of Democracy contest. All 50 of you are to be congratulated. It's a real achievement to win a contest that gets you to Washington. It is particularly thrilling on this occasion to be able to greet for the first time a representative from the 49th State, Melba Phillco.

Indeed, the entry of the 49th State into our Union was, and is, the Voice of Democracy speaking. It spoke through the elected representatives of the people of the United States when the Congress voted to make Alaska a State. That voice declared that the people of Alaska should no longer remain in their Territorial status; that they should be admitted to the full equality of first-class citizenship. This was the application of the principles of democracy to what had previously been one of America's dependent areas. It was an illustration of what I should like to stress in these brief remarks, namely, that to fulfill the promise of democracy we must buttress our words with deeds. We must, if the voice of democracy is to ring out convincingly, couple democratic preachments with practices. We must, if the voice of democracy is to be believed, constantly bear in mind that actions speak louder than words. In short, that "by their works ye shall know them."

The admission of Alaska to the Union, which was formalized by Presidential proclamation less than two months ago, was a shining evidence of performance matching professions—perhaps the most striking example of our time.

It was—it is—a living demonstration that Uncle Sam does practice what he preaches. It was the application, in fact, of the abstract principle proclaimed in our Declaration of Independence that governments derive their just powers from the consent of the governed. Alaskans did not have self-government as long as Alaska remained a Territory. They have it now.

That coupling of promise with fulfillment, of preachment with practice, was never more important than now. When I say now, I mean in our time.

As we all know, democracy has in this, our time, been under savage attack as never before in our history. It has been in the last quarter of a century, and is today, challenged by a basically different philosophy and way of life. That philosophy has taken diverse forms, but only slightly diverse. These forms have variously been presented as fascism, as in Italy under Mussolini; as national socialism, as in Germany under Hitler; and, today, as communism, as in Russia and China. We may correctly describe these as only slightly different forms of totalitarianism. We may accurately assert that the nation which adopts any one of these forms is a police state. It is the purpose and design of the rules of those police states to extend their philosophy and way of life to the rest of the world. It is our hope and purpose, as Americans and members of the free world, that they shall not succeed.

Now the differences between the police state and our free society, between totalitarianism and democracy, are familiar to all of you who are here to give expression to the voice of democracy.

You all know that our democratic faith prescribes certain basic freedoms: Freedom of speech, freedom of the press, freedom of assembly, freedom of worship, freedom from search and seizure. These basic freedoms are enshrined in our Constitution through the first 10 amendments which we know as the Bill of Rights. They were placed there

because the fathers of our country had experienced the violation by the government of King George III of those freedoms which the founders deemed natural rights and had earlier declared that fact to be self-evident.

Our forefathers made no provision to safeguard the right to travel freely, to change one's place of residence, to choose one's employment, the right to organize, the right of association. These rights were not safeguarded by the founders because those rights had never been questioned or threatened. Indeed, their violation had not been dreamed of under the colonial rule against which our forefathers rebelled. In fact, the tyranny against which we Americans launched our Revolution was a far milder and far less oppressive tyranny than that which has been imposed in our time on the victims of contemporary totalitarianism. Contrast, for instance, one of the most fundamental grievances of our colonial forefathers—that of "No taxation without representation"—with the ruthless total confiscation of property, the imprisonment without trial, and the so-called "liquidation," which is not other than murder, to which dissenters, or even peaceable nonconformists, are liable under the police state.

I won't dwell at length on this evident contrast between our land of the free and the most loathsome and brutal tyranny the world has known since the Dark Ages. What I want to revert to is the need of our squaring our declarations with our deeds.

What should be and is clear to all of us is that we Americans have not always, by any means, lived up to the principles we profess. It has been so from the beginning; it continues to be so; and, being human beings with human frailties, will always be so to a degree, but let us hope to a steadily diminishing degree. The great men who drafted the Declaration of Independence, whose principles, by and large, have guided us through the most wholesome and inspiring experiment performed by men in all history—those great men saw no contradiction between the Declaration's assertion that all men were created equal and with liberty one of their inalienable rights and, on the other hand, the perpetuation of the institution of slavery. It was not until 87 years later that that inconsistency was removed by the Emancipation Proclamation. In the early days, too, the franchise was often limited to the ownership of property. But time cured that. For over 130 years suffrage was for men only. The 19th amendment, adopted in 1920, decided that women, too, could vote and that they were men in the sense that the word men was used in the Declaration of Independence.

These progressive changes emphasize that democracy is not static; that it is not and never will be a finished product. It is a great legacy handed to us, a trust for us to keep and cherish. But not merely to keep and cherish—also to validate. Democracy, in short, is constantly in evolution and, let us hope, with proper vigilance, devotion, and dedication, becoming ever better. The heartening fact to remember is that while democracy may, and often has, fallen short of its professed ideals, the opportunity for rectification is always there. Whenever there is a failure of democracy, let us take heart that democracy carries within itself the seeds of self-regeneration. It must be our continuing, unremitting effort to make democracy true to its best self. If we bend all our efforts and purposes to that end, then the voice of democracy will sound a clarion call and be heard and listened to wherever men are free or want to be free.

How shall we apply that unremitting effort to make democracy true to its best self?

Let us first understand that the task to which all of us who believe and cherish the democratic system must be dedicated, is to make democracy work. This is a privilege, an opportunity, and, indeed, an obligation, not merely for those in public office, but for every citizen. Democracy should become a work-a-day religion. It must be a militant, not a passive, faith.

Having reached that understanding, what next? How do we proceed?

Well, first, we must all take a keen interest in public affairs and in Government—in government on every level. It is our Government. In a democracy, government is only as good as the people want it to be. If ours is to be—in Lincoln's immortal phrase: "a government of the people, by the people, and for the people"—it can be so only to the extent that the people, by their vigilance, interest, and concern make it so. It is a cause of just reproach that so large a proportion of our citizens do not even take the trouble to vote. Voting, the exercise of our right as citizens, is a precious heritage. Those who neglect this duty betray their heritage.

In addition to voting in elections—city, school district, county, State, and national elections—there is the obligation to inform oneself. I have been painfully impressed throughout the years to find how many citizens—presumably responsible citizens—do not even know the names of their Representatives in Congress. I have encountered this all over the United States. And merely knowing the name of one's Representative in Congress is a far cry from knowing what his attitude is on public issues and how he votes on them.

One of our first duties, therefore, in the assignment of making democracy work, is to inform ourselves. We must banish political illiteracy. If public opinion, which we like to assume is the ultimately ruling force in representative government, is to be effective, it must be an informed and enlightened public opinion.

To put it in another way, we get out of democracy what we put into it. So we had better put in generously. Democracy will be as good as we make it, and only as good. So our relationship to democracy is a reciprocal process. We must give to it to the extent that we expect to receive from it. We must ever sow if we want to continue to reap.

Therefore, let us think and act on the assumption that for every right which is ours under democracy, we have a duty to perform; for every benefit we enjoy, we owe a corresponding obligation; for every privilege which our freedom confers, we should render a corresponding service.

And thus thinking and thus acting, is the way—perhaps the only way—we can preserve and strengthen our democratic faith and our democratic works.

Thus, and thus only, can we make the voice of democracy ring true and enable it to carry its message to the farthest corners of the earth, penetrating even iron curtains and bearing beyond them its message of good will, peace, and freedom.

Physical Education and Physical Therapy Training

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address given by Miss Mary E. Switzer, Director of the U.S. Office of Vocational Rehabilitation, which she delievered at the opening exercises at the new building and gymnasium at Boston University for Sargent College. Sargent College has for many years given outstanding leadership in the field of physical education and physical therapy training, and will now be equipped to do an even better educational job. Moreover, with its new buildings it will be much more closely integrated with the regular campus of Boston University.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a genuine pleasure for me, both as a Bostonian and as a Federal official with responsibilities for the health and rehabilitation of our disabled people, to participate in the dedication of this magnificent new college building.

To those of us who were brought up in Boston—especially those of my generation—Sargent College has a very special meaning. For most of us started our physical education in high school and continued in college under the tutelage of its graduates.

Sargent is particularly fortunate in its new setting as an integral part of Boston University for the university is one of the key centers of training of professional workers in vocational rehabilitation and related fields.

From the time the training program of the Office of Vocational Rehabilitation was begun in 1954, the school of medicine here has been active in teaching rehabilitation principles and practices to undergraduate medical students. The school of medicine also is giving strong leadership to the extensive program of interdisciplinary teaching in the field of rehabilitation—a program in which many schools within the university—including Sargent—are actively and effectively engaged.

Over its 77 years of excellent instruction and service, Sargent has had notable success in preparing hundreds of students for worthwhile service. These, in turn, have contributed to the well-being of thousands throughout this country and abroad. The opportunity for improved and continuing service is enhanced by the integration into Boston University.

With the stresses of our modern technological society and our speeded-up life, both work-a-day and social, this is of great importance to preserving our sense of well-being.

It is not an easy task to plan for our own future in health—whether it be in medicine, in physical education, or in rehabilitation. We live in an age when the pace of progress gives us little opportunity to rest upon yesterday's achievements—for all too soon, the new and different demands of tomorrow are upon us. With the advent of missiles and satellites, the timetables of scientific development have been upset—and with them, the slow evolution by which our gains have previously been made in so many fields, for we in health and rehabilitation cannot work or plan in isolation.

Those of us who work with the problems of handicapped people feel an obligation to play our full role in meeting the challenges of this exciting period in which we live—for the social, economic and educational development of all our citizens, as individuals, will ultimately determine the rate of our progress, whether it be in science, the humanities or in health.

The vigor with which Sargent College has moved into the needs of our times is evident in many ways.

With the addition of the physical therapy curriculum and laboratory, the college's sphere of usefulness and effectiveness has been greatly extended. I take this occasion to say that the Office of Vocational Rehabilitation is quite happy with its investment in your physical therapy training program.

We look forward to continuing growth of the college's usefulness and hope that you may soon, as I know you plan to do, add occupational therapy to your field of instruction and practice.

President Eisenhower has recognized the need for all of us to make ourselves fit—not only physically but in all ways. The President's Council on Youth Fitness attests to this, as does its supporting group—the President's Citizen's Advisory Committee on the Fitness of American Youth.

This accent on youth is all to the good as you so well know—but it does not stop there. Nor does the President's interest. In a recent speech in the Football Hall of Fame, his words expressed the depth and breadth of that interest. I quote: "This (our contest with other ideologies) requires fitness—fitness in its deepest and broadest sense. We know that fitness is far more than a healthy body. It is more than an alert, disciplined mind. Fitness is the sum of all values which enables a man to act effectively in his nation's behalf in this great contest in which we are engaged.

"In this meaning, fitness is the individual's maximum development for the Nation's good."

While advocating fitness as an essential, the President consistently has advocated and given his strong personal support to the rehabilitation of the handicapped among us.

It is my responsibility to head and help develop the national program of vocational rehabilitation of our handicapped people, so that they may lead useful, productive and satisfying lives. So, as you see readily, it is a joy to me to witness the development and expansion of facilities that contribute to rehabilitation. And I congratulate the trustees, the faculty and, yes, the student body upon the forward look that characterizes this institution.

Vocational rehabilitation of our handicapped people is of the utmost importance to the handicapped themselves, to their families, to their communities and to the Nation.

Yet, for some years—until 1954—the program was at a standstill. In that year the Congress enacted a new law which has served as a new charter for expansion and progress. It provided the sinew with which we are breaking the bottlenecks.

One of these bottlenecks was a lack of money to do an adequate job. Both the States and the Federal Government have stepped up their annual investments in rehabilitation until the total has risen from $37 million in 1954 to $85 million this year.

But there were other hindrances. One was a marked shortage of trained professional personnel to carry on an expanding program. Another was a lack of research into new and better ways of enabling handicapped people to return to self-sustaining effort. We are steadily reducing both of these barriers and Boston is the center of a very high proportion of our efforts.

For instance, the Office of Vocational Rehabilitation has made training grants to many educational institutions in the area. At Boston University, as an example, we are supporting training programs in almost every short-supply rehabilitation profession. These include grants for training counselors, physicians, nurses, social workers, and physical therapists (and that, of course, is centered in Sargent College.)

Boston University also has cooperated with us in short-term training to improve the skills of those who have already entered vocational rehabilitation work.

Other institutions that are cooperating with us to fill the growing need for trained professionals in the field of rehabilitation are Tufts University, Springfield College, Massachusetts General Hospital, Boston School of Occupational Therapy, Bouve-Boston School, Boston College coupled with Simmons College, the Harvard School of Public Health, Harbridge House, and Emerson College.

Boston's contribution to the research program is impressive also. The Office of Vocational Rehabilitation is supporting some of the most imaginative and important work in this area that it is possible to envision.

In the mental health field, the Massachusetts Mental Health Center is working to determine the effectiveness of coordinated efforts of hospital, ex-patients, patient groups, and community agencies in the vocational rehabilitation of the mentally ill.

The Massachusetts Association of Mental Health has completed a project which has provided us with much useful information on employers' hiring practices and attitudes where discharged mental patients are concerned. This reveals that few employers knowingly hire a discharged mental patient and it thus points the way for us to work toward development of more acceptance of such people by employers, not only here but everywhere.

The Mental Health Association also has finished another project involving a study of the vocational adjustment of discharged mental patients. This will help us to improve matters in this field, because it gives us many factors which must be considered in developing new approaches.

In other projects, the Boston Dispensary is developing vocational rehabilitation services for chronically ill persons in a community home-care program, the Catholic Guild for the Blind has undertaken a study of the effectiveness of adjustment training programs of various lengths for blind adults, and QT Inc., is experimenting in rehabilitation of ileostomy patients in three hospitals.

Thus we are moving to meet problems on many fronts. We do this because we, in this country, believe in equality of opportunity. In justice, we cannot deny equality to the handicapped. Wherever possible—and generally rehabilitation is possible—our society must provide the necessary help to enable the handicapped person to make his or her own way.

The dignity of usefulness, the satisfaction of contributing to community life, of belonging—these are precious things, and we must not deny them.

To the extent that we do provide the services necessary to handicapped people, the individual profits; the family has a happier member and thus the handicapped person and the community have a happier family; the community profits from his contributions of work and citizenship and the Nation from his productivity.

Too few of us realize the burden that neglected disability places upon our society and I should like to underscore that—while assuring you that the picture is growing brighter each day. As it brightens, we must remember, our responsibilities as so-called normal citizens increase rather than diminish.

Over 2 million disabled men and women need and can profit from vocational rehabilitation services—the medical, psychological, social, training and job-finding help that is available through the State-Federal program of vocational rehabilitation.

The cost of disability in loss of productive energy and effort is incalculable. The cost in human despair is greater than anyone can estimate. But we do know that in public assistance alone, the cost of disability is more than one-half billion dollars a year. This involves monthly payments to approximately 400,000 children of disabled parents and a total of 600,000 adults—a million people in all.

In Massachusetts alone there are roughly 6,000 children of disabled parents and roughly 17,000 adults who are reduced to public assistance for their livelihood because of disability. The annual bill is about $25 million.

Not all of these disabled people can be rehabilitated, of course, but many of them could be returned to self-support through rehabilitation services. Fifteen thousand public assistance clients were rehabilitated last year at a one-time cost of $13 million. Their public assistance payments were at the rate of $14 million a year—and that could have gone on and on except for rehabilitation.

All told, throughout the Nation, the State rehabilitation agencies set a new high in the number of rehabilitations for the third consecutive year. The total was above 74,000. And another 260,000 are receiving active help today. They eventually will be on their own.

They will repay in Federal income taxes alone in about 5 years the total cost of the rehabilitation program last year—$66 million of State and Federal funds.

In Massachusetts the rehabilitation outlook is up, just as it is in most of the Nation. The total of rehabilitations has increased gradually over the past 4 years from 762 in 1955 to 1102 in 1958. That's better than 50 percent but Massachusetts still has a long way to go.

I'm happy to say that the Commonwealth program is well on the way to better results and we of the Office of Vocational Rehabilitation are bending our best efforts to help.

Much of the progress here is due to the strong efforts of Commissioner Francis A. Harding who heads your State rehabilitation agency. Mr. Harding, while a member of the legislature, saw the need for a strong program of rehabilitation and when the agency was reorganized a few years ago, he was selected as the logical man to be Commissioner of Rehabilitation. It was a happy choice because Mr. Harding has brought new support and new vigor to the work.

As an example, last year Massachusetts used $744,000 of Federal funds for rehabilitation and contributed $569,000 of State funds. The program received more than 96 percent of the maximum of Federal funds available.

For the current year, the Federal Government expects to increase its support of the Massachusetts rehabilitation program to $823,537 and we understand that the State will contribute $633,000—an increase of $55,000. Thus Massachusetts this year will use the maximum available Federal contribution.

You can imagine what a comfort this is to me, both personally and officially. This is my home and I want to be able to speak of my State always with pride. Since I am charged with responsibility for heading the entire national program of vocational rehabilitation, I feel happy at every advance, whether it be in one of our States or in one of our more remote Territories. But my pride is greatest when I see progress in Massachusetts. So this is a proud day for me. It is a pleasure to report progress in my field of responsibility and it is a great joy to participate in the dedication of the new home of Sargent College.

Alaska's Flag, a Schoolboy's Contribution

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. BARTLETT. Mr. President the beautiful, symbolic flag of which we Alaskans are so proud was the creation of a 13-year-old boy, Benny Benson. The story of Benny Benson has been touchingly re-created by Ethel Blake in an article which has appeared in Senior Citizen magazine for October 1958. I ask unanimous consent that the article be printed in the Appendix of the RECORD. The title of the article is "The Alaskan Flag and a Teenage Boy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A 13-year-old boy, Benny Benson, had an important part in the ceremonies, when the Alaskan flag was flown for the first time, July 9, 1927. He fastened the flag to the halyards below Old Glory. For a moment the two flags touched the boy's head and shoulders. Then with the Stars and Stripes leading, the Alaskan flag with its field of deep blue and eight golden stars followed. When the top of the tall flagpole was reached, the two flags straightened out in the cool breeze coming in from the Gulf of Alaska.

Citizens of the city of Seward and dignitaries of the Methodist Church stood with hats off. A captain of the U.S. Signal Corps, other men in the uniform of the U.S. Army, and a troop of Boy Scouts stood at attention.

Benny Benson stood at attention, too, his face shining with happiness, as he watched the two flags in the bright sunshine. The Alaskan flag was his flag for he was a native Aleut. But it was his flag, also, because he had designed it.

The American Legion in Alaska held a flag contest among Alaskan schoolchildren, grades 7 through the 12th. Schools from all over Alaska sent in designs to a committee of two Senators and two Representatives of the Alaska Legislature and three members named by the American Legion. From 142 designs submitted, the one by Benny Benson was selected unanimously, as the winning design. The legislature made it the official flag in 1927.

The flag raising was held on the grounds of the Jesse Lee Home, a Methodist orphanage near the city of Seward. Benny Benson had lived in the Jesse Lee Home since he was 4. He and his little brother, 2 years old, had been brought to the home by their father, who needed someone to care for his motherless boys. Benny and his brother were given good care at the home. The teachers became very fond of them. One day one of the teachers gave Benny a doughnut. He broke it in two. "This doughnut is like you and me, Mrs. Winchell," he said. "Brown on the outside like me and white on the inside like you."

Benny was in the seventh grade at the time of the flag contest. He was one of the three most promising pupils in the mission school. He had done excellent work in drawing, making posters, and in carving ivory.

The Legislature of Alaska voted $1,000 to be used by Benny in making a trip to Washington, D.C., to present the new Alaskan flag to the President of the United States. Benny did not make the trip. He said he would rather use the money for his future education. But he did have a stateside trip, anyway.

It happened this way. The Jesse Lee Home was established by the Women's Home Missionary Society of the Methodist Church. When the superintendent of the home and his wife attended national conventions of the society in the States, they took Benny with them on one of these trips. They were proud to present him, as a boy who had been cared for and educated in the Jesse Lee Home and who had won distinction in designing the Alaskan flag.

The stateside trip was only one of several rewards that came to Benny. Another reward was different than money from the legislature or travel that took him several thousand miles from his homeland. Perhaps it was the most important of all. Probably Benny could not appreciate its importance until he was older. The fact that he was unanimously selected the winner in the flag contest gave a lift to his own people and all other native Alaskans.

Aleut businessmen and other native Alaskans came to the superintendent of the home and said to him: "Now for the first time, we can hold up our heads, because we know our children are as bright as the white children. We had always been told that our children were not the equal of the white children. Now we know they are. What Benny Benson has done has given a lift to Aleuts and other natives all over Alaska."

The Alaskan flag is beautiful in its simplicity. On its deep blue field there are eight golden stars. Seven of the stars represent the best known of all constellations—the Big Dipper. The eighth and largest star on the flag is Polaris, the North Star. The two stars in the outer side of the Big Dipper are called the Pointers, because they point toward the North Star and are always in line with it, no matter in what position the Dipper may be. The stars are arranged on the flag as they appear in the sky.

Benny Benson was born on the Aleutian Islands, which stretch out for thousands of miles from the mainland of Alaska, southwest, between the Bering Sea and the Pacific Ocean. The Jesse Lee Home was at Unalaska in the Aleutian Islands when Benny and his little brother were brought to the home by their father. In Benny's homeland, the nights for part of the year are much longer than in lands farther south. So Benny had been familiar since childhood with the Big Dipper overhead, as it wheeled slowly and majestically around the North Star. He knew that the great North Star was a guide for the sailor, explorer, hunter, trapper, prospector, woodsman, and surveyor.

Benny Benson's design for the Alaskan flag was original and appropriate. The blue field is like the color of the sky, the sea, the lakes. The golden stars are symbolic of the gold in Alaska's streams and mountains.

The people of Alaska are proud of their flag and its history. The license plates of Alaskan automobiles have been made to show the Alaska flag since 1948. Alaska's State song, entitled "Alaska's Flag," was written by Marie Drake, who is still living in Juneau:

"Eight stars on a field of blue—
Alaska's flag, may it mean to you
The blue of the sea, the evening sky,
The mountain lakes and the flowers nearby;
The gold of the early sourdough's dream,
The precious gold of the hills and streams,
The brilliant stars in the northern sky,
The Bear—the Dipper—and shining high
The great North Star with its steady light,
Over land and sea a beacon bright.
Alaska's flag—to Alaskans dear,
The simple flag of a last frontier."

The contest sponsored by the American Legion of Alaska produced a flag that is different than any other of the 48 State flags and is unique in having been designed by a teenage boy.

Food Surpluses and Foreign Assistance

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an outstanding editorial which was published last week in the New Republic. The editorial has a number of incisive recommendations as to how we can more effectively integrate Public Law 480 into our overall foreign assistance policy and how we can more effectively put counterpart funds to practical use in less developed nations of the world.

I believe that the editorial deserves the attention of the many persons who are anxious to develop new ways in which our food surpluses can be made a part of an international effort.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABUNDANT OPPORTUNITY

As a result of bumper wheat and corn crops the estimated value of surplus farm commodity stocks held by the Federal Government will soon reach an alltime high of $9 billion. And who will even guess when the end will be in sight? Farm groups searching for ways to broaden foreign outlets for accumulating U.S. stocks of food and fiber pushed through the surplus disposal program (Public Law 480) in 1954, and Congress has renewed it three times. Although the program has included some famine relief grants ($1.1 billion) and barter deals for scarce ores through private trade channels ($900 million), the biggest single item has been the sale for foreign currencies of surpluses which were not selling in the regular dollar market. Two and one-half billion dollars worth of agricultural commodities had been sold abroad for foreign currencies as of the end of 1958.

The fact that the United States sells the surpluses for local currencies is to the farm bloc simply an unfortunate temporary expedient incidental to getting rid of the stocks. But Public Law 480 has acquired an altogether different significance for the countries receiving the surpluses. The less developed countries which are the principal recipients are short on food and dollars: Thus the program has the special virtue of simultaneously easing local food scarcity (and price inflation) and releasing dollars for capital goods imports. Moreover, roughly half of the sale proceeds accruing to the United States are reloaned to the recipient countries for U.S.-approved economic developments projects (the remainder is used for U.S. local currency procurement, e.g., in military aid programs, and for educational purposes such as the Fulbright student exchanges). What was designed purely and simply as a disposal program has become, in short, an important part of our foreign aid program.

This dual significance of Public Law 480 has long been apparent to some far-sighted aid officials and aid supporters who have doubted whether Congress would ever appropriate the large dollar sums needed for an effective U.S. economic contribution to the less-developed countries, and who have seen in a redesigned Public Law 480 a means for marrying desperate necessity abroad with political reality at home—not to mention reconciling the paradox of U.S. overabundance in a hungry world. But farm

bloc sentiment for a broadened Public Law 480 program did not crystallize until very recently. With Secretary Benson using the high cost of storing the surpluses as one of his main arguments against price supports, the farm groups are now unanimously pressing for a Public Law 480 program placed on a more permanent basis than the present year-to-year schedule. The administration had been considering a special report on the possibilities in an expanded Public Law 480 program by Harvard agricultural economist John H. Davis when the political winds from Capitol Hill began to pick up velocity, and the result was an apparently last-minute decision to place "Food for Peace" in the President's farm message. But although the President has designated Secretary Benson "to explore anew with other surplus-producing nations all practical means of utilizing the various agricultural surpluses of each in the interest of reinforcing peace"—which might mean, in specific terms, a world conference of food ministry representatives later this year—the administration has no immediate plan beyond renewing Public Law 480.

In Congress, on the other hand, there are major legislative initiatives in the making. Representative W. R. POAGE, Democrat of Texas, has introduced an amendment providing for a 10-year surplus program on a loan basis with repayments in dollars over a period of up to 50 years. Senator HUMPHREY, Democrat, of Minnesota, and Represenative MCGOVERN, Democrat, of South Dakota, have introduced resolutions affirming congressional support for a long-term surplus program as an integral part of our foreign assistance, and Senator HUMPHREY is readying an omnibus bill which would, among other things, set up a peacetime agency comparable to the War Food Administration—thus giving the program administrative independence and, equally important politically, budgetary independence from the foreign aid and Agriculture appropriations. By attributing the cost of surplus disposal programs to some agency other than the Department of Agriculture, in the name of an objective other than farm price supports, Secretary Benson's misgivings about the high cost of surplus disposal (on top of supports) might be modified.

Senator HUMPHREY is, in our view, to be commended for his leadership on the surplus issue and his omnibus program will be studied with great interest. There are, however, very serious limitations inherent in any long-term program conceived essentially, as are all of the programs contemplated, in terms of loans. The less developed countries are aware that the United States does not know what to do with its abundance. Thus in this instance the often mentioned preference of sensitive Asian governments for loans rather than grants is less weighty than their clear recognition that the United States could quite painlessly make the surpluses available as grants. This become peculiarly important in the light of the enormous accumulations of local currencies by the United States already taking place in the case of India, Pakistan, and Israel—which together claimed more than half of the Public Law 480 surpluses in 1958—and of the profound and growing uneasiness inevitably resulting from that accumulation in these newly independent countries. As Matthew Kust, former legal adviser to U.S. Embassies in South Asia, pointed out in these pages in the case of India, rupees acquired by the U.S. Government under Public Law 480 (and soft currency development loan programs) might in the conceivable future exceed those held by the Government of India. The mere thought of this is politically explosive in India, which is now in the midst of a frenzied reappraisal of its economic—which is to say political—future. The main theme of Indian Communist propaganda is that the Nehru government is mortgaging itself to Washington.

At present 48 percent of Public Law 480 sale proceeds in India are reloaned for U.S. approved economic development projects; another 15 percent goes for grants to nondevelopment purposes (e.g., education and health); 12 percent for U.S. Embassy administrative expenses, and up to 25 percent for local currency loans to U.S. business operations in India (under the so-called Cooley amendment). Any substantially expanded Public Law 480 program would mean that the 48 percent allocated for economic development would become a larger and larger sum—looming larger and larger in relation to the totality of the Indian Government budget—and a sum increasingly hot to handle. Why, Indian leaders might well ask (and this is also true in Pakistan and other surplus recipient countries), does not the United States follow the precedent of the Marshall plan? The Marshall plan was a grant program and the counterpart funds in European currencies accumulated under the plan belonged to the recipient governments. To be sure, provision was made in the program agreements for virtual U.S. control over decisions as to how the funds were to be spent; but this would be easier for the recipient governments to justify to their peoples than direct control of large sums of the national currency by the United States, with all of its implicit political influence.

The Davis report now before the State Department recognizes this state of mind in the less-developed countries and recommends that the grant portion of Public Law 480 allocations be increased from 15 to 25 percent. In our view there is no reason why the increase should not extend to the 48 percent portion now being reloaned and perhaps in later years to the bulk of the proceeds.

There is danger that in the absence of a clear definition of "Food for Peace" as something different from a bigger and better disposal program—perhaps restyled "Food for Economic Development"—some of the merit of the program may be canceled out. It may become an excuse for many Congressmen to vote against vital dollar aid appropriations (e.g., for an expanded Development Loan Fund) while not having the saving grace of the grant authority so necessary in the light of political realities in the less-developed countries. The National Grange frankly urges the Federal Government to "use surplus agricultural commodities whenever practical instead of dollars as a means of aid and relief." What the farm belt politicians are perhaps afraid of is an isolationist rural reaction against giveaways. But given the facts and some leadership we suspect that farmers could be won to a grant program. They have, after all, nothing to lose.

Civil Defense Folly

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Civil Defense Folly," published in the Springfield (Ohio) Daily News of February 18, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL DEFENSE FOLLY

Whether top officials of the Federal Government are trying to delude the people, or whether the Civil Defense organization is trying to entrench itself solidly into a permanent position, Senator STEPHEN M. YOUNG did the public a favor when he brought the question of the Civil Defense setup into the open. Senator YOUNG says the program is obsolete and futile, and there can be little question but what he is right.

Both the evacuation and the shelter plans have been rendered wholly ineffectual as protective devices by the newer developments in the H-bomb and other nuclear weapons. Nevertheless, the Civil Defense Office has asked Congress to double its appropriations for the coming year. As Senator YOUNG says, in the face of the facts, any further funds for Civil Defense are just being thrown away.

Some efforts to bolster up the Civil Defense case have been made through the contention that the Civil Defense has rendered good service in disaster areas. So has the Red Cross. So have thousands of volunteers not connected with either agency. Service for disaster victims has been just as good if not better in those areas in which the Civil Defense organization has not participated as in the ones in which it did take part. And as for the distribution of surplus equipment, one has only to look at some of such distributions which have already taken place to realize that insofar as heavy masses of the population are concerned, such distribution could have little effect.

There has been some talk about the making of a paid Civil Defense director for Springfield, and possibly including Clark County. It is extremely doubtful if any good practical results, more than are now being had with a volunteer nonpaid director, could be obtained.

Whenever a new governmental agency has been created for any purpose, it has proved extremely difficult to terminate the agency when the purpose has been fulfilled. Seemingly, the present Civil Defense organization is determined to perpetuate itself whether or not it is doing any effective work.

The Public School Situation at Front Royal, Va.

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials dealing with the situation in the public schools at Front Royal, Va. One of the editorials is entitled "Ridiculous Situation in Front Royal" and was published in the Savannah Morning News of February 23, 1959. The other editorial entitled "Boycott by Front Royal School Pupils Could Be Supreme Test of 1954 Ruling," was published in the Augusta Herald of February 20, 1959.

There being no objection, the editorials were ordered to be printed in the RECORD as follows:

[From the Savannah Morning News, Feb. 23, 1959]

RIDICULOUS SITUATION IN FRONT ROYAL

The independent-minded people of predominantly rural Front Royal, Va., pose quite a challenge for the Federal authorities.

According to the ways and means committee of the National Association for the Advancement of Colored People, otherwise known as the Supreme Court, the "law of the land" says Front Royal's school must be mixed—no evasion, no delay, no circumvention.

The people of Front Royal closed their new million-dollar school last fall rather than open it on an integrated basis. The students, instead, attended private classes. But the NAACP lawyers stayed busy, and the courts kept grinding out laws to make the people abide by the laws they had already made, and by last week every legal defense had been exhausted. The people lost, the court won.

As a list-ditch measure, Warren County, where Front Royal is located, held a referendum on whether or not to continue private schooling for the children. The vote was 545 to 4 in favor of private schools.

The parents wanted to keep their children in makeshift classes run by the Warren County Education Foundation since last September, and they appealed to a Federal judge in Baltimore to permit them to continue to do so, citing the election results to show that the people wanted it this way.

But the judge said "No."

Thus, court-ordered integration was scheduled to begin on Wednesday. But on the appointed day the white students stayed away en masse, and only 22 Negro students reported to the 30-classroom high school, built to accommodate 1,000.

There was no disorder. The 800 white students continued to attend their private classes. Nine white teachers were on hand to teach the 22 Negro students.

The next move, whatever it may be, is up to Federal authorities and the courts, and the signals, as usual, will be called by the NAACP.

The white students are, in a sense, cutting off their noses to spite their own faces—but that is not the point. The point now becomes whether or not in this land of ours, the courts can make a new law making it illegal for a person to cut off his nose to spite his face. We already have compulsory attendance laws in all States, but these are State laws and do not specify which school a student is compelled to attend. Attendance of a private school satisfies this law, so far as the State is concerned. Therefore, the Supreme Court must—if it acts consistently with its former rulings—assume control over compulsory attendance and change this to mean compulsory attendance at an integrated school.

Then we suppose U.S. marshals or perhaps even Federal troops could be used to clear the white private school in Front Royal and herd the children over into the integrated public school. It would be sort of like a Little Rock situation in reverse.

Unless something of this nature is done, the law of the land will stand repudiated—and this is something our courts and Federal authorities must never permit. Ask any liberal.

Some students in areas marked for integration already attend segregated private or parochial schools. If Front Royal's white students are forced to transfer to the integrated public school, what disposition will be made of other students attending segregated private schools in other areas?

Perhaps each case will have to be judged on its merits—if the student transferred to private school to avoid racially-mixed classes, he could be enjoined in Federal court from continuing such attendance; but if his motive was to get a better education, to receive religious instructions, or just to permit his parents to "keep up with the Jones," then he would not be transferred.

Ridiculous?

Of course it's ridiculous. But it could not be otherwise in this instance since it is a natural outgrowth of a preposterous proposition—the Federal usurpation, without legal foundation, of a local community's inherent right to run its own public schools.

[From the Augusta (Ga.) Herald, Feb. 20, 1959]

BOYCOTT BY FRONT ROYAL SCHOOL PUPILS COULD BE SUPREME TEST OF 1954 RULING

The first predominantly rural county in the South to face court-ordered integration of its schools has perhaps shown a way to circumvent judicial tyranny by glumly giving up its own public white school to Negroes in order to maintain segregation.

As the country now knows—if the Northern press saw fit to print the story, that is—22 Negro pupils walked into a million-dollar high school at Front Royal, Va., Wednesday—and walked in alone. None of the county's more than 800 white students showed up. Not a single one. Instead, they chose to remain in private classes.

It was a 100-percent boycott—the first of its kind in American history. Moreover, it wasn't a Deep South incident, either, but the protest of an area of northern Virginia, not far from desegregation zones.

And it was a protest that could prove to be portentuous if attempts are made to force Deep South compliance with the Warren Court's reckless ruling.

No doubt the Chief Justice has heard the adage that a horse can be led to water but can't be made to drink.

By the same token, he should now be aware that there are parents who balk at sociological medicine being forced down their children's throats.

The Warren Court first butted its inflated head on Little Rock. Now it is up against a figurative mountain in the Shenandoah Valley—a mountain that will be hard to whittle down unless the Federal judiciary, at the proddings of the insatiable NAACP, should declare private schools unconstitutional and thus involve every church-operated educational institution in the country.

But in view of past performances, it wouldn't be too great a surprise to the South even if it comes to that.

The Front Royal school, which closed last September 12 to avoid compliance with Federal integration orders, was one of those where racial barriers were removed some weeks ago upon collapse of Virginia's massive resistance stand.

Thus, its all-out white boycott was in contrast to the outcome of three metropolitan areas—Norfolk, Arlington, and Alexandria—which, bowing to Federal coercion, finally mixed on a token basis.

As pointed out, however, Front Royal was the first truly rural community to face the test—and it met it stubbornly.

Comments The Charleston News and Courier:

"Because the people of Warren County have refused to be robots manipulated by remote control, they may be subjected to new pressures and penalties. Regardless of what is done to them, they have provided an example of courage, coolness, and character. They have shown the way."

And as Washington columnist Holmes Alexander wrote the other day:

"The theme of equalitarianism has been translated into the vulgate to mean forced integration of white and Negro children. It is a movement by nonsoutherners which is pressed upon the South with the hope of getting the Negro vote and no idea of the ultimate consequences."

But so far the reckless program hasn't panned out too well—as witness the latest episode at Front Royal.

Instead of massive conformity, a Virginia county has handed the Federal courts and the NAACP a massive slap. And our idea is that the President will use no troops in this instance, regardless of what Asia and Africa may say—or how Earl Warren may feel over the anomaly of a strictly one-way mixed school.

Food Prices

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup dated February 3, 1959.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, FARMERS UNION GRAIN TERMINAL ASSOCIATION, ST. PAUL, MINN., FEBRUARY 3, 1959

There are a lot of facts and figures that consumers ought to know about food prices. They deserve to know, because they are entitled to abundance at fair prices.

One farm magazine, for example, explains that if farmers farmed now as they did in 1940, the consumers' food bill would be at least $13 billion a year higher. And it asks: "Which is better, to have a surplus costing the consumer $3 to $4 billion a year in taxes, or to have a scarcity, costing him $13 billion more a year at the retail level?"

And that's a real question, which must be answered. The farmer used to get 55 cents out of the consumers' food dollar. Now he gets 39 cents. That's because food prices are up, while farm prices are down. No other industry has had its income cut so drastically.

The Federal Reserve Bank of Minneapolis explains the situation in the last year this way: "There have been shifts as farm prices drifted lower, and industrial prices firmed, but the total wholesale and consumer prices have remained stable."

That can be said in fewer words, simply that agriculture is subsidizing industry and business and consumers. And all of us ought to be grateful to farmers, not angry with them, for producing so much, so cheap. Most farmers know this, and wish they could get city people to understand.

We received a letter the other day from a farmer near Minot, N. Dak. "We know," he says, "that Secretary of Agriculture Benson is working to reduce farm prices, because he says that will reduce prices to consumers. But let's just compare grain prices with prices of finished products."

He explains that a year ago he sold his wheat for $2.12 a bushel, and paid $2.98 for 50 pounds of flour, and 18 cents for a loaf of bread. Now he sells his wheat for about $1.70 a bushel, pays $3.59 for the same flour, and 23 cents a loaf for bread.

Or take malting barley, this farmer says. "A few years ago I got $2 a bushel for my barley, and beer sold for 15 cents a bottle. Today my barley is worth 90 cents, and beer is 25 to 30 cents a bottle." He goes on to make the same kind of comparisons for oats and milk. Consumers just aren't getting any benefit from lower farm prices, he concludes, because retail food prices go up faster than farm prices go down.

And I'm sure we all agree with that. Now, what this farmer proposes is that farmers get together and exercise some intelligent

production controls, in return for fair and reasonable prices. "But getting the farmers together is the tough job," he says, and he urges them to join up with their organizations and cooperatives.

Well, a lot of farmers tell us that makes sense to them. The last thing they want is an all-out free-for-all on farm production, with each farmer pitted against his neighbor in a disastrous price war.

Gradually, more and more people are coming to understand that in a legislated economy, no single group can be cast out without bringing down trouble on all groups. The better that is understood, the better our chances for decent farm legislation, fair to consumers, taxpayers, and farmers.

Presidential Item Veto Power

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How To Get Economy," published in the Salt Lake Tribune of February 5, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW TO GET ECONOMY

President Eisenhower, speaking through Representative HALLECK, Republican House leader, has appealed to the public to join him in his fight to keep the $77 billion budget in balance.

A hearty public response could have telling effect.

But the public, despite it professed interest in economy, is sometimes apathetic when it comes to making its voice heard. Moreover, Congressmen and Senators, who get letters from home urging that the budget line be held, also must work for projects demanded by their constituents. One man's economy often is another man's necessity. That leads to logrolling and increased appropriations.

There is, however, a way to curb this latter practice. It is item veto legislation which would give the President the power to disapprove individual items in an appropriation bill.

As matters stand now, the President must either accept or reject an appropriation bill as a whole. And when an appropriation bill may run to 50 pages and contain thousands of items, he ordinarily has to accept it despite his objection to what he considers extravagances.

Presidents as far back as Ulysses S. Grant have asked for item veto power. Adlai Stevenson endorses it. Senator DOUGLAS, who was an economics professor before he went into politics, estimates it would save the taxpayers $4 billion a year. President Eisenhower called for the item veto in his recent state of the Union message.

But Congress undoubtedly will continue to say, "No." For the item veto would deal a deadly blow to logrolling and would break the pork barrel into small pieces.

Many State Governors, including Utah's have the item veto power. We think the same power should be given Presidents. But it will take a public upheaval of earthquake proportions to get anything done.

Edward F. O'Meara, of Oregon Daily Journal, Spends 30½ Hours in Ireland

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. NEUBERGER. Mr. President, the propeller-driven airplane has dwindled the size of our terrestrial home, and the jet aircraft will reduce the globe in size still further. It even is possible for a journalist from my home city of Portland, Oreg., to visit many of the great communities of Western Europe during a 10-day journey.

One such pilgrimage involved 30½ hours in Ireland by a Portland newspaperman who traces back his ancestral lineage to that Gaelic land. He is Edward F. O'Meara, city editor of the Oregon Daily Journal of Portland. Mr. O'Meara has written for his paper a lively and vivid tale which gives highlights of his relatively brief stopover in the country of his forebears, under the title of "30½ Hours in Ireland." It is a heartwarming story.

I ask unanimous consent, Mr. President, that Mr. O'Meara's articles, as condensed and edited, be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIRTY AND ONE-HALF HOURS IN IRELAND

(By Ed. O'Meara)

There didn't seem to be much use arguing.

"So you're going back to Ireland! Well, it'll look pretty much the same!"

That's what my Gaelic-brogued plane seatmate was telling me as we winged through the December night's darkness toward Shannon Airport and the land of St. Patrick.

"I've never been to Ireland before," I told him for the second or third time, "so I couldn't be going back."

'Yes, yes," the Gael said, "that's what I say—you won't be noticing any changes."

It was a big switch, this stopover in the Emerald Isle, "stolen" from our mid-December over-the-Pole Pan American trip to London and Paris. And getting to Ireland isn't too easy during the winter season, but one of Pan Am's Paris office staffers, Mme. Micheline Renoux, proved that French girls are not only pretty but also smart by finding an aerial way to Eire for me.

GIRLS IN THE GREENEST GREEN

We dropped in to Shannon Airport on the shores of Shannon River a few minutes before midnight. Even at that dark hour there was green in sight, mainly the uniform of Aer Lingus, which is the greenest green imaginable, and mainly on pretty Irish girls who were (as is the wont of Irish girls almost everywhere) directing traffic.

At this point I was fortunate in falling almost immediately into the convenient and capable clutches of Matthew Kelly and his boss, Derry McCarthy, drivers of cars for hire. Otherwise I might still be standing there, dazedly staring at the $1.80 price tags on bottles of Irish whiskey in the Shannon shops.

Then followed a 14-mile drive to headquarters, the Royal George Hotel in Limerick—locked tighter than a drum at 12:30 a.m. Limerick, a town of 50,000, was as dead as a mackerel at that hour.

ROOM WITH BATH EXACTLY THAT

Ringing of the Royal George bell produced "night man" Dick Leahy, who proudly led the way to one of "the foinest rooms" (yes, a lot of them to talk that way!) in the century-old hotel. It turned out to be No. 68, which is—naturally—on the fourth floor. The "with bath" turned out to be exactly that—a neat little anteroom equipped with a long white bathtub, two round cakes of "oatmeal soap" and four large bath towels. Nothing more. "The other conveniences," Dick explained, "are down the flight of stairs, turn to the right and at the end of the long hall."

Limerick is a little bit like Chicago—it's hog butcher of the Irish world. The breakfast of bacon and eggs was like nothing I've had in years of rather intensive cuisine-testing—huge slabs of sliced bacon with two-inch width of lean meat and practically no fat!

NAMES MAKE SOOTHING SOUNDS

Then the aim was to visit high spots of counties and towns with familiar names—names mentioned over the years by Ireland-originated members of both sides of the family. With Derry McCarthy, a light-hearted but heavy-footed driver of a small English-built car who knows the main roads, the back roads, by-roads, alleys and short-cuts, as well as the way in and out of various pubs and the best eating houses in towns along the way, I made the best of my 30½-hour visit in Ireland.

Names on this soft, green land are colorful, intriguing and unusual and they unrolled before us as we raced some 160 miles through the heart of the country—through what's called the Golden Vale of Eire, as Derry described it.

From County Limerick to County Tipperary, past Silvermine Mountains near Nenagh; alongside Lough Derg, the lakey bulge in the Shannon River; to Cloughjordan, tiny village with a blazing claim to fame because a martyred patriot-poet was born there; into Roscrea, amid fields dotted with abbey ruins and marked by a "round tower of Ireland"; a brief excursion into county Offaly, a fair stretch of miles in Galway and back to Limerick.

"HIMSELF" WAS JUST OUT BACK

Only place we met another O'Meara was in well-named Toomyvarra village, which seems to have almost as many spellings of its name as there are residents. It's near the Devil's Bit, a big nick in the otherwise smooth line of the Silvermine Mountains. And it means O'Meara's Hill."

In the middle of the town sits a neat building with a two-foot-high red-lettered sign—"J. O'Meara." So McCarthy and E. O'Meara went in. Turned out to be a pub. The pub division was at the back of the room and the front half of the shop was a sort of light grocery department. It looked as though the back half of the shop did the major business.

"Is Mr. O'Meara about?" asked McCarthy.

"Himself is out back," said the gray-haired lady sweeping up. Turned out she was Mrs. O'Meara.

"Well, Mr. O'Meara here from Oregon, would like to meet Mr. O'Meara, of Toomyvarra," McCarthy explained, and she ran to get himself.

James Patrick O'Meara, soft-spoken and sixtyish, came in from outdoors and was happy to welcome us to Toomyvarra. We sampled the products of the back half of the shop. James Patrick did some card tricks ("though me hands are too cold to do it properly") with a facility no other bearer of the name has ever shown, to my knowledge. Other O'Mearas in the neighborhood? "Oh, yes," he said. "Must be 15 or 20 families of them—and hardly any of

them will admit to being related to any of the others."

RELATIVITY'S NO PROBLEM

"Probably," said James Patrick with a smile, "they wouldn't admit to being related to you, either. You Oregon O'Mearas have been gone a long while."

"So," he said turning to the back of the shop, "let's have another."

At this point it developed that we had to be on our way, and James Patrick had to be going, too—he was to be a pallbearer at a funeral Mass in a few minutes.

Guidebooks say "the road northwards from Nenagh to Portumna passes the town of Borrisokane, which is of little interest to the visitor." But it was a colorful sight when we reached it, a little before noon.

The main street was jammed with farmers, small trucks, cows, sheep, gesturing men in thick overcoats, bicycles, carts with donkeys, ducks, and some small boys rushing pell-mell out of St. Mary's School nearby.

ALL'S FAIR IN BORRISOKANE

We edged our way through the melee of a typical Irish fair day (McCarthy said it was typical, anyhow), then stopped to query one of the citizens. Did he, by any chance, know of an O'Meara running the local blacksmith shop? (For about 200 years up to the grandfatherly departure in the 1850's there had been an O'Meara forge in Borrisokane).

"O'Meara blacksmith?" he said. "No—there's a McKenna been runnin' the forge here for years. But there's an O'Meara has a fine pub over in Toomyvarra."

Thanks, we said, but we couldn't go back right away.

And then we were off again in McCarthy's Consul, over the well-paved but narrow Irish highways, through Portumna, Ballinasloe, Aughrim, Loughrea and Athenry in east Galway and along the Shannon into Clare as mid-December's early dusk caught up with us hurrying back to Limerick.

IT'S NO TRICK TO GO BACK

And then I climbed aboard a Pan Am plane for London, and in London took off a bit later in another Pan Am plane for a 20½-hour ride back to Portland over the polar route. And the new jets will cut the trip to a mere overnight flight. Since Portland's that close to Limerick and Tipperary, it'd be no trick at all to go back some time.

So that was it—a brief visit to the Ould Sod, a couple of short nights' sleep at the Royal George, a few minutes at Nenagh, an hour or so in the back half of James Patrick O'Meara's pub in Toomyvarra, fleeting glimpses of the Shannon, a peak at the tinker's colorful carts on the roadside, a few short walks in the Irish countryside, a few short beers with Derry McCarthy (who seemed more like a relative than a man with cars for hire), and that was it. No Dublin, no Blarney castle, no Cork. It's a fine, soft, green and quiet land, Ireland is—and a man ought to spend more than 30½ hours there to pay it a decent visit.

Ah, well, as the Irish say, "Slainte"—good health and here's to you.

Our Soybean Economy

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. GATHINGS. Mr. Speaker, on Wednesday, February 25, it was my pleasure to attend with other members of the House Committee on Agriculture a market development luncheon together with representatives from our farm organizations and from industry and industry organizations.

Representing the soybean growers and industry were Mr. Howard Roach, president of the Soybean Council of America, and Mr. Coleman Crews, of Keiser, Ark., representing the American Soybean Association. These two gentlemen had at their fingertips splendid information on the development of our soybean economy in the United States and the address that Mr. Roach gave was heartening as to the work of the soybean organizations, allied with the Foreign Agricultural Service of the U. S. Department of Agriculture, in developing and expanding foreign markets for soybeans and soybean products.

This foreign trade development is essential when production of American soybeans is noted. The following table indicates the great expansion in American production. It is seen that, from 44 percent of the world production in the years 1950 to 1954, American production amounts now to 58 percent of the world production:

Soybeans: World production by areas and U.S. share, average 1950–54 annual 1955–58

[In millions of bushels]

Area	Average 1950–54	1955	1956	1957	1958
Foreign production:					
Non-Communist:					
Brazil	3	4	4	4	4
Canada	4	6	5	7	7
Indonesia	11	13	13	13	13
Japan	17	19	17	17	16
Others	8	7	11	11	11
Total	43	49	50	52	51
Communist countries:					
China	330	335	340	335	350
Others	11	10	10	10	10
Total	341	345	350	345	360
United States	298	374	449	480	575
World total	682	768	849	877	986
U.S. percent of world	44	49	53	55	58

Using only 1 percent of the funds in the Public Law 480 programs for marketing and promotion programs, the various commodity organizations have performed excellent work in creating and expanding markets for American farm products. Mr. Roach, in his statement, illustrates this fact in the case of soybeans. It is a pleasure and a privilege to include with these remarks the statement presented by Mr. Roach.

STATEMENT OF HOWARD L. ROACH, OF PLAINFIELD, IOWA, PRESIDENT, SOYBEAN COUNCIL OF AMERICA, INC., COMMITTEE ON AGRICULTURE, HOUSE OF REPRESENTATIVES, 86TH CONGRESS, FEBRUARY 25, 1959

When the American Soybean Association was organized in 1920, to promote a new and almost unknown crop, few present realized the possibilities of an agricultural achievement that is now history.

In 1925, the first year that the U.S. Department of Agriculture published records of soybean production, 5 million bushels were grown which were worth between 10 and 11 million dollars. Thirty-nine years later, in 1958, 574 million bushels were grown (an increase of over 1,000 percent) which put into the pockets of American farmers over $1 billion.

The same foresight that nursed the small soybean crop, also nursed an infant processing and handling industry. It was but natural that these segments of our agricultural economy, realizing their mutual dependence, should conceive the Soybean Council of America to tell the story of soybeans and soybean products to the world.

With the passage of Public Law 480 by the 83d Congress, in 1954, which contained the concept of using counterpart funds for market development activity abroad, the council entered into agreements with Foreign Agricultural Service of the U.S. Department of Agriculture to tell the story of soybeans and soybean products; to encourage existing overseas markets and to develop new business for American agriculture.

The remarkable increase in acreage devoted to the growing of soybeans has changed the United States in the field of fats and oils from an importing to an exporting nation.

We must, therefore, find and develop new markets. With a broad concept that we must encourage greater consumption among people where possible, and with the still broader concept that edible fats and oils can be substituted one for the other, the council feels responsible for cottonseed oil, lard, butter, and other fats and oils as well as for soybean oil. We are, therefore, engaged in increasing the consumption of fats and oils.

Since our first project, started in Japan, cooperating with the Oregon Wheat Growers, we have now written 15 market development agreements with Foreign Agricultural Service covering the following nations: Austria, Germany, Italy, Spain, Turkey, Poland, Mexico, Central America, Chile, Peru, Caribbean Area, Burma, India, Thailand, Pakistan, Greece, and Israel. In past years we have shown in agricultural and trade fairs in Italy, Germany, Spain, and Greece and during the current year, 1959, will show in a total of 14 fairs in Europe, South America and Asia. This trade fair activity, alone, costs the Council between eighteen and twenty thousand dollars per year in cold cash while our overseas cooperators contribute much more than this amount. This is all possible through cooperation with the Department of Agriculture and with the Department of Commerce.

The Council early learned, in market development work, that our overseas friends expect us to share some soybean meal and knowledge on how to use same in livestock and poultry feeding if we expect them to keep quiet while we ship our surplus edible oil to them which competes with their own fats and oils. We are, therefore, holding schools, seminars and feeding demonstrations on how to use soybean meal efficiently. As a result, our dollar sales to Italy of soybean meal for example have risen from a little over 3,000 short tons in 1954 to over 70,000 tons in 1958. We have also held oil schools and seminars in Spain, showing and telling the trade and Government officials, about U.S. methods of grading and testing vegetable oils. As a result the Government of Spain has recently removed restrictions on the sale and mixture of soybean oil.

The job before us is stupendous. Without assistance, from Foreign Agricultural Service, the task and cost would be too great for us to attempt. American agriculture is the beneficiary of those who conceived the use of funds from Public Law 480 sales for market development work. Our concern is that enough of these funds continue to be directed for market development work until such time that agriculture fully realizes its value and is willing to carry on alone.

Most of us remember the slogan used during the last war to encourage agricultural

production "Food will win the war and write the peace." Food did win the war, but we have never given it the chance it should have to "write the peace." Russia is able to match us in guns, sputniks, rockets, and in every other product that implies destruction. Russia is still unable to match us in food and the knowledge that goes with its production and processing. In this field they cannot compete with us today. Now is time for us to use food to write the peace and demonstrate to the world the wonders that plenty and proper food can do. Market development, made possible through the continued availability of Public Law 480 funds is the greatest single medium through which we can carry on a program for universal peace.

Save Millions by Curtailing or Eliminating Civil Defense Expenditures

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Harsh Words for CD," published in the Toledo Blade of February 18, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARSH WORDS FOR CD

Ohio's Senator STEPHEN M. YOUNG has said what a good many people think when he calls the civil defense program futile and suggests that Congress could, without jeopary to the Nation, save millions of dollars by curtailing or eliminating CD expenditures.

In the Senator's opinion, most of the $500 million appropriated for this purpose over the past 9 years has been wasted. Neither we nor the Russians have any defense against nuclear weapons except retaliation. Opposing the request of the CD agency for increased funds, he charges that the organization has grown topheavy with high salaried officials. Further money, he says, would means more for officials, for useless bomb shelters, for supplies and equipment of doubtful value.

This severe judgment on a program to which it has become customary to pay lip service will, of course, be challenged. There are those who believe that millions of American lives might be saved if a truly comprehensive CD program were put into effect. The trouble has been, they assert, a niggardly scale of appropriations and the lack of Federal leadership for a program of life-and-death importance. Some complain because the Federal Government has failed to come through with a huge program of shelter building.

But while it may be argued that a CD program could and should be made far more effective, there would not appear to be much question about the ineffectiveness of the present one. It is still limping along on a golden shoestring, is still entangled in doctrinal dispute about whether the best defense against nuclear attack is to run or dig in, is still operated on a sort of poor relation basis to the overall defense program, is still without the sort of administration or congressional support that might give it some importance, is still viewed largely with an indifference by the public that reflects general skepticism of its usefulness.

The administration and Congress have been going through the motions of supporting CD all these years. Perhaps it is thought better for morale to spend a few hundred million on a perfunctory program than to admit to a fatalistic attitude about what would happen if the bombs ever did begin to fall. But Senator YOUNG, in putting into blunt words his ideas of the CD operation, has challenged his colleagues to weigh realistically its value.

Communist Tactics, Strategy and Objectives—Report by Committee of the American Bar Association

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. BRIDGES. Mr. President, on Tuesday, February 24, 1959, the American Bar Association, at its midwinter meeting in Chicago, adopted the report of its special committee on Communist tactics, strategy, and objectives. This report has received nationwide attention because of its momentous impact in the field of American law, dealing with recent decisions of the Supreme Court in the field of internal security and communism. It is a courageous and forthright document, from a highly responsible source, which deserves the serious consideration of all Americans who are concerned with the preservation of the American way of life.

Mr. President, I ask that a number of newspaper editorials concerning this report be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Manchester (N.H.) Union Leader, Feb. 23, 1959]

SUPREME COURT UNDER FIRE

The American Bar Association's Committee on Communist Tactics, Strategy, and Objectives, after publishing last August a preliminary report, has now come forth with a report—as yet unreleased to the press—which will specifically cite and criticize 23 Supreme Court decisions which coddle Communists and communism. The report, which is being presented today to the ABA's entire House of Delegates at their meeting in Chicago, will be voted upon by the entire organization.

A quick look at the results of some recent Supreme Court decisions should prove the necessity of the ABA taking strong action. The court has refused to uphold or pass on the constitutionality of the Subversive Activities Control Act, thereby delaying the effectiveness of the act. The Court has held that teaching and advocating the forcible overthrow of our Government, even with evil intent is not punishable under the Smith Act. In freeing five Communist Party leaders and ordering new trials for nine others, the Court said it must be proved that there is some effort to instigate action to that end.

The Supreme Court freed Steve Nelson, Pennsylvania Communist Party leader, and in effect voided the antisedition laws of 42 States, Alaska and Hawaii. The Court construed the Summary Suspension Act of 1950, as it applied to Federal employees, to apply only to employees in sensitive positions, although such was obviously not the intent of Congress. Reversing two Federal courts, the Court, despite incriminating evidence, set aside the discharge of John Stewart Service by the State Department, thereby undermining the McCarran amendment which gave the Secretary of State discretion to discharge any employee in the interests of the United States.

The Court reversed the decisions of three New York courts and held it is unconstitutional to automatically discharge a teacher, in accordance with New York law, because he took the fifth amendment when questioned about Communist activities. Even though the Court later admitted that it erred in stating that the teacher was not aware that his claim of the fifth amendment would result in discharge, it denied a rehearing.

Here in New England, the Court reversed the New Hampshire Supreme Court and held that the attorney general of this State was without authority to question a lecturer at a State university, financed by taxpayers, concerning a lecture at the university and other suspected subversive activities.

The notorious Jenks and Watkins decisions need no elaboration, but only serve to prove the point that the Supreme Court is displaying an obvious bias in favor of Communists and suspected subversives.

Now that Chief Justice Warren has "disowned" the American Bar Association, perhaps the latter will summon up all its courage and endorse the recommendations of the 10 lawyers who comprise its Committee on Communist Tactics, Strategy, and Objectives.

[From the Washington Evening Star, Feb. 25, 1959]

LAWYER'S ATTACK ON SUPREME COURT—BAR GROUP'S DISAPPROVAL OF DECISIONS SEEN IMPLYING MISUSE OF POWER

(By David Lawrence)

Seldom in American history has there been such a scathing criticism of the decisions of the Supreme Court of the United States as has just come from the American Bar Association.

This has nothing to do with the decisions of the Court on segregation or integration. Nor do the members of the bar—who by overwhelming vote approved at the Chicago convention this week a committee report on the subject of Supreme Court decisions—come from any one section of the country.

The action taken is a formal disapproval of several decisions of the Supreme Court, not only in matters of law but in the misuse of the judicial power itself. The report, comprising about 20,000 words, does not criticize the Supreme Court as an institution nor recommend any limitation of its powers, but does say Congress should at once, in the proper way, endeavor to correct the ill effects of the decisions. The report declares:

"Many cases have been decided in such a manner as to encourage an increase in Communist activity in the United States through invalidation of State sedition statutes, and limitation of State and Federal investigating powers in the field of subversion, although these cases might readily have been disposed of without so broadly limiting National and State security efforts.

"The paralysis of our internal security grows largely from construction and interpretation centering around technicalities emanating from our judicial process which the Communists seek to destroy, yet use as a refuge to masquerade their diabolical objectives.

"This trend was treated fully in the Conference of State Chief Justices last year

when they called upon the United States Supreme Court to exercise the power of judicial self-restraint. The dissenting opinions of certain Supreme Court justices have been crystal clear in charting the effect of the failure of the majority to recognize the underground forces that are at work and to appreciate how these decisions affect our internal security."

The bar association's report says it is the duty of members of the bar "to defend the institutions of the judiciary from unfair and unjust attacks" and that proposals to limit the Court's jurisdiction should not be approved. But at the same time the committee report, as adopted by the convention, says that, where remedial legislation can be enacted by Congress to deal with Communists and other subversives, this should be given prompt attention. The report cites a long list of Supreme Court decisions in the internal-security field and points out exactly how they can be overcome by action of Congress.

Also, a chapter is devoted to "current fallacies about communism." The report says: "It is just as false to measure the strength of communism in the United States by comparing the small number of party members with the large number of non-Communists, as it would be to measure the seaworthiness of a ship by comparing the area of its holes with the area of its hull. A few strategically placed holes can sink the largest ship."

Adding that the "danger and the menace of communism are worse than ever," the report calls on the members of the bar to alert the Nation on the menace of international communism.

As one reads the report, there comes a feeling that its writers tried to be as tactful as possible in their references to the present membership of the Supreme Court but nevertheless reveal again and again their dismay at the abuse of power by the highest Court.

"Our internal security," says the report, "has been weakened by a lackadaisical attitude on the part of the public and technicalities raised in judicial decisions which too frequently in the public mind have had the effect of putting on trial the machinery of the judicial process and free the subversive to go forth and further undermine our Nation."

The indifference of the public may be due to the job performed by some of the opponents of the late Senator McCarthy, of Wisconsin. Unfortunately, the period in which he struggled to direct attention to the Communist menace now is brushed off as merely one of hysteria, and there is no effort nowadays to separate what was valid in the crusade from that which was due to overzealousness and emotionalism.

Since the famous battle took place in the Senate in 1954, moreover, it has been an open secret in Washington that the Democratic Party leaders in both Houses have been under pressure from its so-called liberal elements to soft-pedal the inquiries into communism. Though two committees still do some work in this field, they are restrained by word from higher up in the party whenever they really want to expose some palpable manifestation of Communist effort inside the United States. Some prominent American citizens, for example, who have been openly siding with the Soviets against their own Government in certain controversies have never been called as witnesses by the committees of either the House or the Senate to explain their activities or their connections with the Communist propaganda machine. Maybe the American Bar Association report will awaken American public opinion and help to overcome the timidity of the Democratic Party leadership on these subjects.

[From the Newark Evening News, Feb. 24, 1959]

BAR AND SUBVERSION

The board of governors of the American Bar Association has approved a report of a special committee on Communist tactics, strategy and objectives which recommends congressional reversal of Supreme Court decisions in a series of subversion cases.

The report affirms the duty of the bar to defend the judiciary from unfair and unjust attack, an apparent reference to last year's resolution of the Conference of Chief Justices and to intemperate speeches in Congress. Analysis by members of the faculty of the University of Chicago Law School has shown that the charges of legislative encroachment made by the State chief justices had little basis. New Jersey's Chief Justice Weintraub said as much at the time.

However, the bar association committee does insist that many cases, decided in such a manner as to encourage an increase in Communist activities, could have been disposed of without so broadly limiting national and State security efforts.

Congress last year wisely rejected proposals for limiting the Court's appellate jurisdiction and nullifying some of its decisions. These were dangerous measures of unpredictable effect. They could have denied law-abiding citizens the judicial protection they need against tyranny and persecution.

The bar association report makes an obvious distinction between the Court's interpretation of constitutional principles and decisions in which it interprets the intent of Congress or defines the scope of statutes.

In the Steve Nelson case, which the bar association would reverse, the Court declared that Congress "intended to occupy the field of sedition," to the exclusion of the States. In the passport cases the Court held that the statutes do not authorize the State Department to withhold passports because the applicant was a Communist or refused to answer questions about party memberships. This is the judicial function.

Where the Court's declaration of congressional intent is quite different from what Congress did in fact intend, Congress has a right to change the law to make its purposes clear. Where the Court finds that a statute does not grant authority Congress intended to grant, Congress has a right to supply the lack. This is the legislative function.

In contrast with the blunderbuss that was the 1958 Jenner-Butler bill and the sweeping generalizations of the chief justices, the bar association recommends specific case by case revision which would not impair the indispensable doctrine of judicial review.

[From the Wall Street Journal, Feb. 26, 1959]

THE BAR AND THE HIGH COURT

The American Bar Association's House of Delegates, meeting in Chicago, adopted the other day a series of recommendations that, though for the most part politely put, amount to a critical rejection of some United States Supreme Court decisions affecting communism and our internal security.

It is necessary, perhaps, to understand the role of the House of Delegates if one is to measure fairly the meaning of its criticism. The House is the policy-making body of the A.B.A., composed of some ninety thousand members. The delegates themselves number 246 lawyers from every State of the union. They cannot, and do not claim to, reflect the views of every individual member. But there is not much question that the House of Delegates not only sets policy for all the rest, but that it actually does reflect the views of the great majority of members of the bar.

Now, what did the House of Delegates have to say about Court decisions and communism? In its recommendations, designed to nullify the effect of recent rulings, are found such descriptions of decisions as "unsound and incorrect"; as "interpretations" tending to "impede the work of Congress" the result of which is that "internal security is weakened."

Yet the bar did not simply criticize; it recognized that, in some areas, the Supreme Court was faced with imprecise language, sometimes in the law, sometimes in congressional resolutions, sometimes in judicial decisions. So its recommendations were not for limiting the Supreme Court's jurisdiction, as some lawyers and Congressmen have suggested, but for other legislative remedies.

By and large, the recommendations will, we think, meet with approval from both Congress and the public which is also mystified at times by Supreme Court decisions (professional baseball is a sport and not a business; but professional football is a business and not a sport).

Certainly there is little logic in the decision which denied States the rights to enact sedition laws because the Federal Government had preempted the field; States can become as much a target of seditionists as Washington can.

Nor is there much logic in the ruling of the Supreme Court that held, in effect, that it was legal to advocate the violent overthrow of the Government and only illegal to actually try to do it. That is the same as saying the Government could protect itself only when the shooting started.

There are other recommendations, too, that would close some loopholes in internal security. One, for example, would require all Federal employees to answer questions concerning communism before duly constituted congressional committees or authorized officers of the executive or judicial branches or lose their jobs. It makes sense to us to suggest that Uncle Sam should have a right to know whether his employees are loyal and to get rid of those whose loyalty is doubtful.

Congress doubtless will give these bar association recommendations serious study, and it would be well if it acted upon them where necessary to close judicial loopholes in our internal security laws.

It would be well also if the Justices of the United States Supreme Court would read the recommendations and the report on which they were based. This is not the first time the Court has been criticized; a short time back the justices of the State supreme courts pleaded with the Supreme Court for more judicial self-restraint in matters affecting State sovereignty.

It is possible, of course, that the American Bar Association and the State supreme court justices are themselves in error in their criticism of some Supreme Court decisions.

But that is not very likely. And it is even less likely when it is remembered that sometimes minority members of the Court are as critical of the majority decisions as anyone else.

[From the New York Mirror, Feb. 26, 1959]

AIMS OF THE ENEMY

The report of the special committee on Communist tactics, strategy, and objectives of the American Bar Association, headed by Peter Campbell Brown, formerly corporation counsel of this city, is one of the ablest prepared documents that has appeared in a long time.

It is a comprehensive study not only of the infiltration of Communists into American life but it is an itemized brief of the

protection that Communists receive under our laws and their ability to use our laws and our institutions to damage this country.

There are recommendations to the American Bar Association which will undoubtedly influence the opinion of lawyers throughout the United States, particularly those which are critical of the Supreme Court's recent Communist decisions and call upon Congress to pass legislation to correct them.

However, what will have a still greater influence than the resolutions in the 57-page brief which goes to the heart of the subject, which piles fact upon fact, and which makes out so thorough a case against the Communist use of our laws and institutions that even the leftwingers in the American Bar Association found themselves silenced before the shining array of indisputable data.

This brief states:

"The paralysis of our internal security grows largely from construction and interpretation centering around technicalities emanating from our judicial process which the Communists seek to destroy, yet use as a refuge to masquerade their diabolical objects * * *."

The majority in the Supreme Court choose to ignore the world in which they as well as we live. It prefers judicial dogmatism to a realistic appraisal of the danger in which this country finds itself. National security has been weakened by Supreme Court decisions in such cases as *Pennsylvania* v. *Steve Nelson, Communist Party U.S.A.* v *Subversive Activities Control Board, Watkins* v. *U.S., Cole* v. *Young, Jencks* v. *U.S.*, and about a dozen more cases, most of them between 1956 and 1958; that is, since Earl Warren became Chief Justice of the United States.

The difficulty is that the U.S. Supreme Court—that is, the majority—ignores the fact that this Nation is at war—a cold war at present—with Soviet Russia and that that country maintains a fifth column and an espionage organization in this country which must be rooted out.

The report calls attention to facts which the Supreme Court has ignored:

"The Communist master plan for world conquest has been outlined by both Lenin and Stalin as entailing the violent smashing and overthrow of all non-Soviet governments, including those of Great Britain and the United States. Prior to this overthrow and to prepare for it in each instance, the Communist Party is to make 'transmission belts' of all possible nonparty agencies for the diffusion of the Communist line, weakening the country to be overthrown. Already this has become a historical fact to which once free peoples, now enslaved, can testify. Need we have more evidence of Soviet intent?"

Laws have been passed by Congress to provide the means to lessen the effectiveness of Communist fifth column activity in the United States. The Supreme Court has nullified many of the steps taken against the Communists undoubtedly on the supposition that the Communist Party is something like the Populists or Father Divine's heaven or maybe a high school debating society. The honorable and learned justices fail to recognize the nature of the treacherous utilization of our laws and institutions to do us damage.

They now have a brief which can guide them in the right direction. It ought also guide Congress toward legislation which will correct the nonjudicial dogmatism of the scholarly justices.

Criticism of the Supreme Court by the American Bar Association

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of February 23, 1959, entitled "What Is a Technicality?" The editorial deals with the recent criticism of the Supreme Court by the American Bar Association.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS A TECHNICALITY?

The jurisdiction of the Supreme Court is in danger of attack again by an organization as powerful and as responsible as could be invoked—the American Bar Association. A committee report favorably—if somewhat belatedly—presented by the association's board of governors and due to come before the house of delegates at this week's meeting in Chicago carries weight because the bar association has not lent itself to indiscriminate attacks on the Court. Indeed, the board of governors last May denounced the Jenner-Butler Court reform bill as a threat to the independence of the judiciary. This was one reason why that bill was tabled in the Senate last August by a vote of 41 to 40.

The report now submitted pays tribute to the Supreme Court and an independent judiciary as the ultimate guardians of the Bill of Rights and the protectors of our freedom. It goes on, however, to charge that "many cases have been decided in such a manner as to encourage an increase in Communist activities in the United States.

It adds the disquieting indictment that "our internal security has been weakened by technicalities raised in judicial decisions which too frequently in the public mind have had the effect of putting on trial the machinery of the judicial process and freeing the subversive to go forth and further undermine our nation." The principal citation here is usually that of Steve Nelson, convicted of seditious activities under a law of the State of Pennsylvania and given a new trial on the theory that sedition had already been taken care of by Federal legislation.

The bar association report suggests a number of issues that have worried persons who see Communists under every bush. The report suggests that States should enforce their own laws against sedition, which would take care of the Nelson case; that the Secretary of State be given broader power to deny passports to persons he considers subversive; that Federal employees in nonsensitive agencies be put through the same doctrinal wringer as those in the sensitive agencies; that the Smith Act be broadened to remove the distinction between theoretical advocacy of sedition and actual incitement to action; and that the charter of the Committee on Un-American Activities be more precisely worded—obviously a response to the Supreme Court's requirement that a witness needn't answer questions unless they are pertinent to the purpose of the inquiry.

These suggestions are not necessarily criticisms of the Court. In some cases, indeed, the Court itself has expressed a desire for more precise expressions of the lawmakers' intentions.

We do believe, however, that an assembly of distinguished lawyers should think twice before condemning technicalities as of small importance. Lawyers use in their own pleadings all the technicalities they can. Why not? One man's technicality may be another man's property, liberty or life.

We live in a time of great stress, of great dangers, of a great necessity for discipline. Nevertheless, the basic rights of our society are not those of governments, or of any agents of government, but of the individual. And the ultimate act of treason is to despise those rights and undermine them, just as the ultimate loyalty is to protect them and carry forward the great traditions of democracy.

Time To Review Civil Defense Planning

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Still No Place To Hide," published in the Washington Post and Times Herald of February 25, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STILL NO PLACE TO HIDE

Most Americans seem either blissfully or fatalistically unconcerned with civil defense. The minority of persons who think that civil defense is important are disturbed by the inadequacies of the present program. Probably few would go so far as Senator STEPHEN M. YOUNG when he said that civil defense is a "shameful waste of public money." But surely it is time to review civil defense planning once again now that missiles have reduced warning periods to no more than 15 minutes and Americans still have no place to hide.

One thing is clear, and that is the folly of evacuation plans. As the civil defense advisory board in Montgomery County has stated, "mass evacuation following an air raid warning would probably result in increased rather than decreased deaths." The still undistributed civil defense guidebook to evacuation routes for the Washington area which Senator YOUNG criticized as a waste of money certainly will be of little use if indeed it is ever distributed.

The present alternative to evacuation is the construction of private as well as public shelters. The advisory board in Montgomery County estimates that a home shelter can be built for about $100. Shelters are commonplace in England, and in Norway and Sweden many underground garages have been constructed in such a way as to serve a dual purpose. But nowhere in the United States are public or private shelters being built.

What civil defense organization there is in the United States has been helpful in the aftermath of such disasters as the recent

tornado in St. Louis and the floods in Indiana and Ohio, Mr. YOUNG's own State. But the general indifference to civil defense is as great as the lack of shelters. This in difference is due in part to the failure of the Office of Defense and Civilian Mobilization to settle on a workable plan. Even now, when evacuation seems patently unrealistic, it remains as part of the civil defense program. But leaving aside the question of bureaucratic bungling, the great majority of Americans still do not believe that a nuclear war is likely. As long as this attitude persists no civil defense organization is going to be able to do much more than shuffle papers.

Statement of Hon. Steven V. Carter, of Iowa

SPEECH
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

The SPEAKER. Under previous order of the House, the gentlemen from Iowa [Mr. CARTER] is recognized for 10 minutes.

Mr. CARTER. Mr. Speaker, I speak without a script and from a full heart.

First, I should like to tell you that I am tremendously grateful, and it is a wonderful feeling to be back among the land of the living. Just a moment ago I sat here thinking that the last time I sat in this Chamber I sat with the specter of death with me, certain that I had only a short time to live. Since that time the marvelous and tremendous efforts of medical science have treated a cancer that returned. I have been in the hospital since January 30. That treatment has been effective, and my doctors tell me now that I have a normal life expectancy. I am grateful to them and to a gracious God for this chance to live, for this opportunity to serve.

I should like to tell you a little bit about this treatment. The first treatment I took was nitromustard gas in liquid form. They put it into your veins. That was a little rough. But what I do want to mention to you, and what I think the American people should know about the treatment of cancer, is this:

This morning I took, and each morning for the next two weeks I will take, radiation treatments from a 2-million-volt machine. I have no feeling; it does not hurt. There is no reaction at all in my system. They are completing the cure of a cancer that has grown on my spine and caused the terrible pain that I suffered the last time I sat here. I wish the American people who suffer from cancer and who are fearful of the treatment could know this, so that they will not fear this kind of treatment. It is tremendous what medical science has done.

There is much that I would like to do. My life will be dedicated to service. I do not know what your response would be to this experience. Cancer, you know, always happens to the other fellow. When it does happen there are many things that go through your mind. Your perspective changes and your sense of values is greatly affected. I now have a deeper sense of what is valuable and if anything I am more greatly dedicated to service.

The day I got out of the hospital, Mr. Speaker, I was confronted with a tabloid statement concerning the fact that I had hired my son as administrative assistant, as they call it. Actually, of course, we have no administrative assistants in the House. He was my top secretary.

When I first came here the pain had become so great in my left arm that I was quite certain that I had only a short time to live, because the last time I had this cancer they told me I could expect to live 3 weeks if they did not cure it. So you see I was privately certain that I would not live very long.

While I was undergoing treatment for cancer I wanted someone who was close to me, to be with me, and to help me serve—someone I could depend upon—someone who knew me—who knew how I thought. I hired my son on a basis that was temporary. I gave him a salary of $11,000, which is about the average salary paid to the top secretary. It was a temporary thing. Now the truth of the matter is that as of today his basic salary will be cut in two, because, now that the pain is gone, I can work. I can sleep at night. I can build up my strength and I will be able to be in the office regularly and to serve. The truth of the matter is that it was only a temporary arrangement in the first place. The truth of the matter is that he worked many, many hours a week above and beyond the call of the office, to be with me, to tell me the things that happened and to take the answers and to work with me in giving the kind of service and building up the kind of service that a congressional staff must build if they are to represent their district. And know this—I am proud of the staff that serves the Fourth Congressional District of Iowa. They were superlative. They have kept current with every demand for service from the Fourth District during this period of time when I was being treated. My son's present salary will be less per hour than he earned on a road gang last summer.

There is one other thing, Mr. Speaker, I should like to mention here, I would feel and I do deeply regret it, if this that I have done be a mistake, and I seek forgiveness from the American taxpayers and, particularly, from the people I serve in the Fourth District if it is a mistake and if what I have done has cast any reflection on any other Congressman who serves here diligently, please foregive me and know that in my heart I am dedicated to your service. I would not hurt any one of you for anything. Know, too, that if it has cast any reflection on the bill that has been under discussion and has been recently submitted out of the House Administration Committee, that if there has been any reflection on that bill to retain an administrative assistant for the Members of Congress that it is not fair because there are many districts in this Nation where the taxpayers will be greatly benefited if their Congressman is allowed an administrative assistant. This must be considered.

Mr. Speaker, there is another matter I would like to mention here. Every reporter who has talked with me concerning this period of nationwide publicity has become a warm personal friend. They have been very kind. They have been very honest. But, during the period of time I have studied this thing before coming to you to talk to you about it, there have been some matters that I have learned about that makes me wonder why their editors have not let the people know about. For example. On the very day that the fact that the young Congressman from Iowa had hired his son appeared in the headlines, one of the truly great public servants of this Nation and one of the best informed men in the country, Hon. WRIGHT PATMAN of Texas, introduced from this floor a statement with conclusive evidence that the Federal Reserve System has bilked the American people out of $10¼ billion and given it to their relatives. And you know—and this is a query I would place to the fourth estate—I searched every newspaper that I could find and I did not find it in the headlines. I did not even find it on page 15. I could not even find it mentioned. Why?

This query I place because I have a feeling that for some reason, that is beyond me and beyond my experience, they have been straining at a gnat when a camel was passing by.

Mr. Speaker, the Members have been very attentive. I express gratitude from a full heart. I want to mention also that the leadership, through this whole ordeal, has been very kind and very gentle. I am especially grateful to you, Mr. Speaker, to the majority leader Mr. MCCORMACK, and to Mr. ALBERT. You have been strong men and great men. It is a great honor to serve here. It has been an honor to serve with you. Thanks a million.

An Inspiration From a Californian

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. KUCHEL. Mr. President, the problem of helping the physically handicapped find employment and take part in activities which will restore their morale and their psychological health has been receiving increased attention in recent years—as, indeed, it should.

Our Nation has learned that many persons who have been doomed to go through life with different forms of handicaps are able, with encouragement and with the requisite determination, to make for themselves a rewarding and useful place in society. The President's Committee on Employment of the Physically Handicapped has been energetic in

seeking to assist such courageous individuals.

An inspiring example of what can be achieved by a person who has suffered a physical disability is given in an article published in the monthly magazine, Performance, issued by the President's Committee. It relates the achievements of a young woman in California who won both high collegiate honors and a responsible position, despite three handicaps which easily might have discouraged a less aggressive person. Because I believe this account will be challenging and reassuring to others, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REHAB STUDENT WINS TOP COLLEGE HONORS

A vocational rehabilitation student with three handicaps won top honors at Ventura College, Ventura, Calif., last year and became a college employee immediately after the honors were conferred.

The student, Merry Hart, has a spinal injury which prevents her from accepting jobs which require all-day standing. She has an incorrectible visual defect which at times leaves her unable to read her assignments.

Yet at the recent college awards assembly she won top scholastic honors—the Rotary medal for straight-A scholarship. She also won permanent membership in Alpha Gamma Sigma, national scholastic honor society, and received the Altrusa and Elks Club scholarship awards. In addition, she received top publication honors: a gold key with a pearl inset, awarded for 2 years' service on college publications. (Currently she is on the editorial boards of all Ventura College publications; is editor of the annual; and serves as news bureau manager for the college.)

The highest honor which can be conferred upon a Ventura College student also went to Mrs. Hart: the Circle K award for outstanding service to the college. She is the second woman student ever to have been named for the honor.

A fifth-semester student at the college next year, Merry will be employed by the county library 26 hours a week and by the college library 5 hours a week while completing her requirements for the associate arts degree. The mother of a 4-year-old daughter known to VC students as "Little Loveliness," Merry has served for three semesters as president of Alpha Omega, campus creative writers' and artists' club, for one semester as its corresponding secretary; for one semester as vice president of Alpha Gamma Sigma; for two semesters as intra-college council representative, and has maintained membership in Digamma Tau Alpha, educators' club.

While at the college, Merry has achieved publication in three college-level anthologies, and hundreds of her poems have appeared in a Chicago newspaper.

When Merry looks at the six medals she has won while attending Ventura College, she remembers the dark day before Rehab gave her a second chance. Utterly defeated because unemployable, she stood on the ocean pier, looking at the cold waters of the Pacific, and thinking how easy it would be to end her troubles by suicide. A friend who stood there with her said, "You can't do it, Merry. A winner never quits—and a quitter never wins."

Those words saw her through the rehabilitation period, and in a few months she will be entirely self-supporting, with a secure future. To add to the joys of that future is her present project: the completion of a children's picture book. After this she plans to write a 300-page book on "psychopathic personality."

Mrs. Hart served for 3 consecutive years as NEPH chairman in Bradley County, Tenn., and holds the national commander's citation for meritorious service from the Disabled American Veterans.

She recently received the first Altrusa International Founders' Fund Grant at a meeting of the Altrusa Club of Ventura. The award consists of a $225 grant for a camera and other equipment which Mrs. Hart will use in her work as a freelance photographer. The founders' fund provides training or equipment for women seeking employment.

Gen. George C. Marshall

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. BIBLE. Mr. President, on February 23, a moving tribute to a great soldier-statesman, Gen. George Catlett Marshall, was paid by William S. White, one of America's outstanding journalists. I ask unanimous consent to have Mr. White's column, as it appeared in the Washington Evening Star of that date, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARSHALL: PATRIOT, GENTLEMAN—AILING GENERAL MAINTAINED DIGNITY IN FACE OF ACCUSATIONS AND CRITICISM

(By William S. White)

General of the Army George C. Marshall is sick with a great sickness, and with his life a gallant and lost era is coming to its close. This was the era of World War II, in which General Marshall, without ever having a field command at all, served so nobly and so well.

He was the Secretary of State who gave his name to the Marshall plan for the post-war recovery of Europe. He served also as Secretary of Defense. But before this he had been Chief of Staff of the United States Army. And though this post in Washington's hierarchy was far below the others he held, it was this post which most of all he honored in his private thoughts.

This was the man—this rather thin and gray and coldly kind military man—who more than any other on this side of the oceans brought an end to Hitler and to Tojo and to all the evil power that they represented.

It was this man also, with Will Clayton of Texas and others now lost from public sight who made the plan by which a Europe then spent and broken has now come upon a new life of strength and hope.

And it was this man who went to China and made proposals for ending in that ancient land a civil war that has had no end and perhaps will never have any end.

General Marshall went there as a representative of the President of the United States and as a good soldier going into a place he did not know. His purpose was to put a stop by agreement to civil strife between the Nationalists and Communists in China. His fear was that this strife and resulting chaos, if long continued, would eventually benefit only the Russians, as land-hungry neighbors of China.

They said later—the bitter politicians of the Republican right wing said it—that Marshall had gone to promote communism and to push into an abyss the last hope and the last power of our last ally in the far Pacific, Nationalist China.

They called Marshall many terrible things; I remember that the then Senator William Jenner of Indiana called him, "a front man for traitors * * * a living lie."

This was perhaps the most brutal thing ever said in our long history of passionate partisanship about a man who is as great a patriot and as great a gentleman as we have ever known.

Marshall had given up, to a man named Dwight D. Eisenhower, the glory of the top command in Europe when we were all fighting Hitler. Marshall, with a quiet and heartbreaking loyalty to the great comon cause, had stayed in Washington to be simply Chief of Staff of the U.S. Army. Through these great years he had stuck here at his post, a great soldier quietly doing the best he could while other and lesser men put their names and their marks upon battle history.

He stayed here and he stayed with his duty. And the men who were full of rancor had their way with him in Congress. They taunted him, they screamed at him, they did everything of hate that could be done against any man anywhere, anytime.

Not in all our history has one man done, in a military way, so much for all of us. And surely never in all our history has one man been so ill-rewarded for all that he had done.

Now, in the Army hospital at Fort Bragg, N.C., General of the Army George Catlett Marshall is fighting, with gentility and uncomplaining courage, against the final antagonist of all who live.

There are no Valhallas in our life any more. But if a single Valhalla—a single gallery of great fighting men—should survive somewhere, one could hear from this gallery a great shout: "Marshall, well done."

Rabbi Morris Silverman, of Hartford, Conn.

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. BUSH. Mr. President, on February 19, the session of the Senate was opened with prayer by Rabbi Morris Silverman, of Hartford, Conn. Yesterday the Hartford Courant published an editorial entitled "A New Honor for Rabbi Silverman." The editorial is a splendid tribute to an outstanding gentleman. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NEW HONOR FOR RABBI SILVERMAN

The award of a George Washington Honor Medal to Emanuel Synagogue will bring gratification to persons of all faiths and races in the community. For Rabbi Morris Silverman has been tireless in his efforts for interdenominational and interracial amity. He richly deserves this honor, in addition to the ones he has already received. The Emanuel Synagogue is being

given recognition by the Freedoms Foundation for sponsoring a Boy Scout troop including more gentile than Jewish members. The best traditions of Americanism are being fostered by such programs, recognizing as they do that unity in spite of diversity in racial and religious origin is the foundation stone of national strength.

This was recognized by Rabbi Silverman, who has said his idea was "to work toward the attainment of equality for all as is defined and guaranteed in the first words of the Bible and the Constitution of the United States." This is not the first time he has been honored by the foundation. In 1952 he received a third place Freedoms award of $100 for an address he gave at a dinner at which he received a citizenship award. And a year later he received two plaques, one from the Connecticut Civil Rights Commission and one from the Hartfort branch of the National Association for the Advancement of Colored People. These recognized his work toward equal opportunity for men of all faiths and races.

In addition to his spiritual duties as leader of a flourishing congregation, Rabbi Silverman has assumed national leadership in the field of civil rights. He is national spokesman for the civil rights commissions of the 13 States that have such organizations. Two years ago he was head of a delegation of 12 States' civil rights commissions that went to Washington to ask support of Federal agencies in withholding support from employers who do not follow State laws against discrimination. This was in support of his belief that human relations are the Nation's most important field of human endeavor, a belief to which he has given 36 years of devoted service.

As an original member of the Civil Rights Commission, he spoke with authority last year when he said, "America is being judged by our treatment of minority groups. The outlook is good; we have seen more done in the past 15 or 20 years than was done in the previous 100 years."

These sentiments, when put into action and backed by deep religious faith, have made Rabbi Silverman one of the distinguished citizens of this community. A spokesman for justice and progress, he is to be congratulated on the honor given to him and to Emanuel Synagogue.

From Gettysburg to Padre Island the Nation Needs Parks To Preserve Our Past, Present, and Future History

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 26, 1959

Mr. YARBOROUGH. Mr. President, a recent article in a national magazine described how the Gettysburg, Pa., battlefield is gradually being taken over by private interests. A residential subdivision is being built on the field across which Pickett led his famous charge. A motel stands where Union defenses threw back the charge. On the spot where the two armies first clashed there is a free museum and souvenir stand. On another part of the land for which Union and Confederate troops struggled for 7 hours on the 3d day of the battle, rusting autos now are sprawled.

The same article lists nine new national parks which the Nation now needs to acquire, in order to provide our rapidly expanding population with recreation areas and to preserve outstanding and interesting areas in their natural state.

One of the nine areas listed is Padre Island, Tex., a 117-mile-long barrier island in the Gulf of Mexico, stretching roughly from Corpus Christi to Brownsville.

Of the 3,700 miles which make up the Atlantic and gulf coasts, only 240 are in parks for public use. Some 640 more worth saving are still available.

I have introduced Senate bill 4, which provides for establishment of a national park on Padre Island. We must do this now, because a commercial development has already started on part of the island. Other parts are up for sale.

The magazine article tells how completion of the boundaries of the Gettysburg battlefield, in order to protect it for a park, would cost $2 million. To do this to all battlefields now either wholly or in part in park status would cost $10 million; and for the entire national park system, the cost would be $30 million.

Conrad L. Wirth, Director of the National Park Service, is quoted in the article as saying:

> Twenty years ago we could have purchased all the land we now need for $5 million. But in those days no money was earmarked for land purchase. Now we receive $1½ million a year from Congress. At this rate, with land prices soaring, it could take another 50 or 60 years and more than $100 million to complete the boundaries.

Padre Island today is facing the same situation. If we do not act now, more of the land will be under private development, and prices will rise.

The benefits of this virgin stretch of windswept sand, with beaches on both sides of the island, and with an historic past stretching back to some of the earliest explorers of the New World, must be protected for the enjoyment of the public now and in the future.

The natural life, both on the island and in the waters around it, is abundant. There are skeletons of oldtime ships, wrecked on the shores, and as covered with legend as they are with moss and barnacles. There are tales of pirate treasure, small settlements, soldiers from a variety of battles, and vacqueros and cowhands.

Another thing to consider about this coastal location is the type of recreation offered: swimming, fishing, hiking, beachcombing and similar beach pastimes, and boating. In 1904, 15,000 boats were being used for recreation in the United States. By 1947, the number had grown to 2,440,000. The total last year was 7,330,000. This year it will probably top 8 million. In the United States 21 million fishermen spend nearly $100 apiece each year. Their numbers are rising all the time.

If Padre Island were made a park, the benefits to the people of the immediate area are obvious. Yet it should also be clear that this would help the Nation, by providing more jobs and more income. Also, Padre Island has the potential to become a summer and winter playground, providing recreation for millions, just as Yellowstone, Yosemite, Big Bend, and other national parks already are doing.

This proposal to establish a national park on Padre Island has the backing already of several civic and conservation groups. Its value to the national economy and welfare is clearly evident.

Mr. President, in further support of my statement, I request unanimous consent to have printed in the Appendix of the RECORD an editorial, by John W. DeVine, which appeared in the Nueces County News for Friday, January 30, 1959, under the heading: "Padre Island May Become a National Park in Future."

I also request unanimous consent to have printed in the Appendix of the RECORD, a resolution adopted by the Texas Ornithological Society on February 10, 1959.

There being no objection, the editorial and the resolution were ordered to be printed in the RECORD, as follows:

[From the Nueces County News, Jan. 30, 1959]

PADRE ISLAND MAY BECOME A NATIONAL PARK IN FUTURE

U.S. Senator RALPH YARBOROUGH has introduced a bill—S. 4—which would keep a portion of Padre Island for public use—in simpler works, a national park. In presenting the bill, YARBOROUGH pointed out: "This beautiful half-mile wide natural beach, with its mild climate and bountiful wildlife, is one of Texas' greatest recreation resources."

Then he pointed out that "properly developed, there is no question that as a national park, Padre Island would become the winter park of America, just as Yellowstone, Yosemite, Glacier National Park, and the Smoky Mountains are summer playgrounds.

"Looked at from the standpoint of historical interest," he continued, "Padre Island is one of the closest links Texas and the United States have with the past, for it was there that one of the earliest explorers set foot on New World soil. The explorer, Alonso Alvarez de Pineda, a Spaniard, in 1519 sailed the gulf coastal waters from Florida to the Mexican port of Tampico, and mapped the coast for future navigators."

YARBOROUGH has asked State legislators of Texas, and other State officials to enact necessary supporting State legislation on this subject, and is urging all Texans to back the creation of Padre Island National Park.

Naturally such a move is going to draw some opposition. Private developers will oppose it; real estate dealers who are interested in selling Padre Island, and owners of land will be opposed to it; but to the average Texan it presents an opportunity to preserve for his own use a long stretch of island where he can go, camp out, fish, hunt, and generally enjoy himself.

Of course, Padre Island is a mammoth island—the coastline on the Gulf, extending from Port Aransas to Brownsville, 131 miles, is the longest island and the longest beach in the United States (probably in all the world, too).

There is plenty of room for establishment of a Government national park without taking away any of the valuable land now under development, and no doubt, it is this land Senator YARBOROUGH has in mind.

This is only one of hundreds of things, Senator YARBOROUGH has initiated since he became a Member of the U.S. Senate a few short years ago. It wouldn't hurt to take time out and drop him a few lines in appreciation.

Every man, from the smallest to the largest, likes to know he is appreciated and his work is appreciated.

If you favor the establishment of a national park on Padre Island to preserve a large portion of it for future generations in its natural state (except for Government improvements that will not ruin it as a vacation resort), drop your State representatives and senators a line and tell them you will appreciate their supporting eanabling legislation.

Don't worry, they will hear plenty from those who oppose it. And while you are at it, drop Senator RALPH a line, too. It will encourage him to keep up the good work.

RESOLUTION TO MAKE PADRE ISLAND A NATIONAL PARK

Whereas Padre Island contains a wealth of vegetation and wildlife in substantially the same condition as when this sunny region was first discovered by de Pineda in 1519 and boasts a superb sand beach 30 miles in length along a gulf coast shoreline admirably suited for safe swimming and wading; and

Whereas commercial development has gained two footholds on Padre Island and threatens rapidly to ruin its natural beauty; and

Where Padre Island is unique in scenery, climate, ecology and geology and fulfills in every way the standards for a national park; and

Whereas the establishment of Padre Island as a national park would permanently preserve natural treasures of Padre Island for the benefit of the public; Therefore it is

Resolved, That the undersigned organization hereby urges the adoption of the bill (S. 4) to provide for the establishment of Padre Island as a national park.

Passed this 10th day of February 1959.

A. EARL JOURDE,
President, Texas Ornithological Society.

A Writer and Patriot Warns Against Reds

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. THURMOND. Mr. President, on February 24, the Charleston (S.C.) News and Courier published an article by Col. Paul Rockwell, a veteran of World War I service with the French Foreign Legion and of World War II service in the U.S. Army. A writer and member of many patriotic societies, Colonel Rockwell warns of the Communist threat. I ask unanimous consent that his article, entitled "A Writer and Patriot Warns Against Reds," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENEMY INSIDE U.S.A.—A WRITER AND PATRIOT WARNS AGAINST REDS

(By Paul Rockwell)

When the United States began drafting men for World War II the leaders of the Communist Party in America instructed its American party members to accept the draft without opposition. Members drafted were advised to be good soldiers, to try for promotion, to obey orders, and above all they were told to await patiently the day when they could serve the Communist Party.

Almost immediately after the end of hostilities against Japan in 1945 the Communists in the U.S. Armed Forces received word to "serve their part." Soviet Russia wanted the U.S. Army demobilized and out of Europe especially, as quickly as possible. Near mutinies—"we want to go home" demonstrations—broke out simultaneously all around the world wherever there were American troops.

I saw the near-mutiny in Paris. It was disgusting and horrifying.

The "boys" were sent home in a hurry. Our once strong Army was reduced in number and in power. Soviet Russia remained mobilized and on a war footing. Poland, Hungary, Rumania, country after country, was taken over by the Communists under the protecting shadow of the Red armies.

The United States had demobilized. We were in no position to oppose the Soviets. Having taken over central Europe and menaced France and Italy by strengthening the Communist Parties there, Soviet Russia extended its views to Asia and Africa.

To weaken America and keep Americans preoccupied with internal troubles, the integration issue, America's weakest and most vulnerable point, was fostered and kept in active agitation by Communist agents, working through the NAACP, the fellow-travelers, uplifters, do-gooders, "liberals," and other crackpots.

The work of "finishing schools" such as the Highlander Folk School, at Monteagle, Tenn., was stepped up.

No opportunity was lost to magnify every racial incident. Cases of discrimination against Negroes were invented or blown up far beyond their real importance. The kissing case in North Carolina is an example. Virtual censorship of the press came about over most of the Nation.

If the Soviets can divide and weaken the United States, arouse the North against the South, incite the Negroes against the whites, create strife and dissension and trouble throughout the United States, we cannot oppose Russia in her drive for world domination. Already we are more concerned with the situation at home than with the crises in Berlin, Iran, Egypt, the Middle East, Tunisia, Algeria, Morocco, and elsewhere in Asia and Africa, where Soviet agents and sympathizers are working tirelessly day and night, stirring up one race against the other, one people against their neighbors or former colonial administrators.

It is my sincere belief that any person or group of persons who are agitating any issue that divides Americans, are guilty of giving aid and comfort to the most deadly enemy the United States ever has faced—Soviet Russia.

Appointments to U.S. Service Academies

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release I issued today, dealing with competitive examinations for appointments to U.S. service Academies.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

WILEY ANNOUNCES EXAMINATIONS FOR APPOINTMENTS TO U.S. SERVICE ACADEMIES

Senator ALEXANDER WILEY, Republican, Chippewa Falls, today announced that competitive examinations, scheduled for July 1959, would be given by the Civil Service Commission for appointment to the U.S. service Academies.

The available appointments include: 1 appointment to the U.S. Military Academy, 2 appointments to the U.S. Naval Academy, 1 appointment to the U.S. Air Force Academy, and nomination of 10 young men to compete for 7 openings allocated to Wisconsin for the Merchant Marine Academy.

"The examination is open to any high school senior or graduate over the age of 17 but not yet 22, who has never been married and can meet the academic and physical standards," the senior Senator said.

"To be eligible to take the examination, all applicants must file with my office (1) a letter of intention, accompanied by certificate of residence in the State of Wisconsin; and (2) two letters of recommendation from applicant's principal, pastor, physician, or anyone who has personal knowledge of his character.

"This information must be received in my office, room 427, Senate Office Building, Washington 25, D.C., by June 15, 1959, which is the deadline for filing," WILEY pointed out.

"Unfortunately, anyone not filing letters of recommendation and certificate of residence with his application cannot be considered for the examination.

"The examination will be held in July (exact date to be announced later) for appointment in July 1960. The highest ranking candidate will receive principal appointment; second highest, first alternate; third highest, second alternate, etc."

To provide maximum opportunity for obtaining information, Senator WILEY is furnishing all public and private high schools in the State with brochures of each of the Academies.

"Appointment to a U.S. service Academy provides qualified young men with a fine opportunity to serve their country as well as to improve their education," WILEY concluded.

Lack of Market Interest in Government Bonds

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Highroad to Inflation," published in the New York Times of February 10, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIGHROAD TO INFLATION

The Government security market—which speaks with authority because it speaks with the public's money—repeated for the benefit of Congress at the close of last week what the President, his Secretary of the Treasury, and the Chairman of the Federal Reserve Board have been constantly emphasizing in their recent public statements. The market spoke by action rather

than in words, but the message was no less clear on that account.

With $14.9 billion in maturities to meet, $9.2 billion of which was in the hands of the public, the Treasury offered the holders a choice of two new issues—a 1-year certificate bearing an interest rate of 3¾ percent and a 3-year note carrying 4 percent. When the public won't scramble for U.S. Treasury issues on terms as attractive as this it bespeaks serious concern for the state of the Nation's financial position. Yet the fact is that holders of the old securities in the amount of $2.1 billion turned down the exchange offer, demanding payment in cash.

But these figures tell only part of the story. Underscoring the market's lack of interest in governments other than those in the very short-term category is the fact that of $7.2 billion in maturing securities that were turned in by the public (as distinguished from the holdings of the Federal Reserve System) holders of only $1.4 billion, or less than 20 percent, took the 4 percent 3-year notes in exchange. The other 80 percent, plus, demanded the 1-year certificates with their yield of 3¾ percent. That is an increase of 1¼ percent over the interest rate of 2½ percent at which the maturing issue of $9.8 billion in 1-year certificates was sold a year ago.

This means not only that the debt structure has suffered by the replacement of some three-quarters of the outstanding $5.1 billion in notes with short-term obligations, but that the Treasury is forced to go into the market this week with an issue of even shorter maturity in order to raise the $2.1 billion in cash to meet the demands of those who found the exchange offer unacceptable.

The Treasury has been able to market but one long-term issue during the past year, that in the amount of $900 million. It is being forced steadily into the position of having to rely increasingly on the sale of securities for which commercial banks constitute the principal market. And this, as Chairman Martin of the Reserve Board declared last week, is "the highroad to monetary inflation."

The Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the board of directors of the Garrison Diversion Conservancy District supporting the budget estimate for the Garrison diversion unit for fiscal year 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY BOARD OF DIRECTORS, GARRISON DIVERSION CONSERVANCY DISTRICT, JANUARY 28, 1959, SUPPORTING BUDGET ESTIMATE FOR GARRISON DIVERSION UNIT FOR FISCAL YEAR 1959

Whereas the Garrison diversion unit, Missouri River Basin project, when developed will (1) enhance the future economic welfare and prosperity of the people of North Dakota, particularly those within the project area; (2) provide for the eventual irrigation of over 1 million acres of land periodically subjected to insufficient rainfall and drought, thereby stabilizing agriculture in a large section of the State; (3) replenish and restore the depleted waters of several lakes, rivers, and streams and increase the levels and flows therein; and (4) make available within the affected areas water diverted from the Missouri River for irrigation, domestic, municipal, and industrial needs, for production of hydropower, and for recreation, fish and wildlife, and other public uses; and

Whereas investigations, engineering, and planning work under direction of the Bureau of Reclamation needs to be carried on during fiscal year 1960 in order to develop a definite plan report on the initial construction work on the pumping plant, supply canal, and layout on the first lands to be placed under irrigation; and

Whereas the President's budget for next fiscal year contains an item of $550,000 for carrying forward such work during 1960: Now, therefore, be it

Resolved by the board of directors of the Garrison Diversion Conservancy District, meeting in regular meeting this 28th day of January 1959, in the city of Bismarck, N. Dak., That it wholeheartedly supports said budget estimate and urges Congress to appropriate said amount for continuing the work on said project for fiscal year 1960; and be it further

Resolved, That copies hereof be signed by the chairman and attested by the secretary and be mailed to the Honorable Clarence Cannon, chairman, House Committee on Appropriations; Hon. Carl Hayden, chairman, Senate Committee on Appropriations; Senators William Langer and Milton R. Young; Representatives Quentin N. Burdick and Don L. Short; and to W. A. Dexheimer, Commissioner, Bureau of Reclamation, Department of the Interior.

ROY A. HOLAND,
Chairman.

Attest:

VERNON S. COOPER,
Secretary.

The Eagle of Democracy

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. CANNON. Mr. President, Nevada is justly proud of the 1959 State winner of the Voice of Democracy contest. She is Miss Sue Minehan, the daughter of H. A. Minehan, of Las Vegas, Nev. Because of the fine appreciation of America's high ideals and rich national traditions expressed in her essay it gives me great pleasure to request unanimous consent of the Senate that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE EAGLE OF DEMOCRACY
(By Sue Minehan)

A bird's-eye view of America shows a country rich in a history of courageous forefathers, who tamed our young and wild land, and shaped and molded a government from their essential desires; life, liberty, and the pursuit of happiness. A closer look reveals visions of patriotic heroes; common people, fighting for their belief in this Government, and struggling in the times of crisis to strengthen this valuable possession.

Glancing through the centuries clocked in our Nation an evident spirit of unity persists to prevail. And even now in my present environment, my community, State, and my Nation, the same ideals which governed our zealous ancestors are still apparent, only rooted deeper with the passing of time.

What is this mark of uniqueness embedded in our American heritage which accounts for the mutual stability of the United States?

Look. High in the sky. Sweeping over the land since 1776 has been and is the eagle of democracy in all his symbolization for which our country has lived and died.

He nests atop the towering tree of our Government as near to God as he can get to assure himself that the principles which he represents and goals which he has set are in accordance with the Almighty's wishes. This bird of freedom, depicting the essence of democracy itself, stands firm on the branches of our Constitution and the curved talons upon his sturdy feet are set solidly in the context of this charter of our liberty.

The striking plumage of this eagle is stained with the blood of our forefathers who fought to protect him and nurtured the once young eagle into the great and magnificent monarch of the skies which he is today.

The beak with it golden hues resounds with the voice of democracy and proclaims justice and fairness for everyone, regardless of race, color, or creed. Freedom of speech, religion, and press, are "natural instincts" to the American eagle.

Our eagle is not a bird in a gilded cage, hampered by the immovable bars of dictators, but rather is allowed to roam freely, spreading his wings over the land, bestowing equality evenly upon everyone. This king of birds may be challenged while in flight by tyrannically feathered foes, but will always ultimately emerge as the symbol of righteousness.

The eagle of democracy may someday migrate to other less fortunate climates to exert his influence over these lands, offering the ideal of freedom and a voice in the government. But first those distant skys must be cleared of the dark clouds of communism, and the thunderous storms of oppression and war, and instead be lighted with the stars of tranquillity to guide our eagle to new nests. For this is a government of the people, by the people, and for the people—man must only accept it.

The eagle will always stand steadfastly as a true mark of our free Nation. But the fate of democracy is in our hands. Only man, in his misconception of values can set out and track down this precious prey, killing him and taking the very breath of life from within his frame. Man must willingly discard all these dangerous weapons such as skeptical doubt and complacent disinterest, and seriously strive to preserve and perpetuate democracy, the eagle may continue to shed all his benefits upon our Nation and fly high in our free skies as the symbol of democracy.

Needed: Can-Do Christians

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address made by my dear friend,

schoolmate, and lifelong companion, Capt. Charles T. Mauro, U.S. Navy, at the 49th annual Washington's Birthday celebration, Knights of Columbus, P. N. Lynch assembly, in Charleston, S.C., on February 22, 1959.

Captain Mauro was the recent commanding officer of the U.S.S. *Canberra*, the second guided missile cruiser of the world. His brilliant naval career and world travels have permitted him to circle the globe by water and to cross both the Pacific and Atlantic Oceans many times by air. He served with the American Embassy, Rome, Italy, in the Office of the Naval Attaché. He has commanded a destroyer, a division of four destroyers, the destroyer tender *Sierra*, and the guided missile heavy cruiser *Canberra*. He was commanding officer of the last-named ship when she was the flagship of the President of the United States during Mr. Eisenhower's 6-day cruise from Norfolk to Bermuda for a meeting with Mr. Macmillan, the Prime Minister of England. The *Canberra* also served as a flagship for the Secretary of Defense, Mr. Wilson, during the international Navy review at Hampton Roads.

Captain Mauro is now Assistant Director, Fleet Development and Maintenance Division, Office of the Chief of Naval Operations, in Washington.

The address follows:

NEEDED: CAN-DO CHRISTIANS

(By Capt. C. T. Mauro, U.S. Navy)

It is great to be home. It is a particular pleasure to be with dear friends; those with whom your early training and formative years were spent. It was in the Knights of Columbus Hall (top floor) that the first Bishop England basketball team, in about 1921, practiced and played many games. Our coach was Doc O'Brien—the late Monsignor J. L. O'Brien—God bless his soul. He was responsible for the early character forming of many of us. Some of the most pleasant days of our lives were spent under his guidance.

Then, too, it was in those days, some 35 years ago, that the first football team of the Knights of Columbus was formed. All practices were held at night with the football painted white. We practiced on the King Street side of the citadel green to take advantage of the street lighting. We had fairly successful seasons under the coaching of Dick Kerr. One Saturday afternoon we got mighty cocky after defeating the Navy Yard Marines by an overwhelming score. The starch was soon taken out of our hides though by the shellacking the Parris Island Marines gave us.

I am sure many of you are wondering what prompted the subject of my talk this evening. Well, it was chosen since it brings to mind two thoughts which I hold close to my heart.

First, you dear friends gave me the inspiration to go to the Naval Academy and become an officer in the United States Navy; and

Second, my beautiful ship, the guided-missile cruiser, *Canberra*. Many of you were aboard her, I am sure, when the *Canberra* visited Charleston in September 1956.

It was a tremendous thrill for me to bring that beautiful, most powerful, modern ship of the Navy into the port of my hometown. But it was even more of a thrill to have papa and mama on the dock waiting for my arrival. I am sure most of you also know of my great fortune of having mama present here with me tonight. Getting back to the reasons for my subject this evening, my ship being named *Canberra* after the capital of Australia—the country well known for kangaroos—brought the rhyme "can-do" kangaroo to my mind.

We used this catch phrase to symbolize our ship. The crew quickly caught on to this catch phrase. Can-do became the spirit of our ship—you name it and we could do it. The difficult we did today—the impossible took a little longer. As a result, all *Canberra* assignments were tackled with the positive can-do spirit and the ship became known as the "Can-do Kangaroo." During the first year of her life the *Canberra* was officially graded as the best of all the cruisers in the Atlantic Ocean. This was an honor seldom won by a ship so shortly after birth.

This can-do spirit is essential in all phases of life. We should accentuate the positive. Teach youngsters what to do, don't just keep saying what not to do. Remember, the poll parrot learned naughty words by being taught not to say them. Of course, positive teaching takes considerable time and patience, but the dividends are more than considerable. For instance, what do we find the athlete who is training for a game doing? He goes into very rigid and long hours of training to develop those muscles which he needs to win. Similarly our game of life requires a moral muscle to be trained and strengthened for that game.

We must learn to take the initiative and do what is right. Because to know what is wrong and what we are against is not always enough.

We must learn what is right and then continually train doing those things to develop our spiritual and moral character. Being prepared and taking positive action is essential in the game of life. For example, as the Christopher movement emphasizes, lighting a candle in the dark is much better than cursing the darkness.

As you yourself know, any time you do something for the first time you have the fear of the unknown. This fear of the unknown is a type of frustration.

Children need to be frustrated. They are going to be frustrated lots of times in life, so it is good to get practice in the family when they are just children. If we are not accustomed to being frustrated, then it becomes difficult to endure that experience, and as a result we panic. There has been a lot of nonsense about the fact that kids shouldn't be frustrated.

Of course, I am not a child psychologist, but my life has been one of dealing with young men. The average age of my crew in the *Canberra*, consisting of 1,500 officers and men, was a little under 21 years.

Therefore, I think this frustration can become ridiculous. Later in life they darn well are going to have some major frustrations. Therefore, as kids they ought to start getting a little experience with minor frustrations. To solve large problems you must learn to solve small ones. You learn to resist big temptations by first learning to resist little temptations.

It appears to be perfectly normal in this day and age to have a youth get into life without a proper moral foundation.

A youth without a moral foundation is like a ship without a rudder. That youth is at the mercy of the current since he cannot steer his own course. A ship at sea without a rudder would be at the mercy of the current, wind, and waves. No one could keep it off the shoals. Not only would the ship wreck itself but probably wreck other ships also.

Likewise, the youth without a moral foundation is not only a danger to himself, he is also a menace to others.

Let us give our children an inheritence of (1) self-discipline, (2) spiritual-material prospective, (3) positive can-do Christians.

We speak of the word discipline. Many of us fear it because we don't stop to think exactly what it means. Discipline is an austere sounding word that means nothing more than setting out an orderly path or series of paths upon which life can be approached and followed. These paths should have both the material and the spiritual prospective. One without the other is just as bad as neither or too much of both.

The spiritual and material need to be kept in proportion like the sides of a square or heads and tails on the same coin. When the equipment of the home becomes more essential than the care of the child, it is no wonder that the child brought up in that atmosphere gives preference to material things rather than to spiritual things. This spiritual-material balance, which is so essential, cannot be achieved if our moral muscle, which should be developed in our early life, is not daily exercised in our homes.

Let's be can-do Christians. This will reduce the spiritual unemployment typical of our times. To do this we must work daily at balancing the spiritual and the material phases of our lives. For instance, because a church is visited once a week that child will not get the necessary spiritual upbringing if the home does not have more of a spiritual than a material environment to offer.

We look at the Catholic Churches on Sunday and see them overcrowded. Immediately the thought comes to our mind about Catholics being much more religious than Protestants. There is a serious fallacy in this kind of thinking because if you were more honest with yourself you would compare the number of Protestants that go to church on Sunday with those Catholics who go to church on weekdays. Protestants have no obligation on Sunday as Catholics do.

Parents that do not develop the moral muscle in their children are the ones who suffer most after their children reach maturity. To be a physical man and not be a man emotionally and spiritually is like being a man but wearing rompers. When I was in command of the *Canberra* a conscientious mother wrote me a very thoughtful letter indicating that her boy was different. She said he was artistic, temperamental, high strung, and not accustomed to any type of discipline. She indicated I should be very careful in the manner which I treated her son if I wanted him to do his part as a member of the crew.

I replied politely, but told her the facts of life about Navy discipline. I also told her that if her boy had been treated with as much firmness as consideration he would have been a more courteous, dependable, and appreciative son. I told her that I would bear in mind all the things she told me, but I would still treat her son like all the other young men in the ship. I added he was now physically a man and had to learn to be a man among men.

A few months later, after a cruise to the Caribbean, this young man returned home on leave. After he was home for a while, I received a most inspiring and encouraging letter from his mother. She said that she didn't know what I did to her son, but she was most grateful for the tremendous change. She further stated that her son was now just what she always wanted him to be.

The moral of this is you can't stop kids from growing up physically. Therefore, you better be sure they grow up spiritually and emotionally at the same rate of speed. Incidentally, each night aboard my $150 million guided-missile cruiser, just as my crew turned in their bunks for the evening, two short sentences relating to God were spoken into the ship's loudspeaker system.

God's the supreme authority, with the father the authority of the home. Whether intentionally or accidentally, there is endless propaganda attacking authority which passes as American comedy. On TV the stories pertaining to the family usually end up by having the father look like a dope. If the play

deals with the military, the officer is always stupid.

This constant ridicule of authority and discipline is harmful to our youth. The fact that it may be humorous doesn't change its propagandic impact on young minds.

Young minds need to learn what you as a Catholic and as an American already know; that with every "right" goes a responsibility.

The right of freedom goes further than being able to do what you would like to do when you want to do it and in any manner you desire. Freedom takes on a responsibility that requires you to think in terms of what is best for all rather than just what is best for you.

Selfish freedom ceases to be freedom. For instance, (a) you have the right of free speech but you have the moral responsibility to know what you are talking about, (b) you have the right to vote but you have a responsibility to be an informed citizen, (c) the newspapers have the right of a free press but they also have the moral responsibility not to violate good taste and morality, (d) you have the right to a lot of services from your Government provided you accept your moral responsibility as taxpayers to pay for them.

As citizens and Catholics you need both material and spiritual goals. You are not likely to reach your destination if you don't know where you are going.

First, we must try to find out what our target is and then never permit ourselves to stray from the paths which lead to that goal. When the bull's-eye is missed it seldom is the fault of the target. Many road blocks will be found in our paths. The path that we choose will not always be easy. We all know that freedom is bought and maintained at a terribly high price. The ideals we feel are worthwhile will always cost us considerable energy, thought and sometimes suffering.

Each of these difficulties, though, must be overcome if you hope to obtain your goal. Then, too, we must remember that tolerance is not always a virtue. Of some things we can be tolerant, others we cannot and should not tolerate.

Truth can never be tolerant toward falsehoods.

Morality cannot be tolerant toward immorality.

Christianity cannot be tolerated toward paganism.

It is not sufficient to be against things. We must emphasize the positive, and be for things.

Most of us say we are against communism. Unfortunately, our thinking is vague. It would be just as good to say you are against sin. Being against sin isn't enough. You have to be in favor of virtue. Similarly, being against communism isn't enough. What are you in favor of? Communism is a label like a brand name on ketchup. What is in the bottle? Would you still be against it if it had a different label? The content of communism is atheistic materialism. It says there is no God and all that matters is the material things of life. Now a lot of people who think they are violently anti-Communist are not so far from communism as they think because more and more we put the emphasis on material things and less and less do we put the emphasis on the spiritual aspects of life.

Our biggest unemployment is spiritually unemployed Christians. Unemployed moral indignation. We need to get mad. Fight for what we believe in.

A Christian who won't fight for what he believes in is spiritually unemployed. Communists are militant, dedicated atheists. They won't be stopped by halfhearted Christians filled with nebulous good intentions.

Blueprints don't stop bullets. Abstract Christians won't stop atheism. Don't just be against communism. Be for a wholesome Christian living. Be positive. Fight for what you believe in. The chief end of man is to glorify God. To serve Him at all costs. The supreme obligation is to be true to Christ, true to truth, to justice, to righteousness even if one perishes. Since when has the Christian concluded that the end of life is the end of all things? No, for the Christian the cross is not the end. There is always Easter.

In closing, permit me to make three observations. One referring to each of the following: the Knights of Columbus, Washington's Birthday, and our Navy.

First, the Knights of Columbus, like the knights of old, stand for patriotism and service to God, to country, and to the church.

Second, Washington, in his message to the First Congress, said "to be prepared for war is a most effectual means of preserving the peace."

Third, it is the prime purpose of your Navy to insure for ourselves and for our allies the uninterrupted use of the seas. To do this your Navy must remain an integrated combat unit—a fast-moving, hard-hitting, self-contained surface and undersea force, which carries its fire power, its aircraft, its missiles and its landing forces wherever it goes.

Being a Navy man I firmly believe in loyalty to God and country and in preparedness. Preparedness, as I see it, includes both the physical preparedness of our Armed Forces and the spiritual preparedness of our Nation. God grant us both.

Deductions for Higher Education

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. SYMINGTON. Mr. President, Representative HULL, of Missouri, has introduced H.R. 1264, to amend the Internal Revenue Code to allow income tax deduction for payments to assist in providing higher education. The measure would allow a deduction for expenses incurred in the education of dependents, or for sums given to colleges and universities for use in providing scholarships.

The senior Senator from Missouri [Mr. HENNINGS], the senior Senator from Rhode Island [Mr. GREEN], and I introduced a similar bill in the Senate, S. 929.

I ask unanimous consent that an editorial in support of Representative HULL's efforts, from the St. Joseph, Mo., Union-Observer of January 16, 1959, entitled "Now They Have Hope," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Joseph (Mo.) Union-Observer, Jan. 16, 1959]

NOW THEY HAVE HOPE

Congressman WILLIAM R. HULL, Jr., has earned the gratitude of tens of thousands of American youngsters who until now had considered their chances of going to college as something less than nil.

At the opening session of the 86th Congress, the courageous, farsighted Missourian introduced a bill which would open new avenues to higher education for children of families in the lower income brackets.

In brief, the bill would amend the Internal Revenue Code to allow tax deductions made by householders to maintain a child in college. Another provision would permit deductions of contributions for scholarships.

What Mr. HULL proposes in introducing his measure is that America must keep abreast of changing world conditions. Russia no longer lags behind us in matters of education. In the Soviet Union promising young men and women from all strata of society are earning scientific degrees with the state picking up the tab.

What Soviet science has accomplished and is still accomplishing is faithfully chronicled in the free press of this country.

Almost coincident with Mr. HULL's action was an announcement by the AFL–CIO of its plan for awarding six $6,000 scholarships to high school seniors of exceptional ability who want to enter college in September.

The awards will be made on a competitive basis in cooperation with the National Merit Scholarship Foundation, an independent, nonprofit organization.

Gifted youngsters should not be denied the advantages of a higher education simply because they or their parents lack money for that purpose. In this age of electronic marvels, missiles, and the conquest of space, brains are where you find them.

Congressman HULL's measure and the AFL–CIO's scholarship program clearly indicate that this Nation has not kept faith with its youngsters in the matter of higher education. What will be the fate of Mr. HULL's bill is anybody's guess. It will be placed in the hands of fallible men who could if they so desire place political expediency above higher concepts.

Organized labor in St. Joseph is proud of Mr. HULL for his statesmanlike approach to a matter of vital concern and his refusal to indulge in the wishful thinking that we can revert to a peacetime economy and way of life in a world where there is no peace.

Our labor movement is proud, too, that it supported Mr. HULL in his three successful races, but prouder still of the fact that it has never asked of him anything but what was in the public welfare.

For BILL HULL is the Representative of all the people of his district and the forthright champion of young people everywhere.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup of February 20, 1959.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, FEBRUARY 20, 1959

How much will the Eisenhower administration's new cuts in grain price supports cost farmers?

Farmers are worried. So is Main Street. Co-op people are concerned because serving farm families and marketing their grain cooperatively is our business.

When the price cuts were announced to the newspapers Wednesday it hit with jarring impact. Secretary Benson said he had deliberately raised a secrecy curtain in the Department of Agriculture so no word would leak out and upset markets—while grain prices were being made lower in Washington.

But when the news hit the markets went down, as everyone knew they would. The

Wall Street Journal reported it with this headline: "Grain Futures Plunge Under Impact of Slash in Supports." The 1-day drop ranged from 1 to 4 cents. So even last year's crops are being penalized.

One of the big national news services says that cash market prices are expected to adjust downward to match the new lower supports. That's the way it always goes. But how much will it cost farmers? Nationally, this news service figures the support cuts will take about half a billion dollars away from farmers on this year's crops.

That agrees with the figures we had reached here—half a billion dollars less for farmers. But let's bring that closer to home and see what the Benson price support cuts will take away from farmers here in our upper Midwest.

Incidentally, we figured this by multiplying the price cuts on the various grains by last year's production. It will vary some, depending upon production this year. But the figures will be pretty close.

For Minnesota, the 1959 farm income loss can be expected to be about $44 million; North Dakota, a loss of $36 million; South Dakota, $22 million; and Montana, 9 million. The total for the 4-State GTA marketing area, $113 million. That's what our farmers stand to lose this year because of the price support cuts just made by Benson.

Now, losses that might occur on wheat and corn are not included in these figures because at this time they cannot be closely estimated. But several million dollars more could be added to these losses on wheat and corn. The corn support last year on compliance crops was $1.36 a bushel, and $1.06 on noncompliance corn. This year it is $1.12 a bushel across the board. The wheat price support is down 1 cent a bushel—$1.81 for 1959—compared with $1.62 for 1958. These are national average figures and will vary State by State and county by county.

Time will tell what effect the new price support cuts will have on farm families and consequently, on Main Streets in farm towns. But farm experts agree it will not be good.

Perhaps this will jar Congress into prompt action because that is where farmers and rural townspeople must look for help.

The Radio That Speaks for the Silent

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Enno Hobbing appearing in the Reader's Digest, condensed from the New Leader:

THE RADIO THAT SPEAKS FOR THE SILENT

"Radio Liberation," the Moscow Izvestia wrote on April 17, 1955, "is an organ for spreading dirty falsifications and black slanders fabricated by American intelligence."

The unflattering description was greeted with joy by the Soviet émigrés and Americans working for the broadcasting organization; it meant that they had arrived. For over 2 years Soviet authorities had avoided mention of this anti-Communist operation; an attack by name in one of their two most important newspapers was an admission that the station was becoming too widely known inside the U.S.S.R. to be ignored. Since then, Kremlin abuse of Radio Liberation has grown steadily in volume and violence.

Radio Liberation broadcasts to the Soviet Union—and to its military forces stationed in Eastern Europe—around the clock in Russian and 17 other languages, from Ukrainian and Georgian to Ossetic and Kumyk. The voices in these many tongues belong to some 150 refugees from the U.S.S.R., who are now headquartered in Munich. Their scripts are fed on telephone circuits to a battery of transmitters in Lampertheim, Germany, and tape recordings are flown to transmitters in Formosa. Thus beamed at Russia from both sides, the programs nearly blanket the country's major population centers.

Funds and professional counsel for this cold war operation are provided by the American Committee for Liberation,[1] a private organization of journalists, businessmen, educators, and political leaders who decided to do for Soviet Russia what Radio Free Europe was already doing for the Red satellites. Soviet citizens can, of course, listen to foreign stations like the Voice of America and the BBC, but these are government enterprises with the limitations this implies. Radio Liberation, being under no such constraints, can address Soviet listeners in terms of their own interests and yearnings. Its principal broadcasters are products of the Soviet epoch who became enemies of the regime through personal suffering. They can, and do, talk as "we Russians," "we Ukrainians," "we Moslems."

There is, for example, 42-year-old Leonid Pliajev, Radio Liberation's humorist, who pokes fun at the dictatorship and its bureaucrats. He grew up as an ardent Communist and became a functionary of the Central Committee of the Komsomol (Communist Youth). But the horrors of the Stalin purges of the late 1930's wrecked his faith in communism, and he ended up in the notorious Vorkuta slave-labor camps in Siberia. Released to serve in the Red army in World War II, he was captured by the Germans and at war's end chose to remain in the West.

Broadcasts into Soviet Byelorussia are supervised by Vladimir Dudzicki, who spent 3 years at hard labor for anti-Communist activity. The war enabled him to escape to the West.

The organization's Turkestani desk is run by Veli Zunnun, a lineal descendant of the ancient Asian conqueror Tamerlane and the first translator of Tom Sawyer into the Uzbek language. Captured by the Germans, he, too, refused to return home after the war, and he now talks regularly to his Soviet fellow Moslems.

To maintain close contact with current Soviet life, Radio Liberation screens scores of Soviet newspapers, magazines, and books, and monitors 88 Soviet radio stations. In addition, researchers do a massive job of interviewing Soviet tourists abroad, Westerners returning from Soviet Russia, new defectors, and others likely to have fresh information.

"Radio Liberation will not encourage any acts of premature violent resistance to the Soviet regime which could result only in fruitless sacrifice," the organization's statement of policy declares. It simply tries to provide its Soviet audience with mental and spiritual ammunition for their struggle toward freedom.

After Milovan Djilas, the former Yugoslav Communist leader, published his scathing analysis of communism, "The New Class,"[2] Radio Liberation broadcast the forbidden book at dictation speed, so that listeners could make their own copies. There is evidence that this is precisely what some listeners did. During the period of the so-called thaw, in 1956–57, many Soviet writers produced essays, stories, poems which, in guarded language, were critical of the regime. Most of these works, however, had limited circulation. By continually broadcasting the most telling passages, Radio Liberation has made them available to larger Soviet audiences.

The Munich group has repeatedly been able to report antiregime episodes inside the U.S.S.R. that have been hidden from Soviet citizens by the Kremlin. For instance, in 1954 when inmates of the huge Kengir concentration camps rose against their guards and were crushed by T–34 tanks, the people of Russia first learned of it through Radio Liberation. And each year Liberation broadcasters commemorate the 1953 Vorkuta uprisings, to keep the memory of that dramatic slave revolt alive.

A substantial portion of time is devoted to airing cultural works blacked out by the Kremlin. Radio Liberation has broadcast extracts from certain nonfiction writings by Tolstoy, the music of Russian-born Igor Stravinsky, short stories of the satirist Mikhail Zoschchenko, and other works frowned on by the Soviet regime, such as the great new Russian novel, "Dr. Zhivago," by Boris Pasternak. But, above all, the broadcasters concentrate on bringing to the peoples of the U.S.S.R. news and world opinions that are withheld or distorted by their rulers.

Continually, Radio Liberation reminds its audience of the great traditions of intellectual freedom and political resistance in Russia before the Communists seized power. On appropriate anniversaries it reviews past events that have been blotted out by Soviet thought control. Early this year, for instance, an impressive array of political leaders from the United States, France, Denmark, Peru, and India addressed the U.S.S.R. on the 40th anniversary of the Constituent Assembly of 1918, a freely elected body which Lenin suppressed by force. Aware of the terrible isolation of the Soviet peoples, the Munich broadcasters make every effort to apprise them that free men outside distinguish sharply between the regime and the people.

The broadcasts also give Soviet Russians access to their own profound religious traditions. Last Easter the Orthodox service held in St. Alexander Nevsky Cathedral in Paris was put on the air. On the Jewish New Year a former Soviet army officer, who is now a rabbi in Brooklyn, broadcast over Radio Liberation a greeting to the 3 million Soviet Jews. Similarly, Moslem holidays are marked by special programs in the languages of Soviet Central Asia and the Caucasus.

Soviet jamming of Radio Liberation began within 10 minutes after it first went on the air, and has been intensified ever since. Engineers estimate that the Soviets are spending at least ten times as much to jam the broadcasts as the American committee spends to get them through.

In its determination to silence Radio Liberation, Moscow has gone to brutal lengths. Leonid Karas, a writer on the program's Byelorussian desk, was found drowned near Munich in September 1954. Two months later the head of the Azerbaijan desk, Abo Fatalibey, was murdered under mysterious circumstances. All evidence pointed to the guilt of known Soviet agents who fled behind the Iron Curtain after the murders.

These attempts at intimidation indicate that the impact of Radio Liberation is substantial. But the most encouraging evidence is the growing response to programs from inside the U.S.S.R.

At intervals, broadcasts mention an innocuous-sounding name and address in the free world to which Soviet citizens may

[1] First president was Eugene Lyons, a former Moscow correspondent, now a senior editor of the Reader's Digest.

[2] See "The Book That Is Shaking the Communist World," the Reader's Digest, October 1957.

write as if addressing a relative or wartime acquaintance abroad. The resulting letters—all anonymous, naturally—have meaning beyond their words. Some ask for the small comfort of a reply: "If you receive this, please sing 'We Met by Chance.'" A few hardier souls transmit information they think may be useful to Radio Liberation. A Ukrainian wrote: "The Bolsheviks are as scared of your words as the devil is scared of incense. Many people listen to you, but they are afraid to write letters."

"Radio Liberation naturally cannot know how large its audience is," says Howland H. Sargeant, former U.S. Assistant Secretary of State for Public Affairs and current head of the American Committee. "But every now and then a message comes from the target areas that makes staff members proud of their work." He cited one recent letter which said:

"When I hear your voice, my eyes fill with tears of joy. I have a feeling that I, too, have friends."

Operation Understanding

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. WILEY. Mr. President, today I received a letter which summarizes the writer's reaction to what he calls a 4-day exposure to Operation Understanding, which he shared with six other persons. He states:

First of all, I should like to say that I returned somewhat reassured, having found so much of a necessary air defense already operational.

I ask unanimous consent that the entire letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE FALK CORP.,
Milwaukee, Wis., February 24, 1959.
Col. MARTIN B. CHANDLER,
Commanding Officer,
61st Antiaircraft Artillery Group,
Milwaukee, Wis.

DEAR COLONEL CHANDLER: With the hope that they may be of interest, I will attempt to summarize my reactions to the 4-day exposure to Operation Understanding that I shared with six other Milwaukeeans last week.

First of all, I should say that I returned somewhat reassured, having found so much of a necessary air defense already operational. It was somewhat of a revelation to witness at the Red Canyon Range a Nike missile climb at blinding speed some 5 or more miles into the sky and shoot down an unseen small target plane, and this by an electronic brain guided by radar. It is gratifying to know that this was accomplished by the same crews which guard the year around this city's concentrated population and the great productive facilities contained therein, and so essential to bringing a possible armed conflict to a successful conclusion.

The manner in which these Nike squadrons are integrated into the total North American defense system through the early warning radar network that encircles our part of the world, and the overall controls exercised at the nerve center in Colorado Springs comes as an amazing discovery for a civilian not previously briefed therein. My one regret is that such an insight is not possible for the large numbers of civic and industrial leaders who could use their influence to assure the disposition of adequate funds for these endeavors.

Secondly, this orientation brought the realization that our air defense can never be static, but must continuously evolve new developments out of the funded knowledge and equipment already acquired, alert to every advance in the weapons to come out of enemy technology and completely responsive, insofar as it is possible, to counter them. This suggests that a major portion of our resources will have to be made available to those responsible for this defense effort, and we must reconcile it as essential to the continuance of our free society in the face of an aggressive totalitarian threat.

Thirdly, I am left with the impression that this evolution of defense material is following an orderly pattern in which the economic factor and the time factor are receiving the attention they merit. The greatly improved Hercules, to replace the Ajax, employing the same launching equipment with a minimum of delay and cost, is an excellent example of the long-range planning I found evident.

Fourthly, our visit to Colorado Springs indicated that the three branches of the Armed Forces are interacting creatively in these matters of mutual concern. This, in view of disparaging reports to the contrary, dispels needless concerns that have arisen, and are still voiced in some quarters. There is adequate evidence that the competition between Army, Air Force, and Navy is productive of the same vitality in striving for excellence that has characterized other areas of enterprise.

Fifth, and finally, I must express what is perhaps most important in my reactions, namely, the convictions that this struggle for survival is in splendid hands. The impact upon us of the many officers we conversed with, or heard describe the complex operations they were identified with, was one that must leave a lasting impression. Their technical competence is of such a high order that one wonders how it is possible to hold them in the services, knowing the great disparity in the remuneration they receive and that which they could command in industry.

In closing, may I express my gratitude to you and to Major Murphy and all those who contributed so generously of their time in order to make this a meaningful experience.

With every good wish.

Sincerely,

WALTER P. SCHMITTER.

The Danger of Overspending

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Brave Appeal for Integrity," published in the Deseret News of Salt Lake City, Utah, January 20, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Deseret News, Jan. 20, 1959]

THE BUDGET MESSAGE—A BRAVE APPEAL FOR INTEGRITY

As he promised he would, President Eisenhower has now joined battle, full strength, against inflation and the big government spenders. His two messages to Congress this week represent the first big guns.

The President's economic message today appeals for "self-discipline and restraint" by labor leaders in wage demands, more economies in production rather than raised costs on the part of business, "careful shopping" on the part of consumers, and a balanced budget on the part of Congress.

And his budget message yesterday emphasized the fight that may be in prospect on the last of those appeals.

That fight is timely and vital. The Nation has bounced back from last year's recession to the highest gross national product in its history. The recovery has created new inflationary pressures that will explode into a new cycle of inflation this year unless strong, effective leadership at the national level prevents it.

The budget message reflects such leadership—if President Eisenhower doesn't pull his punches in fighting to push it through Congress. It will be tragic if this budget turns out to be little more than an opening gambit in a campaign to maneuver the Democrats into an unfavorable position for the 1960 elections.

If he does intend to fight for a truly balanced budget, he faces a long, bitter, extremely difficult road. His estimates of $77.1 billion receipts in fiscal 1960 (compared to $68 billion in 1959) is probably overoptimistic. And few qualified observers give him much chance of keeping spending to the $77 billion proposed in 1960 (compared to $80.8 billion in 1959).

He will get that much income only if he can persuade Congress to boost gasoline taxes a cent and a half a gallon and to boost the price of a first-class postage stamp to 5 cents. His chances are not good on either.

And he can keep spending down to that level only by persuading Congress to cut almost a billion dollars from farm subsidies, cut out all public housing, make no new starts on public works, and keep defense spending close to its present level.

Again, Congress is not likely to go along with any, much less all, of these proposals.

Still, a balanced budget is worth fighting for—as the shocking $8 billion budgeted merely to pay interest on the Federal debt so painfully indicates.

President Eisenhower will submit a series of special messages justifying in more detail his position on most major issues covered in his budget and economic messages. They will be analyzed editorially as they appear.

But let us call attention right now to what seems to us the most significant part of the message. It is buried in the middle of the 78-page document and has received little public attention so far, but it could begin the turning of a corner away from big government.

For 10 years and more, thoughtful citizens have been urging that we get the Federal Government out of programs where State, local, or private organizations could do the job. The second Hoover Commission made some far-reaching recommendations along that line. President Eisenhower challenged the Nation's Governors to help. But big Government has, meanwhile, grown steadily bigger.

This week, the President proposed action of his own. Throughout his budget message, he demanded that local and State government stop depending on Federal handouts. And he got down to specifics. He recommended that Federal grants to States for vocational education and for construction of sewage treatment plants be discontinued as of July 1, 1960. And gradually but steadily, he proposed, Federal support should decrease and local support increase for slum clearance, urban renewal, and airport construction.

To help States take up the slack, he proposed that they receive a share of the Federal excise tax on local telephone service.

This is not much, but it is a start. If the administration fights these proposals through Congress successfully, they may well begin a gradual movement back toward the local and State responsibility upon which the Federal system was founded. One only wishes the President had not waited until the final 2 years of a "lameduck" term to undertake this highly significant fight.

The budget proposals will, of course, be sharply criticized, particularly in respect to the level of defense spending. Some of the criticism may be sound; perfection in the spending of $430 for each man, woman, and child in America is hardly attainable. President Eisenhower will not come out of this battle without bruises.

But overspending is a much greater danger to America's basic strength than underspending, and we welcome the President's budget and economic messages as standards around which supporters of sound government can rally.

Nominees for Academy Awards

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. JACKSON. Mr. Speaker, as a Californian, it is my pride and pleasure to say a few words about an outstanding industry in my State—the production of motion pictures.

This past Monday evening Hollywood announced the nominations for the most gifted accomplishments in films during the past year. Among these 1958 nominees for the famous Oscars—the annual awards of the Academy of Motion Picture Arts and Sciences—are included the stars and writers, the directors, producers, technicians, and artists of motion-picture making.

On April 6 some 90 million persons will hear and see the election results of these nominations in a program sponsored by the film industry over a nationwide network of NBC television and radio.

To me, these awards are reminders of what Hollywood has meant to us as Californians and also to us as Americans.

Hollywood has always made a major economic contribution to my State. It spends hundreds of millions of dollars on filmmaking. It employs thousands of persons in some 275 crafts and trades. And the people of Hollywood, in their own right, make important contributions to the civic life of the community. They are generous in charity, unstinting in giving time and effort to entertain at benefits not only in California, but around the world.

The best of our films are reaching audiences in the Communist lands. Until recently, most of these audiences have seen no films of any sort from the Western world.

And they are reaching audiences in that part of the world which may be of greatest moment to us in the years ahead. This is the world of less developed but developing free nations of Asia and Africa. The future course of this new free world will surely affect our future.

And what do our films show the Communist world and the non-Communist world about us?

It would be folly to think that they show America as all good—or even as all bad. What they do show, and vividly, are the infinite, varied aspects of a many-faceted nation. They show the face of freedom and individuality and enterprise, the fact of a nation which was built up by peoples of all nations and creeds and colors.

The film, as a human creation, has the capacity to reach men's hearts everywhere, to show the brotherhood of man, to illustrate the human flaws and human triumphs which can link men together in our rapidly condensing world.

It is here, I think, that the film industry makes its distinctive and lasting contribution.

It will be a fine show on April 6. I invite all of you to tune in on the ceremonies of awarding the Oscars.

Now, finally, let me list this year's nominees for the academy awards:

Best picture: "Gigi," "The Defiant Ones," "Auntie Mame," "Cat on a Hot Tin Roof," and "Separate Tables."

Best actress: Susan Hayward, Deborah Kerr, Shirley MacLaine, Rosalind Russell, and Elizabeth Taylor.

Best actor: Tony Curtis, Paul Newman, David Niven, Sidney Poitier, and Spencer Tracy.

Best supporting actress: Peggy Cass, Wendy Hiller, Martha Hyer, Maureen Stapleton, and Cara Williams.

Best supporting actor: Theodore Bikel, Lee J. Cobb, Burl Ives, Arthur Kennedy, and Gig Young.

Best director: Richard Brooks, Stanley Kramer, Vincent Minelli, Robert Wise, and Mark Robson.

The Cheyenne River Sioux Rehabilitation Loan Program

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. MUNDT. Mr. President, to those of us who live among the American Indians, there is nothing more heartening than to observe instances of real progress and a better economic life for these original Americans.

It was for this reason that I was so encouraged after reading the story of the efforts made on the Cheyenne River Agency in South Dakota to assist tribal members get a start toward economic self-reliance. Under the able direction of Superintendent Noralf Nesset, and the Cheyenne River Sioux Council a rehabilitation loan program has been initiated from funds which the tribe has received from the Government. These funds were paid to the tribe when water from the Oahe Dam flooded the reservation.

The news story from the Aberdeen, S. Dak., American-News, tells the story of this rehabilitation program. Some members have engaged in a cattle program, others have attended schools of higher education, still others are engaged in business enterprises. Under the education loan program, 38 young men and women have graduated from colleges or vocational schools and their average income is $3,350 annually.

The Cheyenne River Agency and the Cheyenne Sioux Indians are to be congratulated most heartily for these efforts. They have proven that the Indian in America needs to be given only one thing—opportunity.

I ask unanimous consent to have printed in the Appendix of the RECORD this story of initiative and success of one of South Dakota's Indian reservations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE HUNDRED AND THIRTY-NINE INDIAN RANCHERS MAKE GOOD HEADWAY IN REHABILITATION SETUP

CHEYENNE AGENCY.—The Cheyenne Sioux Indian Reservation is not the most prosperous post in South Dakota. But Supt. Noralf Nesset, in his latest news bulletin notes that considerable progress is being made.

The Cheyenne Sioux Tribe, with money received as indemnity for Oahe Reservoir flooding, some time ago set up a rehabilitation program for its own members.

The tribe aimed to give its younger members a beyond-high-school education, train and relocate families who had no economic future on the reservation, set up other families in either ranching or business enterprises and to give assistance to the aged.

CATTLE PROGRAM

A dramatic phase of the rehabilitation program is the cattle repayment phase. Tribal members who qualified were set up with 100 heifers and a line of machinery.

The operator was to pay for the heifers by returning 11 calves for each 10 heifers received. This repayment was to be over a period of 10 years.

Most of the operators received their cattle in the spring of 1957 and had their first income from the increase recently.

There are now 139 families in the cattle program, Nesset reports. This season they sold approximately $500,000 worth of calves or an average of more than $3,500 per family. Approximately 20 operators have discontinued. The tribe foreclosed on some. Others quit voluntarily because of health or other reasons.

All of the 139 have an abundance of hay and several have enough forage to last for 2 years.

INDIAN LAND FIGURES

The rehabilitation program has been one factor making for greater Indian use of Indian land. In 1953 Indian operators used 564,477 acres of trust land. In 1958 the figure was increased to 970,585 acres.

Indian trust land used by non-Indians dropped by about the same figure. In 1953, non-Indians used 808,730 acres of trust land; in 1958 they used only 408,740 acres.

In the educational phase of the rehabilitation program, 169 members of the tribe have received grants to attend colleges or vocational schools. Thirty-eight have been graduated and are now earning an average of $3,350 annually.

Four major loans have been approved for business enterprises. They include a combination garage-service station and lunch counter, dairy farm, recreation parlor and theater. Nesset says all four enterprises will undoubtedly be successful.

Ex-Coach Blaik Believes in Prayer

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. BRIDGES. Mr. President, in this Lenten season when individuals are most prone to reassess their relationship with God, and when our thoughts turn particularly to solemn prayer, it seems most fitting to call attention to the professed belief in prayer of outstanding individuals.

I therefore ask unanimous consent to have printed in the appendix of the RECORD an article from the New Hampshire Sunday News, Manchester, N.H., on February 15, 1959, entitled "Ex-Coach Blaik Believes in Prayer."

I have known Earl Blaik as a close friend for many years, as a coach at Dartmouth College in my own State of New Hampshire, and as the most recent coach of the U.S. Military Academy at West Point. His coaching career was a most notable record of achievement, not only in the won and lost columns, but greater still, in molding the careers of so many fine young men of this Nation. His lessons in integrity, fair play and sportsmanship, will be well-remembered throughout their lifetime by the youth he coached. To those who know Earl Blaik as I do, it comes as no surprise that he felt so strongly about the source of power derived from prayer. His words which follow should be read and reread by all Americans, not only in this Lenten season but throughout the year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EX-COACH BLAIK BELIEVES IN PRAYER—SOURCE OF POWER AND CONFIDENCE ON PLAYING FIELD

The Lenten season each year brings new meaning to Christians the world over. It is a time for the individual to assess anew his relationship with God. Prayer, as the direct link, plays a vital role in this relationship. This selection is from the book, "We Believe in Prayer," by Lawrence M. Brings, published by T. S. Denison & Co., of Minneapolis.

"(By Earl (Red) Blaik, former Army football coach)

"If you were to ask my mother the value of prayer she, in her 92 years of Christian living, would cite over a half century of devotion to a Presbyterian faith which she and my late father, an immigrant Scotsman, knew was the foundation of their years of happiness. To them daily prayer was as natural as the need of food. Spiritual impoverishment could be tolerated less than physical hunger.

"The dedication of a daily hour to contemplation and prayer may be partially lost in these days when the mind has little respite from the continuous reminders that our civilization courts chaos.

"DAYS OF DIFFICULTY

"It may seem strange, however, that in face of these major world problems stoically accepted, there comes to all men days of great individual difficulty as personal events of seemingly overwhelming pressure cannot be answered without guidance, and such guidance is only found in prayer.

"Strength through prayer is the foundation of confidence when the pressure of great spectator sports all but overcomes the minds of players. It is far more common than not, to see college teams get an added source of power and confidence as they pause for a short prayer before play; a prayer such as Coach Ray Eliot's is the one used by the hundreds of youngsters who play on Pop Warner midget teams:

" 'As we gather here today
We take a moment, Lord to pray;
That you will guide us in our play
And show us how to go Thy way;
Make us honest, fair, and true
In this game and all we do.'

"NOT RATIONED

"Prayer is not rationed as a commodity is in war or reserved for those bleak days of sickness and trouble. Prayer is the means of spiritual growth which compounded, will give the individual the mental strength to surmount daily problems and provide the needed peace of mind.

We meticulously prepare for changing conditions which are met on the football field of play. Confidence which destroys anxiety, is based on faith, and is a top requisite for the competing champion. All the training of his great physical attributes are of little value to the champion without a faith in himself gained only through prayer and contemplation.

"Prayer may be a personal matter, but for the ordinary soul daily meditation with the following prayer given by Chaplain Clayton Wheat to the corps of cadets when I was a cadet, will strengthen your belief in the power of prayer.

"CADET PRAYER

" 'O God, our Father, Thou searcher of men's hearts, help us draw near to Thee in sincerity and truth. May our religion be filled with gladness and may our worship of Thee be natural.

" 'Strengthen and increase our admiration for honest dealing and clean thinking, and suffer not our hatred of hypocrisy and pretense ever to diminish. Encourage us in our endeavor to live above the common level of life. Make us to choose the harder right instead of the easier wrong, and never to be content with a half-truth when the whole can be won. Endow us with courage that is born of loyalty to all that is noble and worthy, that scorn to compromise with vice and injustice and knows no fear when truth and right are in jeopardy. Guard us against flippancy and irreverence in the sacred things of life. Grant us new ties of friendship and new opportunities of service. Kindle our hearts in fellowship with those of a cheerful countenance, and soften our hearts with sympathy for those who sorrow and suffer. Help us to maintain the honor of the corps untarnished and unsullied and to show forth our duty to Thee and to our country. All of which we ask in the name of the great friend and Master of men. Amen.' "

Labor in the World Picture

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD, and commend to the attention of the membership of this body, an article entitled "Labor in the World Picture," which appears in the February 1959 edition of the AFL–CIO American Federationist, and which was drawn from the remarks made by AFL–CIO President George Meany. Mr. Meany delivered this speech during a 2-day conference on Labor and Science in a Changing World, sponsored last month by the AFL–CIO industrial union department.

I was much impressed by Mr. Meany's thoughtful and provocative remarks. He has a clear understanding of the nature of the Communist international movement, and he does not mince words about their ultimate goal—the goal of world conquest, and the destruction of all free and democratic institutions. But Mr. Meany does not stop there: he outlines a clear course which the American labor movement and, in a larger sense, all of us must pursue if we hope to successfully meet the Communist challenge.

I shall not cite any excerpts from Mr. Meany's remarks, because I feel that his entire speech warrants our close and careful consideration. For that reason, I am placing it in the RECORD and commending it earnestly to the attention of the membership of this body:

LABOR IN THE WORLD PICTURE

(By George Meany)

Where does American labor fit into the rather somber picture of international affairs? What can it contribute and what are its special qualifications for contributing to the maintenance of peace and freedom in this changing world?

First of all, labor has the highest interest in having the greatest number of people share the benefits which modern science can bring to life. Labor has the greatest stake in atomic power being used solely for the pursuits of peace. Labor is by its very nature humanitarian in aspiration.

As in the first industrial revolution, so today in the second industrial revolution, it is not industrial progress as such but rather the mass human factor—the labor movement—which is the force making for and advancing individual dignity and personality.

The ideals of labor know no national boundaries. Here labor and science have much in common. Precisely because of the impact of the revolution in technology on military strategy, it is important that we do have a humanitarian approach. By its very nature, labor is basically humanitarian in its aims and in its values.

We of labor indict communism because it robs the people living under it of all human freedom and the possibility to share equitably and adequately in the benefits of technical progress behind the Iron Curtain. We indict communism for gearing its technical progress to military objectives. Until the Soviet Union discards its aim of world conquest, mankind cannot really tame atomic fission.

Lest we forget, Moscow is enraged over Tito's efforts to travel a different road to what the Kremlin calls socialism. And even helpless Hungary was not permitted to live in peaceful coexistence with the successors of Stalin.

American labor must help our Nation lend support to policies which recognize the right to nationhood as a basic human right. In the missile age, in the days of breakthroughs in outer space, free and independent nationhood has a larger meaning than ever before. Today more than ever, inde-

pendent nationhood means a distinct cultural entity and a spirit of self-respect and self-reliance among the great mass of the world's people.

More than half the world's population lives in economically underdeveloped areas. Labor has a special interest in having modern science and technology serve to raise the standard of living in these areas. The most vital interest of American labor and our self-preservation as a free labor movement make it imperative to have the workers of these countries enjoy a rising standard of living, better pay, better hours, more leisure, health and culture.

In our own country, where our labor movement is not prisoner of any economic dogma or political formula or party machine, the movement is especially qualified to work for a much more rapid and widespread utilization of atomic energy for peaceful purposes.

This is no time for conflict between private and public power interests over their respective roles in atomic power development. The public should have the benefits of modern science through private power if possible, through public power if need be, and through a combination of the two if necessary.

Once such atomic development is speeded up in our own country, the United States will find it easier to help other nations and strengthen them in their fight against poverty and subversion.

The record of American labor in regard to an adequate and sound foreign aid program is very clear from the Marshall plan right down to date. In the face of vast advances in science and technology, and in view of the great desire among the peoples of economically underdeveloped countries to industrialize quickly, we must stress that our foreign aid program should mean much more than giving dollars and providing machinery and technical know-how. There is a human element in this picture.

These economically underdeveloped societies seek to move rapidly from a backward rural stage to an advanced industrial stage. To avoid exploitation and concentration of economic power, to avoid a monopoly of political power is essentially a problem of social justice which the free trade unions can make a contribution to solve.

After all, the test in regard to the human value of science and technology is whether they serve the spiritual fulfillment and the material well-being of the individual, whether they are for the good of the great mass of the people or for the benefit of a few.

These standards can be met only in a free society, in which free labor can play a constructive role. Such a society is far superior to the dictatorial tyrannical setups we've seen.

Remember, Hitler in his day also lorded over a country with a highly developed technology. Hitler in his day was even more ahead of us in buzz bombs and missiles than Khrushchev is today. But under Khrushchev, as under Hitler, the high level of technological progress and achievement spelled massive exploitation, enslavement and war.

In contrast let me cite a distinct American experience which proves that the real value of industrial progress is in human service. I cite TVA and the development of the Central Valley of California. Neither Communist Russia nor any other totalitarian country can show similar institutions, similar undertakings, with free labor playing a vital role in the communities' enjoyment of benefits of flood control, electric power, reforestation, navigation, food production, health and education.

Of course, there are those who feel that we can meet the Soviet challenge at the conference table and that the threat of human destruction, total war, is enough to hold off, enough for our protection. Well, I think that this position is really a repudiation of the responsibility that all Americans must have—a responsibility even in this great age of technical and scientific advance—a responsibility to preserve this free way of life, a responsibility as trade unionists to preserve a system of government under which it has been possible for this trade union movement to advance the cause of those who work for wages in this great Nation.

Our criticism of the Soviet system must be accompanied by a living demonstration that man can achieve far more for himself and his community through democracy than through despotism.

We have demonstrated the superiority of democracy over Nazi despotism not only on the field of battle. It will be harder for us to defeat communism. Unlike nazism, it hides behind a humanitarian cover. It pretends to be the champion of labor.

The Mikoyans are harder to fight than the Goerings, but they are none the less our enemies, because they are the enemies of all freedom and human decency. Let none forget what Mikoyan and his regime did to the people of Hungary, Bulgaria, and Czechoslovakia.

Our country should strive to do more in serving the cause of peace, freedom and expanded human well-being. The rapid progress of science and technology demands this.

But with all our shortcomings and failings, too many of us forget the contributions our country has made to the advancement of human liberty and welfare. America has meant much and done much for advancing political democracy and national independence for colonial peoples. We can be proud of our industrial progress and the increasing extent to which—thanks in great measure to our free labor movement—the great mass of people are benefiting from our front-rank status in science and technology. Our readiness to share our atomic resources in the interest of peace and human betterment is unparalleled.

Of course, there is more that we can and must do. The Soviet challenge and the rapid pace of scientific progress necessitate that our educational system be vastly improved and that more talented sons and daughters of the people—regardless of their race or religion—be given an opportunity to secure the highest learning. As the pioneer of free education in the United States, American labor must now be the most active force for such improvement and democratization of our educational system.

Even if the Soviet regime had not come to cast its dark, ugly shadow on the arena of history, the scientific and technological revolution which humanity is now experiencing would have produced profound social, political and economic changes and national emotions and even explosions.

The role of communism in this stage of history is far more complicating and destructive than constructive. Our best answer to the Communist challenge is constantly to humanize our society, improve our free way of life and make it invulnerable in every way to Communist subversion and assault.

Given the nature of the Soviet system and the new world role of our country in this age of miracles of science, the American labor movement must not only respond to events in the making but also influence, mold and help direct events.

Our labor movement must help our Government evolve and execute an effective democratic foreign policy. We must cement our relations with the international free trade union movement and expand our assistance to its weaker sections.

There are areas where American labor is especially qualified to serve the ICFTU and the free world. I speak of awakening Africa and the struggle against every vestige and form of colonialism. I speak of exposing the true nature of the Communist enemy which has made our country and our free way of life its principal target.

There are no blueprints to social progress and human advancement. But there are certain practical steps—all in a humanizing direction and all aimed at strengthening the non-Communist world and its nations whether they are or are not our allies today in a formal sense. American labor should foster such policies with redoubled energy.

The advances in science make it most urgent that we work for effectively controlled and internationally supervised disarmament and the banning of nuclear and all other weapons of mass destruction. Our foreign aid program should be put on at least a 2-year basis so that it can be a greater force for stabilization. We must energetically help our allies break with colonialism in Algeria and everywhere else. We must advance a most comprehensive program for rebuilding the Middle East so as to help Arab nationalism become a positive force for democracy and live in peace with Israel. We must open our colleges to more students from overseas on a free scholarship basis. We must maintain and strengthen our national defense and the capacity of our allies to maintain their national security.

Labor is the best equipped sector of our community to demonstrate that life in a democracy is better, fuller, and richer in a moral, cultural, and spiritual sense than it can ever be under communism or any other despotism.

It seems to me that in meeting all of these problems of living in this new great technical and scientific society, we must arrange, if we can, to stay alive. We must preserve democracy in being. That's the No. 1 objective, because all of these other things we talk about—aid to under-developed countries, great advances in our own economic picture here at home—all of these things depend on maintaining the American system under which we are privileged to have a free trade union movement.

It seems that the No. 1 objective is to use our influence in shaping a foreign policy that will always leave the door open for peace but at the same time present at that bargaining table an America strong enough to defend this way of life from aggression of any kind.

I think it's labor's job to make its contribution to that sort of America.

Resignation of Hon. Theodore Francis Green as Chairman of the Senate Committee on Foreign Relations

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mrs. KELLY. Mr. Speaker, a few weeks ago when the Senate Committee on Foreign Relations met in regular session, its membership was not aware that the agenda included the resignation of their distinguished chairman, Hon. THEODORE FRANCIS GREEN. They were deeply moved and those of us on the House Committee on Foreign Affairs, who have worked closely with Chairman GREEN and his Senate committee over the years,

observing his outstanding leadership, were saddened to learn of it. Senator GREEN's decision to resign as chairman because of failing sight and hearing is typical of this patriotic American who, after determining that he could not continue to give his country service of the very highest order, felt he should step down. It takes real courage, Mr. Speaker, to reach such a decision and I want to add my tribute to the many well deserved commendations he has received from Members of both Houses of Congress and other grateful Americans. It is indeed a great comfort to know that Senator GREEN will remain a member of the Senate committee and that America will continue to have the benefit of his statesmanship and sage counsel.

Can We Win the Hot Economic War?

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. AUCHINCLOSS. Mr. Speaker, on the occasion of the 22d annual dinner of the New Jersey State Chamber of Commerce, which was held in Washington in honor of the New Jersey congressional delegation on February 5, 1959, the president of the State chamber, Lansing P. Shield, made a few remarks, entitled "Can We Win the Hot Economic War?" and I am very pleased to receive the permission of the House to have this brief address printed in the RECORD.

Mr. Shield says a great deal in a brief space and in my opinion he expresses the thoughts that have been in the minds of many people for some time. We should now take action and I feel sure that if management and labor can get together and discuss the great problems facing our country, they will reach some ground of agreement and we can show a united front in winning the hot economic war.

Mr. Shield's remarks follow:

CAN WE WIN THE HOT ECONOMIC WAR?

(By Lansing P. Shield)

An unusual gathering of leaders of Government, organized labor, and industry such as this provides an opportunity for all of us to achieve better understanding. In these critical times, is there anything more urgent than the development of teamwork between these three important segments of our society? And this applies particularly to New Jersey—the most highly industrialized State in the Union.

Despite unparalleled prosperity and spectacular achievements in mass production and mass distribution, our economy in New Jersey and throughout the Nation is labeled as a high-cost one—and as each month rolls by the break-even point for both industry and Government rises. We might as well face it: we are living in a plush economy. Because of high costs, world markets are slipping away from us.

Within the last 12 months, Khrushchev, Mikoyan, and company have made trade agreements with 11 countries. During that same period, we haven't signed a single agreement. In today's papers Khrushchev calls for the end of the cold war. This is understandable, because he feels sure of victory in the hot economic war. In his speech yesterday before the 21st Soviet Party Congress in Moscow, he boasted that "economic competition was now enough to win the world to communism."

As a nation, we are in danger of losing out to a competitor who has a built-in low-cost austerity program. His economy, contrasted with ours, has a constantly lowering break-even point and the cost of goods in Russia is being steadily reduced.

The complete answer to the dilemma in which we find ourselves does not lie solely in reducing Government spending, freezing prices and wages, nor in further mechanization. We already lead the world in that area (I'm referring to mechanization, not spending) and it's ironical that the more we mechanize the higher go our costs. The President has warned us that unless we reverse this trend which is weakening us both internally and externally, it may be necessary to put our economic body into a straitjacket in the form of wage and price controls. It is up to us to choose now between teamwork and dictation, or the freedom of choice may be taken away from us.

As leaders in Government, business, and labor, we have been fighting small battles among ourselves instead of presenting a united front—a truly United States of America against our adversary, the Kremlin.

As an example, here in the United States, industry and organized labor meet as antagonists annually or biannually at the bargaining table and then withdraw until the next battle. Between political campaigns, Government and industry often tear each other down.

While we have been trying to solve the problem of integration in race relationships, we have actually been practicing segregation in our economic relationships.

A form of class warfare is adding fuel to the flames that are licking at the foundations of our society and our freedoms. Recently a columnist in the New York Times pointed out that both political parties seem to be solidifying along the lines of class interests.

Can anyone say there is a conscious, common effort to promote integration and understanding between organized labor and management—and to a somewhat lesser degree, between Government and industry?

Recently, recognizing my own shortcomings in this area, I invited to lunch a well-known labor leader in a neighboring State and a U.S. Senator. After 2 hours in which we exchanged views (no holds barred) all three of us came away with a better understanding of the problems of the others and we all wanted another meeting.

This week one of the top labor leaders in New Jersey told me the time was overdue for management and labor to bury the hatchet, particularly in view of the international situation. It is heartening to find that leaders in every field are becoming aware of the necessity for Government, labor, and industry to close ranks.

In a shooting war, we get together because we are thoroughly aroused to the common danger. If we are to win this hot economic war, a united front is equally imperative. May I respectfully suggest to the representatives of Federal and State Governments present tonight that industry would be glad to join any effort to bring about a closer working relationship with Government and with labor? Perhaps an improved relationship might be initiated by a conference of leaders in Washington, followed by meetings at the State level. Such action would not only be good business and good politics, but would be a definite first step toward the objective of developing unity.

We must have unity to be productive—we must be productive to be strong—we must be strong to remain free.

Ernest Joiner, of the Ralls Banner—The Hardest Hitting Community Newspaper Editor in Texas

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 26, 1959

Mr. YARBOROUGH. Mr. President, Ernest Victor Joiner, owner and publisher of the Ralls (Tex.) Banner, has become a legend in his home State.

Many persons do not agree with what he has had to say; yet all must respect him as a man who stands up for his beliefs, and who will fight for his ideals. He and his family have been cut at verbally. Joiner has even been shot at. Yet he continues to stand courageously for what he believes is right, and to lash with a cutting edge those whom he feels are not acting in the best interest of the people.

Ernest Joiner has been called a "voice crying in the wilderness." Yet this is not wholly accurate. He is heard not only in the wilderness, but also in the big cities and in the small communities. He is one of the most often quoted newspaper editors in Texas. His statements in his column, "It Says Here," have become bywords in many parts of our State. Knowledge of him is spreading over the Nation.

Ernest Joiner has his ideas and his ideals. He has the astuteness and intelligence to argue persuasively for his causes. And he has the willingness to work to put across a point or to bring about a community improvement, such as a new school auditorium, a new telephone building, and others. He stands for progress and good citizenship, and he has the courage to work actively for their accomplishment. I am proud to be able to call him a friend and to have the advantage of his wisdom and counsel in many fights for the betterment of the government of Texas.

Mr. President, two articles written about Ernest V. Joiner give a good description of him. I request unanimous consent to have them printed in the Appendix of the RECORD.

The first is from the 1958 edition of the South Plains Yearbook, "Parade of Progress." The second article was written by Willie Morris, and was published in the Texas Observer on September 19, 1958, under the heading: "An Editor the Sheriff Missed":

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the 1958 edition of the South Plains Yearbook, "Parade of Progress."]

RALLS BANNER IS EDITED BY ERNEST JOINER, HARDEST HITTIN' COMMUNITY NEWSPAPER EDITOR IN TEXAS

"Here, read what Joiner says in the Ralls Banner," is a common expression at a political meeting in Austin, Washington, D.C., and around all of the coffee shops in Ralls. Ernest Joiner came to Ralls about 12 years ago, and from this time no local politician has ever dared to get his hand caught in the purse strings of this city.

At a press convention in 1950, a room full of community editors bluntly predicted that Joiner would be out of the newspaper business in less than 6 months. He had broken every rule. He jumped on his town's preachers, lawyers, city councilmen, school board, civic club leaders—but most of all he roasted many of his best advertisers.

Recent Governors, State representatives, State senators, and most all of the county political leaders have felt the sting of Joiner's pen.

Joiner, towering something over 6 feet, came into Ralls fully sold on the idea that America needed red-blooded editors who would call a "spade a spade."

He has been cussed and discussed. He's been shot at and missed! He's been openly preached against in Ralls' pulpits, and he has also been praised in the same places. He lays his ears back and kicks like a mule when he thinks someone is getting a raw deal. He's for progress. He's for people in his town being good citizens. Once he even singlehandedly called a beer election because he said the only thing people would vote on was keeping the county dry.

In brief, a volume could be written about Ernest Joiner. His newspaper has captured many State awards for outstanding service to its readers. If you read his column and you don't like what he says, cuss him. Cuss him real good, but don't cuss him in Ralls. People in Ralls respect and love Joiner and the Ralls Banner. But why shouldn't they? He gives Ralls and this area the best news coverage of any community newspaper in the State.

[From the Texas Observer, Sept. 19, 1958]

AN EDITOR THE SHERIFF MISSED

Out here in the lonely whistling spaces, on the main road to Lubbock, sits Ralls. It has a red brick main street and a cafe to drink coffee called Jack Rabbit's. It also has Ernest Joiner, who edits the Banner and who gets quoted more than most newspapermen on the mass circulation dailies.

In the daily and weekly output of grey matter that constitutes Texas journalism, the Ralls Banner (circulation 1,175) is a kind of journalistic oasis. Its editor is a man of raw courage, a thorough noncomformist, and an idealist. Beneath the eccentricities of his weekly column, "It Says Here," a sensitive social conscience is at work, ridiculing political greed, jousting with religious dogma, lashing unkindness and inhumanity and pettiness and whatever else he thinks ills the human race, 2,000 of whom have chanced to band together in this tiny community on the plains of west Texas.

Ernest Joiner is a stern critic of the times. "We have no angry voice to challenge this era of passiveness," he once wrote. "Here and there some minister of the Gospel addresses empty air from behind the Mexican border in a tone of anger, but the tone is a stage prop, more than likely and his aim is economic security for himself. There is no Thomas Paine to fan the flames of revolution, stir the imagination of Americans toward human rights and national independence; no Tom Paine to strike fear into the hearts of dictators, both clerical and lay. Gone are the Robert Ingersolls, W. C. Branns, Voltaires, and Victor Hugos whose anger stirred men to justifiable action. Nobody emulates Jesus, who in anger, whipped moneychangers from the temple. Just give us for 1958, God, some thoroughly angry men."

"I think a man can be judged by his enemies just as he can by his friends," Joiner once said, "and I'm proud of my friends and my enemies." He has his share of both. In 1952, when his shop burned down, a group of hometown people raised $1,000 for a new building. He also was a target for a bullet once—fired by a sheriff he had caught in the act of bootlegging. The bullet missed and the sheriff became the only one-term sheriff in the history of Crosby County.

He once wrote of the school board, which was conducting secret meetings: "These little dictators, lacking only a small balcony for their strutting, take pride in saying, as one member certainly did say, 'We run this school business the way we want to run it.'" And later he wrote, "Once about 10 years ago this newspaper criticized the local school board for what it considered light-of-the-moon activity. And for just as many years one board member has nursed the conviction that the editor should drop dead, which seems a fair punishment for exercising freedom of speech and press as more or less guaranteed by the Constitution. Now the man has a child in school who studies the works of Mark Twain, who once said: 'First God made idiots. That was for practice. Then he made school boards.' Haw."

Ralls had a Negro population of about 200. Some years ago Joiner editorialized: "Every so often some solid, upstanding Christian gentleman feels called upon to criticize this newspaper for printing news of the colored population of our town. Last week we printed the honor roll for the colored school. A couple of these characters gave birth to a two-headed calf, sideways, when they read it. Our opinion is that colored students, with three strikes against them on books, equipment, and facilities for study, are to be commended above a lot of white children we know who can't make the honor roll with the best of instruction and educational facilities. We think effort should be recognized. We think news should be printed. If these two convictions of ours soil the lily-white hands and Christian consciences of a handful of bigoted Klu Kluckers, they are invited to get the hell off our subscription list."

THE RASCALS

When the political dismissals took place at Joiner's alma mater, Texas Tech, last year, a Banner editorial was published in the CONGRESSIONAL RECORD: "It is fitting that the infamy of a handful of scoundrels be permanently recorded in the national archives so students and historians of every age may know how the public's servants conducted the public's business at Texas Tech. It couldn't have happened to a more deserving bunch of rascals."

Joiner belongs to the American breed of agrarian humorists; his style bears the imprint of Twain. His description of a Californian's directions on how to get to Texas is to go east until you smell it and then south until you step in it. Once, in a column reflecting his rationalist views on religion, he quoted a mayor who said that God saved his life, after a tornado wiped out his town, killing some 79 men, women, and children. "Man has been given the power of reason," Joiner wrote. "Why doesn't he use it? It doesn't square that God should be given credit for saving Mayor Rowe's life unless we also assign him credit for killing 79 others."

Joiner and his staff of two publish the Banner in a neat new building a half block from the stores and offices in the center of Ralls. Wearing black horn-rims, he is a tall, handsome man of 47. He speaks and moves like the west Texan. On the desk in his private office is a plaque saying "Vice president" with a phrase below it "in charge of vice, naturally." His window looks out onto the business section, and onto the weird old town assembly hall, red and weatherbeaten, built by the people of Ralls not long after it was founded in 1910.

He was raised in Dalhart. His mother was a Populist and an admirar of Eugene Victor Debs, the Socialist. Joiner's middle name is Victor, after Debs. He worked 5 years in Fort Worth before he went to college. He studied 2 years at the University of New Mexico, and spent his last 2 years at Texas Tech, where he studied political science and got into trouble with a conservative administration when he edited the school paper. He first angered the officials there by conducting an election for the biggest horse's neck on the campus. "We had our share. How was I to know the dean of engineering would win hands down?" he said.

This was when Pappy O'Daniel was Governor, and when Joiner discovered the dormitory cafeteria was purchasing carloads of flour for the first time, and O'Daniel flour at that, he asked why in several editorials. He never got an answer. The day he crossed the stage to get his diploma, Clifford E. Jones, then president of Tech, handed it to him and whispered, "Joiner, this is the happiest day in my life."

He toured the whole country looking for a newspaper job, and the only one he could find was with the New Orleans Times-Picayune at $15 at week. So he went to work for the U.S. Corps of Engineers in Galveston.

In 1942 he married a Georgia girl. They had met at a college editor's convention in Iowa and carried on a romance through the mails until Joiner showed up at her home the summer after he left college.

He spent 4 years in the Army, first with the infantry, then the paratroopers, and finally the criminal investigation department, but he never got overseas. He almost did, but he'd cracked his back as a paratrooper at Fort Benning and was sent up to be shipped to Europe when a doctor noticed his cast and notified his commanding general.

FROM A JUNKHEAP

Right after he was discharged in 1946, he bought the Banner with a GI loan. "It was a real junkheap, nuthin' would run, and it had 600 circulation," he said.

"I came here," he said, "because I believed, and I believe it more every day, that the only independent and uncontrolled press in the United States are small weekly papers. It's obvious I couldn't do what I'm doing on a big-city daily. Why, I wouldn't last as long as a paper shirt in a bear fight. Those big papers are only honest when it pays 'em to be honest."

He chuckled often, between phrases. He is a jovial man who likes to amuse.

"I don't think too much of the weekly press in Texas either," he said. "I don't think much of a paper with no personal column or editorial page. Too many weekly editors are printers instead of editors." He does admire H. M. Baggarly's Tulia Herald, just 70 miles to the north, as well as the Kountze News and the Dallas White Rocker. He reads over 40 weeklies every week.

He leaned back in his chair and reminisced. "Out in this country up until recently," he said, "people were friendly. But that ol' West Texas hospitality is damned near a thing of the past. I guess it's the pace people live now—improved transportation, and more money and time, and TV. I wanta tell you somethin'—you can't phone people around here. They'll leave the phone off the hook if they're watchin' TV. Try to get people out to a public meetin' the night Gunsmoke's on, and, brother, you've had it. I'd like to have five cents a pound for all the food consumed in front of television.

"I don't know any satisfied folks anymore. They're weighted down with their new freedom or somethin'. If other people're usin' their new leisure the way folks around here are, this country's in bad shape. I imagine we could use about four psychiatrists in this town already."

Joiner is proud of the Banner's editorial campaigns. "I imagine we have more voters in city elections percentage-wise than any community in Texas," he said. When he came to Ralls, only seven votes had been cast in the last city election. "The first thing I tried to do," he said, "was organize an opposition for the city commission. Once

I had to put myself up and get beat. But now there's no more business about lettin' a small group handpick the leaders.

"Another thing—for a dry county there's more drinkin' here. Just about everybody's got beer and whiskey at home. I circulated a petition to get a referendum, must've been back in '48, to see if they'd vote to drink openly. An hour before the votin' people were lined up a block in front of the Legion Hut. Why, more people voted in that election than any presidential election in history here. Every night for a solid month they were havin' rallies and things. You'd of thought Ringling Brothers'd come to Ralls.

A COCKTAIL BAPTIST

"I remember there was a big man against it, and one night not long after it'd been defeated I was deliverin' some printin' over at his house, and he invited me in and mixed me a cocktail, right before his wife and teenage daughter, them knowin' full well in 2 hours he'd be at the Baptist Church. I could've dropped my teeth. When I finished with him in the paper I didn't get any more invitations to his house. You lose more invitations that way."

Then he remembered when a big squeeze in the Baptist Church got caught bootleggin'. He pleaded guilty and they never fined him. Two Negroes had been brought in on a bootleggin' charge at the same time and they pleaded innocent and rotted in jail 6 months before they were even tried. I wrote it up, but I guess the people in town didn't mind, 'cause they didn't do anything, so the next week I apologized for botherin' 'em. That's equality under the law for you."

Joiner praised the Ralls Jaycees. "They've really accomplished some wonders around here. The Banner helped them in a campaign to get a $35,000 swimmin' pool, and we got it over the dead bodies of the church people. It was preached against in the pulpit all over town, they called it 'public bathin',' and they gave me and the Jaycees hell.

"There's one thing I'll give these people credit for—they get bitter and they don't forget. That ol' Christian virtue of forgiveness doesn't thrive out here."

Joiner picked up the phone and called his wife to tell her she'd have a guest for dinner. "Louise had a little trouble gettin' adjusted way out here, bein' from Georgia," he said, chuckling. "She had a language problem for one thing, and then she had a time gettin' used to this carryin' on on a paper. It took her a good 5 years to where this stuff rolled off her back. Now she likes it. She usta say let's sell this paper and go open one in the South, and I said, 'What're you tryin' to do, be a young widow?' Of course the weather threw her too, and it was a lot worse then than it is now.

ON CUTTIN' PEOPLE

"I'll tell you this, you'd be surprised at the things people do to strike back at you—at your wife at parties, kids at school. Men can take lessons from women in the fine art of cuttin' people dead."

How does he feel on foreign aid? "I'm opposed to it now, because I don't think any of the people it was supposed to help are gettin' helped. Too much foreign-aid money is goin' to bolster every dictatorship on the face of the globe except Khrushchev." He pointed to a Christian Science Monitor he'd been reading. "It says here we're givin' Chiang over in Formosa more money than ever. If I had my choice of goin' to war with Khrushchev or Chiang, I think I'd take Chiang. We have a knack for fallin' in bed with some of the shadiest characters. * * * When a man's in trouble, his friends don't deliver him a pot of money. They encourage him, understand him. Givin' money creates its own problems. What must it do to people who have pride?

"I suppose catholicism is my big prejudice and I admit it. It's the most authoritarian form of life in the world today. Communism's patterned after it. I don't have a thing against it on religious grounds. But when Catholic politicians start runnin' the government according to the dictates of a church, that's where we separate. The Catholics are too involved in big business too.

"I just got involved with my own church on the same score, on gettin' into business. Business has nothin' to do with the work of God. I raised hell when the Methodist Church bought this big, beautiful hospital at Lubbock. I saw this preacher and asked him about it, and he said Jesus was a healer, and I said, yeah, he didn't charge for it either."

Joiner supported Gonzalez for governor despite his catholicism. "You know," he said, "Gonzalez came to Ralls and made a speech and those who heard him were charmed. The concensus seemed to be, he just wasn't a Mexican. He's a fine fella. He's a whiter man than a lot of whites. He's been good for Texas. People have seen a first-class Mexican in action."

Joiner said he'd show me around town. We closed up the office and got into a battered green Ford. By now it was late, there was a touch of fall in the air, and it was crisp, pleasant. He pointed out the new school auditorium and the new telephone building that he'd campaigned for. "Now I wanta take you out to the Ralls International Airport and show you my plane," he said. Down the highway toward Crosbyton a couple of miles we turned right, onto a wide, bumpy road where the planes land. "If you can set her down here, you can anywhere," he said. The plane was parked under a shed, a little blue and white job with "The Ralls Banner, Ralls, Texas" written across it. Joiner and his wife go everywhere in it—Mexico City, California, Austin, Dallas. The first time he flew alone for any length of time was in another man's plane from El Paso to Ralls. He got lost and had to crash land in a cotton field up near Dimmitt. "I harvested four acres of that fella's cotton," he said. "Once we were flyin' out to Las Vegas and it was the first time I'd ever flown at night usin' instruments. I was checkin' the radio and my wife tapped me on the shoulder and said, 'Honey, aren't we upside down?' and sure enough we were. That's the last time I'll ever fly at night."

We got in the car and drove over to Joiner's house; it was small, new, and modern. They designed it themselves. Louise Joiner, beautiful, intelligent, and Southern, with traces of Georgia in the way she talked, cooked us steaks. Their two girls, 15 and 11, came in and then left, to see the Ralls Jack Rabbits play a football game. We sat around until late drinking coffee and talking, and march music from the band drifted over from the football field, telling in the cool evening that summer was dying, almost gone. When I left Joiner made me promise to come back, "I'll take you up in the plane," he said. "We'll go somewhere. You name it."

The End of Empire

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of one of the articles in the series "Adventures of the Mind" which recently appeared in the Saturday Evening Post entitled "The End of Empire." The author, Dr. D. W. Brogan, is a professor of political science at Cambridge University in England. I believe this to be an excellent essay and would like to bring it to the attention of those who have not had an opportunity to read it:

THE END OF EMPIRE

(By D. W. Brogan)

More than one foreign observer has noted, admired and envied the unconditional loyalty of the average American to the American political tradition. And as a source of internal, of external strength, the loyalty that sends boys and girls on pious pilgrimage to the National Archives to revere the Declaration of Independence and the Constitution is wholly admirable. But when the good American transfers his gaze to the outer world, when he innocently looks for equivalent institutions in that less fortunate part of the globe, when he takes as having the same meaning as he gives them inside America such common words as "freedom," "good government," "progress," he asks for trouble. And with the promptitude of superservice, he is given it. His plate is filled with problems, and he is driven to realize that he is the victim of the old Chinese curse. He "is living in interesting times."

The good American is confronted all over the world today with two linked phenomena, the decline of empires and the rise of nations. He can, as a good American, have no doubts as to the sentiments he must feel at the news and noise of these phenomena. He must rejoice that empires are falling (did not America give the first push in 1776?) and rejoice that new nations devoted to freedom are arising (did not America set the example in the same fateful and admirable year?).

But having paid this respect to the national tradition, the American notes with bewilderment and often with downright annoyance that peace, progress, good will, order and liberty don't seem to be in any greater supply than in the bad old days. He hears doubts expressed as to whether some free nations (Indonesia, Burma) are as well off as they were in the days of imperialist tyranny. He notices that there are two nations on very bad terms with each other in that land called India that was united under British rule, and that their creation was the signal for massacre, rape, and exile on a colossal scale. He has to face in his morning paper news of bloody rioting in Ceylon, led, with a high degree of inconsistency, by Buddhist monks. New nations in Africa such as Ghana threatens to suppress internal opposition by methods very reminiscent of the bad old days. Even after paying, during an American visit, homage to Washington, Jefferson, and Lincoln, Dr. Sukarno of Indonesia, returns home via Moscow much more impressed by the relevance of Soviet experience than of American. Newly enfranchised nations such as Egypt gladly dicker for arms with the Soviet Union. An Indian state elects a Communist government, and each area, liberated from imperial slavery, seems to develop odd ways of attaining those unalienable rights proclaimed in 1776. Indeed, some of them seem very easily alienable under the pressures of "freedom."

Nothing can be done to make the world easily and automatically safe for democracy (as Chesterton pointed out in 1918, "The world will never be made safe for democracy, it is a dangerous trade"). The good American will have to get used to seeing his principles parroted and parodied. But he will suffer less and be less tempted to angry and foolish reactions if he can bring himself to

think that maybe the decline of empires, at the speed at which it has taken place, is not an unmitigated benefit, and if he also can bring himself to accept the fact that a nation which gets its freedom—that is, is freed from foreign rule—gains that and nothing more. What it gains may have little or no relevance to its real economic or social problems, except to make them worse, and even if it is evident that the gains are well worth the price, the price may yet be very high. And if the price includes poverty, disorder, and division, the United States in its own interest may be forced to pick up the tab.

The United States may have to step in to fill the gap in common defense made by the withdrawal of the imperial power. It may have to spend men, money and patience (patience will be the hardest to come by) to prop up a new, free, but rickety governmental structure. It may even, as a last aggravation of its sad state, have to receive, with what self-control it can, charges of exploitation and imperialism made by peoples in complete control, as far as the American goes, of their own destiny. Bewildered and bothered, the American in the street—or in the White House—will be less bewildered, if no less annoyed, if he accepts the fact that the end of empires is the end of an epoch that suited the United States pretty well, and that the wicked, grasping imperial powers were doing a job (possibly from the worst of motives) that somebody had to do—a job that now must be done mainly by the United States, the reluctant legatee of the old firms now in liquidation.

For the decline of empire means the passing of a crude form of solution to a real problem. "All nations are equal, but some are more equal than others." Since this cynical view happens to be true, it means that nations have very different resources, degrees of competence, are at very different stages in historical development (but want to be at the same stage) and, in defiance of all objective assessments, are ready to assert that this stage of real equality has been reached—that Liberia is a republic in the sense that the United States is; that Ceylon is a state in the sense that Holland is. The old, condemned imperial order denied this. It asserted that nations were unequal, that they were at different stages of development and that the advanced nations had the right, the opportunity and the duty to bring the backward areas, forcibly if need be, up to scratch—a laborious and expensive process for which it was only reasonable to charge a fee.

I am well aware that this appears to contradict the formal doctrines of the Declaration of Independence and that such doctrines would be shocking if developed inside the United States. California and Mississippi are equal and are at the same stage of progress; the peoples of the two States are equal, if not identical, and law and custom make no difference between one group of inhabitants and another. Such is the theory; I beg to be excused from comment on the fact. But outside the United States, until very modern times, this was neither theory nor fact. No one thought that Egypt (legally then a Turkish possession) should be allowed a free hand in controlling the way from Europe to Asia simply because it "owned" the Isthmus of Suez. (The United States, nonimperialist as she was, took much the same line about Colombia's claim to own Panama.)

There was a practical justification for this high and mighty attitude. All the new techniques that transformed the world in the last 150 years originated in Europe or North America. The owners of the new machines and the new weapons faced a world that lay lapped in immemorial slumber. Briskly, like the proprietor of a health farm, the white world insisted on wakening the sleepers, by ruling them directly, as in India; by insisting on a highly privileged position, as in China; or by frightening the more alert into imitating the white man before he took over, as in Japan. Conquest, empire was as old as human society. What was new was the expanding technical superiority of the conquerors that ate into the "cake of custom," and prodded the sleepers wide awake and bred, in reaction, the force that has undone the empires—nationalism.

It is desirable at this point to proclaim that I am too much disposed to accept the unavoidable to protest against this state of affairs. As the wise Bishop Butler put it, "Things and actions are what they are, and the consequences of them will be what they will be; why then should be seek to be deceived?" Why indeed? But it is a part of deception not to notice what follows from "things and actions being what they are," and there is some danger of such error being committed.

The first error in which it is tempting to fall is to assume that the end of imperialism, the arrival on the stage of nationalism, is necessarily accompanied by material or even by moral progress. For it is too often forgotten that the basic article of the nationalist creed is that progress, good government, liberty, and civilization have no meaning except in nationalist terms. It is true that nationalist propaganda usually promises lots of goodies as well as national "freedom," but they are not of the essence of the contract, and the promise is often not kept. For example, material progress may be accelerated, usually is accelerated when the economic area of a state is large. The size of the United States is one reason for its wealth. But nationalism usually breaks up existing economic units (usually, not always), for, to the nationalist, progress in material well-being is empty if it does not mean progress in national well-being. A man can be emotionally well off only in a nation state to which he belongs, even if he could be materially better off in his mere material command of goods in a vaster nonnational or antinational area.

Thus, although not a perfect economic unit, the old Austro-Hungarian empire was a more satisfactory one than that created by the "succession" states. Yet it is now—and was in 1918—useless to point out this fact to the emergent nationalities. What they wanted was not well-being, but national well-being. It was a choice that the peoples of the old empire were free to make as a result of the Allied victory in the First World War. They made it, and no wisdom from above the battle, from Woodrow Wilson or Herbert Hoover, could have altered that fact.

After all, no such decision is as irrational as the decision to wage and endure war, and we are all conditioned to make that decision. "Give me liberty or give me death" is not only Patrick Henry's slogan. The same uneconomic choice can be seen nearer to the United States. What rational justification is there for the frontiers of Central America? The little republics round the waist of the Americas are obviously designed to be united or even to be united under Mexico. But suggest to them. I am quite prepared to believe that even Panama, invented for the convenience of the United States, has bred in the past fifty years a genuine national feeling that will last—and may become a real nuisance to the United States, at any rate from a propaganda point of view. Why should Panama not imitate Egypt? And, from the nationalist point of view, there is no easy answer to that one.

The greatest single gift of British rule to India, perhaps the only one, was the creation of India. For it did not exist before the East India Company and then the British Indian Government by war, by road, by railway, by law made a united government and a united economy for a subcontinent never before united in history under an effective central Indian Government. But the first result of freedom for the India thus created was suicide. We now have India and Pakistan, the latter state a nation that did not exist, even as a name, 50 years ago. The one great good thing imperialism did was undone. The unity the French imposed on Indochina has not survived their defeat, and it is not certain that the unity of Indonesia (another artificial, imported name) will survive Dutch rule for long. All of these breakdowns in unity may have been worth while; they were certainly nearly, if not quite, inevitable, but they had a high price.

Nor is that all. The division of the imperial units suggests something about nationalism that is novel and ominous. Nationalism often, too often, breeds nationalism. Peoples who have got along more or less with each other under foreign rule suddenly develop violent antagonism when foreign rule is withdrawn or is threatened with collapse. For under the foreign tyrant some kind of neutrality could be imposed from above. If neither group ruled itself, it had not to worry about being ruled by its neighbors. But if those neighbors were on the way to becoming the ruling class, then the prospect of local foreign rule became intolerable. So the Indian Moslems revolted against the prospect of Hindu rule; Turkish turned on Greek Cypriots; and in once peaceful Ceylon, Sinhalese turned on Tamils as self-government, freedom, got more complete. Nationalism, that is to say, is often the result of a reaction. If a government claims to embody a national tradition, a way of life, a language, a religion, or all of them, people have got to ask themselves is it really their way of life, language, religion? Often the answer given in blood and rapine is "No, a thousand times no." Freedom in these situations—and they are common enough—brings not peace, but a sword.

And this leads to the invention of nationalities, to be the creation of new human groups cut off from the mass of mankind by new feuds, new and carefully fostered differences. It is, of course, too easy to be critical and cynical about the history manufactured for new nations or old nations making new claims. Popular history in all countries is full of comforting legend. It is largely because they have their nationalist growing pains far behind them that western European and North American nations can afford to be scholarly, critical; can debunk national heroes and legends, remember that Washington swore, and doubt the cherry tree. Some Americans in the South may even doubt whether Lee made the right choice in going with his State in 1861 instead of sticking with the United States, and some Germans may believe that Bismarck's temporary triumph was a longrun catastrophe for Germany and for Europe.

We cannot expect this kind of critical history from the new nations. We should be more struck with admiration than we are when we get an approach to it as we do in India in the educated classes, or when we think of Thomas Masaryk exposing the Dvur and Hora forgeries of the country's literary past, despite the fact that they flattered Czech national vanity. But we must be prepared today for a high degree of fiction in all or almost all nationalist propaganda, and the American people, full of kindness and credulity, must not be shocked when they discover that some interesting spokesmen for some interesting countries are prone to the use of what Huck Finn called stretchers.

What is more important is the not infrequent case where historical fiction conceals from a long-suppressed and now renascent nation that its misfortunes are also largely its own fault. Except where the preponderance of power is overwhelm-

ingly on the imperial side, and possibly not always then, the fact of subjection is a fact about the oppressed nation. It suggests weaknesses that mere freedom will not necessarily cure. Freedom may be (I think today it almost always is) the necessary preliminary to curing the weakness, but the weakness of resources, traditions, social habits, is there to be cured. Waving a new flag makes you feel good, but that is about all.

It is difficult for Americans to realize that for a great part of the world, the views of poets and philosophers, of orators and legend makers are more important than the views of businessmen or scientists or economists. The Arabs are dazzled by their own past, seen in a golden haze. For two generations they have been asking the question why they, who once ruled the Mediterranean and brought civilization to the Christian barbarians, have been kicked around and subjected to foreign rule in their homelands. And the answer they expect must be encouraging. It must exaggerate the unity of the Arabs and suggest that only Western tyranny or local corruption prevents the creation of a great Arab nation stretching from the Atlantic to the Persian Gulf. It must ignore permanent and desperate problems of inadequate resources (as in Egypt and Algeria); of undoubtedly Arab but totally anachronistic social structures (as in Yemen and Saudi Arabia). It must find in hatred of Israel a substitute for difficult problems of social and religious readjustment. It must be uncritical of the social results of Islam. And it must give a great place to treason. For all suppressed Nations have a deep conviction of betrayal.

"Let Erin remember the days of old
Ere her faithless sons betrayed her,
When Malachi wore the collar of gold
That he won from the proud invader."

What the Irish sang the new nationalities still sing, and so every national leader has to look over his shoulder to keep an eye on his countrymen, who may see in the possibly inevitable failures and limited successes of "freedom" not a result of the nature of things, but treachery. So Nuri-as-Said is butchered, so Gandhi is assassinated.

And the leaders who have to be watchful often become leaders by negation rather than by affirmation; they are against something (foreign rule) rather than for something, for basic changes in the internal structure of the Nation, eradication of the very weaknesses that helped to produce foreign rule in the beginning. Of course, this is not always so. Nationalist leaders are sometimes preachers, as was Gandhi, of self-reform as well as of the expulsion of the foreigner. The Gaelic League, the chief begetter of modern Ireland, had as one of its slogans: "And as we are shall Banba (Ireland) be." But it is easier to damn the imperialists than to go in for fundamental self-criticism, and when the imperialist has been heaved out or has left under his own steam, the basic problems remain.

So the world is faced with the new states with inadequate economic resources, with erratic frontiers, with dissident minorities, with delusions of grandeur and, what is worse, of goodness. And all this is in a world where the new nations are almost all arising in poor regions where, even with the best and most rational government, the headaches would be frightful, where the problem of keeping abreast of the birth rate and of not actually going backward in well-being is serious enough to daunt the bravest. It is not being offensive or aggressive to assert that half the nations whose delegates give parties in New York round the United Nations building are too poor and too backward to give their peoples in the next generation even as good a government and as adequate a standard of life as the most backward European nation (let us say Portugal) or the most backward American State (let use say Mississippi) possesses.

Freedom from imperial yoke may even be a luxury some of them (which could be named) can hardy afford. There are areas in the dwindling British and French Empires that are a dead loss to the imperial power; regions that cannot afford freedom, although only the most prudent of their leaders know this. For there is nothing in the law of nature and of nature's God that provides that an area with the linguistic and cultural unity that demand nationhood and will not be denied will have any of the other resources for even frugal well-being.

The great problem of the concentration of most of the world's wealth and technical competence in a small area of the globe has many nonpolitical aspects. It is to be noted that there is no first-class industrial power outside the temperate zones. But the political problem of the replacement of the empires by the nations is one of the governing conditions of any attempt to redress the imbalance that is so deeply and dangerously dividing the world. And it is the beginning of wisdom for Americans, conditioned as they are by their own largely irrelevant history of nation making, to recognize the national freedom may be an obstacle to a quick redressing of the balance, both by creating doubtfully viable national units and by transferring authority to leaders whose competence has lain in the exploiting (all right, the heroic undoing) of a national grievance.

But if this is the beginning, it is not the end of wisdom. For it is not only a fact, if not a totally welcome fact, that the days of empire are over; it is a fact that the nation state offers possibilities of improvement that the empires either never did (which I doubt) or have ceased to do (which I admit). There is another fact. If one political truth is established today, it is that once the nationalist bug bites a group of human beings they cannot be cured except by national freedom, with all the possible social and economic disadvantages it may bring. Once an Algerian, for instance, decides that he is not a Frenchman and doesn't want to be one, rational economic argument is wasted. Bernard Shaw usually talked nonsense on political questions, but he occasionally talked sense, and his Irish origin illuminated much of this question for him. So, he wrote sense in his preface to "John Bull's Other Island," the only play he ever devoted to his native land. "A conquered nation is like a man with a cancer: he can think of nothing else, and is forced to place himself, to the exclusion of all better company, in the hands of quacks who profess to treat or cure cancer." This is true, and the first great gain of freedom is that thought and effort can be devoted to something more immediately relevant than freedom.

It does not follow, of course, that it will be. There are few greater emotional losses than a grievance that explains why things have gone wrong in terms of another's fault. Any father of a family can testify to that (and his children can testify, too, in another sense). To get freedom is to lose a grievance, and some nations have firmly refused to give up their darling excuse. Thus, if the people of the Argentine Republic devoted a tenth as much rational thought to the causes of their serious, but quite curable troubles that they have wasted on irrelevant and unjust spleen about "Yanqui" imperialism, they would be a great deal better off. If a patriotic Cuban put to himself the question, "Would we not have been materially better off if we had had more Yanqui imperialism?" and then admitted that some, if not all, of the troubles of Cuba are homemade, freedom would be an unmitigated good. Can any candid observer, looking at Haiti and the Dominican Republic, pretend that freedom is always an unmitigated good?

The beneficial effects of freedom can be seen in two such different former jewels of the English crown as Ireland and India. For more than a generation of freedom has taught most of the inhabitants of the Irish Republic that their troubles are no longer of England's making, that "the border" is neither here nor there in the bookkeeping of a declining nation, that the Gaelic League was right: "And as we are shall Banba be." Even an act which, seen from the outside, seems one of the most foolish ever perpetrated by a rational community—the exit from the commonwealth in 1948—may have been worth the price in making plain to the Irish people that a republic left them where they were, with the basic problem of why the Irish won't, if they can help it, live in Ireland.

The problems of India are so gigantic that courage fails the spectator (but not the Indians). But one great gain is the creation of a government that does not hesitate to face Indian abuses such as the caste system. The government of Nehru makes many mistakes, but it can, through the mouth of the Prime Minister, preach to the Indians the lesson that it is now up to them. No British government could do that. It can risk appearing "antireligious" as no British government dared risk appearing. It has not succeeded in abolishing untouchability or in winning over all the primitive tribes of India. It has not undone many centuries of limitations on the role of women. It has not succeeded in giving India what India needs badly, a competent and enlightened business class. But it has made beginnings in all these fields. It has kept India from becoming a mere "Hindustan." And it has made it possible for Indians to borrow from the West with no feeling of humiliation.

There is nothing that the new Indian government did that enlightened British officials didn't see as desirable. But, in this century, the British government in India had lost the power to innovate. An imperial power that begins to doubt its mission is rightly doomed. The old, confident, authoritarian British rulers stamped out the burning of widows, the religious murders of the Thugs, abolished backward kingdoms like Oudh and introduced in a fine philistine fashion the English language as the lingua franca of all India. These things, with the Indian army (obedient to civilian authority) and civil service (uniquely honest and competent in Asia), were great British legacies, but it was time for the British to go. Talk to an Indian who is now liberated from the need to think, all the time, in terms of national freedom, and you see the gain. He may even think that Macaulay, imposing English, had something to be said for him as he contemplates the bloody riots over languages that freedom has brought and the danger that an "Indian" national language such as Hindi may be a source of disunion and breed a new Pakistan in the south.

If this is the first, it is not the only gain. Indian nationalism may be simply the fruit of anti-British feeling, but it is a fact and gives India a new unity most necessary in a land divided by language, race, caste. It gives the Indian a new feeling of not being looked down on, and so a new freedom in his attitude to the outer world into which India has been dragged. True, the kind of dignity that nationalism breeds may be touchy, offensive, unrealistic, but there is no substitute for it. As the American Negro is no longer content to be grateful for concessions made from above, all over the world hundreds of millions of men are finding a new meaning in life, a new loyalty to something bigger than the village, the caste, the tribe.

It is not in solving immediate technical problems of well-being that the nations score over the empires. They often handle them, for quite a long time, worse than the imperial rulers did. It is in creating a new type of human being, who may not, it is true, adjust himself adequately to the New World, but at least is not doomed to fail in that adjustment as the empires finally became doomed to fail.

If the American abandons the fallacious parallel with the facts of the American Revolution (as apart from the spirit of '76) and contemplates the New World that is coming into being, he will be forced to avoid snap and easily systematic judgments (especially the judgment that assesses the worth and prospects of a new nation by its willingness to be noisily anti-Communist). He will see many nations running before they can walk—and so falling; demanding steel mills when what they need is more wells and better seed; aspiring after the heights of atomic cannon when they need to learn how to maintain a truck; above all, pouring out endless floods of what it may be too unkind to call mendacity, but can justly be called nonobjective information.

He will find few nations willing—or able—to imitate all or most of the American way of life, social, political, economic. If he wishes to help the world (as many do), he will have to learn to help it in un-American ways, to learn un-American qualities such as patience and the willingness to wait a long time for results. If what he wants is allies against communism, he will find in nationalism the most, perhaps the only effective force against international communism, even when that nationalism is unwilling to stand up and be counted. For the great battles will probably be fought in the hearts of men, not on material beaches where marines can land, but in a world now effectually united for the first time in history by material means and divided by passion and envy. One may regret the old imperial days, but the awkward and often unprogressive nationalist world is that in which we all must now live.

Anatole Litvak Receives Radio Liberation Award—Ceremonies To Be Broadcast to Soviet Union

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

ANATOLE LITVAK RECEIVES RADIO LIBERATION AWARD—CEREMONIES TO BE BROADCAST TO SOVIET UNION

NEW YORK.—Radio Liberation has presented to a scroll to producer Anatole Litvak, attesting to his achievements in the field of motion pictures.

The presentation was made by Howland H. Sargeant, president of the American Committee for Liberation which supports Radio Liberation's around-the-clock broadcasts to the Soviet Union. Mr. Sargeant, a former Assistant Secretary of State for Public Affairs, said it was the first such honor ever presented by Radio Liberation.

The ceremony, in which Mr. Litvak spoke in Russian, was taped for later broadcast to the Soviet Union by Radio Liberation, which has powerful transmitting facilities in West Germany and the Far East.

The Radio Liberation scroll said:

"For his outstanding achievements as producer-director of motion pictures and for his contributions to the art of cinematography, Radio Liberation—the Voice of Former Soviet Citizens—is pleased to present this statement of commendation to Anatole Litvak.

"Born in Kiev, Anatole Litvak underwent the rigorous and thorough training offered by the Dramatic School of Petrograd. He left his homeland in 1924 and since then has distinguished himself in Germany, France, Great Britain, and the United States as a producer and director of films, each bearing the imprint of his creative mastery.

"He served as an officer in the U.S. Army and was decorated by the Governments of Great Britain, France, and the United States of which he had become a citizen.

"May this statement of commendation testify not only to the towering stature of a creative artist—but also to the spiritual integrity of one no less devoted to the cause of freedom."

False Economy?

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. OSMERS. Mr. Speaker, all of us who have traveled abroad are aware of the excellent U.S. Customs Service and its efficient and friendly personnel.

It has always been amazing to me that so few could handle so much so well.

Seldom do we realize, when we return from a pleasant journey abroad, that returning with us may be criminals carrying important quantities of illegal drugs. Many of them are intercepted by the Customs Service, but unfortunately some get through simply because there are not enough customs men to go around.

I submit a most timely editorial entitled "One Economy That Costs Us High" from the Bergen Evening Record, Hackensack, N.J., of February 19, 1959, which focuses attention on this often-ignored problem:

ONE ECONOMY THAT COSTS US HIGH

Heroin, the big H of the drug traffic, is no longer of much use medically. It is inferior to morphine which it resembles, but it used to be administered instead of morphine under the mistaken impression it was less habit-forming. Its narcotic effect is almost instantaneous. Manufacture and importation of it are forbidden in the United States. It is the drug used by an estimated 95 percent of addicts.

Last weekend Federal and New York City narcotics agents in a carefully planned series of raids confiscated 32 pounds of the junk, and arrested 27 persons who were described as importers, wholesalers, and distributors. "These are not small fry," said George Gaffney, regional head of the Federal Narcotics Bureau. And he added, perhaps significantly, that none of them uses drugs. Generally the big wheels of the racket are too smart. The ones who use drugs do not stay big wheels long.

The raids were carefully planned, as they had to be. The illegal drug traffic is a rabbit warren of informers, prostitutes, perverts, all willing to sell anything, information included, for a fix. Two years went into the planning, and it was worth the trouble if big sources of supply have been stopped.

Arresting the users or even the small-fry pushers of narcotics is a necessary but rather futile aspect of halting the drug traffic. Not only must the pushers' suppliers be arrested, but the suppliers of the suppliers must be identified and rendered harmless. Most illegal narcotics are imported. The Customs Service is too badly undermanned to cope with it on all its many fronts at once. Once the stuff gets into the United States, it is distributed fast, and the job of tracking it and its distributors becomes more complicated. Fighting the drug traffic is a continuing war with no truce asked or given. Are we giving law enforcement sufficient manpower to make it anything like an equal battle?

Fiscal Problems of Michigan

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include the texts of several articles which appeared in the Fort Lauderdale News. I think these articles present a true picture of the damage done to our State of Michigan by a Governor who listens to the dictates of one segment of our population rather than making an effort to answer the needs of all our citizens:

[From the Fort Lauderdale News, Dec. 9, 1958]

THE AMERICAN WAY

History is replete with the stories of men who destroyed themselves but took down with them, or first destroyed, the nations which nurtured them. And history does repeat itself, thanks to the inidifference of mankind to the lessons of the past as well as complacency in the face of the future.

Out of the third generation of a family dedicated to the cause of socialism, born and bred in an atmosphere of mistaken thought sincere hatred for what they deemed the evils of capitalism, and with an almost sublime disregard for essential economic truths, came Walter Reuther.

European conditions and limitations, not those of America, seeded the thinking of the Reuther family, beginning with old Jacob Reuther (grandfather of Walter) who left Germany with his 11-year-old son Valentine in 1892, to make a new home in America and escape military conscription for his son.

Valentine Reuther and later his children, including Walter, were apparently raised as Lutherans. It is said that Jacob modified his religion to meet his own conceptions, based largely on his belief that the churches did too much for God and not enough for man. In a belief so simple, and sincere, could grow easily the worship of man rather than the worship of God, and lead even to the atheism which many believe is that of Walter Reuther.

It is tremendously significant that Valentine Reuther trained his children in socialism. He seems to have held regular sessions on Sundays, with his four sons (Ted, Walter, Roy, and Victor) discussing and debating all manner of subjects relating to working men and women.

These meetings took place in an era when the country was discovering and fighting off some of the evils men concoct under freedom and lack of understanding. And there were evils and injustices which needed correcting, although they were not inherent in the fact of freedom of enterprise under rules of fair play with government or law as umpire.

Walter Reuther grew up actively in socialist organization, later even with violence in organization of workers. Fired from his job as a young man, he went to Europe with his brother Victor and studied communism first hand in Russia. He came home vibrating with deep fervor for the Russian system of economic control.

The point is that this man is self-consecrated to the principles of socialism and government control of economic life. His fanaticism, cold in its utter dedication, is incapable of understanding the economic truths which will eventually destroy him. The tragedy is he could easily destroy our country with a socialist dominated and guided government. Walter Reuther already controls the State of Michigan, which, alone among the Midwestern States, has gone backward in prosperity since he took over.

ALFRED P. HAAKE.

[From the Fort Lauderdale News, Nov. 21, 1958]

THE AMERICAN WAY

Hundreds of letters from individual union members to the McClellan committee of the Senate, expressed fear of reprisals if they dared sign their names to their protests against tyrannical and corrupt practices of union labor bosses.

What a travesty on our vaunted freedom when men dare not tell the truth and express their discontent with the actions of their union masters, lest they lose their jobs—or even worse.

But that is the fact. And the reason for it lies largely in the pernicious agreements between management and unions which force workers to join the union if they want to keep their jobs. It is called by several soft-soaping names, but the correct description is the "closed shop."

Under that label many a factory should hang out a sign for applicants for work: "Americans who believe in freedom are not hired here."

There is an answer to that violation of our constitutional rights. It is the "right to work" laws, already passed in 18 States, which forbid employers and union bosses to enter into closed-shop agreements.

These right-to-work laws, barring compulsory unionization, were upheld as constitutional by the Supreme Court in 1949, and sustained in principle in 1954 in the decision on segregation in public schools.

But where are the liberals who believe in freedom and constitutional rights? They weep crocodile tears over restrictions in "freedom of choice" for all citizens regardless of race, and accept without a murmur a system of private slavery under which a man cannot get or keep a job unless he joins a union, pays tribute to and takes orders from a labor boss or his goons.

They are afraid.

The power, political as well as industrial, of the UAW–CIO boss has gone far beyond a single industry and its affiliates. He makes no bones about his aim to get political control of the United States and to win his socialistic objectives through legislation. He already controls nearly a majority in both Senate and House, and may even name the next President of the United States.

And the pattern of control with closed union members serving in precincts, through which he already controls Michigan and its Governor, is being built elsewhere with alarming rapidity and thoroughness. He has more money to spend for elections than both major parties together.

Think about that, you businessmen, professional men, workers, housewives, and students getting ready to work—all of you who believe in freedom. And while you are thinking about it, let me remind you that what happens to a State, such as once industrially proud Michigan, when it falls under the domination of a little labor clique and a subservient Governor, falling backward in employment and industrial development, while its neighboring States forge ahead. Read these figures and weep:

Industrial construction, 1956–57

Ohio	$921,678,000
Indiana	889,123,000
Michigan	199,176,000

We are on the threshold of a greater prosperity than we have yet known. We can realize that prosperity and even make it endure, if we will shake off the shackles of compulsory union tyranny, and give men the right to work without fear.

ALFRED P. HAAKE.

[From the Fort Lauderdale News, Feb. 14, 1959]

FAVORABLE TAX CLIMATE AND NICE WEATHER NEEDED TO ATTRACT NEW BUSINESS

It is most unfortunate that dieting—tightening the belt—has never become fashionable among governments.

Most governmental units would look atrocious if they were capable of assuming form and appearing on the beach in bathing suits. They would present the sad sight of bulging waistlines, sagging jowls, flabby muscles, and drooping bags under the eyes.

A good diet certainly would improve their figures.

In particular, we are all in favor of Florida governments going on a biennium diet. We believe it would do a great deal toward improving the State's appearance and health.

This is the way we view it.

Across the Nation, the legislatures of 46 States are in session or will convene this year. In all but a very few instances, the paramount issues up for consideration center around new or increased taxes.

There is a plague of financial ills virtually everywhere.

One of the most seriously stricken units is the noble welfare State of Michigan, where the 10-year reign of Gov. G. Mennen (Soapy) Williams has brought the commonwealth to the bring of financial disaster.

But at the same time nearly 40 States are giving serious consideration to new or higher levies in a wide range of tax fields.

Taxpayers in nine States face personal income tax problems. Tobacco taxes are eyed in nine States. Gasoline levies are due for action in eight States. Seven States are weighing sales taxes and a like number are toying with liquor imposts.

Corporation taxes, motor vehicle fees, inheritance, natural resources, gambling, soft drinks, business franchises, restaurant meals, hotels and motels, property and head taxes are other fields where States plan attacks on the taxpayers' pocketbooks.

At the moment, Florida is among the few exceptions.

Gov. LeRoy Collins has enunciated the policy of holding the line in the 1959–61 biennium. He believes no new taxes will be necessary.

National publications, in looking over the appalling situation of State taxes, are noting Florida's position with some admiration.

And there we have a factor that can be of inestimable value to Florida.

The State has been boasting for years of its favorable tax climate. This has been used as a lure to bring individuals and businesses here.

Now, this asset becomes more important than ever.

Businesses and industries can be expected to take a close look at Florida's tax climate in drafting plans for expansion or relocation.

In the next 2 years, this may well be a vital consideration inducing concerns to locate in the State and provide the much-needed support for Florida's economy.

Cursory studies in Michigan indicate business is finding it increasingly difficult to operate there. The U.S. News & World Report for February 13 cites cases of manufacturers moving from Michigan to other States to ease the tax burden while other concerns are passing up new plants in the State for similar reasons.

The fact Governor Williams had to appeal recently to 23 of the State's largest employers for tax payments in advance to keep the government functioning has pointed up the problems graphically. Businessmen, accordingly, will have this uppermost in their minds when it comes to making future plans.

Under the circumstances, it would not be surprising to find concerns following the example of the Chris Craft Corp., which forsook Alganac, Mich., for Pompano Beach.

In the next 2 years a favorable Florida tax climate can help the State move toward its goal of a more rounded economy, one better suited to withstand a siege of poor weather in the winter season, the inevitable periods of business slowdown, and the other variations of life.

For that reason, it is important that Florida, both the State and the localities, do some governmental dieting. It is important that the people temper their demands for new and expanded services in the interests of a sounder development, in the interests of business expansion which will mean more and better jobs.

The challenge is there. The question is whether Florida can fatten its economy through a dieting government?

HARVEY CALL.

Need for a Third Federal Judge in the Western District of New York

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. DULSKI. Mr. Speaker, the story of a court's success or failure is in its statistics, for they set a standard of attainment which the court must not fall short of in each succeeding year.

The court, as a part of our governmental machinery, must be given freedom to function so that it may react consciously to the practical needs of the times and the community it serves.

It has become increasingly evident from the statistics cited in a recent article in the Buffalo Courier-Express that efficient performances cannot be expected where conditions necessary to efficiency are impossible.

An additional judgeship would make for a more democratic court and procedure answerable to the best existing public opinion.

This court has the direct and unequivocal duty of disposing of all of the business coming to it from year to year.

The safety of personal liberty, of the rights of the public and of property, depend upon the efficient, impartial enforcement of the laws of the land, which is entrusted to this court.

Long delays are expensive to the taxpayers, as well as exceedingly damaging in failing to bring about prompt satisfaction to society when a crime has been committed, and to the individual when he is falsely charged. Delay discourages the witnesses, the prosecuting atorney, and the general public in the effort to enforce the law.

I shall make a determined, sincere, constant effort to correct this evil condition of literally choking this court of the western district of New York with accumulated cases by seeking appointment of an additional judgeship for this area.

To focus attention on a national basis to a local problem, I am including an article which appeared in the Buffalo Courier-Express, Buffalo, N.Y., on February 11, 1959, giving the statistical justification for this judgeship:

ADDED CASES POINT UP NEED FOR THIRD JUDGE

(By George Wyatt)

The need for a third Federal judge in the western district of New York is being brought into sharp focus by a substantial increase in the backlog of Federal court cases here. At the close of business yesterday there were 307 civil cases and 65 criminal cases pending.

Despite an almost doubled caseload, the western district has had only two judges at one time since 1927.

The situation has become even more critical since last summer when Judge Justin C. Morgan was incapacitated by illness. Since August 1, his last day in court, virtually the entire burden has been borne by Judge Harold P. Burke of Rochester.

The district got its second judge in 1927 when Federal authorities appointed Judge Simon L. Adler to help Judge John R. Hazel.

Now—32 years later—the number of judges remains unchanged. But those who urge appointment of a third judge point to these changes:

1. Caseload: In 1927 there were 226 civil cases filed, compared with double the number, 450, last year. There were 208 criminal cases filed in 1958, compared to 600 in 1927. However, the huge majority of the 1927 criminal cases were minor prohibition violations which were handled routinely. The modern criminal caseload involves many full jury trials.

2. Wider jurisdiction: Since 1927, literally thousands of Federal statutes have been added to the jurisdiction of the court. In the fields of labor and business alone, the judges are concerned with entire new areas of jurisdiction. Federal jurisdiction in criminal coverage in the areas of tax matters, espionage and subversion, labor racketeering, narcotics, immigration, and others has been broadened.

3. Population: The 17 counties of the district in 1930 totaled 2,208,447. The 1950 population was 2,341,042. Experts estimate it is now above 3 million.

4. Economic growth: Business analysts estimate the gross commerce of the district has nearly trebled since 1927, not counting the difference in dollar value since then. With growing commercial complexity comes matching complexity of litigation.

Lumping the 1958 criminal and civil cases, the district's two judges each had a total case load of 329. The national median caseload for Federal judges about 250.

During Judge Morgan's illness, Judge Burke has had to travel here for court sessions on an average of at least once a week. When he comes the work load is staggering.

On an average day he will handle upward of two dozen cases, including arraignments, sentencings and civil motions.

The trial calendar in both Buffalo and Rochester has been slowed. There have been no nonjury civil cases in Buffalo, for example, since last July.

The operation of Federal grand juries here also has been hampered. Although not necessary, it is customary to have a judge present when a grand jury is in session.

Repeated delays occur when the grand jury is awaiting Judge Burke's return here for rulings. This has become a serious element in the Federal grand jury's lengthy probe of the city paving scandals and of the Appalachian-linked western New Yorkers.

Legislative Oversight, Spectrum, Study, and Investigation—H.R. 4800

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. HARRIS. Mr. Speaker, today I had the special honor and privilege of speaking to the Federal Communications Bar Association, composed of distinguished members of the legal profession. I was very glad to have had an invitation to speak to this particular group at this particular time. It gave me an opportunity to discuss with them some most important problems in which I knew they had a great interest, as does the American public.

In that my remarks were directed to the work of our Committee on Interstate and Foreign Commerce and with particular reference to the Special Subcommittee on Legislative Oversight, our plans for this Congress, some exposures of false claims in a recent book, and a discussion of the bill introduced as a result of our committee last year, I thought perhaps the Members might be interested, and therefore include it in the RECORD with these remarks:

ADDRESS OF REPRESENTATIVE OREN HARRIS, CHAIRMAN, INTERSTATE AND FOREIGN COMMERCE COMMITTEE, HOUSE OF REPRESENTATIVES, BEFORE FEDERAL COMMUNICATIONS BAR ASSOCIATION, HOTEL WILLARD, FEBRUARY 26, 1959

Mr. President, members of the Federal Communications Bar Association, honored guests, I welcome this opportunity of appearing before you today. I feel you could hardly have chosen a better time for this discussion because there are several important developments that I would like to talk to you about, and I doubt whether I could find a more interested audience since the things I want to discuss with you are of great importance to you, your clients, and the FCC.

In the first place, there has been a lot of speculation and wide interest in the future program of our committee. I am speaking of our plans for further study and investigation pursuant to the provisions of the Legislative Reorganization Act of 1946. From the experience we had in the last Congress, I can readily understand this interest.

In our committee report filed January 3 this year, we made recommendations on a variety of questions that needed further study and investigation. I have no other intention than to carry out these recommendations.

In view of the fact that so many of these questions are highly sensitive, I felt it advisable to ask for a budget separate from the other work of our committee in order that the Congress and the public would know just what we had in mind.

You are familiar with the announcement of a few days ago with respect to the reestablishment of the Legislative Oversight Committee.

On Monday of this week, I introduced a resolution requesting $350,000 for the committee to make the special study and investigation. I went before the House Administration Committee and explained our purpose. The committee approved the funds for this work and yesterday reported to the House. It being a privileged matter, the chairman of the committee called it up for consideration. With little discussion and a few pertinent questions, the House approved the request and made the full amount of $350,000 available to the committee.

In the budget that I submitted to the House Administration Committee, $200,000 was for the purpose of continuing the work of the Special Subcommittee on Legislative Oversight. Obviously, we have not had time as yet to get together a staff, since the funds were obtained only yesterday.

I want to make it perfectly clear, however, that the committee will use the greatest precaution in obtaining the kind of a staff that is needed and which will carry out the plans and policies of the committee for a forthright, fearless, fair and objective study and investigation.

We have not had an opportunity to formulate specific plans and a program, but the pattern is fairly well established in our recommendations contained in the report filed January 3.

In the second place, we asked and obtained $150,000 to make a study of what I believe to be one of the most important problems we have today which is of tremendous concern and interest to the American public, that is a study of the proper utilization of the radio spectrum.

Many of the situations which we dealt with in the Oversight Subcommittee are a direct result of the scarcity of desirable spectrum space available for broadcasting purposes.

It is my intention to have our regular Subcommittee on Communications and Power study the present and prospective utilization of the radio spectrum and have it also study the proper governmental machinery and procedures to bring about an efficient utilization of the spectrum.

As you well know, at present there is divided responsibility between the President and the FCC for the allocation of frequencies for governmental and nongovernmental purposes. The demand for spectrum space has grown to such an extent and is expected to grow still further at such speed that it is dubious whether the divided responsibility can bring about an efficient utilization of the spectrum. The spectrum situation may be analogous to the situation which did exist with respect to the use of the airspace by military, commercial, and private planes, and which led during the last Congress to the creation of the unified Federal Aviation Agency.

I consider this study one of the most important ones which our committee can undertake in the field of communications. We shall seek to retain an expert staff to make

this study, and the outcome of this study may affect you, your clients, and the American people most importantly.

Thirdly, most of you know that a week ago I introduced a bill, H.R. 4800, to carry out the legislative recommendations made by the Special Subcommittee on Legislative Oversight in its report to the Congress at the end of the last session. The hearings on which this report was based commenced in January 1958 and continued through November 1958. The hearing record of more than 11,000 pages, exclusive of exhibits, is probably not much shorter than the sum total of news stories that have been written about these hearings, and the individuals involved in these hearings as well as the Members of Congress who conducted them.

One aspect of the hearings, which particularly seems to have intrigued the press, is the proven or alleged misconduct of certain members of the commissions which were under investigation, of parties involved in proceedings before these commissions, and of other persons in public or private life interested in some of these proceedings.

Now, I don't want to deny for a moment that improper or unethical conduct by members of the regulatory commissions and commission employees, by parties and practitioners before these agencies, by persons in the executive branch or in the Congress, constitutes a most serious and difficult problem which ought to be given proper attention and that such conduct ought to be prevented in the future. However, I want to emphasize that even if all the commissioners and all of the persons in public and private life who are concerned with proceedings before these agencies were angels, there still would be other crucial problems in connection with the operation of these agencies which the Congress must come to grips with and on which the American people must be well informed.

Many of you probably have read recent newspaper stories about a book written by a former counsel of the Special Oversight Subcommittee. A few of you even may have read the book. Now, I could spend all of the time which you have allowed me here today in pointing out misstatements of fact and erroneous assumptions and conclusions made by the author. However, I doubt that you would want me to take the time, and I am reasonably sure that it would not be time well spent.

I have thus far refrained from making any comment publicly. However, there are two or three things I would like to say now which I think would be appropriate.

In the first place, even though our committee, in my opinion, accomplished a lot and did a good job in the last Congress, I would be one of the first to admit that some mistakes were made in connection with such a difficult and sensitive task.

In fact, about the first and perhaps the most serious mistake the committee made was that it employed Dr. Schwartz as its chief counsel.

When he was interviewed by the committee and presented with the policy statement previously adopted by the committee, he complimented the statement and thought it constituted a very fine and objective approach. After he became employed, he apparently forgot or else arbitrarily failed to proceed in accordance with the committee policy.

I would never question anyone's right to his ideas on a matter of principle. I do seriously take issue, however, with the methods, tactics, and procedures employed by Dr. Schwartz. I could not agree with them from the first public utterances he made before the Federal Bar Association. This was the major reason for what later developed.

He was determined either to rule or ruin. In my opinion, and as illustrated in his book, he proposes to change completely our fundamental principle of regulatory commissions. (Ch. 2 of the book.)

In other words, the book itself is the most outstanding proof of why the committee should never have employed him. He admits to defiance of the committee and he asserts that it was his purpose and responsibility to make the policies and conduct the investigation according to his own views and procedure.

Having been completely unsuccessful with his tactics, he proceeded to write a book. As for the sharp criticism and personal reflections on me, I care little. I did observe the one compliment, which must have been an oversight, when he referred to me as a "most urbane denizen."

Just let me mention two or three of the false and inaccurate claims:

There is reference to the Albany television case in which Mr. Hagerty was involved.

There was nothing at any time called to the atention of the committee about any problem relating to the Albany TV comparative television case. Neither I nor any other member of the committee received any information from the staff or anyone else until after the expiration of the committee in January, and you have recently seen the publicity.

Dr. Schwartz undertakes to claim credit for the Adams-Goldfine fiasco. There was nothing in the files referring to this matter in any way, with the exception of one memorandum from the Federal Trade Commission which in no way referred to Mr. Adams. Dr. Schwartz gave no information to the committee in public hearings or in executive session, and there was nothing at that time developed on it.

Two staff investigators had obtained the information regarding Commissioner Mack and the channel 10 question. However, this information had not been put together and developed for presentation at the time the committee terminated the services of Dr. Schwartz.

In other words, not only are the claims false, but it again emphasizes his attitude in withholding information from the committee itself.

The book reconfirms my earlier conviction that the author has not as yet grasped the scope of the task assigned to the Legislative Oversight Subcommittee, and that he preferred to follow his own notions of what the subcommittee should investigate instead of carrying out the detailed policies which had been laid down by the subcommittee for the scope and conduct of this investigation. In other words, while he was counsel of the subcommittee and still at the present time, he is almost exclusively concerned with the problem of improper conduct and what to do about it, as if that problem, serious though it is, was the only or even the foremost problem that confronts us in dealing with the independent regulatory agencies and their operation in the public interest.

Under these circumstances, the most important task of the Legislative Oversight Subcommittee, namely a thorough study of the functioning or malfunctioning of the independent regulatory agencies, beyond improper conduct, and of the causes of and the possible remedies for such malfunctioning still lies ahead of us.

That does not mean that the job which the subcommittee has done to date is insignificant. Quite the contrary. I feel that the accomplishments of the subcommittee to date are very substantial, and it is my hope that the bill which I have just introduced and which carries out the legislative recommendations of the Oversight Subcommittee will be enacted into law.

The process by which a bill becomes law is fortunately a slow one. This process offers ample opportunity to all interested parties of making their views known to the Congress. I trust I am correct in believing that you are interested parties, and I appeal to you that you give the provisions of this bill your careful attention both in your own interest and in the interest of your clients and most of all in the interest of the American people.

I appreciate, of course, that the Federal Communications Bar Association cannot take any position with respect to substantive matters. You represent different classes of clients who have divergent interests and it would be too much to expect that you or your clients would agree as to the substantive provisions of the Communications Act. However, H.R. 4800 deals primarily with organizational and procedural problems, and these problems, I feel, are a proper subject for discussion by the Federal Communications Bar Association. It is my hope that the Committee on Interstate and Foreign Commerce will have the benefit of detailed and specific recommendations of your association with respect to this legislation. Your constructive criticism and your suggestions for amendments as well as your support for the principles on which this bill is based will be most welcome.

Let us take a brief look at some of the provisions of H.R. 4800. Title I of the bill relates to the FCC exclusively. The other titles of the bill deal with the remaining five of the six big independent regulatory commissions. The provisions for all of the agencies are substantially identical.

Section 101 sets forth the policy. The bill is intended to strengthen the independence and effectiveness of the independent regulatory agencies and to increase the public confidence in their efficient, fair, and independent operation. These objectives are to be reached by taking the following actions: (1) Guarding against improper influence upon and improper conduct of agency members and employees; (2) observing ethical standards by members, employees, parties and practitioners; (3) preventing of off-the-record communications; (4) selecting chairman by agencies themselves; (5) assuming of individual responsibility by commissioners for preparation of agency opinions; and (6) making uniform the President's power to dismiss commissioners for cause.

Section 102 which contains definitions is a most important section because it defines the term "proceeding" and thereby outlines the boundaries of the key provisions of the bill. I want to call to your attention particularly subsection (b) of section 102 which has the effect of making applicable to certain rule-making proceedings the prohibition against off-the-record communications and the requirement that all communications made concerning such rule-making proceeding be placed in the public files of such proceeding. The rule-making proceedings to which this prohibition and this requirement apply, however, are only those in which the Commission actually undertakes an "on-the-record-only proceeding" and where a notice of proposed rule-making to this effect has been issued.

It seems to us that in those cases of rule-making, the Commission holds out to the participants and to the public generally that only on-the-record communications will be taken into consideration by the Commission, and therefore there is no room for any other communications. I realize, this may be an innovation and may go beyond the provisions of the Administrative Procedure Act. However, I believe it is desirable to make this change.

Section 103 outlines in general terms criteria of improper influence by parties and others upon the Commission and of improper conduct by Commission members and employees. The Commission is directed to prescribe regulations implementing and supplementing these provisions. While the

criminal provisions of the bill do not apply to this section, I want to call to your attention certain provisions of subsection (d) of section 103. In order to bring about compliance with this section, the Commission is directed to establish procedures for considering and acting on complaints, and the Commission is authorized to issue reprimands and take other disciplinary action, including suspension or disqualification of persons appearing in a representative capacity before the Commission, or take other action which may be warranted in particular instances, including action against the parties to the proceeding. This is a most important power which the Commission would be given, and, in my opinion, this power is necessary if the provisions against improper influence and improper conduct are to be enforced effectively.

Sections 104 and 105 dealing with off-the-record communications and the requirement as to placing certain communications in the public files of proceedings, may perhaps be considered the heart of the bill. We appreciate that exceptions may have to be made with regard to these provisions in order to promote the expeditious and efficient discharge by the Commission of its duties, and in order to secure the cooperation of other agencies of Government. Nobody knows better than the Commission and the attorneys who regularly appear before the Commission how broad these exceptions should be. Under the bill, the Commission would have three months from the date of enactment of this legislation to prescribe the regulations setting forth the exceptions from the prohibition against off-the-record communications. I trust, the Commission can count on your assistance and scrutiny in prescribing proper exceptions, and proper exceptions only.

Please note carefully that the criminal penalties of section 107 apply to sections 104 and 105 as well as section 106(a) which provides for the filing of a notice of appearance by any person who appears for himself or in a representative capacity in any proceeding or matter before the Commission. The hearings before the Oversight Subcommittee developed several situations in which parties had two teams to represent them—an on-the-record team and another one whose existence was not even known to the attorneys who did ther best to represent their clients in accordance with the regular procedures of the Commission. This kind of influence peddling has to stop, and section 106 is designed to help stop it.

Section 111 provides that the Commission shall choose its own Chairman and Vice Chairman. The term of the Chairman is not to exceed 3 years. The Chairman, after serving a full term, may not again serve as Chairman until a full term has elapsed.

The purpose of this provision is undoubtedly clear to all of you, as is the purpose of section 112 which provides for the assumption of individual responsibility by Commissioners for the preparation of agency opinions. Such opinion is to be signed by the member of the Commission who was responsible for its preparation. Specialization in opinion preparation according to types of cases is prohibited.

Several of the big six independent regulatory agencies are already following this practice and the results, according to the testimony before our subcommittee, have been very salutory.

I believe all of you will welcome section 113 which provides that failure of the Commission to act on motions for procedural or interlocutory relief within 60 days shall be treated as a denial of such motion.

Section 114 repeals the honorarium provision now contained in the Federal Communications Act, and section 115 repeals the provision establishing the "Review Staff" and the provision prohibiting certain off-the-record communications. These provisions were added by the McFarland act. The reasons for their repeal are apparent: the provisions of H.R. 4800 are either in conflict with or go beyond the provisions which are to be repealed.

This concludes my very brief review of some of the key provisions of H.R. 4800 which are applicable to the FCC. I appeal again to you to study with care the provisions of this bill, to come forward with your constructive criticism and suggestions because we are most anxious to make this the best possible legislation, and you appreciate that we shall be legislating in a most critical and sensitive area.

It has been a pleasure to be with you today, and I hope that this day will mark the beginning of renewed efforts for fruitful cooperation between your association and our committee. Thank you.

Pennypinching That Aids Crime

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica, Calif., Evening Outlook of January 12, 1959:

PENNYPINCHING THAT AIDS CRIME

The Port of Los Angeles is the favorite west coast port of entry for dope smugglers trying to bring their illicit and highly profitable wares into the United States. For reasons of geography as well as population, it is especially favored by smugglers getting their supplies from Red China, the world's principal source of heroin, and also from Mexico. With huge profits and also dire penalties at stake, dope smugglers find many ways to hide their small packets of contraband and to disguise their occupation. It takes officials of long experience and expert training in this field to catch them.

It might therefore be expected that the U.S. customs service would keep at least a minimum staff of such experts on duty at the Port of Los Angeles, adequate to the big and exacting job of watching out for dope smugglers on incoming ships. Yet when a wave of economy hit the U.S. customs in 1958, orders went out from Washington that have the effect of reducing all personnel, including those of ship inspectors at the Port of Los Angeles.

This arbitrary order, preventing replacement of any customs employee who is shifted elsewhere, or who dies or is retired, has resulted in the skeletonizing of a Port of Los Angeles force of inspectors that was already understaffed. During the week of Christmas, three large ships entered this port which should have been thoroughly searched for dope smugglers. But only two inspectors were available. They could not do the job in the brief time allowed them.

The austerity program, as it is called by Washington, recognizes that practically every office is faced with an increase in business and many are in urgent need of additional personnel. Yet it includes numerous pennypinching measures. Cause of the austerity is failure of Congress to provide $300,000 additional funds to compensate for mandatory wage and salary increases to Bureau personnel.

We are all for economy in Government when it eliminates unnecessary services, waste, duplication, or costly monuments to bureaucracy. But the economy practiced by the Customs Bureau at the Port of Los Angeles and other major U.S. ports has pared a few hundred thousand dollars off the Government's payroll at the cost of weakening the public's protection against the most nefarious and costly traffic in the world today. And not only the public's protection aaginst the drug traffic, but against a large proportion of our major crimes which are traceable to drugs.

"For want of a nail, the shoe was lost—for want of a shoe, etc." The number of drug addicts in California has been growing at an appalling rate, and such leading authorities as J. Edgar Hoover emphasizes that we must stamp out the drug traffic before we can reduce the incidence of crime. The pennypinching imposed on the U.S. Customs Service is a move in the reverse direction, opening our ports to the dope smugglers.

Tax Incentive To Invest Abroad

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of February 20, 1959:

WALL STREET, U.S.A.
(By Donald I. Rogers)

TAX INCENTIVE TO INVEST ABROAD

One of the more constructive campaigns being conducted in Washington these days is being managed by Representative HALE BOGGS, Democrat, of Louisiana, who holds promise of a boon to U.S. taxpayers and both individual and corporate investors who seek to expand their foreign investment activities.

Representative BOGGS has introduced a bill (H.R. 5) "to amend the Internal Revenue Code of 1954 to encourage private investment abroad and thereby promote American industry and reduce Government expenditures for foreign economic assistance." No one can quarrel wtih the aims and intentions of this bill.

Representative BOGGS' bill clearly recognizes that valid tax incentives are most essential to the advancement of private foreign investment by American citizens. In his speeches he has made another equally valid point—that tax reductions to encourage increased private investment abroad should be regarded as part of our national security program, particularly in view of the mounting economic offensive of the Soviet Union.

There's a weight of solid evidence to prove that tax incentives can stimulate portfolio investment abroad, as well as direct investment by U.S. corporations. One need only look across the northern boundary to find an outstanding example in the record of the publicly held Canadian investment companies established since 1954.

Since 1954 eight publicly held Canadian investment companies have been formed in response to the hospitable treatment afforded under Canadian laws. To qualify their shares for sale in the United States, they registered under the United States investment company act of 1940 and the securities act of 1933.

In little more than 4 years more than 129,000 United States investors, large and small, have put about $393 million to work principally in Canada, through these professionally managed companies, according to the Committee of Canadian Investment Companies. The average individual holding in the securities of these companies was in excess of $3,000 an investor at the close of 1958.

Why the success of these companies? How have they managed to attract so much long-term individual investment for the securities of companies contributing to the long-range growth of Canada and other free world nations?

There are three basic answers:

1. They have offered United States investors an opportunity to get diversification and informed investment management supervision of foreign securities.

2. They have offered United States investors an opportunity to avail themselves of certain tax incentives offered by Canadian laws to attract needed capital—incentives unimpaired under United States tax laws.

3. They have offered United States investors an opportunity to make long-term foreign investments without being subject to the many inconveniences that ordinarily arise in connection with foreign investments.

By policy, Canadian investment companies retain and reinvest both their net income and capital gains that may be realized. They thus compound the possible long-term capital gains benefits for their shareholders at low tax cost and keep their resources continuously at work, principally in the economy of Canada. Since Canada does not tax capital gains the publicly held Canadian portfolio companies are not subject to such a tax. And, as Canadian corporations, they may retain and plow back their current income without penalty. Thus, under consistent and long-standing United States tax policy, they have given the United States portfolio investors the type of incentives and opportunities to participate in foreign investment that have long been available to the direct United States corporate investor.

The response of United States investors to these opportunities clearly illustrates that a new and effective pattern has been created for stimulating private investment abroad.

This pattern can be extended, with similarly desirable and long-term benefits, to other receptive developing nations.

Maintaining these incentives and improving them, as the Boggs bill would do, cannot help but motivate both direct and portfolio investment abroad.

Statement of Peter Volid, of Barrington, Ill., Chairman of the Board of King Korn Stamp Co., of Chicago, Upon Receiving the Horatio Alger Award Presented by the American Schools and Colleges Association

EXTENSION OF REMARKS

OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am appending a statement by Peter Volid, chairman of the board of King Korn Stamp Co. of Chicago, upon receiving the Horatio Alger Award presented by the American Schools and Colleges Association. His friends report that Mr. Volid is proud indeed to be numbered among such men as have been chosen to symbolize America's "rags to riches dream come true."

The rise of Peter Volid is a tribute not only to his own genius but equally to the American free enterprise system which has made this country great.

Mr. Volid, owner and manager of King Korn Stamp Co., succeeded in increasing the annual gross of that company within a period of less than 4 years from nothing to an estimated $10 million. His business life, from its inception, contained meteoric force. Following 2 years' attendance at Sheldon High School in Chicago, he started out, in 1922, as a door-to-door peddler of ham, bacon, hosiery, and notions. He later became Wisconsin representative for Brillo steel wool and then worked for a Chicago macaroni company in the early 1930's. When he had saved up $2,000, Peter Volid set himself up in business as a food broker. With perspicuity, realizing that few companies specialized in marshmallows, he set himself up as a marshmallow maker and seller by borrowing $3,000 from 29 persons. He himself sold his own products—and sold them so successfully that in 1951, at 54 years of age, he retired. In 1952, however, he was asked by Thriftway Stores to make a management survey of their chain—and later to organize and run the premium stamp business of that company, which they had decided to start. Before the end of 1 year, Mr. Volid bought out the founders of the company. He had increased the number of stores using the stamps to 1,000. The revenues therefrom rose consistently until in 1956 they amounted to $7 million. Small wonder that in describing Mr. Volid's miraculous rise, a national magazine titled its article, "Something for Nothing."

In appending the following statement of Mr. Volid, whom I am proud to claim as a constituent of the 13th District of Illinois, I would personally recommend his words as a renewed challenge and answer to those whose faith in America and its free system will never die:

Opportunities for the young people of today who are entering their chosen fields in the business world are greater now than at any other time in our Nation's history.

However, these young people must, it seems to me, set a plan for the future and follow it. They must first of all decide what their objectives and goals are; then they should make a realistic study of what it will take in the way of sacrifice, energy, and hard work to realize those goals. Finally, they must be willing to pursue their goals with unswerving persistence.

If a youth can apply this simple formula, there is no limit as to what he or she can achieve. America today is in the throes of an industrial, business and commercial, and scientific revolution that has known no equal in days gone by. And to the ambitious youth, who is not afraid of the time tested techniques of hard work and persistent application of effort, there is no direction to go but up—up to greater heights than were heretofore possible by ourselves and our predecessors.

The youth of today must not be influenced by those who say that the economy is a saturated one—that one today cannot forge ahead and receive just recognition without influence or powerful connections—or that the saga of Horatio Alger is a dead one in the country. Just as these Horatio Alger award winners on this stage today overcame every conceivable obstacle to rise to great achievement and heights in their fields, so today, there are thousands of youngsters all over America who have begun their climb up the ladder, and who will be the success stories of tomorrow.

You must remember that these men, 30, 40, 50 years ago heard the same basic discouragements that you will hear today. Yet they managed to rise above their meager beginnings. And so can you by applying and living the same techniques that they did.

Persistence and hard work applied over a long period of time can turn the medicore into a giant. One need not be blessed with great mental or physical strengths; but merely a determination and a will to work hard.

In most cases the rest, brilliance, wisdom, knowledge, commonsense, will all come as the determination and hard work is applied. One must also not be afraid of failure. For it is only through failure that one can learn and profit by his mistakes. If you refuse to stretch yourself and hence run the risk of failure, you can never grow. The only fact that must be remembered is that after failure, you must recognize your mistakes and try again, the next time avoiding the pitfalls of the last experience.

A Long Career

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to insert the following richly deserved tribute to the Honorable William A. Wachenfeld that appeared in the Newark Evening News of February 24, 1959.

Judge Wachenfeld's career exemplifies the truth of the statement that the "expression and perfection of the law" come only from men endowed with a rich spirit, full learning and humility of soul. His integrity, intellectual capacity, and devotion to duty have won Judge Wachenfeld the respect and esteem of his fellow citizens. As the editorial states, Judge Wachenfeld's "retirement brings to a close a public career of unusual length and commendable performance." He takes with him into retirement the gratitude of the people of New Jersey and their best wishes that the years ahead will return to him in good measure the health and happiness he has earned.

A LONG CAREER

It's hard to realize that the seemingly ageless William A. Wachenfeld is 70, but he is. And today, in obedience to the constitution, he must step down from the supreme court seat he has occupied 12 years.

Before that he served 13 years as prosecutor of Essex County. Next year will bring the 50th anniversary of his graduation from law school. A busy lawyer, he found time for politics and public affairs. He might have been governor had he not twice refused to be a candidate.

William Wachenfeld was not everyone's idea of a supreme court justice when Gov-

ernor Edge appointed him in 1946. Vigorous and combative and brusque of speech, he seemed better fitted for administrative office.

It was out of character for him to sit patiently through the endless, often tenuous, argument which judges must endure, and he himself doubted that he had the temperamental requisites for the bench. Nevertheless, he made the adjustment successfully, becoming one of the court's most useful members.

As might have been expected, he became a notable dissenter. Some of his disagreements with his colleagues were scholarly explorations; others, especially those dealing with criminal law, consisted of a single scathing paragraph or page.

His retirement brings to a close a public career of unusual length and commendable performance.

A Worthy Tribute

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mrs. BLITCH. Mr. Speaker, I would like to call the attention of my colleagues to the following editorial, which appeared in the February 19 issue of the Jesup Sentinel, paying tribute to Miss Gussie Sutton.

Miss Sutton, well known and recognized throughout Jesup and Wayne County as one of its most outstanding citizens, was presented the first Kiwanis award of the year on February 13 at the annual Kiwanis ladies' night program. Miss Sutton is city clerk of the city of Jesup.

The editorial follows:

A WORTHY TRIBUTE

Rev. Albert Hall, pastor of the First Methodist Church in Jesup, presented most effectually the feelings, respect, and admiration of the people of Jesup and Wayne County, last Friday night, when he presented, on behalf of the Jesup Kiwanis Club, the club's first Kiwanis Award of the Year to Miss Gussie Sutton.

Miss Gussie, as she is affectionately known, has through the years gained the respect and admiration of every person with whom she has come in contact and has been one of the main supports of the present city manager form of city government. Miss Gussie served as city clerk of Jesup prior to the establishment of the present system of city government. She succeeded the late Don Surrency as clerk of the city of Jesup and has served under two city managers.

In honoring Miss Gussie, and presenting the first Kiwanis Award of the Year before more than a hundred Kiwanians and guests, who gave a standing ovation of approval to the praise spoken and the presentation of the award to the city's beloved Miss Gussie, Rev. Albert Hall took the opportunity to condemn those people who look toward the destination of the city rather than for its good.

He pointed out the dangers and results of people starting or assisting in the spread of vicious and unfounded rumors and that such people can destroy more good than a complete community can build in many years.

We join with Reverend Hall, officials and members of the Jesup Kiwanis Club and the people of Wayne County, in paying long-overdue praise to one of Jesup's most capable, unselfish, and beloved citizens. Miss Gussie has demonstrated to all those with whom she has come in contact her unselfish devotion to duty, and her willingness to serve her fellowman at every opportunity. Such an award could not have been deserved more, nor been awarded to a more deserving person.

We also commend Rev. Albert Hall for the outstanding presentation, and for bringing to the attention of the people of Jesup and Wayne County one of its growing evils, an evil that appears to have gained such a firm hold upon the community that it is rapidly taking its place as the greatest problem of the city, that of the spreading of vicious rumors.

An unfounded rumor started as an innocent little falsehood, often becomes a vicious evil that can destroy the very life of any community. Not only is the person who started the rumor at fault, but those people who, often without thinking, assist in the spread of its evil fangs, are contributing as much or more toward the destruction of their community and their people as any other person.

An unfounded truth, a little falsehood, or a vicious deliberate rumor, started for the purpose of destroying a person, and caused to grow, through the support and assistance of people, who, "heard that so and so was reported to be such and such," can not only destroy the person to whom it was directed but the very community in which it was started.

Jesup and Wayne County has grown and prospered through the past 10 years, gaining for itself the reputation as one of the State's faster growing cities, and one to which its citizens could point with pride. Within recent weeks these characteristics which have contributed so much to its growth, and its reputation is fast fading into the background, and taking their place as the growing reputation of a city of vicious rumors, or unfounded truths, and a divided people, neither satisfied with its progress and its accomplishments, but striving in its evil way to uproot the good that has been done and the progress made.

Unthinkingly many of the better people of the city have joined hands with this effort to destroy the very lifeblood of the community, in joining with the rumor-makers, and helping in passing them on to others in the city.

We join with Reverend Hall and others of the city in urging that we stop and take stock of our individual lives, see if we are assets to our community, see if this community is a better place for our children to live, for our having lived and worked here, or have we joined hands with those who would destroy what others have worked so hard to accomplish.

The Jesup way of life is a good way of life, all of us should join hands in an effort to stamp out every false rumor, every effort to destroy those things that have made us a great little city.

Shining On

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hollywood, Calif., Legionnaire for February 1959:

SHINING ON
(By P. A. "Dick" Horton)

One of our national heroes who seemed to best represent the common man of America, was Abraham Lincoln. His birth in a hand-hewn log house; his modest and frugal childhood; his guidance from a kind and understanding mother and his own determination to educate himself were character moulding factors that have always appealed to the American people. His life, more than any other American has given hope and inspiration to the youth of our land. That, regardless of social or economic station in life Americans all have equal opportunities to reach the highest position of trust in our land.

During Lincoln's day our people held a deep respect, loyalty and gratitude for Washington and the knowledge that he was more responsible than any other person for the winning of our freedom, for the adoption of our Constitution and for the building of the first Nation on earth dedicated to the religious and political freedom of mankind.

Lincoln's reverence and respect for Washington are revealed in his statement: "To add brightness to the sun, or glory to the name of Washington, are alike impossible. Let none attempt it, and in its ageless, deathless splendor leave it, shining on."

The Nation was at that time less than a century old. Many were still alive whose fathers had been companions of Washington. Our people were proud, very proud of the accomplishment of both of these two noble Americans. Loyalty, integrity, patriotism, and faith were the guiding words, spirit, and conduct of Americans. The most odious word in the English language was treason.

OUR CHANGING WORLD

Following World War I, the world was aflame with the hatred built up by centuries of turmoil, strife, plottings, trickery, and ambitions of European politicians. New tyrants had risen in Italy, Germany, and Russia. Each of these tyrants were determined to conquer the world or destroy it. Propaganda or brainwashing became an advanced art.

The old Grecian method of appeasing the masses was used under the banner of socialism and false promises of equality, position and goods. Hitler called his socialism "nazism"; Mussolini called his socialism "fascism"; Stalin called his socialism "communism." While the approach differed slightly, the objective was the same in every instance, to enforce conformity under the iron rule of dictatorship under the penalty of death or even worse.

Serene in our belief it could not happen here, our people were aroused by diligent members of patriotic societies and particularly the American Legion. One piece of evidence after another was furnished by patriots who found plottings, schemings, and propaganda of the agents of these foreign groups. Most of this material was received with a shrug. Veterans, patriots, Americans were crucified for daring to suggest that there were those among us that worked for our downfall. Treason is an ugly word.

Patriotic members of the American Legion and other groups realized that unless we could soon obtain an official government body with its cloak of authority to investigate and expose these traitors in our midst, it would soon be too late to save our beloved America.

The National Americanism Commissioner, Homer Challiaeux, and the united efforts of the members of the Legion in every State in the Union, and including the writer in the State of California, pleaded with our Congress, individually and collectively, until we had at last obtained the appointment of a committee in Congress known as the

Un-American Activities Committee. Enemies of this committee have attempted to destroy it ever since its organization. But year after year patriots have risen to its defense.

History will write of the noble work it has done and how it has exposed the traitors in our midst. How it exposed the machinations of the Remingtons, the Harry Dexter Whites, the Alger Hisses, and those thousands of men and women of foreign ideals who have come to our shores determined to destroy all that those two noble men, Washington and Lincoln, had worked so diligently to obtain.

The need for this committee is greater now than at any other time in our Nation's history. It is stated that the Civil Liberties Union and other organizations whose loyalty to our country has long been submerged by their sympathy for Communist causes intend to file a petition of 2 million names demanding a discontinuance of the Un-American Activities Committee.

We must all ask ourselves, Are we less loyal than our fathers; is conformity and slavery a good substitute for liberty? Do we lack the energy to defend our country or protect it from the fanatics who would destroy it?

Our Congress is now in session. How deeply are you interested in your country's future? Write to your Congressmen. Write to your Senators and express your views on this matter.

When the shades of night have fallen and you are nestled in the bosom of your family secure in the rights guaranteed you under our Constitution, take time to pray to God that we may continue the America of Washington and Lincoln, and that the light of liberty be kept shining on.

Repeal Excise Taxes on Telephone Services

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mrs. BLITCH. Mr. Speaker, it has long been my belief that the Federal excise taxes on local and long distance telephone services, which, with other excise taxes, were imposed on the citizens of our Nation as war-time measures, should be repealed. I was, therefore, pleased when the House of Representatives of the State of Georgia recently passed a resolution memorializing the Congress of the United States to enact during the current session of Congress, legislation repealing said excise taxes on local and long distance telephone services and other communication services. So that other Members of the House may be advised of the action taken by the Georgia House of Representatives, I am, under leave to extend my remarks, inserting house resolution No. 212, introduced by Mr. Downing Musgrove, of Clinch County in the Eighth Congressional District of Georgia, as follows:

H.R. 212

Whereas the Congress of the United States during World War II, as an emergency measure, levied the Federal excise tax upon the charges for local telephone service and increased the tax rates on long distance telephone service and other communication services for the purposes of raising needed funds for the war effort and of discouraging the unnecessary use of services and materials needed to carry on the war; and

Whereas the emergency ended many years ago, and the principal purposes for enacting the Federal excise taxes on local and long distance telephone services no longer exist; and

Whereas historically, a Federal excise tax on telephone services has never been imposed on the American public except in times of emergency; and

Whereas telephone service has become an essential household and business service and is an everyday necessity for nearly everyone; and

Whereas telephone service is the only household utility service that is subject to a Federal excise tax; and

Whereas the Federal excise taxes on telephone services are discriminatory, unfair, have outlived their justification and should no longer be continued in effect; and

Whereas measures which would effect the repeal of these taxes on communication services are now pending in the Congress of the United States: Now, therefore, be it

Resolved by the House of Representatives of the State of Georgia, That we do hereby memorialize the Congress of the United States to enact during the current session of Congress legislation repealing said excise taxes on local and long distance telephone services and other communication services: and be it further

Resolved, That the clerk of the house of representatives transmit a duly authenticated copy of this resolution to the chairman of the Ways and Means Committee of the U.S. House of Representatives, to the chairman of the Finance Committee of the U.S. Senate, and to each member of the Georgia delegation in Congress.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a resolution adopted by the Pittsburgh chapter of the Lithuanian American Council, on February 15, 1959, commemorating the 41st anniversary of the independence of Lithuania:

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent of the city of Pittsburgh, Pa., sponsored by the Lithuanian American Council of Pittsburgh, and held February 15, 1959, at the Lithuanian Citizens Hall, Pittsburgh, to commemorate the 41st anniversary of the declaration of independence of Lithuania:

"Whereas in 1940 the Soviet Union in conspiracy with the Hitlerite Germany and in brutal violation of all treaties and obligations, signed by her, invaded Lithuania with armed forces and against the will of the people, annexed her to the Communist empire; and

"Whereas since that time the freedom of Lithuanian people is suppressed by cruel means of the Communist dictatorship which strives to dominate all the world; and

"Whereas the fate of Lithuania as well as of other subjugated eastern European nations will depend on the success of the foreign policy of the United States: Therefore be it

"*Resolved*, That this gathering of loyal Americans of Lithuanian descent of the city of Pittsburgh, Pa., calls upon the Government of the United States to stand firm against the expansion of Communist imperialism and do all in its power to liberate the enslaved nations behind the Iron Curtain; be it further

"*Resolved*, That this meeting urges the Government of United States to continue its opposition to the United Nations' Draft Code of Offenses which prohibits lending assistance to and liberation of captive nations; and be it finally

"*Resolved*, That the Government of United States refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom and sovereign rights to Lithuania and the other enslaved European nations."

STANLEY F. BAKANAS,
Secretary.

As Others See Us

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. KNOX. Mr. Speaker, under leave to extend my remarks, I include an editorial from the February 11, 1959, Norfolk, Nebr., Daily News that was reprinted in the Charlevoix Courier of Charlevoix, Mich., on February 19, 1959.

The editor of the Charlevoix Courier had wisely commented in part as follows:

Now and then it might be to our advantage to see ourselves as others see us.

How true. And we may well ask the question "Just what is the chief executive of Michigan, the political head of one of the great industrial States in our Nation doing to continue the State's preeminence and to encourage the entry into the State of new industries?" We might also inquire, "What is the Governor doing to create a fiscal environment in our State that is conducive to expanding job opportunities so that our highly skilled labor can have jobs that are better jobs through private enterprise rather than poorer jobs through Government enterprise?"

The editorial reprint I referred to at the outset of my remarks follows:

AS OTHERS SEE US

(We who live in Michigan may be more or less complacent about the situation in our State government. Now and then it might be to our advantage to see ourselves as others see us. With that in mind we offer the following editorial, "Michigan Shows What Happens," which appeared February 11, 1959 in the Norfolk, Nebr., Daily News.—Editor's Comment.)

The State of Michigan might be called a guinea pig by which we are able to test the effects of too free spending.

Its experience is significant because it has been for several years under the control of influences that have moved into the Federal field. Gov. G. Mennen Williams, a presidential hopeful, has been in the State House for five terms. He has been so closely associated with Walter Reuther, UAW head, that some have called Reuther the power behind the throne.

Under this regime Michigan has spent herself virtually bankrupt.

The condition of the treasury is such that, in order to meet payrolls, Governor Williams has had to appeal to his old enemies, the big corporations, to pay their taxes early. The State is running a deficit this year estimated at $89 million. Even the juggling of funds was not enough to put the State on a basis to pay its help.

The story of how Governor Williams has brought the State to this critical financial condition is too long to tell here. But the important fact is that it is the same welfare program that the Williams-Reuther cult is now trying to wish on the Federal Government, that has drained the State's treasury.

Walter Reuther is at the head of one of the groups that is demanding greatly expanded and expensive projects for Washington to finance.

Listing what has happened in Michigan, U.S. News & World Report says, "All these problems have combined to add to the State's financial worries. New business enterprises are slow to come to Michigan. * * * Thus, the people of Michigan, one of the wealthiest States in the United States, now finds their government broke."

Our representatives in Washington who would head the Government there in the same direction Michigan has been traveling, might well study where that path has led one of our richest States.

Utilization of Military Manpower

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. KOWALSKI. Mr. Speaker, the proper utilization of our military manpower is one of the most important issues facing America today.

One key phase of this problem has been raised in a letter to the Secretary of the Air Force by Lodge No. 1092, American Federation of Government Employees. The specific problem involved is the use of military personnel in civilian and administrative type duties.

I intend to bring this letter to the attention of the Special Subcommittee on Manpower, which has been established by the Armed Services Committee, but I feel that the questions it raises are so important that I should bring them to the attention of the entire House at this time.

I quote the key points of a letter to the Secretary of the Air Force by Mr. John Mann, president of Lodge No. 1092, American Federation of Government Employees:

AMERICAN FEDERATION OF
GOVERNMENT EMPLOYEES,
LODGE NO. 1092,
February 25, 1959.

DEAR MR. SECRETARY: Staffing of civilian-type support positions with military personnel has approached a point which, we feel, actually jeopardizes economic completion of the Air Force combat mission. Recent military and civilian pay raises have a direct bearing upon this problem. The assignment of military personnel to civilian or administrative-type duties has become prohibitively expensive. Pay fringe benefits have increased costs to where today's enlisted man can earn over $10,000 per year. In the officer category, the career cost amortization of one full colonel may involve as much as $33,000 per year. This includes base pay, quarters' allowance, longevity pay, flying pay, responsibility pay, PCS costs, dislocation allowances, training costs, retirement, Medicare, and other fringe benefits not inherent in civilian manpower costs.

In terms of overall manpower implications, the problem involves much more than simple comparisons of take-home pay between military and civilian personnel. An Air Force major and a GS-12 civilian, for example, may have similar take-home pay in terms of dollars. However, in terms of true cost to the taxpayer, a military man involves many costs, benefits, and investments (education, training, facilities, housing, retirement, etc.) not accorded a GS-12, or other comparable career civilian.

In many areas in Headquarters USAF, commissioned officers spend their entire tour of duty in nonmilitary, nondefense, noncombat, functional assignments. This is unnecessarily expensive. More importantly, it is creating a misleading manpower picture in terms of defense readiness and combat capability. Manpower totals are padded with thousands of uniformed personnel who are not engaged in, or even prepared for, defense or military-type duties. We feel that this is neither the spirit nor intent of Congress in putting a man in uniform. The assignment of military personel to administrative and support type activities may well constitute the most expensive form of bureaucracy in the Federal Government.

Compounding this situation is the fact that the military man often does not have the motivation, aptitude, background, or training for support type duties. He knows he will probably be rotated in 3 years into an entirely different career category. He also realizes that interim civilian type assignments tend to jeopardize his long-range military advancement potential. In the support areas, particularly, this has created officer and civilian morale problems, poor management leadership, lost continuity, and inadequate technical specialization. In many cases, important projects or programs are canceled prematurely, or reorganizations undertaken, at considerable loss in Air Force funds and resources, simply to coincide with an individual officer's rotation. In others, costly or ill-considered decisions are made as a result of disinterest, lack of training, or personnel instability. We feel that this type of transient management is costing the American taxpayer millions of dollars in excess defense costs. During recent Senate appropriations hearings, considerable discussion was centered upon the high cost of personnel instability within Headquarters USAF.

The problem, as we see it, involves much more than simple mismanagement, or labor relations, as such. The entire concept of civilian-military relationships, roles, and teamwork must be reexamined within Headquarters USAF. * * * For some reason, Headquarters USAF continues to pursue a costly and illogical manpower policy concerning the utilization of civilians. The impact of this policy upon defense capability and costs should be obvious.

We also feel that the proposed 2-percent reduction in DOD civilian manpower will actually increase overall defense payroll costs. Reductions in civilian manpower, in many instances, simply mean that military personnel will be assigned to perform civilian duties. Direct and indirect payroll costs will actually be increased in many areas. This process will then be compounded by a secondary manpower cycle wherein Headquarters USAF will demonstrate a need for additional military manpower. In contrast to this, it is accepted knowledge that advancing weapon systems, technology, and airpower concepts (missiles and spacecraft) will require progressively greater concentration of stabilized civilian manpower in the direct and indirect support areas.

We could cite many more arguments and examples of why greater utilization should be made of civilian manpower in support-type activities in Headquarters USAF. However, numerous studies by outside consultants and citizen groups (Hoover Commission, Sarnoff Commission, Ford Foundation, and Rockefeller Report) have indicated similar conclusions. We feel that corrective action is long overdue.

As a point of departure, the following proposals are submitted:

Review of Headquarters USAF civilian-manning ratios in all direct and indirect support functions; and progressive civilization of appropriate broad functional areas and activities throughout Headquarters USAF, as outlined in DOD 1100.9.

JOHN MANN,
President, AFGE Lodge 1092, AFL-CIO, Headquarters, USAF.

Curing Unemployment

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. HOSMER. Mr. Speaker, Columnist Lawrence A. Collins, Sr., recently had some sound advice to give regarding the problem of curing unemployment. It appeared in the Long Beach Independent newspaper on February 22, in the following column:

CURING UNEMPLOYMENT
(By L. A. C.)

The 4.7 million unemployment figure for January is disturbing news. It has brought demands from the AFL-CIO for shorter hours and a much greater spending program by Government to produce more jobs. Walter Reuther advocates an unemployment march on Washington to dramatize the demands.

It would be unrealistic to ignore the dangers of widespread unemployment. But it is equally unrealistic to expect that full employment can be achieved by unsound measures. Actually we have had an average of about 3 million classified as unemployed for most of the past 10 years. These are largely people who are in process of changing jobs—there is a normal turnover of jobs which brought this 3 million unemployed to be viewed as normal during our most prosperous years. It was about 4 to 5 percent of the available working force.

We are just coming out of a recession. Our labor force increases at the rate of about 1.5 million a year. New jobs must be created for this new working population. We have met this increase in the past. The big question is how we are to do it for the future. This raises the question of shorter hours—or creation of new jobs by private enterprise or Government spending.

There is a grave question that shortening the workweek would provide the needed new jobs. Such action would mean a reduction in the weekly pay of workers and thereby less purchasing power. Or, if present 40-hour pay were maintained for 35 hours' work, it would add to the cost of everything produced by the workers. This would reduce the amount of purchasing power of workers.

When it comes to providing jobs by Government spending, we should look back to the

1934–39 period, when billions of dollars were expended by many alphabetical agencies. There was never a year during this period that unemployment fell below 7 million workers—with a working force 10 million less than we have at present. It was only when war broke out in Europe and we became the arsenal for France and Britain that we pulled out of that depression.

After World War II, we were busy making up the shortages created by 4 years of war and austerity. Then private enterprise poured billions of dollars into new products, plants, and machinery. Prices increased 100 percent over the 1930's—but income of workers increased 150 percent. The result has been higher living standards, more people employed, and general prosperity. We have had three minor recessions during the last 10 years. But we pulled out of two without a serious economic disorder. We are very close to being out of the recession which started some 18 months ago.

Some of the added 1.7 million unemployment above the 3 million normal is caused by workers producing more, the extension of working hours of those employed, and the wage and fringe benefit increases given unions the past year. Production is at high levels, prices are stabilized, and with winter over there is good reason to expect jobs to be more plentiful.

There is every reason for concern over our ability to provide the new jobs needed for our expanding working force. It is probable there will be shorter hours in the future. But such changes should not be allowed to increase costs of production and thereby create a destructive inflation spiral. Unless unions and their supporters in Congress accept this view, they will be creating greater unemployment and destroy the value of dollars now held or hoped for by all the people.

Spending Higher at White House

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. METCALF. Mr. Speaker, in his budget message this year, President Eisenhower has indicated the various cuts he proposes in the number of tax dollars to be spent on each program for the fiscal year beginning on July 1. And while he proposes cuts in some of our most vital programs, he fails to practice at home in the White House the economy he preaches in his budget.

Drew Pearson's column in the February 23, 1959, Washington Post and Times Herald edition, points up some of the items which have increased the budget for the White House. The column follows:

SPENDING HIGHER AT WHITE HOUSE
(By Drew Pearson)

Stung by President Eisenhower's evangelistic outbursts against the spenders, Democratic leaders are taking a sharp look at how Ike practices the economy he preaches. Their findings reveal he has been the most extravagant President in American history.

He spends twice as much to run the White House as former President Truman ever did. During Truman's last year, his operating expenses came to $2,467,000. This is petty cash compared with the $5,013,750 bill Ike turned in for the fiscal year ending June 30.

He also left the White House out of his fervent campaign to balance next year's budget. While he ordered everyone else to slash expenses, he boosted his own budget by a generous $332,250.

Truman was able to get along with an office staff of 245. Ike has added another 153 employees to the payroll. He has also increased the White House work crew from 62 to 71. Among their new duties are hunting lost golf balls and keeping the squirrels off Ike's putting green.

The cost of operating the whole Executive Office has soared even more spectacularly under Eisenhower. This includes all the octopus arms of the White House, such as the National Security Council, Budget Bureau, Office of Defense Mobilization, and Council of Economic Advisers.

LUXURIES DISGUISED

Truman spent $6,703,000 on the whole works his last year in office. Ike's total budget for the Executive Office this year is $52,736,250. Next year he is asking for $91,880,000. Of course, 89 percent of the increase will go to the newly created Office of Civil and Defense Mobilization. But a full 5 percent will go to the same Budget Bureau which is supposed to enforce his economy edict.

Many of Ike's little luxuries are charged to other Government departments, so they don't show up in the White House budget. The two helicopters which whisk him and his staff to Gettysburg on weekends are charged to the Marine Corps. Sometimes he makes the hop in a light, twin-engined plane, kept at his disposal by the Air Force.

Ike didn't wait long after moving into the White House to get rid of Truman's hand-me-down plane and order a de luxe new model for himself. The Air Force paid $3.8 million for the *Columbine*, which was decorated to suit Mamie's tastes. Last year, the President decided the plane needed another rest room and running water. However, the story leaked out before the new plumbing was installed, causing such unfavorable publicity that he withdrew the order.

The Presidential launches, the *Barbara Ann* and *Susie E.*, are maintained and operated by the Navy. One was dispatched all the way to Newport, R.I., last year to ferry the President between the golf course and his vacation headquarters.

Incidentally, he has taken more vacations at the taxpayers' expense than any other President in history. His biggest year was 1957 when he took 22 vacations, counting long weekends at Camp David and his Gettysburg farm. Last year, he was away from the White House 16 times. Already this year, he has slipped away for four brief vacations.

UNCLE SAM PAYS

The Eisenhowers also use White House servants on their farm. Their personal belongings are frequently hauled by Army truck. Once Ike brought in GI's to dig a ditch around his farm when he couldn't find civilians who would work in the rain.

Besides his extravagance with the taxpayers' money, Ike has accepted expensive personal gifts. Certainly the deep freeze which caused Truman such painful publicity was a five-and-dime item compared to what Eisenhower has received. Gifts he can't use are usually kept in the family. Mamie's sister, Mrs. Gordon Moore, is the chief beneficiary.

White House intimates say the President's fervor over economy is inspired by the tight little circle of millionaires who have become his closest friends. They include:

Former Secretary of the Treasury George Humphrey, now head of National Steel; William Robinson, Coca-Cola's board chairman; W. Alton Jones, Cities Service chairman; Clifford Roberts of Reynolds & Co.; Barry Leithead, president of Cluett, Peabody & Co., and George Allen, a director of many big companies.

This is Ike's golfing-bridge cabinet. Democrats point out that these are men whose own living standards are the highest in the world, but who believe in economy for small business, schools, farmers, veterans, widows, and the aged.

NOTE.—This column called the White House for details of Ike's finances, but Jim Hagerty was in Mexico. No one else was permitted to discuss the subject.

California Fiscal Affairs

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. HOSMER. Mr. Speaker, many interesting fiscal statistics regarding the Nation's second largest State were compiled recently by columnist Bill Broom. California sets a particularly fast pace in attention to educational facilities. I feel that colleagues from other States will be interested in comparing the figures furnished by Mr. Broom, on California, to those of their own States.

Mr. Broom's column follows:

CENSUS SHOWS THIS STATE BIG SPENDER AND LIBERAL TAXER
(By Bill Broom)

WASHINGTON.—The Californian taxes himself higher and spends more for his local schools than the average citizen of any other State in the Nation.

He is able to do this because his annual income is $2,523 for every man, woman, and child in his State. He ranks fourth in the Nation in this respect.

These are some of the statistics turned up by the Department of Commerce in its annual business census of State and local government finances. The figures cover 1957.

The Californian is a free spender and a liberal taxer. He ranks in the top 10 on a per capita basis for most every classification covered by the census.

His annual State and local tax bill is $237.87 per person, and that's highest in the Nation.

The U.S. average is $169.147; the lowest being Arkansas with $100.40.

The biggest chunk of his governmental budget goes for education. Californians spend $98.22 per capita every year on local schools, highest average in the Nation. He slips on his budget for colleges and universities, however, with a per capita expenditure of $19.16, well above the average of $11.50 for the Nation, but 12th in per capita ranking. The total for all education is $119.39 per capita annually, second high in the Nation.

The Census Bureau provides its statistics in two ways. One set of statistics cover the total dollar amount spent in each State. The other divides that amount by the number of residents of the State, giving the per capita figure.

On total spending, the Californian leaves nearly everybody eating his dust. His State and local governments spend more for education, colleges and universities, local schools, highways, public welfare, and natural resources than any other State in the Union.

New York spends greater dollar amounts for health and hospitals, police and fire protection. The Californian is third in the total amount of $80 million he pays out for interest on his debt.

On a per capita basis, the Californian pays $321.20 annually for all government services (ranking fourth), $46.48 for highways (ranking 29th), $29.19 for public welfare (ranking 7th), and $24.02 for health and hospitals (ranking 7th).

The national per capita average in those categories is $237.35 for all services, $83 for education, $11.50 for colleges and universities, $69.60 for local schools, $45.79 for highways, $19.94 for public welfare, and $18.80 for health and hospitals.

With all that spending, the Californian hasn't gotten himself too far in debt. His per capita debt is $327.02, 10th highest in the Nation, and a little more than the national average of $299.75. New Yorkers are a lot worse off. Each of them owes $566.62. In the District of Columbia, where Congress won't permit long-term indebtedness, the average is only $45.61.

The dollar spending totals, in which the Californian ranks highest, are $1,657,060,000 for all education, $265 million for colleges and universities, $1,363 billion for local schools, $645 million for highways, $405 million for public welfare, and $210.5 million for natural resources.

California, which spends $333.4 million for health and hospitals, $171 million for police, and $115 for fire protection, ranks second in those categories.

Where does the money come from and what is the Californian's ranking on a per capita basis?

His local and State governments have a total annual per capita revenue of $314.06, third highest in the Nation. They receive $33.50 per capita from the Federal Government (ranking 12th), $112.01 per capita in property taxes (ranking 2d), $125.86 in other nonproperty taxes (ranking 4th), and $42.67 in charges and miscellaneous government revenue (ranking 9th).

Remaking the Mississippi

EXTENSION OF REMARKS
OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an address delivered by Maj. Gen. Walter K. Wilson, Jr., Deputy Chief of Engineers for Construction, delivered at the Mississippi Valley Flood Control Association meeting in New Orleans, La.

The Mississippi is one of the great rivers of the world. Never have I heard a finer discussion of this river than was delivered by General Wilson. It is so full of valuable information that I wanted others to share it.

The address follows:

REMAKING THE MISSISSIPPI

To address the Mississippi Valley Flood Control Association is a high point in the career of any member of the Army Corps of Engineers. I am privileged today to make my first appearance before you.

The task of bringing this river system to its present state of control and improvement has taken a long time. I am sure most of you recall what Mark Twain said about it. He considered the job of what he called remaking the Mississippi one that was exceeded only by the original job of creating it. That was probably the greatest understatement he ever made.

While we can all be proud of our progress on the Mississippi, we dare not be satisfied with it—or complacent about it. There is still a great deal that engineers do not know about the behavior of a river of the size and characteristics of the Mississippi. Although the present flood control works have successfully passed flows greater than any of previous record, we still cannot be sure that we have the protection we need or can afford.

So, now the Corps of Engineers, with your cooperation, is reevaluating the adequacy of the protection we now have and is reappraising the degree of flood risk that confronts us so as to ascertain wherein it may be justifiable to improve the present project.

General Carter will discuss with you the progress being made on the Mississippi River project. I want to talk about the future, looking far ahead to anticipate some of the problems we can expect to encounter. The answers to all of them, of course, are not apparent at this time, but I hope that some constructive benefit can be derived by pointing our thoughts in certain directions.

In considering future development of the Mississippi, we must keep two principal factors in mind. The first, as I have already indicated, is that we dare not become satisfied and complacent about the adequacy of the works we have built for controlling the tremendous force of our largest river system. Second is to appraise accurately the equally dominant force of economic and social growth that determines the requirements for control and use of the river and its waters. Although in past years the Corps of Engineers sometimes has been criticized for building too big and too far ahead, the fact is that in virtually every instance the economic growth of the country has outrun the adequacy of our projects long before the facilities were worn out. Let us examine that question a little further.

The burden of supporting America's post-war boom has fallen with especial weight upon water resources. Though in many ways these resources have become less available, demands upon them have skyrocketed. We are building navigation facilities faster than ever before, but the growth of traffic outstrips our building. Bigger vessels tend to make our harbor facilities obsolete. Irrigation and power needs also are rising. The surge of population and enterprise into river-valley flood plains increases the urgency of the flood control problem.

Not only have traditional needs become intensified, but new ones are appearing. We used to take water supply for granted. Now domestic and industrial consumption have multiplied. At the same time, pollution is degrading surface supplies, drawdowns are raising the cost of underground supplies, and encroachment on reservoir sites is undercutting the feasibility of many storage projects. Recreation has been transformed from an amenity into a social necessity. Serious questions of preserving our fish and wildlife resources have arisen.

In short, our water resources problems have mushroomed upward and outward since the war, and the trend is just commencing. I do not believe these problems are yet out of control, but every year that passes will make it harder to keep them under control. I feel that no doubt the post-war expansion which has made the problem urgent will continue and accelerate for years to come.

We are in a feverish age. Automation, synthetics and electronics are revolutionizing production processes. The atomic era, by opening new realms of power, may intensify the drain upon basic natural resources. Ideas, the most explosive force of all, can now be manipulated with techniques that reach into the subconscious and, thanks to modern communications, they can be disseminated throughout the world with the speed of light. Entire nations previously retarded in economic and social progress are now asserting themselves as powers and are repolarizing the currents of trade and politics.

Populations, including our own, are erupting with a force comparable to that of the atom. When Magellan circumnavigated the globe 500 years ago the world had a population of half a billion. When Jules Verne sent Phineas Fobb on his imaginary 80-day circuit in the 1870's there were 1.4 billion people—a 900 million increase in 400 years. When Wendell Willkie made his 160-hour "One World" trip in 1942, there were 2.3 billion people—another 900 million increase, but accomplished in only 70 years. And last year, the Strategic Air Command circled in 45 hours a world of 2.8 billion people. The rate of population growth has increased more than fivefold within three centuries.

All of this means that our natural resources base, including our water resources, will have to support even greater efforts than before.

It follows that our water resources development programs will have to continue to be bold in scope and vigorous in prosecution and that we must rigidly adhere to the requirements of good planning and sound economics to the end that we can ultimately enjoy the fullest use of this limited resource.

Our task of remaking the Mississippi and its tributaries should be continued in light of these considerations, and with the same boldness, foresight, courage, and skill with which we must plan our military defenses. For in the international conflict in which we are now engaged, national defense requires both military and economic preparations.

In the resurvey of the Mississippi we are exercising the type of alertness that must be maintained generally, and for an indefinite period in the future. Here in the lower valley our flood-control project has opened large flood-plain areas to development by a generation that has never had its imagination prodded by an actual flood experience. As perhaps most of you know, we are trying to ascertain two basic facts in this survey. First, is it justifiable to provide protection against a flood of greater magnitude than the project is now being built to withstand? And second, what improvements or changes in the flood control system should be made to accommodate a flood of such magnitude?

While I cannot prejudge the final report, there are indications from the interim report made last year, that we may be warranted in increasing the magnitude of the project flood. We are studying the effects of the changes brought about in the regime of the river; whether we have made proper allowance of the reduction of peak flows by upstream, tributary storage; the adequacy of the levees, floodways and channels, and all other factors that would be necessary to assure a 3-foot freeboard against a project flood of the magnitude being considered.

Determination of the effects of up-stream storage is a particularly complex undertaking. We know that we must look to the reservoirs of the Ohio Valley for about 90 percent of the reduction of peaks for floods at Cairo that occur in January and February. For floods that occur in the late spring and early summer, we must look to the reservoirs on the Mississippi-Missouri above Cairo for up to 80 percent of the reductions in peak flows.

To accomplish this requires a well-balanced and comprehensive system of reservoirs in order that floods from the major tributaries may be regulated regardless of geographical origin.

But here in the Alluvial Valley we must keep in mind that the reservoirs on the tributaries are built primarily to serve more local needs. Thus, while tributary reservoirs hold back water to help reduce the flood peaks on the lower Mississippi, this

is not the principal purpose for which the majority are designed. It follows that there is a limit to which we can look to them for help in reducing your floods. We must take fully into account the benefits you will receive from them, but at the same time depend primarily upon the adequacy of the levees and other works for safely passing floods through the Alluvial Valley. At the present time, low flows in the main stem of the Mississippi present a problem primarily to navigation. It appears that a discharge of 100,000 cubic feet per second at Cairo and of 140,000 cubic feet per second at the mouth of the Arkansas are the minimums necessary to maintain an adequate navigation channel without unreasonable maintenance dredging, and provide sufficient water for industrial and domestic use and pollution abatement.

Flows of less than this minimum discharge have been encountered on numerous occasions in the past. During 5 of the past 25 years the flows at Cairo have been less than the minimum and during 9 of these years the flows below the mouth of the Arkansas have been less than the minimum.

We must anticipate that periods of extremely low flow will be encountered in the future. Flows of less than the minimum would present a serious threat to dependable navigation with the 12- by 300-foot channel authorized from Cairo to Baton Rouge. Moreover, there is the question of rising demands on the river for other water uses, including, of particular significance, future irrigation, industrial water and pollution abatement, which could conceivably place even larger demands upon the river. We must take into account the fact that increasing demands upon the river for all kinds of water uses will occur throughout the entire river system, which will further affect the availability of water during periods of drought. This includes not only water appropriated from the streams, but also continued excessive demands upon the underground water tables, which, in turn, affect the rivers.

The population experts anticipate increase of 60 million people in the United States in the next 17 years. This, in addition to the per capita increases in water uses, means that our national water requirements for all purposes will more than double. Crop surpluses as we now conceive them will diminish and there will be heavy demands for water for agricultural uses for enhancing production even in the more normal humid times, to say nothing of periods of drought.

Although the seemingly abundant waters of the Mississippi have been the envy of our parched friends in Texas and Oklahoma for a long time, I want to emphasize that the main stem of the Mississippi may not be an inexhaustible source of water for all uses over the years ahead.

Moreover, it does not appear likely that sufficient storage is practical on the upstream tributaries both to serve the ultimate needs there and to solve all of the low water problems of the Mississippi.

Virtually the entire country is affected by the problem of diminishing sites for the economical storage of water, a question that is growing more critical each year. For example, it is now doubtful that more than about 15 of the 48 remaining reservoirs authorized for the Ohio River system have any reasonable chance of ever being built. The reason? It is simply the exorbitant price we are paying for the sprawling, unregulated economic growth of the country. The construction of highways, airfields, utility lines, urban communities, industries and other encroachments on the reservoir sites have made the cost of procuring the land prohibitive in many instances.

I think you people of the Alluvial Valley are becoming more aware of the importance of upstream reservoirs and certainly you will become more acutely conscious of it in the future. Reservoirs on the Missouri contributed about one-third of the flow of the Mississippi at St. Louis during the 1953 drought. In September and November of that year, the upstream reservoirs provided about one-fourth of the discharge at Cairo, a figure that rose to 40 percent in October. At Baton Rouge about 25 percent of the flow was coming from the upstream reservoirs. A similar condition was repeated in 1954 and we had trouble again in 1955 and 1956. In January of the latter year, the Mississippi reached the lowest stage of record at Memphis, and extremely low stages were recorded all along the lower river, and very little assistance could be provided from the reservoirs on the Ohio and the Missouri.

The answers to the problem in your area appear to lie in several directions.

First is to encourage the construction of upstream conservation storage which will inevitably benefit the Lower Mississippi as well. You should support action to preserve the remaining reservoir sites from further encroachment, throughout the great Mississippi Valley.

Next is to make good use of the opportunities for storing the waters originating within your own States. You will ultimately need all you can get. There is none to be wasted.

Develop maximum treatment to return unpolluted water to the streams.

Then, as a last resort, you ultimately may have to limit the uses of waters diverted from the Mississippi in times of extremely low flow.

Please remember, I am looking far ahead, but one must be farsighted in considering where we go from here with respect to future water resources development. I did not come here to present you a discouraging picture concerning your water future. In fact, your future, waterwise, is one of the brightest in the country. I am confident that ways to overcome the problems of low flows can be found. I am probably much more optimistic about them than many of my forebears in the corps were when they first tackled the problems of curbing the floods of the lower Mississippi. I can think of nothing more spine chilling to an engineer than to see a vast expanse of rushing water, as far as the eye can reach, destroying entire communities and taking the lives of hundreds of people.

We have demonstrated that we can tame the floods, and certainly we are in much better position, for having done so, to tackle the problems of enough water. That should be our next big battle in meeting the seemingly endless challenge of the conquest of nature.

A Long Career

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. RODINO. Mr. Speaker, it is my pleasure and privilege to insert in the RECORD the following editorial tribute, which appeared in the Newark Evening News February 24, 1959, to my good friend and one of the most respected members of the bench and bar, the former associate justice of the Supreme Court of the State of New Jersey, William A. Wachenfeld:

A LONG CAREER

It's hard to realize that the seemingly ageless William A. Wachenfeld is 70, but he is. And today in obedience to the Constitution he must step down from the supreme court seat he has occupied 12 years.

Before that he served 13 years as prosecutor of Essex County. Next year will bring the 50th anniversary of his graduation from law school. A busy lawyer, he found time for politics and public affairs. He might have been Governer had he not twice refused to be a candidate.

William Wachenfeld was not everyone's idea of a supreme court justice when Governor Edge appointed him in 1946. Vigorous and combative and brusque of speech, he seemed better fitted for administrative office.

It was out of character for him to sit patiently through the endless, often tenuous argument which judges must endure, and he himself doubted that he had the temperamental requisites for the bench. Nevertheles, he made the adjustment successfully, becoming one of the court's most useful members.

As might have been expected, he became a notable dissenter. Some of his disagreements with his colleagues were scholarly explorations, others, especially those dealing with criminal law, consisted of single scathing paragraph or page.

His retirement brings to a close a public career of unusual length and commendable performance.

Bill Aims To Spur Investing Abroad

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Sunday, February 15, 1959:

BILL AIMS TO SPUR INVESTING ABROAD—TAX-CUT PLAN TERMED STEP TOWARD SHIFTING FOREIGN AID TO PRIVATE HANDS

(By Brendan M. Jones)

Any proposals for tax reductions these days would seem—with a bit of understatement—to be somewhat out of tune with the times.

But one such proposal has been gaining serious consideration and even slightly optimistic support among businesses engaged in trade and other foreign operations. It is a bill (H.R. 5) providing various Federal tax benefits as a stimulus to increased business investment abroad.

In view of its sponsor, Representative HALE BOGGS, Democrat, of Louisiana, the bill ultimately could result in a saving on Government spending and possibly a tax revenue gain. His proposals, which he maintains are valid and moderate, would provide some rate reduction as well as more liberal tax treatment of foreign-investment income.

Potentially the proposed tax incentives could, by spurring expansion of foreign investments, produce more taxable income. But at the outset they would cause a loss of revenue. The maximum estimate of such loss, according to Mr. BOGGS, is $500 million a year. Such a figure, he feels, is relatively insignificant compared with multiple billions spent on defense and foreign aid.

A PRACTICAL STEP

Essentially, the main merit of the bill, Mr. BOGGS asserts, is that it is a practical step toward getting private enterprise to take over the job of foreign economic aid. While this might not mean any direct saving to the

average taxpayer, it could conceivably ease increasing demands on Government revenues, which threaten to force tax increases.

The job of assisting economic development abroad has been given new urgency by Soviet Russia's increasing competition in trade and aid. The Communist drive is aimed primarily at the less developed countries. These are also the countries that private foreign investment has tended to shun. The reasons for this attitude are many and varied, but largely they come down to a matter of the risks exceeding the rewards.

The main fact of the Soviet challenge, however, is that it promises to increase the need for foreign economic assistance over an indefinite period. It has been recognized that, despite high appropriations, the efforts of Government foreign aid will become increasingly inadequate to meet the problem.

By contrast, private industry has a vast reserve of capital and technical skills that are regarded as more than sufficient to fill the prospective task. Taxation, however, while not the only impediment to increased foreign investment, represents a major obstacle to its rise along lines best suited to the long-term Soviet competition.

Such, briefly, is the background for the special significance of the Boggs bill. What then are its prospects for enactment, and what also are some of the basic reasons for special treatment of foreign investment generally?

Mr. Boggs gained an important measure of support for his bill last week from local business groups. It came as a result of a meeting organized by the international section of the New York Board of Trade. The meeting, attended by some 500 representatives of business, banking, and trade groups, brought general endorsement of the measure from key elements of the foreign-trade community here.

Opposition to the measure has been expressed by the American Tariff League, which last week described the bill as a move to encourage migration of American industry to foreign countries. The league, which has been a leading advocate of more protective tariffs, said the bill would be discriminatory in giving American corporations abroad a lower tax liability than those engaged in domestic production.

LACKS ACTIVE SUPPORT

Apart from the attitudes of business groups, however, the Boggs bill lacks active administration support. Actually it is in line with broad administration policies as set forth in a similar measure that suffered defeat in 1954. Treasury officials are reported opposed to the measure on general principle, but there has been evidence of some support for it from officials of the Departments of State and Commerce.

According to some calculations, the bill has a fair chance of bipartisan support. It may also have an appeal to those legislators who, while opposed to increased foreign economic aid, would like to find an alternative because of concern with the Russian challenge.

Basically the bill seeks to permit a certain flexibility for reinvestment of foreign-earned income. It does this through a number of deferral procedures under which such income would not become subject to tax until repatriated in the form of dividends.

Its tax reduction feature is based on the precedence of existing law granting a 14-point lower tax rate to companies organized under the Western Hemisphere Trading Corporation Act. This lower rates established in 1942, applies to companies qualifying under the statute as doing at least 95 percent of their business in Western Hemisphere countries other than the United States. The Boggs bill would simply extend this principle on a world-wide basis.

Another main part of the bill would establish a new kind of foreign business corporation. Such a corporation would be treated as a company operating abroad, although it would be based in this country. Thus, it would be legally obliged to report earnings to the Internal Revenue Service. This provision would counteract the trend of business to set up corporations in foreign tax havens where, apart for other advantages, they are under no legal obligation to report operations to United States tax officials.

Claims for more favorable tax treatment of foreign-earned income range from the principle that income should be taxed only where earned to consideration of extra hazards of investment abroad. That foreign-based corporations have to pay foreign as well as Federal taxes is often ignored.

In addition, it is contended that foreign investment besides entailing special risks makes a basic contribution to the domestic economy by assuring raw materials sources and increasing industrial exports. Now, however, the strongest argument for favorable treatment is based on the fact of foreign investments' relation to foreign policy and national security interests.

Finally, a recent Department of Commerce survey has shown that companies interested in foreign operations regard Federal taxation as the major single obstacle to increased foreign investment.

Problems Plaguing American Agriculture

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks, I include the Daniel F. Rice & Co. commodity letter of February 18. All who are genuinely concerned with solving the problems plaguing American agriculture today will be interested in some of the proposals advanced in this letter:

COMMODITY LETTER

The time has come in matters of agricultural legislation to get on one horse and ride off in one direction. It has been clear to us for a long time that an agricultural support program cannot be all things to all people; that it cannot repeal the immutable laws of supply, demand, and price. If a price program is designed to support prices above levels that would otherwise exist it has to have enough teeth in it to command the supply so that the price can be put where it is wanted.

This simple principle has either not been clear to the administration and the Congress or they have chosen to ignore it. The Congress has tried to gallop off in two directions at once—toward higher prices that would prevail in the marketplace and unlimited production. The Department of Agriculture has thrashed about in all directions at once. They have advocated lower price supports but have never wanted to go the whole hog and eliminate supports, as the reasoning of their position would dictate. They have argued that lower supports would cut production and have sat for 6 years with the same argument while prices went down and production up. They have taken huge quantities of grain off the market through loans to support prices and at the same time have sold huge quantities which have weighed very heavily on prices. The Department tried a soil bank scheme. It was never clear whether this was to cut production or to improve land so that we could get more production.

The result of all of this confusion has been lower prices, the accumulation of huge stocks, expenditure of vast sums of public funds, and reduced farm income. In early 1953 when this administration took office wheat was selling for $2.45 per bushel, corn $1.65, oats 92 cents, and soybeans $3. Now wheat is $2, corn $1.20, oats 68 cents, and soybeans $2.24. By way of contrast the Dow-Jones industrial stock price was 287 in January 1953 and now is 590. The agricultural situation is becoming critical. How long farmers can continue to take the kind of economic punishment that they have been submitted to in recent years is conjectural. There is no doubt that justice calls for an immediate reversal of the recent trend.

During this session of Congress the agricultural problem is getting more than the usual amount of attention. Three things appear to be behind this interest: (1) attempts to capture the farm vote, (2) concern over the high cost of farm programs, and (3) concern over the ineffectiveness of existing programs. The administration continues to beat the same old drum for lower supports. With regard to wheat they seem to think that some varieties and qualities would go as low as $1.12. The Congress is kicking around two price proposals. One is for direct income deficiency payments on the amount of the commodity used domestically and the other is a scheme to use food as an instrument of peace. The second presumably means to increase our export dumping programs. One wonders if there are any more ways to dump than are already being used.

None of the suggestions get to the point of a fair price in the marketplace. There is no reason to think that a fair price to farmers cannot be determined and production and inventories adjusted and managed so that this fair price can be maintained. There is no reason why agriculture cannot be run as a business so that it produces when there is a profit and does not produce when there is a loss. There is no reason why farmers should be expected to subsidize consumers, both domestic and foreign, and why government should in turn be forced to heavily subsidize farmers.

To put agriculture in a profitable position a four-step program needs to be adopted:

1. Establish fair prices for the main agricultural products. A new system needs to be developed to take into account new technology and new methods.

2. Establish production goals that will result in the desired prices. These goals need to be established by a board of nonpartisan experts.

3. Enforce multiple cross compliance. No system of control will work if land is taken out of one crop and put into another, creating a problem somewhere else. Land taken out of one crop has got to go out of production.

4. Freeze existing surplus stocks. When production and use are brought into balance these stocks can be appraised and their disposition determined. We may want to keep them as a reserve against atomic attack. Stocks can be frozen. If one bushel of corn in Crossroads, Iowa, needs to be sold because it is going out of condition, CCC can buy a bushel at Crossroads to replace it.

This program cannot be compromised and made to work. Either we adopt this program or we return to a nongovernment situation. We cannot continue to ride two horses in opposite directions.

A "Dime Dollar" Can Result From Failure To Curb Inflation Threat

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Jackson, Miss., Clarion-Ledger, February 12, 1959. It refers to some views of our colleague, the gentleman from Mississippi, Mr. COLMER, who as we all know is one of the soundest and most dedicated Members of this body. The editorial follows:

A "DIME DOLLAR" CAN RESULT FROM FAILURE TO CURB INFLATION THREAT

Representative WILLIAM M. COLMER, distinguished Member of Congress from Mississippi, warns that while communism cannot conquer this Nation, inflation easily can unless every effort is made to prevent it. He stresses that the preservation of a strong economy in any country requires vigilance on the part of the people against inflation.

In our time, says Representative COLMER, we have seen the ravages of this economic disease in many nations throughout the world. It has gained a foothold in the United States and unless checked, it could become the economic cancer that could disastrously soften us. Thus, America could become fair game for the Communists.

Lenin himself, father of communism, said the way to conquer us would be to make this country spend itself into bankruptcy. As Representative COLMER points out, our public debt now stands at $282 billion. Interest on the public debt in 1958 was $7,867 million. This staggering interest on the national debt is now twice as much as was required to operate the entire Federal Government three decades ago.

"One of the greatest causes of inflation," says Representative COLMER, "is unquestionably the continued deficit spending by our Federal Government. Carried on long enough, it is bound to destroy the economy of this country and when that happens, our whole way of life will disappear too. The question that we must face up to is: 'What are we going to do about it?' On the answer hangs the fate of our Nation."

Voicing similar concern over the perils of inflation, Federal Reserve Board Chairman William Martin has recently warned that a sound dollar is as essential to American strength and security as atomic bombs and missiles. The people's savings, their life insurance, their investments, their pensions, all depend on a stable currency.

The integrity of the American dollar, the Federal Reserve Board Chairman has emphasized, depends upon economy in government at Federal, State and local levels. There are but three ways to meet the unpaid bills of government—through taxation, inflation or repudiation. Chairman Martin offers this disturbing conclusion:

"A nation that piles debt upon debt, refuses to balance its budgets and continues to run in the red, inflates its currency, circulates phoney money, undermines its defense and destroys the security of its citizenship. We the people must live within our income or perish. Only a government that conserves can survive. We will save or sink."

On top of this warning comes another, from William A. Burkett who is superintendent of banks for the State of California, predicting that we will have a 25-cent dollar in this country before too long if the Federal Government does not do something to check inflation. He is quoted as saying, in an advertisement in the American Banker published by the Hancock Bank at Bay St. Louis, Miss.

"If the history of the last 100 years teaches us anything, it is that inflation is more dangerous to the people than any other thing except war. We who have lived to see a 50-cent dollar could live to see a 25-cent dollar or a 10-cent dollar if the Government and the people continue to spend beyond their means and keep going deeper into debt."

Legislation Is Needed To Free Our People From the Foreign-Made Shackles of Unemployment

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. SAYLOR. Mr. Speaker, first I should like to compliment the gentleman from West Virginia [Mr. BAILEY] for his intense and enthusiastic efforts to get through some type of legislation that will free our people from the foreign-made shackles of unemployment. He has done just about everything humanly possible to return to Congress the tariffmaking authority established in it by the Constitution. He deserves a large measure of credit for whatever help the statutory escape clause has been. Unfortunately, diplomatic considerations have superseded economic reality in the final determination of too many escape clause cases, and I think that the legislation proposed by my close friend from West Virginia here today is very sound, practical, and urgently needed. My remarks will be brief. Later I am going to insert some figures on imports that should alarm even the most fervent freetrader, and I want to include a quotation, from a respected naval officer, that belongs in a discussion of this kind.

First, I should like to mention that I am pleased with the reaction of the Westinghouse Co. to Tennessee Valley Authority's plans to purchase foreign generating equipment without so much as a by-your-leave to the American manufacturers and workingmen who have been subsidizing TVA from its inception. Westinghouse has arranged for Governor Lawrence, of Pennsylvania, to come down to meet with our congressional delegation on this important issue Thursday evening. Because of Pennsylvania's wide unemployment, I think it necessary for everyone in the State and Federal Governments to coordinate all efforts in overcoming the economic obstacles that have so many of our families in actual poverty. The detrimental affect of an oversupply of alien commodities entering American markets is an obvious factor in Pennsylvania's economic problems. I hope that more and more of our State's delegation will walk with those of us who have been striving for whatever legislation is required to remedy the present deplorable situation.

We may as well realize one thing, Mr. Speaker. We are not going to stop Government agencies from ordering supplies and equipment from foreign manufacturers if we permit these departments and agencies themselves to make the decisions. For 25 years Government departments have been subjected to such generous doses of international propaganda that free trade has become one of their obsessions. Any time that hearings or inquiries are held on the matter of foreign trade, an assortment of representatives of a miscellany of Government departments always appears with briefcases chockfull of data gathered from hosts of countries throughout the world. These Government officeholders who come out to cheer for further lowering of trade barriers have traveled—at Government expense—hither and yon among the nations of Europe, Asia, and South America, but they apparently are not interested in becoming clued on what is taking place back where the tax dollars are collected.

The average Government worker living in Washington and in Foreign Service is not exposed to the economic ups and downs experienced in the various parts of our own country. Week after week, and month after month, and year after year there are heavy pockets of unemployment throughout central and western Pennsylvania, just as there are in the State of the gentleman who has granted me this time. The U.S. News & World Report for February 20 contains an indication of why Government officials in the Nation's Capital are either uninformed or uninterested about what is going on back at the ranch. "How's Business Around the Country" is the title of a series of tables reporting on conditions in selected communities from coast to coast. Of the 33 eastern cities listed, 19 are marked as victims of substantial unemployment; 13 are classified in the moderate unemployment category; one city—Washington, D.C.—has slight unemployment. As a matter of fact, Washington is the only city of the 78 studied for the United States as a whole in which unemployment is not either moderate or substantial.

While the parties responsible for import-export policy are assured of their paychecks without interruption, the fellow back home who is getting the bill for these services finds his means of livelihood taken away by incredible foreign trade policies. He has only Congress to look to for help. I suggest we give it to him by demanding quick action on this bill to amend section 350 of the Tariff Act of 1930 as amended.

I also ask that the House enact the bill which I have introduced to restrict imports of residual oil, the product of foreign refineries which has washed out thousands of jobs in our mine and rail communities. These are the figures which I wish to include in the RECORD:

From January 1 to February 13, 1959, the daily average for residual oil imported into the United States was 807,700 barrels. If this rate continues for the remainder of the year, the 1959 total

will come to 294,830,500 barrels—or more than 70 million tons of bituminous coal in energy equivalent. Keeping that figure in mind, please also note this statement by Adm. Arleigh A. Burke as reported in the Washington Star on February 15:

The possibility of a surprise attack by submarines is very great, and it is causing us a great deal of concern.

Admiral Burke's remark was made at a recent hearing before the Senate Disarmament Subcommittee, at which time it was disclosed that of Russia's 500 submarines, about one-half are long-range craft.

Mr. Speaker, who among us would dare to depend upon foreign oil that must travel over the lonely seaways that even now may be infested with Red submarines carrying the most destructive missiles in the history of naval warfare? The daily imports of residual oil for the first 7 weeks of this year have been equal to 193,830 tons of bituminous coal. In an emergency this tonnage—plus enormously more coal to be used in the actual war effort—would be required. I suggest that, instead of forcing our unemployed coal miners to wander about the country seeking employment opportunities in other industries, we encourage them to remain in their mining communities. They are a vital component of our national defense. They will be ready for whatever demands are made upon them if our foreign trade policies will only give them a chance. The same principle applies to railroad workers. We are not going to have them when we need them if we permit their jobs to be taken away unnecessarily in the meantime.

We may equate the position of the coal miner and the railroad worker to that of the Westinghouse employee who will have no work if foreign generating equipment is allowed to come in and price American products out of the market. We can put the pottery worker, glassmaker, and all other victims of inequitable foreign trade competition in the same category. We owe it to them and to our security to keep them occupied now, for without them we would not have a chance against the common enemy in an emergency.

Taxes Take One-third of Average Family Income

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. HOSMER. Mr. Speaker, lest we forget the burden of taxes to support governmental spending, Robert G. Shortal, of United Press International, recently outlined them as follows:

TAXES TAKE ONE-THIRD OF AVERAGE FAMILY INCOME

(By Robert G. Shortal)

NEW YORK.—Joe Smith is a typical American. He works full time for a company which pays him $4,500 a year and part time for the Government which takes $1,393 from him.

The sad fact of the matter is that Joe Smith spends more of his working day earning his taxes than he does to pay for any major item in the family's budget.

The Tax Foundation estimates that the average worker toils 2 hours and 29 minutes each day to earn his taxes, compared with 1 hour and 39 minutes to earn his food money, 1 hour and 25 minutes to pay the mortgage or rent, 37 minutes for clothing, 42 minutes for transportation, 24 minutes for medical care, 20 minutes for recreation, and 24 minutes to pay for his other purchases.

It has been estimated that direct and hidden taxes siphon off one-third of the family's income.

Everybody is painfully aware of income taxes, which range up to 91 percent on individual incomes and 52 percent on corporate incomes. Most people also are aware of the excise taxes they pay when they buy cigarettes, liquor, or furs.

However, not many Americans are aware of the number of taxes hidden in the price of things they buy. The really hidden ones are the excise taxes which must be paid by manufacturers.

Manufacturers of refrigerators, for instance, must pay a 5-percent tax on each unit they sell to retailers. Although this tax doesn't appear on the price tag, it is included in the price the consumer pays.

The Tax Foundation estimates that there are 151 taxes on a loaf of bread, 116 on a man's suit, 100 on an egg, 150 on a woman's hat, and 600 on a house. Taxes, direct and indirect, account for 25 percent of the $2,000 cost of a low-priced car.

The plain fact of the matter is that only people pay most of the hidden taxes. Business—from the giant corporation to the corner grocery store—collects them.

The foundation points out that companies, large and small, couldn't stay in business long if they had to pay all these taxes out of their own pocket. Taxes are a cost of doing business and are taken into account when setting prices.

The foundation said practically everything a consumer buys has a hunk of tax hidden in the price.

Lincoln's Monetary Policy

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I think it would be appropriate on this anniversary month of the birth of Abraham Lincoln to call to the attention of the House the following text of his monetary policy. I believe this policy clearly shows the understanding Abraham Lincoln had of the powers of the Government in relation to money:

LINCOLN'S MONETARY POLICY

Money is the creature of law, and the creation of the original issue of money should be maintained as an exclusive monopoly of National Government.

Money possesses no value to the State other than given to it by circulation.

Capital has its proper place and is entitled to every protection. The wages of men should be recognized in the structure of and in the social order as more important than the wages of money.

No duty is more imperative on the Government than the duty it owes the people to furnish them with a sound and uniform currency, and of regulating the circulation of the medium of exchange so that labor will be protected from a vicious currency, and commerce will be facilitated by cheap and safe exchanges.

The available supply of gold and silver being wholly inadequate to permit the issuance of coins of intrinsic value or paper currency convertible into coin in the volume required to serve the needs of the people, some other basis for the issue of currency must be developed, and some means other than that of convertibility into coin must be developed to prevent undue fluctuations in the value of paper currency or any other substitute for money of intrinsic value that may come into use.

The monetary needs of increasing numbers of people advancing toward higher standards of living can and should be met by the Government. Such needs can be served by the issue of national currency and credit through the operation of a national banking system. The circulation of a medium of exchange issued and backed by the Government can be properly regulated and redundancy of issue avoided by the withdrawing from circulation such amounts as may be necessary by taxation, redeposit, and otherwise. Government has the power to regulate the currency and credit of the Nation.

Government should stand behind its currency and credit and the bank deposits of the Nation. No individual should suffer a loss of money through depreciated or inflated currency or bank bankruptcy.

Government possessing the power to create and issue currency and credit as money and enjoying the right to withdraw both currency and credit from circulation by taxation and otherwise, need not and should not borrow capital at interest as the means of financing governmental work and public enterprise. The Government should create, issue, and circulate all the currency and credit needed to satisfy the spending power of the Government and the buying power of consumers. The privilege of creating and issuing money is not only the supreme prerogative of Government, but it is the Government's greatest creative opportunity.

By the adoption of these principles, the long-felt want for a uniform medium will be satisfied. The taxpayers will be saved immense sums in interest, discounts, and exchanges. The financing of all public enterprise, the maintenance of stable Government and ordered progress, and the conduct of the Treasury will become matters of practical administration. The people can and will be furnished with a currency as safe as their own Government. Money will cease to be master and become the servant of humanity. Democracy will rise superior to the money power.

A Report on Cuba

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of a letter I recently received from Mr. Harry E. Boyes, news editor of radio station WION, Ionia, Mich. Mr. Boyes makes a very interesting and informative report on his recent visit to Cuba and the conclusions he arrives at

as a result of his many personal contacts with the Cubans themselves:

FEBRUARY 9, 1959.

Hon. ALVIN M. BENTLEY,
House of Representatives,
Washington, D.C.

DEAR AL: I mentioned to you on the phone the other day I was sending you a report of my impressions of my recent trip to Cuba. Here it is. I hope what I have to say will be of interest and possibly a help to you.

If I was to draw any single conclusion from my short stay in Havana it would be this: Our foreign policy with regards to Latin America is presently facing a crossroad. This conclusion is reached from many observations.

The first is this: The Cubans above all desire friendly relations with the United States. This desire stems from many things, among them the hope that the United States will assist them in restoring their economy. They do not necessarily wish the United States to do this through financial channels, but in many instances would prefer technical assistance and other aids that would allow them to fully exploit their own potential. Cubans resent the American foreign policy that allows our big business interests a free rein in their country. This resentment against our large corporate structures stems from the stifling of Cuban business, of which our business interests can be and sometimes are, guilty. Such resentment of American business in particularly noticeable today because the Cubans feel the Republican administration favors and aids this type of operation. In spite of resentment Cuba has a tremendous feeling of affection toward this country. They look upon us as big brothers.

My second point would deal with the violent change of government. Either our State Department was completely out of touch with the feeling of the Cuban people in the months leading up to the overthrow of Batista, or such knowledge was kept hidden from the American public in general and Members of Congress, such as yourself, in particular. I refer to some of the statements voiced about the change of government by certain of our Congressmen—statements referring to "purge" and "blood baths." Granted these men are entitled to express their opinions, but when responsible men in Government "sound off" on any subject, their words are usually taken to be the official view of the United States Government which, as you and I know, may not always be the case; but to people who have endured years of oppression such words cut deeply. It was my firm belief upon leaving Cuba that the executions were fully justified. Without going into great detail let me simply say, those executed were sadists of the worst sort and the Cuban people lived in the shadow of terror and oppression created by these men. Had not the Castro regime embarked upon the course it did, Cuba would have experienced a state of anarchy similar to 1933 and many innocent people would have lost their lives. My point in this case is this, in dealing with the best of our friends let us in the future either know what is going on, or choose our words more wisely.

Thirdly. I had the opportunity of speaking with several South American newsmen and I definitely received the impression from them that we are not the most popular people in the world in eyes of the citizens of their countries. Some of these newsmen were openly hostile to those of us from the United States. Others merely voiced their knowledge of the feeling within their countries.

Fourthly. The swing in the Latin Americas is definitely toward democratic forms of government. These people sincerely desire to live in friendship with the United States, but we feel that their friendship is only wanted in time of need. They would like the United States to regard them as partners. There is a new awareness of government "by the people" in this part of the world, and the Latins know that they need help to develop the economies in which those governments can exist. They despise having to make overtures to Russia in the hopes of forcing the United States to come across with what they need. A good example of what I refer to is the recent oil drilling equipment "deal" conducted in Argentina.

These are some of the reasons for feeling the way I do and for believing that the next move on our part will be extremely crucial for this country. However, I also believe that a solution exists to the "crossroads" situation that I mentioned earlier.

If the United States can embark on a policy that would aid Cuba in developing its industry and agriculture so that this country can achieve even a portion of its tremendous potential, then the rest of Latin America would begin to look upon us again with favor. To me, Cuba is the place to begin because of its consistently friendly feeling toward the United States and because the results that we need can be more quickly achieved in Cuba than elsewhere in Latin America. However, Cuba is only a beginning and in this ever changing world a strong Western Hemisphere is just as desirable—perhaps more so—than a friendly Europe.

Many things I saw in Cuba—poverty, great wealth, lack of facilities, and incomplete construction—are well known to all and need no explanation at this point, however, they also are factors which will contribute to the end results.

These are strictly my conclusions but I spent much time in Cuba talking with people, those working in shops, taxi drivers, hotel clerks, rebels, and with people of prominence, and the ideas that I have set forth are the composite I reached through these conversations.

I hope these thoughts will be of assistance to you.

Best regards,

HARRY E. BOYES.

City of Mayfield Heights, Ohio, Memorializes the Congress To Eliminate the 10-Percent Tax on Telephone Calls

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mrs. BOLTON. Mr. Speaker, like so many other temporary taxes, the 10-percent excise tax on telephone service levied during World War II to reduce the load on overburdened telephone facilities and to raise funds for financing the war effort is still with us. While there is some justification for continuing such a tax on luxury items, the telephone certainly cannot be put in this category. In the home and in business today the telephone is a necessary public utility just as gas, electricity, etc.

On February 23, the council of the city of Mayfield Heights, Ohio, under the leadership of Mayor Edwin T. Frantz, approved a resolution memorializing the U.S. House of Representatives and the U.S. Senate to eliminate the 10-percent tax on telephone calls. Under leave to extend my remarks in the RECORD, I include the resolution herewith:

RESOLUTION No. 1959–23

A resolution memorializing the U.S. House of Representatives and the U.S. Senate to eliminate the 10-percent tax on telephone calls

Whereas the Council of the City of Mayfield Heights hereby respectfully petitions the Members of the U.S. House of Representatives and the Members of the U.S. Senate to eliminate the 10-percent tax on telephone calls, for the following reasons:

1. That the emergency which existed at the time this tax was created no longer exists.

2. That said tax is burdensome upon telephone users: Now, therefore, be it

Resolved by the Council of the City of Mayfield Heights, State of Ohio,

Section 1: That this council hereby respectfully memorializes the Members of the U.S. House of Representatives and the Members of the U.S. Senate to eliminate the 10-percent tax on telephone calls.

Section 2: That the clerk of council be, and she hereby is, directed to send certified copies of this resolution to U.S. Senators LAUSCHE and YOUNG and Congressman BOLTON.

Section 3: That this resolution shall take effect at the earliest time allowed by law.

M. A. LANESE,
President of Council.

Attest:

ALICE K. SUPPLE,
Clerk of Council.

Approved by the Mayor:

EDWIN T. FRANTZ,
Mayor.

U.S. Economic Supremacy Is Put to Test by Khrushchev's Threat

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Mr. Carroll Kilpatrick which appeared in the Washington Post and Times Herald on February 14, 1959:

U.S. ECONOMIC SUPREMACY IS PUT TO TEST

(By Carroll Kilpatrick)

Premier Nikita S. Khrushchev's economic challenge to the United States is regarded by experts in government and private circles here as exaggerated in detail but nevertheless a serious long-range threat.

Some officials go so far as to say that this economic challenge has now become greater even than the military challenge, and that Russia and China combined eventually will outproduce the free industrial countries.

President Eisenhower, however, told his last press conference that he did not believe an expanded Federal program was necessary or desirable as an answer to the Soviet 7-year plan.

In Khrushchev's speech last month at the 21st Communist Party Congress, the Soviet leader extolled the complete superiority of socialism over capitalism and said that by 1970 Russia will attain the world's highest standard of living.

Khrushchev told the assembled party delegates that the Soviet's fundamental economic task is to overtake the most highly

developed capitalist countries in per capita production.

"If we calculate on a per capita basis," the Soviet Premier said in the course of his lengthy discourse, "we will probably need, after the fulfillment of the 7-year plan (in 1965), about 5 more years to catch up with and outstrip the United States in industrial output.

"Thus by that time (1970), or perhaps sooner, the Soviet Union will advance to world leadership both in absolute volume of production and in per caipta production."

Secretary of Commerce Lewis L. Strauss, in a speech Wednesday in Chicago, dismissed Khrushchev's claims as boasting, and pointed out that in 1958 the gross national product in the United States was $437 billion compared with about $180 billion in Russia if you want to believe their statistics.

Nevertheless, Strauss warned that Russia's foreign trade offensive is a serious menace which the general public does not yet appreciate.

Russia is not in business for business, but for economic warfare, the Secretary said.

It is this new trade potential that bothers experts more than Khrushchev's grandiose claims of beating the United States in total and per capita production.

With its growing econmic power, Moscow will be strong enough to use trade more and more as a weapon of the cold war, directing trade with one hand where it will do the most good from the Communist viewpoint and withholding trade with another hand if it decides to crack down on a country that is not toeing the line

Even more disastrous for the West would be a demonstration of Soviet economic progress at a time of economic recession in the leading capitalist country.

If Moscow is able to conduct its economic offensive on the basis of greatly expanded production at home, and if the United States decides it cannot afford to promote certain economic programs either at home or abroad, the lesson would quickly be apparent to all the uncommitted countries as well as to America's friends.

Some experts argue that the statistical race between the United States and Russia is not too significant. They quote Paul-Henri Spaak, Secretary-General of NATO, who recently said, "I feel that a rich Communist is probably less to be feared than a poor Communist."

"What we must realize," Spaak said, "is that the Communist goal is not merely an economic or a social threat; it is much wider; the ambition of communism is to be the wellspring of a new civilization, in which the essential foundations of our spiritual, intellectual, moral and political life will be challenged."

One expert summarized the issue this way: "For us to say we cannot afford aid to India or cannot afford adequate schools, or cannot afford a proper defense, is to admit failure.

"We must maintain a satisfactory rate of growth—not to postpone the time the U.S.S.R. matches our productive capacity but to demonstrate for ourselves and the rest of the world that our system works."

The rate of progress could be more important, particularly in the eyes of the underdeveloped countries, than the absolute difference between the United States and Russia. Russia's rate is now between 6 and 8 percent a year and China's is reportedly as high as 10 percent. The United States rate, which dropped considerably last year, averaged 4 percent between 1947 and 1956.

It is conceded that Russia's rate of growth will continue to be about twice that of the United States, but even so, gross national product in the United States in 1970 will be almost twice Russia's. Not until the turn of the century according to American experts, will Russia equal America in total output.

As one indication of Russia's more formidable economic base is the substantial industrial progress that has been made in the Eastern European satellites. To the surprise of most observers, postwar development in the satellites has been impressive, and Poland, East Germany and Czechoslavakia are now in the vanguard of the Soviet bloc in seeking trade contracts with the Afro-Asian countries and Latin-America.

Jan Wszelaki, prewar economic adviser to the Polish Government and specialist in Eastern European economics, shows in a new study for the National Planning Association that the satellites have obtained "impressive economic footholds" in a number of underdeveloped countries. The Eastern European countries and Russia need raw material imports which the underdeveloped countries are all too eager to sell.

In return, the satellites are increasingly able to "supply the kind of industrial goods the developing countries can use," Wszelaki says, adding that Moscow has assigned this trade "high poltical priority."

Instead of being a burden on the Soviet Union, the satellites have become of great value, particularly in the last year or two, he writes.

Wzelaki declares that "control over East-Central Europe continues to be more than marginally important to Soviet economic development and * * * is of at least equal value in the Soviet trade-and-aid offensive."

He further notes, as part of Communist economic development that Moscow soon will establish an international bank to finance economic projects in uncommitted countries.

Russia now is a poor second to the United States in total industrial production. In the reasonably near future it will be a strong second—a fact that will make a great impression on the rest of the world unless—all experts agree—the United States makes the best possible use of its machinery and resources to strengthen itself and its associates in the free world.

Our Surplus Crops Could Be Utilized in Industry if We Make a Real Effort

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. WEAVER. Mr. Speaker, for the last decade we have been hearing the claim that if get rid of our surplus farm commodities we will be a long way toward solving the farm problem. So far, nothing attempted by this administration or previous ones has done anything to get rid of these surpluses. Six years ago we had $1,118 million worth of surplus commodities stored in Government warehouses and bins. Today, that figure has climbed to nearly $5.5 billion.

There are any number of ways of eliminating such surpluses. One is to try the old depression program of destroying them. A much sounder method has been advocated in this House by a number of Members and in the other body by some of our most capable Senators. I refer to the program for industrial uses of these farm crops.

I am indeed proud that a fellow citizen of Nebraska, Mr. J. Leroy Welsh, has done a great deal toward making this a real possibility rather than just wishful thinking. As head of the President's Commission on Industrial Uses of Agricultural Products he has supervised the writing of a very important report along these lines.

However, for some reason there is considerable opposition to a real development of industrial uses of farm commodities. The Secretary of Agriculture has been far from friendly to this program and has done his best to fill it with his halfhearted support. One bone of contention is that the Department under Mr. Benson has demanded sole right to control expenditure of any funds allocated to this important program. In this direction lies further stalling, further delay, and eventual death through bureaucratic strangulation of this potential benefit to the American people and the American farmers.

It is the contention of the able and sound thinking Mr. Welsh that a separate board would do the best job and that this board must have wide discretion to farm out research to industry and private research organizations rather than attempt to keep it within the Government.

Recently the Omaha World-Herald carried a lengthy and very thorough article by Bob Considine concerning the subject. For the benefit of my colleagues, particularly in the cities, I would like to bring this article to their attention. The story follows:

HOW TO GET RID OF FARM SURPLUSES

(By Bob Considine)

OMAHA.—Telegraph poles made of corn? Automobile tires from wheat? Nylons from barley? Peppier gasoline from oats? Protein for the protein-starved world from soybeans?

Well, we'd better start thinking seriously about these and other ways of getting rid of our colossal grain surpluses or we'll be sorry, the country's leading authority on the crisis told us.

He is J. Leroy Welsh, Chairman of President Eisenhower's Commission on Increased Industrial Use of Agricultural Products.

PROGRESS WON'T STOP

Mr. Welsh gave us some hair-raising facts about a problem that seldom swims before the ken of city folks.

"By July 1 the Government will have in storage $9 billion worth of surpluses," the Nebraska grain dealer said.

In 5 years, if this program is continued, and we find no adequate use for the produce, we'll have between $20 and $30 billion tied up.

"Warehouse rent on what we've got right now comes to more than $1 million a day. Every day. Seven days a week.

"The Government just can't stop agricultural progress. It pays the farmer to take part of his land out or food production, but then the State of some other organization turns around and shows him how to raise more on his remaining land than he raised on the whole dam' acreage."

MOUNTAIN OF PROTEIN

"Take Nebraska. By 1960 we'll have enough irrigation wells pumping—about 22,000 of them—to produce a full crop without one drop of rainfall.

"Here, and elsewhere, the Government can't count on drought to slow things up."

Mr. Welsh, whose commission's recommendations have not been passed by the House of Representatives, said that much of

the world is ready and eager to buy the protein content of our grain reserves.

"They don't want the stuff as is," he put it. "Almost every country in the world has its own surplus of starch. But there's a lot of protein in there with the starch if we ever get industrious enough to recover it. It comes to 34 percent of the total bulk of grain.

"Seven years ago this residue, which grain men call 'bitter' and fed to animals, was made palatable for humans when blended with other foods.

"But as far as I know only one major American food producer has made use of this great discovery. He put it in a breakfast cereal.

"The rice-eating peoples of Asia hunger for protein we're letting go to pot.

"Matter of fact, people in most countries need more protein in their starchy diets. Italy, for instance. We need markets like that desperately if we're going to whittle down the size of our surpluses."

Mr. Welsh pointed out that 1 bushel of grain will yield 2¾ gallons of alcohol, for hosts of purposes over and above the best known application of the stuff.

JUST 10 PERCENT

"If the petroleum people would substitute as little as 10 percent of their varied production with grain-produced material, we could eliminate our costly surpluses and stop paying farmers not to do what God intended them to do," Mr. Welsh asserted.

"If the Government had given grain to the tire companies to make synthetic rubber—given it free—we'd all be saving money today.

"If the first oil prospectors had found starch instead of oil, we'd be making today out of starch everything that is made from petroleum.

"After all, there's not much difference, molecularly, between a field of corn and an oil bed. The oil was once vegetation. It all comes out even in the laboratory."

BUT IF WE DON'T

"But the petroleum industry won't buy this huge source of raw materials, a source that renews itself all over the Nation with every crop.

"The plastics and synthetics trades have been slow to dip into our mountains of surpluses, too.

"Enough protein to add stature to countless millions of people, upgrade the health of whole areas of the earth, lies unexploited in our bins.

"Nothing is going to stop the American farmer from producing more than this country needs, what we can sell, and what we can give away abroad without hurting our foreign friend's markets.

"But if we don't soon put this bounty to work we'll go bust."

Republicans To Draft Credo

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. PELLY. Mr. Speaker, the history of intra-party differences and conflicts over issues and policies, as between members of the same political party would fill a book and make interesting reading. Actually it is remarkable that under the stress of strong personal loyalties and the resulting cross-convictions of thought that our two great political parties have not splintered into a multiparty system as is the situation today in modern Italy and France. All of which is very much to the good of the great Nation which is so beloved in common by members of both the Republican and Democratic Parties. Moreover, I might add that I doubt if any present Member of Congress will ever live to see a reconstituting or readjustment as between the parties with conservatives joining with conservatives and liberals joining with liberals or some such regrouping.

From time to time, however, in the process of establishing majority views and finding a common basis for agreement, contention manifests itself. Early in this session of Congress Republicans in the Senate in selecting a floor leader revived the modern versus conservative argument of their party. Then in mid-January, in Des Moines, Iowa, at the meeting of the Republican National Committee, partisan roles and policies were under attack and made headlines.

Now at the Senate end of the Capitol, the Democrats are in the limelight with dissident voices asking for more party caucuses to afford wider participation in formulating legislative programs and policies.

But to return to matters pertaining to my own party, which obviously I can discuss with more propriety, Republican Chairman Alcorn has just announced a 44-member committee to draft a long-range statement of Republican Party policy and objectives.

Naturally the question arises, Can any such study group of either party representing all segments of thinking, spell out successfully a set of principles covering a party stand on all vital issues?

Personally, Mr. Speaker, as a Republican I have said that if Republicans stuck to fundamentals and general objectives and principles we can stand firm and find unity. When it comes to regulations on labor, fiscal problems, foreign policy, or domestic programs we should be able to agree on a pattern and framework, but each individual, to have accord, would have to complete the picture for himself or herself as to shades, degree, and details. In other words, there would have to be flexibility and in the spirit of the republican form of government which protects minorities properly there must be mutual respect of viewpoint and compromise between individuals. Each party member cannot demand exactly what fits his or her own convictions down to the last dot. That would be impossible.

Actually, our two great political parties follow the tradition of establishing principles at the grassroots by precinct caucus. After local discussion and free debate, party opinion is implemented and finds substance and form by process of resolution and vote at conventions at various levels until a set of principles and statement of majority views and objectives are consummated in the formal adoption of a party platform. In turn, referring to national principles and objectives, the respective party Members of the House and Members of the Senate establish their respective programs except that the party to which the Chief Executive has allegiance naturally has an influential and active partner in establishing the program deemed in conformity with party policy.

Speaking for myself, I am happy Mr. Alcorn has acted with the President's blessing to have a committee of 44 members of my party draft a statement of principles and long-range objectives. Such a committee should spell out the distinction between the two political parties and point out our Republican philosophy, especially where we insist on need as a requirement to recipients of Federal Government assistance.

To return, however, to my original thought and opening remarks, each political party has its internal differences and sources of conflict. Nothing can effect agreement on all issues. But it is certainly wholesome and constructive for an organization to take a fresh look at what it advocates and at what it seeks to accomplish and how. Self-analysis and self-criticism are healthy signs, and out of what I might call this agony of self-appraisal of the Republican Party I look for Republicans to rally to a rededicated and revitalized party under a strong creed under which our candidates can look for vigorous and united public support.

Of one thing I am sure; no party platform should remain static. For example, the establishment of the European Common Market and free trade areas excluding the United States which became effective in January will require a reexamination of our tariff policy. We stand to lose out to foreign manufacturers and our high-cost American-made products, coupled with worldwide dollar shortages and other barriers, already are cutting U.S. industries out of world competition. I fear American capital may be induced to establish more mass production outlets overseas and then they will ship back into our own domestic markets. Our labor will lose both in foreign markets and here at home.

Therefore we should reemphasize the long-standing Republican principle that foreign products of underpaid foreign labor shall not be admitted to this country on terms which imperil the living standards of the American workman. We will not, I hope, retreat from favoring world trade on the basis of fair and reasonable competition but domestic industry must be protected from serious injury and I feel we Republicans should review our historic position from time to time.

By the same token, on domestic matters such as a farm program, where Republicans have strongly differed within the ranks of party, I am certain unity can be restored if we reexamine and restate our policies. Certainly we believe in building a Nation in which each and every citizen may make the most of his skill, incentive, and enterprise. We believe in individual freedom and oppose a welfare state. We believe in incentives and rewards to workmen and industry for ability, knowledge, hard work, risk, and initiative. This principle should appeal to the laboring people of America.

By the same token Republicans are against big Government spending, big taxes, and Federal control. We would assist those citizens who need help; but in every case the local community and citizens should manage their own affairs and daily lives. We believe that individual opportunity and individual freedom go hand in hand.

The Republican task force to paint the true image of the Republican Party if it succeeds will create an issue which to me needs portrayal to all Republicans. Once we see ourselves and objectives in proper perspective, we can go to the people offering principles which assure the best hope of all citizens—not leaders in Wall Street; not leaders in labor—but all citizens in every walk of life a better and happier existence.

Intra-party issues, selfish interests, and human weakness will always exist as long as politics and politicians compete for popular favor. Yet men and women everywhere regardless of political faith will continue to cherish ideals and hold convictions dear.

It is therefore in our Nation's best interest that both our political parties restudy their policies from time to time and strengthen in every way the honest advancement of principles on which there is united agreement. Therefore, Mr. Speaker, I hail with hope and expectation the efforts of the 44 Republicans from all walks of life and from all over the country who will seek a common ground on which members of the Republican Party can find unity and offer leadership and service to the Nation.

Hon. Hale Boggs, of Louisiana, Suggests U.S. Base Companies To Defer Tax on Foreign Income Used Abroad

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the March 1959 issue of the Journal of Taxation:

BOGGS SUGGESTS "U.S. BASE COMPANIES" TO DEFER TAX ON FOREIGN INCOME USED ABROAD

"Why do we force our businessmen to seek out such countries as Liechtenstein, Monaco and Panama to achieve a business result?" asks Congressman HALE BOGGS, Democrat of Louisiana. "I have come to the conclusion that no reason for forcing them to do so exists. It is within our power to provide the means of organizing base companies in the United States itself for the conduct of foreign business operations. We have the example of Canada's 4-K companies and Britain's overseas trade corporations. As a matter of fact, we have the example of practically every other trading country in the world before us to follow."

Because Mr. BOGGS is a member of the Ways and Means Committee and chairman of its Subcommittee on Foreign Trade Policy, this arresting suggestion demands the serious attention of tax practitioners and taxpayers alike.

"Enactment of a law permitting the creation of a unique class of domestic corporations organized for the conduct of business abroad would do much to provide incentives to foreign investment," said Mr. BOGGS in his remarks at the recent meeting of the Foreign Trade Council. "Such companies would be in a position to utilize the earnings derived from their foreign operations for the expansion of their activities in the free countries of the world without the immediate payment of United States tax. These corporations would pay U.S. tax on their foreign source income only when it is severed from the foreign operation by a distribution to the shareholder. Such corporations—I refer to them as U.S. base companies for want of a better term—could and should be permitted to carry on all operations now conducted by foreign base companies. I wish to emphasize that I think that exporting activities be included within permissible activities.

"Provision for U.S. base companies would not in my opinion require any change in the existing law providing for Western Hemisphere Trade Corporations. Additionally, I see no reason for not permitting any company desiring to do so to continue to operate abroad through a branch.

"It is fair to state that the present fiscal condition of the United States should make deferral attractive to those in the executive department who are responsible for securing the revenues with which to meet the Government's bills. Deferral involves no loss of U.S. revenue since by hypothesis every dollar of foreign earnings would be subject to tax when repatriated to the United States and severed from the base operation by distribution to stockholders.

NEED FOR ACTION IS GREAT

"A most charitable appraisal of the code as it applies to foreign-source income would find it capricious in result, formalistic in impact, and difficult to administer," said Mr. BOGGS. "I know of no one familiar with taxation who does not believe that a thorough legislative overhaul of foreign tax technique and policy is badly needed and long overdue. But it will be an uphill fight to get tax incentives for the encouragement of foreign investment and it behooves us at least to begin by considering recommendations which, though they may not go as far as we believe necessary, have a chance of adoption. I would think it wise for those who have competence in the field of taxation to direct their attention to proposals to defer U.S. tax on foreign source income until it is severed for domestic use.

ADVANTAGES OF THIRD-COUNTRY SUBSIDIARY

"Possibility for the deferral of U.S. taxes on foreign source income now exist under the current code, but the benefits of such deferrals by using foreign subsidiaries or foreign base companies are not available in many instances except at great price. The slow development of the statute and its rather fragmentary administrative and judicial interpretation have effectively denied these benefits to many companies. As an example of a business unfairly treated by the present law, consider company A which at great risk embarked upon the unknown of foreign investment in the 1920's. Legal advisers then had little experience with foreign investment and there were few interpretations of the law. The attitude of the U.S. Treasury Department was certainly far different from its present one. Accepting the best advice available, company A organized its foreign undertaking in the form of a subsidiary incorporated in Brazil. The risk proved worthwhile and the undertaking was successful in Brazil. Company A was also aware that similar markets for its products existed in Argentina, Peru, South Africa, and elsewhere. One would think it a simple matter for company A to transfer a part of its hard-earned, foreign-source earnings to any one of the countries named and establish a similar successful venture for the ultimate benefit of the United States and the countries involved. We know it is not.

"Now look at company B which manufactured a product similar to company A's. For years company B watched the experience of company A and, convinced of the wisdom of foreign investment, decided to move into the foreign field in 1953, but, learning from company A's difficult tax position, it established a base company and, by utilizing this third-country arrangement, is developing the markets in Argentina, Peru and South Africa with profits from other countries untaxed by the United States. This financing ability should be available to company A as well. B's accumulated earnings and profits in any one country may be transferred without the imposition of U.S. tax to another subsidiary where they are needed. Additional benefits accrue to company B such as the averaging of foreign tax rates for the purpose of achieving the maximum benefit of the U.S. foreign tax credit. It may achieve many tax savings on branch or other agency operations because its base company is not subject to U.S. tax jurisdiction.

"Surely, if we were proceeding de novo, no one would support this inherently unequitable and discriminatory arrangement. Yet we today condone it by inaction and perpetuate the inequity by an overdeveloped concern for the bare possibility of tax avoidance.

"The chief reason why company A is unable to remove this tax handicap is section 367. Section 367 applies only to exchanges which involve gain and provides that, in determining the extent to which gain shall be recognized, a foreign corporation shall not be considered as a corporation for purposes of most of the important sections of subchapter C unless, before any exchange is undertaken, it has been established to the satisfaction of the Secretary or his delegate that the exchange is not in pursuance of a plan having as one of its principal purposes the avoidance of Federal income tax. Section 367 began as section 112(k) of the Revenue Act of 1932 in a campaign against foreign personal holding companies which were then being utilized for the purpose of avoiding the U.S. capital-gains tax. Now, of course, with today's tax rates, it is not difficult for the Treasury Department and the IRS to find that a purpose of a contemplated exchange is the avoidance of Federal income taxes. Deferral is so deemed.

"However, company A has no desire to avoid the payment of U.S. tax. It simply wishes to compete with equality under U.S. law with company B for foreign investment opportunities. This it cannot do because section 367 has cemented, not only company A, but perhaps a majority of the primary companies in the field of foreign investment, into a fixed organization pattern.

"Even if we were to assume that rare thing, the Commissioner's approval of an exchange involving a foreign corporation, company A is by no means out of the woods. Subchapter C of the code was framed with domestic business problems in mind. It does not take into account the vagaries of foreign law and the policy of many foreign countries requiring a high percentage of local ownership in corporations. Thus even assuming that company A can overcome what is almost the irrefutable presumption of section 367, it may nevertheless find itself unable to invest where investment is needed because of a statute which should have as one of its

principal objectives neutrality of impact between similarly situated taxpayers."

H.R. 5, introduced by Representative Boggs on January 7, 1959, attempts to solve both of the problems he discussed. Section 2 provides for the creation of a new class of foreign business corporation. Section 3 modifies section 367 of the code to permit tax-free transfer by making that provision inapplicable to an exchange arising out of, or in connection with, a transfer of "foreign business property" (as defined) to a foreign corporation in exchange for its stock.

Summary of Boggs Bill and Initial Industry Reaction

The bill introduced by Representative Boggs to accomplish some of his objectives is seen by some representatives of the foreign trade industry to be facing grave difficulties in its progress through the legislature. The bill (H.R. 5) contains seven independent sections and it may be that, if the need for compromise develops, one or more sections may be dropped.

Section 1 is introductory.

Section 2 would create a new class of Foreign Business Corporations (FBC). These would be domestic corporations which would be permitted to defer U.S. tax so long as the earnings remained invested abroad, to some extent as third-country, foreign-base corporations now do.

Section 3 would permit the tax-free transfer by U.S. corporations of foreign business assets to controlled foreign corporations.

Section 4 would extend the 14-percentage-point tax reduction allowed to Western Hemisphere trade corporations on all foreign income. Only companies with 90 percent of their income from foreign business could qualify as International Trade Corporations (ITC). The WHTC would be abolished.

Section 5 would create an overall limitation on the foreign tax credit which may be elected in lieu of the per-country limitation.

Section 6 would specifically permit credit for foreign taxes forgiven by the foreign country as part of a tax incentive program.

Section 7 would permit nonrecognition of gain on property of foreign subsidiaries involuntarily converted.

Paul D. Seghers, New York City tax attorney and chairman of the International Section of the New York Board of Trade, expressed one reaction of foreign tax experts to the bill: it's complex and doesn't cover all the points that need correction. Mr. Seghers says that, "The need for encouragement of increased activity abroad through tax incentives is so abundantly clear that it is a disappointment that the one piece of legislation proposed along these lines should fall short of affording sufficient incentive. Nevertheless, it would seem reasonable first to consider whether the urgency for legislation to accomplish the announced purpose of the Boggs bill is so great that it would be better to enact H.R. 5 at the earliest possible moment, rather than to risk prolonged delay by seeking to incorporate changes in it, though they may be very desirable.

"However, H.R. 5, if denuded of its provisions for the extension to worldwide trade of the 14-percentage-point tax reduction and for credit for tax waived by foreign countries, would be inadequate to accomplish satisfactorily its intended effect—'to encourage private investment abroad.'

"Why? Deferment is now available through the use of foreign subsidiaries and, according to the most ardent supporters of deferment, is being quite widely availed of in this manner by their competitors. Why, then, can it be anticipated that another form of deferment, given almost the same tax treatment as a foreign subsidiary, will stimulate U.S. business to put money into foreign operations?

"Hence, all who are concerned with the achievement of the announced objectives of H.R. 5 should unite in insisting that the substance of the 14-point reduction and the tax sparing be retained in it.

"The tax-deferral method adopted is based on a plan proposed by Ira Wonder and E. R. Barlow, both of Harvard. It would be better had the method of deferral proposed by Richard C. Munsche (at the December hearings of the Subcommittee on Foreign Trade Policy) been incorporated in H.R. 5, rather than the Harvard plan. In other words, it would be better, as a method of deferral of the tax, to have the income taxed to the stockholder of the Foreign Business Corporation when distributed, rather than to tax the corporation on its income when distributed by it. Unfortunately, there are many obvious disadvantages in the method of deferral of tax provided in the Boggs bill.

"I note that it is apparently possible to qualify the same U.S. corporation for treatment in the same taxable year as both a foreign business corporation and an international trade corporation. This would afford the benefit of both the tax deferral and the 14-percentage-point tax reduction.

"The proposed allowance, in effect, of either the per country or the overall limitation on the amount of the foreign tax credit is to be commended as a badly needed correction of an injustice. It is to be noted, however, that this still leaves much to be desired to correct the injustices resulting from the Treasury's interpretation and application of the code provisions with respect to credit for foreign taxes levied in lieu of income taxes."

Other reactions run the familiar gamut of varied opinion. At the opposite pole to Mr. Seghers may perhaps be the point to fix the position of Prof. Stanley Surrey of the Harvard Law School. He feels that, at present, there is a drive to secure a distinct U.S. tax preference for U.S. corporations having foreign income; the main goal is a 38 percent U.S. tax rate on those earnings. From the start, as Professor Surrey sees it, basic congressional policy has been that a dollar received from foreign earnings should bear the same ultimate U.S. tax burden as a dollar from domestic earnings. Why then, he asks, should a dollar earned abroad be treated any differently? He feels that this question lies at the root of every tax policy issue relating to foreign income.

Somewhere in between are some practically and politically minded persons who believe that, at this point in our political picture, it will be necessary to settle for deferment alone.

Other minor voices may still be heard. Someone has suggested that, if deferment is to be enacted, foreign incorporated base companies should be required to meet the same standards of reporting to the IRS that will be required of foreign business corporations. Another has inquired why no corrective legislation has been proposed to eliminate the tax advantage which results from the arithmetic operation of the foreign tax credit formula (see 10 J. Tax 33).

Citizens Working Abroad Must Now File Returns

U.S. citizens employed abroad will have to file Federal income tax returns for 1958 and later years, even though their income earned outside the United States may be exempt from tax, as a result of the Technical Amendments Act of 1958. Taxpayers claiming exemptions under Section 911(a) on their income from personal sources earned abroad will be required to submit with their tax return a new Form 2555, "Statement to Support Exclusion of Income Earned Abroad."

The 1954 Code has always required that a return be filed by a taxpayer who has annual gross income of $600 or more ($1,200 if he is 65 years of age or over).

Formerly, many citizens employed in foreign countries did not have to file returns because their gross income, which did not include income exempt because earned abroad, was less than the minimum gross income for filing a return. Now the taxpayer abroad must include exempt earned income when determining whether he must file an income tax return.

All income received for personal services performed abroad by a citizen who is a bona fide resident of a foreign country for at least one full taxable year is exempt. There is also an exemption of the first $20,000 of income received for personal services performed abroad by a citizen who is physically present in foreign countries for (approximately) 17 out of 18 consecutive months.

If the taxpayer qualifies under either of these two rules, income derived from personal services rendered abroad is exempt. This includes wages, salaries, fees, bonuses, commissions, tips and similar income.

However, income paid by the United States Government is not, under any circumstances, exempt for reasons of bona fide residence or presence in a foreign country. Accordingly, U.S. Government employees abroad are generally not affected by the new filing requirement because their government salary is taxable and they have always been required to file income tax returns.

Congressional Complaint Blocks Further Oil Price Increase

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1959

Mr. STRATTON. Mr. Speaker, some days ago, I had occasion to bring to the attention of the Members of the House the serious situation created in upstate New York by another increase in the price of fuel oil completely unjustified by the circumstances. I advised the Members of this House of the hardship that these increases were creating for the people of my district, and I advised them that I had also brought this matter to the attention of the Antitrust Division of the Department of Justice and to the appropriate antimonopoly subcommittees of both Houses of the Congress.

I have been gratified by the tremendous favorable response which I have received from people throughout New York State to the action which I took, and I have been gratified, too, by the prompt action of the Antitrust Division of the Department of Justice in referring this matter to Mr. Richard B. O'Donnell, Chief of their New York office for full investigation.

But, Mr. Speaker, no development has pleased me more than a report which appeared in one of the leading newspapers in my district the other day, the paper which had first brought this matter to my attention, to the effect that as a result of statements made in this House and action taken by a Member of this body, an additional projected price increase was forestalled. All too often

an individual Member of this House who rises to discuss a matter of public concern has doubts in his own mind as to how effective his comments may be in accomplishing the action he seeks. Mr. Speaker, I am delighted that in this case we have indeed been effective in a concrete way, and, under unanimous consent, I include at this point an article from the Freeman's Journal, of Cooperstown, N.Y., dated February 18, 1959:

STRATTON PRESSES OIL PRICE INVESTIGATION—ANOTHER ¼-CENT INCREASE IS POSTPONED

Congressman SAMUEL S. STRATTON, Democrat, of New York's 32d District, has announced that the Justice Department has advised him that the subject of recent fuel oil price increases in the upstate New York area has been referred to Richard B. O'Donnell, chief of the New York office of the Department's Antitrust Division, for consideration in connection with other similar complaints under study in that office.

Congressman STRATTON asked for the investigation by the Justice Department following an editorial in the Freeman's Journal's issue of January 21 which called the fuel oil price increase of a half-cent a gallon completely unjustified.

Last week, the Journal heard from a contact within the oil industry that another quarter-cent increase had been scheduled to go into effect on or about February 1, but it was postponed after Mr. STRATTON started his campaign for Justice Department and congressional investigations of the industry's pricing polices.

Congressman STRATTON said that a communication from Victor R. Hansen, Assistant Attorney General in charge of the Antitrust Division, advised him that the Department was following the recent fuel oil price increases very closely to determine whether they are the result of a conspiracy to fix prices in violation of the Federal antitrust laws. Assistant Attorney General Hansen, also added, in his communication to the Congressman, that "if we obtain evidence of price-fixing agreements I assure you that prompt action will be taken to enforce the antitrust laws."

The Department's letter also referred to a pending indictment in the U.S. District Court for the Eastern District of Virginia in which some 29 major oil companies were charged with fixing prices on crude oil and automotive gasoline. The Department's letter pointed out that "the price of crude oil has a relation to the price of heating fuel oil about which you have complained."

Congressman STRATTON announced that he was highly gratified at the prompt and effective response which he had received from the Justice Department and said that he hoped that this action would help curb any further unwarranted or unjustified price increases of this type.

Congressman STRATTON also said that he was submitting the information with regard to the fuel oil price increases in upstate New York to the House Judiciary Committee with the request that the committee's Subcommittee on Antimonopoly Measures look into the matter further.

Giving World True U.S. Picture

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. GATHINGS. Mr. Speaker, Mr. Constantine Brown, one of America's most reliable and conscientious reporters, wrote a most significant article which appears in the February 24 issue of the Washington Evening Star and other newspapers of the Nation.

Mr. Brown comments on the failure of the U.S. Information Agency to tell properly the American story and combat the propaganda of the Soviets and their satellites. He uses, as an example of this failure, the inability—or unwillingness—of the USIA to place in its proper perspective the situation in America created by the Supreme Court decree on school segregation. While the Information Service may have handled other subjects properly, the record of this situation does not commend the USIA.

It occurs to me that an agency of the U.S. Government should hew to the American policy of relating the facts and all of the facts. For, in not bringing out both sides of the issue in this instance, USIA does a disservice to the American people and to our relations with foreign nations. The action taken defeats the very purpose for which tax dollars have been most lavishly appropriated.

And, as parallel study, I recommend the reading of Senator ELLENDER'S recent report to the U.S. Senate on his tour and his study of USIA activities in South and Central America. This report—together with Mr. Constantine Brown's article—will be helpful to a Congress presently concerned with budget requests for this agency.

Mr. Brown's article follows:

GIVING WORLD TRUE U.S. PICTURE—USIA SEEN FAILING TO TELL OTHER PEOPLE OF RESPECTABLE POSITION OF NEGROES

(By Constantine Brown)

With the assortment of crises, dilemmas, and issues which confront our Nation in almost monotonous regularity, the question is often heard, "What will our allies think of us?" or "This is grist for the Soviet propaganda mill."

American taxpayers have contributed millions of dollars to the U.S. Information Agency and its offspring, the Voice of America. Our USIA offices around the world and in every important capital are well staffed and, we hope, well supplied with all the information available to counteract Soviet propaganda and to explain some of the vital issues we must see in this country.

One of the most important issues in the last 3 years has been integration. When this reporter made his last trip around the world in the fall of 1958 he was asked in almost every country he visited about our racial problems. Far too often the questioner's tone of voice reflected a feeling that America was treating its colored citizens in a very shabby fashion.

In Karachi, Pakistan, for instance, the leading English language newspaper, Dawn, ran a lead editorial severely criticizing the United States on the subject.

In France I found people who actually believed that American Negroes were starving, given no voting rights, and lived in ghettos, much like the Jews in Hitler's Germany.

In Tokyo I heard that many people believed that Negroes were lynched every day.

Nowhere did I find any attempt of the USIA to explain how well off American Negroes are comparatively; how many of them live in well-built houses, how many of them drive the most expensive cars. Nor that the majority of American Negroes live in far greater luxury than many of the foreigners who are feeling so sorry for them.

Neither did I find any evidence that our USIA was presenting to our friends both sides of our segregation question. To the people overseas it would seem that all of America's white citizens hate all American black citizens, and vice versa. It was never told to them, for instance, that there are a large number of Negroes who prefer segregation and who are working alongside and with the whites who also prefer it.

There is ample evidence which the USIA could present. A leading publisher of a string of weekly Negro newspapers, Davis Lee, has written several editorials on the subject. In one published in the Anderson, S.C., Herald on January 18, Mr. Lee said: "These (Negro) advocates of desegregation want to force white people to desegregate, but they haven't desegregated within our race. In some sections of South Carolina the yellow Negroes won't have anything to do with the dark Negroes. I know Negroes in Charleston who will not speak to other Negroes because they are of different stations in life.

"In some sections the yellow and mulatto Negroes have churches that dark Negroes cannot attend. The educated Negro shuns the uneducated of his race. The professional members of our race will rob and exploit the unfortunate members of our race. But they refuse to associate with them on an equal social basis. At the rate they are going, in a few years there will not be a Negro race. You can hardly conceive of sensible leaders advocating a movement that is going to do away with our race. But that is what they are doing."

If the USIA wanted to present proof to our friends overseas that the American Negroes are not a downtrodden and starving minority in our country, they need only to quote Mr. Lee further. He wrote: "Ted Lewis is one of Atlanta's leading Negro businessmen. Some time ago he was having financial difficulty. He went to some of the city's leading Negro businessmen, including the bankers, and tried to borrow $2,500.

"They turned him down flat. He went to the small-loan department of the C.&S. Bank. One of the officials went over his plans with him, and then recommended that he borrow $5,000 instead of $2,500. The bank let him have the money without questions. As a result he is a success today, a credit to Georgia and his race."

There are many things our USIA could do to let the world know that the American Negroes are respected, intelligent and first-class American citizens. It is only a vocal few of both the black and white race who are giving our country a black eye on every continent of the world.

Miss Debra Glater, New York State Winner of the Voice of Democracy Broadcasting Contest, an Eloquent Voice for Democracy

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. STRATTON. Mr. Speaker, yesterday in Washington the 50 winners representing the 49 States of the Union and the District of Columbia who scored highest in their respective areas in the annual Voice of Democracy broadcast scriptwriting contest, conducted jointly by the National Association of Broadcasters, the Electronic Industries Association, the State Association of Broadcasters, and the Veterans of Foreign

Wars, assembled in Washington for the presentation of the national awards. I had the high privilege of attending that luncheon in company with the number one winner in my New York State, Miss Debra Glater, 17 years old, of Schenectady, N.Y., a constituent of mine and a student at Mount Pleasant High School in Schenectady. I was deeply impressed with the outstanding qualities of all of the 50 young men and women who participated as finalists in this contest. But I was especially impressed with the moving and eloquent expression of the meaning of democracy contained in the script of Miss Glater, which took top award in the Empire State of our Nation.

This script shows a deep understanding of the meaning of democracy as it is practiced in our community and in our Nation, and it also is eloquent tribute to the outstanding educational training provided to the young men and women of Schenectady by the Schenectady public school system.

Because I believe that Miss Glater's script ought to be read by every American, I ask unanimous consent that it be printed at this point in the RECORD:

I SPEAK FOR DEMOCRACY

(By Debra Glater)

May I read you a letter which I received 2 weeks ago from Bonn, Germany?

"MY DEAR COUSIN DEBRA: Life is so wonderful in the West, but yet so strange. I say strange in the sense of newness. Although I am 17 years old, I must begin life again—like a newborn baby. So many new words I've learned in these few days. Yesterday, while walking in the market square, I overheard two people talking about coming to America. I heard them say that America is a land of fulfillment, a land rich in opportunity. And Debbie, one word I heard them repeat over and over—'democracy.' I've heard this word in school, but what does it really mean?"

Helena's letter goes on—but I must stop here, as it's this part of the letter that troubles me. How can I explain the word 'democracy'? How can I put into simple words this way of life which is my heritage—and which I take so much for granted? Will you listen to me and my answer? Do you think I have told her the truths about Democracy?

"DEAR HELENA: I rejoice with you in your new found freedom. I know there will be many new things you will be wanting to see and enjoy. I feel that an excellent place to begin is with your question, 'What is democracy?'

"This question is not easily answered, for democracy is a composition of many ideals. To me, democracy means freedoms. In the United States, I can fulfill my religious ideals freely. As I walk down State Street in Schenectady, I can see S. John's Church, the First Methodist Church, and Beth Israel Synagogue. I can hear soft melodious voices of young choir boys singing Christmas carols. The ancient appeal of the Kol Nidre melody on the eve of the Jewish Day of Atonement emanates from the walls of the synogogue. You see, Helena, I need not be ashamed of my religion, that my beliefs are not like those of my neighbors. This privilege, this wonderful feeling of freedom of religion, everyone in a democracy possesses. This is a sharp note in the harmonious chord of democracy.

"The freedom of press, speech, and public opinion—to what do these liberties entitle me, as a citizen of America? I can write any article I may desire, without reprisal, but must consider the reputations of my neighbors. I can print what I know and feel is the truth, and express my thoughts on anything from economics to a cartoon. In my democracy, I am free to think, to investigate, and to express myself. This is another forceful note in the chord of democracy.

"The freedom of enterprise grants to me the privilege of choosing my occupation. If I wish to further my education, I may do so. If I take pride in my work, I can be a success. This opportunity for success is very evident, for in America one can see the tables of the workingman as well as the tables of the executive filled with food. In America one can see a picture of well-being. People are well clothed and possess the material comforts, which contribute to their security and happiness.

"And so, the third exuberant note is struck in the chord of democracy.

"But, Helena, democracy begins with education. It's a wonderful sight to see students in high school working in a physics laboratory, or studying math, history, and languages, for they mean America's future. I, as well as each individual, have the benefit of public schools and colleges which will teach me to become a better American citizen. Thus, the final thundering note in the chord of democracy is struck.

"What is democracy, Helena? It is the constant repititious song of freedom-loving citizens, bound together by the basic melody in our Constitution. It is a way of life, the American way of life. I hope you understand my explanation, Helena, and that it will not be too long before both of us can speak for democracy."

Coal Problems

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. DENT. Mr. Speaker, in order to clear up any misunderstanding on my proposal for the creation of a Coal Research Commission, I submit the following analysis and argument.

COAL PROBLEMS

The serious condition of the coal industry can be directly traced to the following sources:

First. Importation of fuel oil.

Second. The subsidization of other power sources.

Third. The favored position given to competitive domestic fuels taxwise by existing laws.

Fourth. The high cost of transportation of coal which, in some instances, is higher than the production costs.

Fifth. Our foreign trade and air policies which are responsible for a reduction of American production which in turn reduces the use and need of fuel.

The Canadian government has long ago realized this and has had in operation at least two major operations for the benefit of the coal industry.

First. They subsidize coal by paying a subvention on coal transportation to enable the producer to meet competition with other domestic fuels as well as American imports.

Second. They maintain a complete unit for research into the uses, production and marketing of coal through a coal research commission.

Even this last operation has been denied our coal industry.

We have research and study commissions on many subjects and yet, we refuse as a body to pass the necessary enabling legislation to create a study commission for coal.

Why? Simply because other fuel sources oppose the coal industry. In passing, it might be interesting to note that more payroll dollars are paid out by the coal industry per B.t.u. of heat energy than any other source of fuel.

For years the membership of the House of Representatives coming from the coal mining areas have been attempting to pass legislation to create a Coal Research Commission.

It has always been defeated by arguments based upon economy. Nothing could be farther from the truth than the statement that "we can't afford a Study Commission for Coal."

In the face of the declining fuel market for coal, the subsidization by the Government of TVA atomic powerplants, and other fuel sources makes it imperative for coal to find new uses and new markets.

One such outlet is fast disappearing. That outlet was called the foreign shipments market.

Recently, the following stories appeared in the public press:

Bonn puts embargo on imports of coal.

Six nation trade agreement group to put limitations on coal imports. Study plan to subsidize this domestic coal to compete with American imports.

Recently, West Germany put a tariff on coal of $4.79 a ton.

The above-captioned stories tell a very sad story. While we are opening our tariff doors wider and wider for foreign made goods, our so-called friends are clamping down on our products just as quickly as they become self-sufficient.

There is a growing suspicion too, that some of our own foreign aid money will be used to subsidize our competitors.

This, of course, would not be a new phase in our international policies. It has been going on for some time in other fields of American production.

The history of coal is the history of steel and the history of steel is the history of our phenomenal growth as a producing, successful nation.

There are still untapped reserves sufficient to provide fuel needs for many, many years.

However, in the face of present and future threats to this industry from other fuel sources, it becomes our duty to help this industry and the thousands of families and hundreds of communities that depend upon coal for their welfare and in some cases, their very existence.

There can be no valid argument to offset the arguments so far advanced. I expect to present a new bill which will make the Commission self-sustaining.

I would increase the coal depreciation allowance from 5 to 15 percent—oil and gas enjoy a 27 percent allowance—and take a certain per tonnage assessment against all coal mined to carry out the

work of the Study and Research Commission.

It is estimated that we have coal reserves beyond our needs for the foreseeable future.

Coal is one of the world's most versatile minerals. Its uses are limitless. The need now is for the proper study of its many byproducts with the goal in mind of preserving both the industry and the jobs of its employees.

The stubborn, and sometimes blind, opposition to the Commission fails to recognize that our neighbor Canada has such a commission and has for years been giving its coal industry Government subsidies in both Government-financed research and direct transportation subsidies.

King Coal is not dead, he just slumbering. He still has the power and the resources to keep alive the fires in the continuing and eternal struggle for the welfare of all the people.

To those of us whose roots are deep down in the bowels of Mother Earth nurtured by hard times, near starvation, strikes, coal and iron police and meager fare of the old company store, the depreciation of our coal economy strikes us as a real catastrophe.

The sickness of the coal industry is contagious. No one dare really measure the loss sustained by our whole economy when a coal mine shuts down. It is not money alone, it is all of the other values that somehow have become a part of our way of life.

This Congress cannot, in good conscience, refuse again to pass this legislation.

Mr. Speaker, I again appeal to the good will and sound judgment of this House to support my bill for the creation of a coal research commission.

Increasing imports of crude and residual oils are having a greater impact on the bituminous coal industry than ever before. Please consider these facts.

The administration's voluntary import control program, even under the broader trade agreements statute enacted in 1958, is not effective in restricting the imports of crude oil and products. Imports of residual oil have not been included in the voluntary control plan.

Residual imports in 1958 were approximately at the 1957 level. Coal production in 1958 was 20 percent below the previous year. Residual imports for the week ending January 9, 1959, averaged 867,200 barrels daily—456,300 barrels daily above the comparable week in 1958. This is the highest level in history. Coal production for the same week was 645,000 tons below the comparable week in 1958.

Total residual imports to January 9 were 7,342,800 barrels, greater by more than 2 million barrels than for the same period in 1958. Total coal production to January 10 was 9,922,000 tons, less by 2,584,000 tons than for the same period last year.

Imported residual prices along the eastern seaboard, the area of greatest impact in coal's markets, have been reduced from $2.57 in August 1958, to $2.37 in January 1959. Thousands of tons of coal's markets have been absorbed as a result of the increased residual imports and reductions in price. Economic conditions in coal-producing areas are deplorable. Unemployment is on the increase, and the number of public assistance recipients is increasing.

Significant facts regarding the proposal for the establishment of a coal research independent agency:

First. In practically all instances where Government-sponsored research programs are in operation, administration and control of such agencies are in the hands of independent agencies, for instance: National Science Foundation, National Advisory Committee for Aeronautics, Atomic Energy Commission.

Recently the Department of Defense, within its own organization, has set up a separate and distinct agency for research operations rather than assign control of these activities to the various established Government divisions.

Second. An important research program, such as anticipated, to benefit the coal industry would require high-type administrative personnel. This is obtained in independent agencies, whereas the same option is not available under established agencies. For instance, the chain of command in an existing Government agency would be along the lines of the following: First, secretary of the department; second, under secretary of the department; third, assistant secretary in charge of the particular area; fourth, director of the bureau within which such operations might fall; fifth, assistant director of the bureau; sixth, chief of the division; and, seventh, head of a research program.

In other words, in the average governmental department a coal research program would necessarily fall to an individual in the seventh administrative level.

Third. Traditionally, in moving projects through Government agencies interdepartmental delays tend to hamper expeditious movement. Likewise, most Government agencies are inclined to protect their own "empires" from possible invasion by other Government departments.

Fourth. There has existed for quite some time a natural inhibition on the part of private industry to turn over to an established Government agency information that might result in impediments to such industry competitively. This is particularly true where several competitive industries find their direction under the head of the same department or bureau. In these cases, industries are reticent about giving information and details of activities for fear that it might find its way into the hands of competitors in its own field.

Fifth. The coal industry's desire for a coal research program is for one that would be all comprehensive, and all inclusive. It should not, therefore, be limited to the field of technical research in which most of the existing coal research done by Government has been confined. In addition to the technical aspects of research, the coal industry's suggested program would cover such other areas as market and distribution, transportation, utilization, etc. In Government, in order to find experience and the qualification to evaluate projects in such fields, it would be necessary to refer to several separate existing departments of the Government. This would require a very involved job of coordinating as well as directing.

Sixth. As evidenced by the experience of Government itself in placing research under individual agencies, the problem of administering a research program requires individual and special attention. It is not something that can be operated successfully as an adjunct administrative task involving other operations of a Government department.

Significant quotations pertaining to the coal industry's suggestion for a coal research project:

House Report 1263, August 27, 1957, "Findings and Recommendations of the Special Subcommittee on Coal Research," in the conclusions of that report on page 29, made the following comments concerning a coal research project:

> A short-range, federally supported coal research and development program such as that referred to in the preceding paragraph, if it is to be conducted expeditiously and effectively and achieve the maximum end results, should utilize the research facilities and personnel of industry associations, universities, and other nonprofit organizations, of private consulting firms and of the Department of the Interior and other Federal agencies, to the extent it is practical to do so, and should be administered by an independent Federal agency which must not be shackled and inhibited by such traditional approaches and restrictive policies as control research activities in the Department of the Interior.

As between the work on coal research in existing Government agencies and the suggestion which has been made by the coal industry for an independent agency, this same report, on page 91, makes the following comment:

> And the Bureau of Mines, as a matter of policy, does not concentrate its coal research activities on efforts to solve the short-range problems of the industry. Most of the Bureau's work on coal, which now amounts to about $5 million annually, is in the area of long-range research and is of such nature that it appears unlikely the average coal producer will be benefited by it.

With reference to the unanimity of the recommendation for a coal research agency established as an independent agency of the Federal Government, the above quoted report has the following to say:

> The Bureau of Mines does not look with favor upon an expanded coal research program along the general lines suggested by the National Coal Association and as suggested by practically every witness appearing before the subcommittee on behalf of the coal producers, mine workers, State organizations, community officials, civic groups, and coal-carrying railroads.

In addition to the congressional comments, the Western State Governors' Mineral Policies Conference on November 7, 1955, advocated an approach similar to that recommended by the coal industry in the following comment from their conference report:

> 1. Establish at Federal level, and at State level where desirable, permanent minerals research advisory boards. These boards

should consider and recommend initiation of research programs, which, in their opinion, are particularly needed.

Excerpt from statement of policy of National Coal Association, page 12:

RESEARCH

Scientific research has made an immeasurable contribution to the economic growth which has made the United States preeminent among the nations of the world. Research should be broadened and intensified to assure further expansion of the Nation's economy and the maintenance of the U.S. leadership. Private industry should continue to play a substantial role in research and make every feasible contribution to the Nation's continued progress. The ultimate in research is beyond the economic capability of some segments of the economy. In furtherance of the national interest and the public welfare, it is incumbent upon the Federal Government to encourage and participate actively in appropriate research in the field of energy resources. An independent Federal agency composed of representatives of industry and Government should be established to aid in developing, coordinating, supervising, and financing an appropriate research program for the extraction, utilization, and consumption of bituminous coal. The program should rely upon existing research facilities to the greatest feasible extent, giving impetus and direction to present research efforts.

Hon. Daniel Alden Reed

SPEECH
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. WHARTON. Mr. Speaker, while driving to my district on Thursday morning last, I heard on my car radio the sad and distressing news of the passing of our distinguished colleague, the Honorable DANIEL ALDEN REED. For several years in Washington, Uncle DAN and his good wife resided in an adjoining apartment and our pleasant association with them shall remain a treasured experience in our lives.

I have never met a more cheerful individual nor one more dedicated to his work and the betterment of his fellow man. His appreciative constituents of the 43d District of New York returned him to Congress time and again until he had attained something of a record in his 83d year and his 21st consecutive term in the House. From every walk of life, the people of his home district frequently expressed their regard with gifts raging from small delicacies for his table to a fine automobile purchased through popular subscription.

He was a friend and an inspiration to all and we shall miss his presence sorely, as we have during his long hospital confinement.

To his charming, courageous wife, Georgia, and his fine son, William, we extend our sincerest sympathy in their great loss. I am sure we echo the sentiments of all his friends and constituents in these hallowed words, "Well done thou good and faithful servant."

Modesto, Calif., Naval Reserve Unit Is Cited for High Rating in Inspection

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. McFALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to call your attention to a recent article in the Modesto (Calif.) Bee concerning the high rating of the Naval Reserve Electronics Division 12–17.

In these days when we must build an adequate defense for this Nation and at the same time watch every dollar that is expended, it is good to know that the Reserves are being trained and qualified to take their place and do an effective job if we find ourselves in a position where we have to call on them to supplement our Regular Forces.

Following is a brief summary of the newspaper article. You will note the broad section of county life represented in the unit:

Scoring one of the highest personnel inspection marks in history, Naval Reserve Electronics Division 12–17, Modesto, earned the plaudits of Capt. E. J. MacGregor, U.S. Navy, 12th Naval District, Deputy Chief of Staff for Naval Reserve.

"The division, led by Lt. Comdr. Harvey B. Rhodes, Modesto city schools adult education chief, scored 3.91, a record cited by Captain MacGregor as the highest personnel inspection score known to him.

Commander Rhodes' division was followed closely by its sister outfit, NRED 12–16, whose enlisted personnel rated 3.86. Lieutenant Commander Richard Copland, Modesto accountant, heads this unit.

The two divisions, training 120 officers and men, comprise Naval Reserve Electronics Battalion 12–3, led by Commander Dwight H. Barnes, Modesto newspaperman. They are part of the 12th Naval District electronics program headed by Commander R. H. Konig, Treasure Island.

NRED 12–17, ranking 18th in national standing among more than 220 similar units, earned high grades in administration and training to become eligible for national trophy consideration.

Division executive officers, Lts. Gerald Underwood, NRED, 12–17, and Russell Lawson, NRED 12–16, an attorney and teacher, respectively, gave much personal inspection credit to enlisted squad leaders:

Radarmen Henry A. Mayers, Turlock paper company foreman, and Lauren Miller, Stanislaus County Road Department employee; Storekeepr Martin J. Sanchez, Turlock salesman, and Personnelman James K. Yoshino, Turlock farmer, all of NRED 12–17, and in NRED 12–16 Electronics Technicians Robert Dewey, Modesto laboratory technician; Ernest P. Scheuber, Modesto feed company employee, and Hideo Yamada, Oakdale farmer; Radioman James S. West, general merchandise firm official, and Storekeeper A. R. Lindsley, junior executive in a chain store.

Captain MacGregor, in presenting Commander Barnes' Battalion trophy to the top division, reminded naval reservists of their important service to the Defense Establishment and to the Nation's taxpayers.

They are the manpower, already trained, to bring the Navy up to fighting strength on a moment's notice in the event of mobilization or attack. With a third of today's annual $10,500,000,000 naval budget going to pay and allowances, Captain MacGregor explained were it not for the Naval Reserve, the Navy would have to be up to full wartime complement at all times and the costs would be much higher.

"I know of no group of men who do a more important job for their community and their Nation than the Naval Reserve," Captain MacGregor said.

The National Debt

SPEECH
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. UDALL. Mr. Speaker, I should like to join with my colleagues in commending the gentleman from Texas [Mr. WRIGHT], in leading this discussion today. I take pride that the gentleman conferred with me during the time he was formulating his proposal to begin a responsible and systematic program of paying off our national mortgage, and I am glad to be a cosponsor of this idea.

As some of the participants in this discussion today have suggested, our national debt is, strictly speaking, an unpaid bill from two world wars. On the budget front our two political parties have fought a rough draw since demobilization in 1946. President Truman had three overbalanced budgets with a surplus of nearly $13 billion; and his four deficit budgets totaled over $18 billion. President Eisenhower has made a $3 billion debt payment in 2 surplus years; and his 4 deficit years have increased the debt nearly $23 billion.

Most people have the idea that since the end of World War II our national debt has been mounting rapidly. However, in relative terms our Federal debt has been stable. In fact, considering that our economy has almost doubled since 1945, the national debt is actually smaller and more manageable today, and hence easier to pay off if the people will support a systematic annual debt-retirement plan.

Another fact that has been missed by many critics of Federal spending is that since 1945, while Federal debt has grown roughly 10 percent, the outstanding debt of all State and local governments increased more than 350 percent to a total of $55 billion. In other words, the Federal Government has actually done a sounder job of debt management than State and local governments during the postwar period.

During the new fiscal year, out of every dollar paid in Federal taxes approximately 11 cents—$8.1 billion—is earmarked to pay the interest charge on the debt. In other words, if the debt remains about the same and we follow current debt policies, by 1987 we will have paid out in interest the total amount of the debt—but we will still owe the debt.

What is the reason our Presidents—and Congresses—have never put forward a debt retirement program? Why have we given so little attention to this problem?

The answer, I believe, is imbedded in our political habits and the attitudes of our citizens which influence public men. For instance, some Congressmen—and citizens—argue that the only way to hold down expenditures is to cut taxes—a philosophy which in practice means a perpetually unbalanced budget. Then there are those—a majority perhaps—who believe that it is smart politics to cut taxes as soon as a budget surplus appears—preferably just before the next election. Then there is constituent pressure for an unbalanced budget by, for example, the type of citizens who write their Congressmen to warn them that the tax rate is confiscatory. Naturally, this pressure plays on the politician's fear of advocating higher taxes, and results in noisy applause for any officeholder who stands up for the taxpayer and demands lower taxes.

The formula is simple: Only overbalanced budgets pay off debt. It is plain, then, that debt reduction is keyed to courageous political leadership that is willing to call for austerity and higher taxes.

Perhaps this all adds up to the conclusion that, for the present at least, it is impossible from a political standpoint to sell the American people on a debt reduction program. In my opinion the trouble with this conclusion is that it misjudges the temper of the American people and assumes that they are soft and self-indulgent.

One final point should be made in connection with this debt reduction plan. The only anti-inflation weapon which has not really had a tryout is an overbalanced budget in times when the economy is strong.

It is my personal feeling that the people are far ahead of their elected representatives on this whole issue. Moreover, I believe they would respond if there were national leadership on this question. For one, I am not only an advocate of debt retirement, but would vote for higher taxes if such a step were necessary to carry out the plan embodied in the idea we have discussed today.

Dedication of Highway Trailer Co. Plant

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1959

Mr. FLOOD. Mr. Speaker, upon the occasion of the dedication of a new plant, the Highway Trailer Co., at Hazleton, on February 19, the Honorable David L. Lawrence, Governor of Pennsylvania, had some significant things to say on what the people of Pennsylvania and the Commonwealth are doing to improve the industrial situation in the Keystone State.

Governor Lawrence had high praise for CAN-DO, the industrial promotional organization of Hazleton, as well as the Greater Hazleton Chamber of Commerce, emphasizing that the people of the Greater Hazleton community had dug deep into their pockets to finance the handsome plants that now house Capitol Products, General Foam Corp., Lewis Steel Products, and Highway Trailer.

Stressing the self-help aspect of these industrial promotions, Governor Lawrence pointed out that these four plants, at full normal operation, will employ 810 people and create annual payrolls totaling nearly $3 million.

The Governor used the new plants as an example of teamwork to get things done in Pennsylvania. He said:

These plants are costing nearly $2½ million. Seventy percent of this comes from your subscriptions and bank loans and 30 percent, or roughly, $736,000, in loans from the State's industrial development authority.

PIDA—as we have come to call the authority—is, in my opinion, the most essential use of public funds Pennsylvania can make. It is an absolute necessity if we are to achieve the economic redevelopment of our chronically distressed areas. PIDA—make no mistake—is not a giveaway. These are loans, not grants. They are to be repaid, with interest.

Mr. Speaker, this is an ideal example of the philosophy of the area redevelopment bill, the Flood-Douglas bill, which was passed last year, only to meet the fate of a veto, and which has been reintroduced this year and is now coming up for hearings. Pennsylvania shows the way government, industry and the community can cooperate to create jobs, increase production, produce payrolls, banish unemployment.

It is most encouraging to know that Governor Lawrence is all out and fully behind this job-development plan in Pennsylvania. In his campaign last fall, he made this issue one of the main planks in his platform, and true to his word, as he always has been, he is asking the Legislature of Pennsylvania for a new appropriation of $10 million to carry on this forward-looking, result-getting, payroll-creating industrial promotion campaign. In addition to asking this amount, Governor Lawrence has just requested the general assembly for an additional $1,850,000 appropriation to replenish the authority's loan funds until the new biennium begins on June 1.

Just how successfully the PIDA is working was reported by Governor Lawrence when he said that in Luzerne County my home district:

During the past 30 months PIDA loans went into industrial projects which created 3,300 new factory jobs in 17 new or expanding plants.

Mr. Speaker, in the face of this outstanding performance of community and State teamwork and joint financing, with bank participation, in spite of the excellent work being accomplished in this direction, the fact remains that today Luzerne County has 25,000, or 18 percent of its working force, unemployed. So you can see that this is a problem we must keep working at constantly, and one, too, in which we need the aid of the provisions of the Flood-Douglas bill.

I, too, want to congratulate Mr. David Charnay and his associates upon their new industrial home and say to them again that they are most welcome as members of the industrial community of Hazleton, in Luzerne County. And again, I want to offer my congratulations to the great Hazleton community team whose dedicated efforts resulted in the decision of Highway Trailer to locate at Valmont Park, the home of Hazleton's new industries.

Mr. Speaker, I ask unanimous consent to have Governor Lawrence's remarks at the formal dedication of the Highway Trailer Co. plant inserted in the Appendix of the RECORD:

REMARKS OF GOV. DAVID L. LAWRENCE AT THE DEDICATION OF THE HIGHWAY TRAILER CO. PLANT, HAZLETON, PA., FEBRUARY 19, 1959

This is the first time that I have participated in a plant dedication since I became Governor of Pennsylvania a few weeks ago.

I am glad that this particular experience can be in Hazleton here in the anthracite region, where new job opportunities are urgently needed—and where the Nation's most dramatic demonstration of community industrial development has come into being.

I am pleased to welcome Highway Trailer to Pennsylvania.

We are proud to have this fine company join the great industrial family of the Commonwealth.

Pennsylvania welcomes industry. Our need for industrial growth is obvious. Therefore, when we Pennsylvanians say "welcome" to industry, we believe that our welcome is a little warmer and more deeply meant than might be the case in States which have not know our problem.

To Mr. Charnay and his associates, and to the stockholders and employees of Highway Trailer, let me say also that Pennsylvania does not merely want to be with you at these joyous dedication ceremonies, our people want you to enjoy a long and profitable life among us, and we want your company to continue its expansion here.

I consider it our continuing duty to help you, insofar as we can, toward enhancing your stability and growth as a company. I have made it a matter of major policy to create and maintain the kind of business climate in which companies can succeed and grow.

And now, let me extend my congratulations to the people of Hazleton, to your banks, and to your civic leaders, who, with the strong support of the general public, have done so magnificent a job of industrial development through CAN-DO and the Greater Hazleton Chamber of Commerce.

It wasn't easy to dig down into your pockets and raise the money that is financing these handsome plants here at Valmont Park—Capitol Products, General Foam Corp., Lewis Steel Products, and now Highway Trailer.

But you did it.

Certainly the statistics bear out what you have done here. You know them well, but on an occasion like this they bear repeating because they tell—better than anything else—the tremendous job you have done.

These four plants, at full normal operation, employ 810 people, and create yearly payrolls totaling nearly $3 million.

That's a wonderful record of achievement, and it doesn't even take into account the jobs and payrolls created indirectly as a result of this new employment.

These plants are costing nearly $2½ million. Seventy percent of this addition comes from your subscriptions and bank loans and 30 percent, or roughly $736,000, in loans from the State's industrial development authority.

PIDA—as we have come to call the authority—is, in my opinion, the most essential use of public funds Pennsylvania can make. It is an absolute necessity if we are to achieve the economic redevelopment of our chronically distressed areas. PIDA—make no mistake—is not a giveaway. These are loans, not grants. They are to be repaid, with interest.

And you can take pride that PIDA is in a very real sense, a product and creation of this area. Up until its establishment, Hazleton and other anthracite communities financed plant construction through subscription funds and first mortgage loans from your banks. Many called this post-World War II effort "the Scranton Plan," but it did not operate only in Scranton. It was a plan that worked—although it could not work fast enough to absorb all the employment needs in the area.

PIDA came into being, not as a departure of the area plan, but as a part of it. Actually, some of the people right here today helped to formulate the program and write the needed legislation. Senators McMenamin, Flick, Murphy, Wagner, and Scott of the hard coal regions were among its sponsors. And when PIDA came into being, with men like your own Vic Diehm as members of its board, the burden of local fundraising was cut in half. Before, you had to raise 40 percent of funds needed—under PIDA, you raise 20 percent. With the same effort by notable Hazletonians like Diehm and the untiring Dr. Dessen and your chamber of commerce, you can bring more plants, offering more employment.

Your own plan has been strengthened at the suggestion of your own leaders. And the result has been the speeding up of industrial growth in cities like Hazleton, and with firms like Highway Trailer. Here's what your plan developed into—what the result of your original thinking did in Pennsylvania.

PIDA has participated in the financing of 72 new plants and plant expansions in distressed area communities. Those plants and expansions are creating just under 12,000 new factory jobs.

I have requested the general assembly for an additional $1,850,000 to replenish the authority's loan funds until the new biennium begins on June 1.

And for the next biennium—and I am pleased to announce it here for the first time—I am requesting an additional $10 million from the general assembly for PIDA.

Pennsylvanians know this program is working. Here in Luzerne County during the past 30 months, PIDA loans went into industrial projects which created 3,300 new factory jobs in 17 new or expanding plants. I congratulate you for making such a record.

It is a record of cooperation and yet, as you know in the region, it is only the beginning.

These are the thoughts that occur to me as I welcome Highway Trailer to Hazleton and Pennsylvania. You could not have come to a greater State or a finer community.

This work, as I have said, is only in its starting stages. I am hopeful that our PIDA funds are going to be supplemented by a Federal program of financial assistance to distressed areas in the matter of industrial development. Our own Senator CLARK and Congressman DAN FLOOD, as well as others in our Pennsylvania congressional delegation, have given that legislation top billing in their programs.

In a few days, I am going to Washington to testify on this matter in the official hearings, and I shall do everything in my power to see such legislation enacted into law. With this kind of Federal help, our efforts to achieve economic stability in Pennsylvania will be greatly strengthened.

Again, I congratulate the Highway Trailer Co. for seeing here a great benefit for themselves; I congratulate your civic leaders for your can-do program. I feel a sense of pride in Pennsylvania's government for assisting what was done here, but more than anything else, I congratulate the people of Hazleton and the region for your faith in your community, for your perseverance in adversity, for the spirit which has emerged here which is an example to any community in the Nation.

Truly, Pennsylvania's greatest asset is its people, as you have proved right here in Hazleton. May God bless you in this venture and in all your work.

Tax Cuts on Profits From Abroad

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York World Telegram and Sun of February 6, 1959:

TRADE BOARD FOR TAX CUT PROFIT ABROAD—BACKS BOGGS BILL TO SPUR INVESTMENT

A drive to stimplate the foreign investment of about $10 to $15 billion of U.S. capital each year opened today under the sponsorship of the international section, New York Board of Trade, which urged passage of the Boggs bill providing for a 14 percentage point cut in U.S. taxes on foreign-earned income of U.S.-owned firms.

Paul D. Seghers, chairman of the section, said that the reduction to 38 percent, instead of the present 52 percent, in corporate income taxes would not only increase U.S.-owned investment abroad by as much as $15 billion a year, but would also create a friendlier climate for American business abroad.

He estimated last year's investment abroad at $5 billion.

OTHERS SUPPORT IT

Clay R. Smith, treasurer, Pfizer International Inc., a subsidiary of Chas Pfizer & Co. Inc., also urged passage of the Boggs bill as a means of allowing the same 14 percent tax break for investment in Europe and elsewhere as is already available in the Western Hemisphere.

Richard C. Munsche, tax manager, Coca-Cola Export Corp., a subsidiary of the Coca-Cola Co., indicated that the cut would reduce U.S. revenues by only about $150 million.

Francis Fay Miller, tax specialist, W. R. Grace & Co., said that both the United States and Commerce Department favored the bill but that the Treasury alone was blocking it.

MORE FLEXIBILITY

Albert D. Early, partner, Milbank, Tweed, Hope & Hadley, law firm, said the Boggs bill would give major corporations more flexibility in foreign investments.

Stefan J. Rundt, foreign trade consultant, noted that, although many U.S. corporations already have foreign subsidiaries, some of them secret, the bill would remove ethical roadblocks to the foreign investment of many other large firms. He indicated that provisions of the bill would help reverse the "flight from the dollar" throughout Europe.

The board of trade also announced plans for a conference, arranged by the international section, to be held February 10 at the Hotel Astor to unite more than 50 leading businessmen behind the Boggs bill.

Garnishment

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LANKFORD. Mr. Speaker, the fifth of a series of articles dealing with ganishment in the District of Columbia is inserted at this point in the Appendix of the RECORD.

SPENDING SPREE PRODUCES REAL WOE

(By Morton Mintz)

(Fifth in a series)

In the spring of 1953, a 50-year-old woman went on a spending spree. She ran up bills totaling almost $1,500.

She bought appliances, a television set, and clothing for herself and her seven children. About half of the total was spent in seven easy-credit stores.

Her husband had known for some years that his wife was mentally disturbed and put faith in soothsayers. He said, however, that he was unaware that she was making the purchases and that he was being made responsible for the debts.

The creditors presumably established that the husband was employed, so that his wages could be attached in event the debts were not satisfied. It is not known if the wife's condition was evident to any of the sales personnel.

FROM THE RECORDS

Here is the story that comes out of employer, hospital, and municipal court and bankruptcy court records and from conversations with the husband and others directly involved:

On June 18, 1953, the woman got into a taxicab. She did not make clear where she wished to go and she spoke incoherently. The cab driver took her to the sixth precinct; police sent her to District of Columbia General Hospital and on June 29, she was committed to St. Elizabeths Hospital. She was diagnosed as a psychotic.

The husband made a few trifling payments on the debts. Late in 1953, three easy-credit stores sued him; the others along with other creditors, apparently wrote off his debts as hopeless. He made no answer to the suits, so judgments were declared by default.

The way was open for attachment of his wages. On February 19, 1954, writs from all three stores landed almost at once. The employer noted on the last one, "Wages $127.24 (for 2 weeks) all of which has been answered for on previous writs of attachments" from the other two stores.

On March 19, the husband filed a debtors' petition in U.S. Bankruptcy Court. It said his debts, all contracted in 1953, totaled $1,426.79 and his assets $462.71.

STATES HIS PREDICAMENT

The petition said the husband states upon his oath that his wife incurred heavy indebtedness during the past year; that his salary has been attached three times recently; that if another attachment is placed against his salary, he will lose his job according to the policy of the company, and will be without means to support his family.

On March 22, the husband was adjudged to be legally bankrupt. (He was discharged from bankruptcy on November 24, 1954.) On March 26, he asked the municipal court to quash the attachment of the store that arrived last, Marvins Credit, Inc., 734 Seventh Street NW., but this move failed. His motion said his creditors "are constantly at-

taching (my) salary * * * the entire family is without proper food."

In a statement of affairs filed in bankruptcy court on April 21, the husband said Marvins, which had a balance due of $160.56, "attached March 17, 1954, and there is now $173.95 held by (the employer) on attachments, of which $158.56 was condemned by Marvins."

The second store, due $71.26, cleared the books with a long-delayed attachment effected in October, 1955.

Records indicate that Hollywood Credit Clothing Co., Inc., 703 Seventh Street NW., obtained $140.23 by attachments and $78 by payments, leaving a balance of $101.90. Just when this debt was lifted is not clearly indicated.

The employer's records, however, show that the husband's paychecks were attached a total of eight times between February 16, 1954, and June 1, 1956, leaving him without pay for 16 weeks' work in 15½ months.

Then, at least by normal credit standards, a strange thing happened. Here was a man who had been ruled bankrupt; who himself lacked the slightest understanding of how to handle money, and who presented extreme collection problems. Yet Hollywood sold him more on its "Credit That Is Different" and Marvins on its "Magic Credit."

Hollywood filed suit on April 20, 1955, charging that he had become delinquent again. He confessed a debt of $320.13, and the store attached his wages. With his payments, Hollywood netted about $250 prior to the fourth attachment, served on August 29, 1956. The employer noted on the writ, "The defendant has left the service of the company."

PATIENCE EXHAUSTED

Employed there 17 years, he was fired by an employer whose patience was exhausted and who could see no end to the costs and trouble of handling the garnishments.

For about a year the husband had only off-and-on employment. Finally a firm hired him as a janitor, at $34 a week. His old job, which benefited by union standards, paid $80.

The new employer's turn came on February 19, 1958, when he was served a writ that said the husband still owed Hollywood $30 (he had paid $290.13) plus court costs of $13 plus 6 percent interest. His $34 wage was attached; the employer lent him the balance, and the debt was paid off.

Marvins obtained a default judgment in 1957 on a balance of $164. But it was unable to attach the husband's wages because in this instance he got an exemption. The garnishment law permits the income of a head of a household to be exempted from attachment if it does not exceed $400 in the two months prior to issuance of the writ. His wages were, however, frozen for more than a week, until the Court could determine his eligibility.

JUST COULDN'T DO IT

The husband said in a recent interview that he had tried to pay off his debts "$5, $6 a week, but there were so many bills, try to pay the rent, $40, try to eat * * * got so I couldn't take care of it."

Recalling his dismissal from his first job, he said, "One night I went to get my time card, didn't have no time card."

There was a 2-month period in which the Department of Public Welfare paid his rent. He is in easy credit debt even today for about $130, some of it for clothing he bought the children now at home. He is paying it off at about $2 a week.

Since February 1956, St. Elizabeths has permitted his wife to come home several times a week. "When she comes out now," her husband said, "she says, 'Don't make any more bills.' "

IT DOES HAPPEN HERE

This is not a typical garnishment case, if there is such. It is, however, not unusual in the trial of grief it left or in its individual aspects. Its importance lies in its disclosure of things that happen under the District's 58-year-old garnishment law:

The municipal court and employers become collectors, chiefly for a few easy credit operators.

Such firms as these thus have an inducement to sell to persons who buy much more than they can afford and who are unable to pay except when attachments deprive them of necessities.

The employee's entire pay check can be attached, and attachments on the same bills can keep coming.

Employees are fired after multiple attachment, often after only two.

Exemption of a person's wages from attachment, so as to leave something for food and rent, is not automatic. Even if an exemption is won, wages are tied up for 7 to 10 days.

The public is burdened with relief costs and the difference between the nominal and actual court costs.

Court costs, even if nominal, and interest inflate the defendant's original debt.

The debt can be charged to a person who does not know of the purchases or that he is being made responsible.

Why Statesmen and Reporters Turn Gray

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. DAGUE. Mr. Speaker, a brief examination surrounding the current visit of British Prime Minister Macmillan to Moscow will furnish the answers to the above caption to these remarks.

In two separate articles appearing in yesterday's Evening Star we see how wide of the mark a columnist sitting in his ivory tower here in Washington can come when his observations are stacked alongside those made by a correspondent closer to the scene.

In his column entitled "Britain Takes the West's Helm," William S. White has this to say:

Mr. Macmillan's mission to Moscow has quietly turned upside down the diplomacy of the allied world. Today at least, and possibly for a fairly lengthy tomorrow, it is British leadership that holds the initiative on the Western side.

And then in the same issue and on the same subject—Mr. Macmillan's overtures to Communist boss Khrushchev—Crosby S. Noyes, the Star's European correspondent, in a report subtitled "Berlin Outlook Dims," makes this comment:

In the face of the deliberate insults, the frustration of his hopes and the total intransigence which he has met, it may seem to Mr. Macmillan that his best course at this point would be to cut short his fruitless quest and come home.

All of which simply points up the fact that John Foster Dulles in always taking a firm stand with the Communists and President Eisenhower in refusing to meet with Khrushchev until he shows some evidence of sincerity have been pursuing the proper course all along.

The Right To Protest

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. BECKER. Mr. Speaker, I include here in the Appendix of the CONGRESSIONAL RECORD an article written by the great columnist, George Sokolsky, entitled "The Right To Protest." This article, I believe, covers very clearly what was in the minds of a great many people during the time of Mr. Mikoyan's visit to the United States. Secondly, it also raises the question that is in the minds of many people and has never been answered, and that is: Who invited Mikoyan to the United States?

The article follows:

[From the Long Island Press, Jan. 23, 1959]

THE RIGHT TO PROTEST

(By George E. Sokolsky)

One sometimes gets more light on events in what is known as fan mail than anywhere else. Sometimes, I refer to such letters in this column. That which I received from Bert A. Doering of St. Louis is one of several on the same subject and in the same tone. I take two paragraphs from Doering's letter as particularly pertinent:

"You spoke about Mr. Mikoyan being confronted by a picket line in this country composed of alien refugees, including Hungarians, Bulgarians, Poles, Czechs, and other foreigners. You said these refugees marched in protest against Mikoyan, and were duly dispersed by the police, although picket lines are supposed to be respected. Your perverted views about respecting such picket lines are extremely obnoxious.

"These damned alien refugees who should be extremely grateful for being afforded asylum in this country now presume to exercise their will in this country by forming picket lines in protest against the visit to this country by a foreign dignitary who is here with the full approval of our Government. These uncouth alien refugees should be taught how to behave themselves in this country, or sent back from whence they came."

Those "damned aliens" are refugees who have been given asylum in this country because in their own they fought for those principles of life and conduct for which we stand in the United States. Because they believed in our way of life, many such persons in the satellite countries have been shipped to Siberia or were murdered. A very few fortunate ones found their way to the United States.

Here they are suddenly confronted with the butcher of Budapest, one of the men who participated in the genocide of Hungary. They find that preparations are made to wine and dine this man, that he is received by bankers and manufacturers as a friend, and no voice is raised protesting his presence in our midst. So they organize to protest and to tell their story—a story of murder, a story of genocide, a story of horrors.

Doering says further:

"It is quite possible that the rude and riotous demonstrations of these uncouth refugees was inspired by the vituperative language of Government spokesmen in their references to Government officials of Soviet Russia. These Government spokesmen are just as uncouth and ill-mannered as these alien refugees who want to take over the country after they get here. And you approve this conduct."

Yes, I do approve of the right to protest and only regret that at the moment I was

unable to go on the picket line against Mikoyan who came here to do this country only harm. The right to protest is fundamental in the America way of life. It emanates from the right to petition. This is not a police state in which the citizens must be silent while the officials act for them. Nor need we fear to speak our minds on political and social questions. Therein lies the strength of our Nation.

Undoubtedly some Americans helped to "cook up" this Hollywood farce of bringing Anastas Mikoyan to this country on a publicity man's Odyssey through our land. Harry Truman, with characteristic down-to-earth wisdom, speaks of them:

"I hope that the recent crop of diplomatic tourists does not get us into more complications at a time when the free world is trying to find how to deal with the Communist world."

Neither President Eisenhower nor Secretary of State John Foster Dulles gave Mikoyan an inch because apparently he would not budge an inch. He used television, radio, and every device of communications to influence public opinion against the stated views of the Government of the United States, to separate the people from their Government.

According to Doering that was all right because Mikoyan was a guest of the United States. Who invited him? Let a committee of Congress discover who invited him. Mikoyan, himself, said on "Meet the Press," in reply to a question, that he came here to visit the Russian Ambassador. The President has not admitted that he invited Mikoyan to this country and the President did not give him a formal reception. Guests of the Government of the United States usually stay at Blair House in Washington. Such a courtesy was not extended to Mikoyan. The Secretary of State does not admit to inviting him. Nobody does.

Kosciuszko Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader-Evening News of February 12, 1959:

KOSCIUSZKO ANNIVERSARY

To residents of Greater Wilkes-Barre, the name of Thaddeus Kosciuszko, Polish patriot, who fought for American independence, and whose 213th birthday anniversary is observed today, has special significance, apart from our interest as grateful Americans.

This community, as a large center of Americans of Polish ancentry, has in recent years played a leading role in the Kosciuszko Foundation, with headquarters in New York. Dr. Joseph J. Kocyan, city, is chairman of the board of trustees, of which Joseph J. Lester, Kingston, and Dr. Eugene Farley, president of Wilkes College, are members. Among those who have been active on the national council are John S. Cresko, Mary Glowacki, Mary R. Koons, and John Malinowski.

For more than three decades the Kosciuszko Foundation has been promoting cultural relations between the United States and Poland by providing scholarships and other grants through the dues and gifts of members, scores of whom are local residents.

It is fitting, indeed, to perpetuate the memory of General Kosciuszko in this fashion, for it not only serves to remind us of our debt to this gallant officer, but of the ties between the two countries, especially in trying times like these through which we are passing. The native land of this hero of the Revolution has been undergoing an ordeal for two decades, fighting an uphill battle to keep the fires of liberty burning.

The spirit of Thaddeus Kosciuszko lives on in the hearts of his countrymen who carry on with traditional courage in the face of such tremendous odds, thanks to his stirring example.

The Vaughn Bible Class

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. HARRIS. Mr. Speaker, a few days ago, February 13, the Vaughn Bible Class of Calvary Baptist Church celebrated its 70th anniversary with an annual banquet which was attended by some 400 people. The speaker of the occasion was the Honorable Ezra T. Benson, Secretary of Agriculture, who was introduced by our distinguished colleague, the gentleman from Maine [Mr. CLIFFORD MCINTIRE].

In connection with this important event one of the classmen, Dr. Nelson M. Blake, prepared a statement in the style of Lincoln's Gettysburg Address, in that it was so appropriate and timely in connection with our 70th anniversary banquet. I ask that it be extended in the RECORD with these remarks:

Three score and ten years ago our founding fathers organized in Calvary Baptist Sunday School the Vaughn Bible Class, committed to the study of God's Word, and dedicated to a genuine concern for the other fellow. Now we are faced with a great challenge, testing whether this class, or any class so organized and so dedicated, can long continue. We are met together on a significant anniversary of this class. We have gathered here to enjoy Christian fellowship and to pay tribute to those loyal and faithful men who have labored so devotedly that this class might endure. It is both fitting and proper that we should do this. But in a larger sense we cannot dedicate, we cannot consecrate this class. The noble men, living and dead, who have served here through the years have consecrated it far beyond our ability to add or detract. Members of Calvary Church and of the Vaughn Class will pay little attention to what we say here, but they can never forget what these men have done here. It is for us, the living, to be dedicated anew to the continuing program which those who have labored here have thus far so nobly advanced. It is rather for us to be dedicated here to the challenging tasks remaining before us—that from the lives and examples of our leaders we pledge renewed devotion to the high and worthy purposes for which they have labored so faithfully; that we here solemnly resolve that these leaders shall not have served in vain; that the Vaughn Bible Class, under God's guidance and direction shall experience a spiritual rebirth; and that sincere service for God, for country, and for the other fellow shall continue to inspire and challenge us as the years come and go.

Congressional Abuse

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. ASHLEY. Mr. Speaker, in recent months we have been witness to a crescendoing wave of critical opinion, public and private, with respect to the expendability of the House Committee on Un-American Activities or at least with respect to the urgency of reappraising its effectiveness in rooting out subversion and the need for clarifying its jurisdiction. It required no divining rod to perceive that this sudden intense and widespread interest in the activities of the Un-American Activities Committee was touched off by the decision of the Supreme Court in the Watkins case which castigated in no uncertain terms the efforts of congressional committees to expose persons through the investigative process merely for the sake of exposure.

I would like at this time to commend to your attention the following editorial, appropriately entitled "Congressional Abuse," which appeared in the February 21 issue of the Toledo Blade and which places dramatic emphasis on the continued excesses and abuses of the Un-American Activities Committee in publishing a so-called elite corps of 39 lawyers whom they have identified as Communists.

The editor suggests that the validity and reliability of the committee's list be properly evaluated against the background of a formal protest to the Congress by the California Bar Association in 1957, a protest against the improper and abusive conduct, amply documented, of the members of that committee in the course of its investigation.

I believe the following editorial is highly illuminating and its conclusions an unmistakable indictment of distinctly un-American methods employed by the House Committee on Un-American Activities:

CONGRESSIONAL ABUSE

In releasing a report on what it calls an "elite corps" of Communist lawyers, the House Committee on Un-American Activities has not only unfairly attacked a group of accused attorneys but has also jeopardized the constitutional right to counsel. The House group listed the names of 39 lawyers from a total of 100 who, it said, had been identified as Communists before the committee. It charged that their activities included abuse of the courts, misbehavior before congressional committees and circumvention of the law.

Of the attorneys named, 23 are from California. This being the case, the Congress and the country should now pay attention to what the California Bar Association said in 1957 with regard to the committee's treatment of members of the bar in that State. In a formal protest to Congress, the association branded the group's conduct toward lawyers in hearings there as "improper and lacking in dignity and impartiality" and as "grossly offensive."

To document its case, the association declared that:

"A lawyer accused by a witness as being a Communist was thereafter referred to by the committee counsel as 'Comrade.'

"Lawyers who tried to object to such treatment were ejected from the hearings even though they were not 'disrespectful, unruly, or boisterous.' "

In the light of such a protest as this from a respectable professional organization, Congress had better look to the misbehavior of its own committee. Members of the bar, while practicing their profession, should not be required to put up with abuse by representatives of Government. If they are to be accused, they should have full opportunity to defend themselves.

Continuation of the irresponsible and abusive methods of the Committee on Un-American Activities can hardly fail to discourage attorneys from taking the cases of Communists or other unpopular clients, thus impairing the guarantee of the assistance of counsel, which the Bill of Rights provides and which both the American Bar Association and the California Bar Association have sought to uphold.

The Soaring Spire

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. HOFFMAN of Illinois. Mr. Speaker, no one knows better than the housewife the gathering danger of inflation if the practice of borrowing and spending by our Federal Government continues unbridled. Their awareness of this risk is ably set forth in a resolution adopted by the Hinsdale Women's Republican Club of Hinsdale, Ill. Their observations should be well taken at this time. The resolution follows:

The following resolution was passed unanimously at the regular meeting of the Hinsdale Women's Republican Club on January 12, 1959:

"Whereas the tax burden in the United States has reached an all-time high, with increasing pressure on the 1959 sessions of State and national legislatures for increased appropriations; and

"Whereas Government spending programs in the various fields of foreign aid, welfarism, and education require ever-increasing taxation, which is destroying initiative, incentive, and enterprise; and degrading the national character; and

"Whereas Government by continuous taxing and borrowing and spending is causing an inflation, which eventually will confiscate the savings and investments of every citizens; and

"Whereas the taxpayers are helpless in this matter, unless they make a combined and united effort to demand relief: Now, therefore, be it

"*Resolved*, That it is the sense of this club of Republican women—

"1. That our representatives on both State and National levels be advised that they may count upon our unified assistance in their fight to resist this trend of spending;

"2. That they be asked to make careful study of all requests for money, in order to ascertain what economy may be worked out;

"3. That all new taxing agencies and services be held in abeyance;

"4. That we call on taxpayers at precinct and grassroots level to join in this economy effort, by writing to their representatives in Washington and Springfield;

"5. That copies of this resolution be forwarded to all Illinois Members of Congress, and to all members of the general assembly in Springfield."

MARY C. ALSBAUGH,
Chairman of Legislation.

William T. Wynn

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. SMITH of Mississippi. Mr. Speaker, the death of William T. Wynn, of Greenville, Miss., on Saturday, February, 21, was a great loss to our country, but it was an especially great loss to the Mississippi Delta, the area which I have the honor to represent in the Congress. Mr. Wynn was an outstanding business leader, well known throughout the country.

He was one of the founders and most successful presidents of the National Cotton Council.. His greatest love, however, was Greenville and the Mississippi Delta. His contributions to the progress of our area can never be measured. Billy Wynn was a southern gentleman in the highest tradition of that expression.

Under unanimous consent, I include editorials from the Delta Democrat-Times, of Greenville, Miss., and from the Memphis Commercial Appeal:

[From the Delta Democrat-Times, Feb. 23, 1959]

WILLIAM T. WYNN

Taken all in all, William T. Wynn was Mississippi's foremost present-day citizen. As such, this many-faceted man will be remembered and mourned in our community, our State, our region and our Nation, each of which he served ably and patriotically and in a variety of ways. He was soldier and churchman, lawyer and lawmaker, a visionary agriculturalist who led in the fashioning of the National Cotton Council into a mighty weapon for the South; and a businessman and financier whose acumen had the tinge of genius. All these things he was and more.

But my own remembrance and mourning are not so much for such a man as for one who was my benefactor and advisor and friend. Billy Wynn was one of the handful of Deltans who sponsored my coming to Greenville nearly 23 years ago to establish a new daily newspaper. In that difficult, eventually successful struggle, he and our seven associates gave of their time and wisdom and resources to an extent that is in retrospect as unbelievable to me as it is to the literally thousands to whom I have told this story. I owe him much.

Nor am I unique as a beneficiary of Billy Wynn. No one knows and no one will ever know the range of his unobtrusive generosity. Some of us he put on the road to success. Some he rescued from poverty or disgrace or worse. Some were close to him and some were strangers or nearly so, to whom he offered his helping hand for no other reason than that they were fellow humans in need.

Yet this is not enough to say of him. The successful man can be dull and the open-handed citizen dreary. Billy Wynn was neither dreary nor dull. He enjoyed life in all its aspects, in drawing room and duck-blind and at the racetrack and the football stadium; in the political powwow and at the directors' table; in civic undertaking and in the casual banter of the American main street. No matter where he was, his rare personal charm and his unfailing courtesy glowed warm and bright, drawing to their flame all manner of men and women. He was one of God's gentlemen. May God rest his soul.

HODDING CARTER.

[From the Memphis Commercial Appeal]

W. T. WYNN

W. T. Wynn, who died Saturday in Hot Springs, Ark., while on a vacation from his Greenville, Miss., home, was a man of many facets, varied careers and ambitions.

Billy Wynn, as he was known best by his friends and associates, was a lawyer, financier, banker, cotton planter and ginner, politician, and civic leader.

Successful in all the fields he entered, he will be remembered best for his devoted zeal in civic and community affairs.

He was one of the organizers of the Delta Council, which is the voice of the Mississippi alluvial empire in matters ranging from water conservaton to farm legislation, from schools to forestry development. It was logical that he should serve a term as president of the group.

With the late Oscar Johnston he moved to form the National Cotton Council, which speaks for cotton both at home and abroad. He served the council as director, treasurer, president, or chairman of the board during all the years since it was formed.

Of all his activities cotton demanded and received the most attention. He guided the council through the hectic span that marked the efforts to develop legislative and pricing policies which would restore cotton to its place in the sun. After his tenure in office he remained a strong force in the determination of policy.

Many men have made successes in single fields. Few have had the varied successes that came to Billy Wynn.

Yet he gave of himself freely, without stint or hope of personal gain to further the welfare of his community and the cotton industry.

Gentle and gentlemanly, soft spoken but forceful, he was beloved for what he was as well as for what he did.

His reward has been the success of the organizations he fostered; his monument, their continued and growing influence.

Congratulations to Clarostat

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial which appeared in Foster's Daily Democrat, Dover, N.H., on February 24, 1959, in observance of the 10th anniversary of the Clarostat Manufacturing Co. New Hampshire is proud to have Clarostat as one of its industries. The company has performed an outstanding service to the community and the economic life of the State:

CONGRATULATIONS TO CLAROSTAT

Clarostat, the popular name for the Clarostat Manufacturing Co., is tonight formally observing its 10th anniversary in Dover. On this occasion it will honor employees of 5 to 25 years with a banquet and presentation of awards.

A long story could be written about the 38-year-old concern that started on one floor of a Brooklyn, N.Y., factory building in 1921 as a small manufacturer of miscellaneous items. Not until 3 years later when it produced a special type of rheostat that clarified static in radios of those days, did the company begin to grow. This new product gave the present name—Clarostat—to the concern. It was forced to move to larger space in Brooklyn and the payroll increased to a few hundred.

About a dozen years ago continued growth of the business demanded that new quarters be located. Company executives searched all over the Northeast. Finally, when the late Charles Burnell, one of the top executives of Clarostat, made a trip up through the Connecticut Valley, he was referred to the New Hampshire Planning and Development Commission.

To this State agency and to the old Dover Mill Committee go much of the credit for having the Brooklyn corporation take over the Pacific No. 1 mill. Into this building the Government had poured several hundreds of thousands of dollars to modernize the plant during the war emergency. It was turned over to Sylvania Electric Products, Inc., to operate on a war project.

As a result, Clarostat purchased a modern plant for a relatively small sum, and it also inherited hundreds of men and women who had received Sylvania training on detailed assembly-line electronic work, an asset difficult to appraise in dollars and cents. In the list of 173 employees, of whom 125 are Dover residents, who have been with Clarostat for 10 years, we note many names of former Sylvania workers.

Since coming to Dover, Clarostat has a record of almost constant growth. Its research facilities have multiplied and it has developed many new television and radio components. From a few hundred workers at the end of the first year in Dover, the company now has over 1,300 on its payroll. Salaries and wages have gone up from $1 million to nearly $4 million annually.

Last year its payroll aggregated $3,773,029. Probably over 80 percent of this is in the immediate Dover area. The official breakdown shows that 76 percent is specifically paid to residents in Strafford County and adjacent communities. Of the remaining 24 percent, all but a very small amount is paid to employees residing within 25 miles of this city.

Of the total 1958 payroll, $1,710,000, or about 46 percent, is paid to Dover people.

To get off money matters, a noteworthy feature of the 10th anniversary of Clarostat in Dover is the pleasant relationship existing with its employees through local 242, IUE (AFL–CIO). We note that union officials are frequently called in by management to cooperate on numerous projects. Tonight's dinner is one such.

The Democrat feels that it is in a position to extend to the Clarostat Manufacturing Co., not only its own congratulations, but those of the local area business community and people, for the success that the company has enjoyed, and for what it has meant to the area economy as one of the largest employers.

President Eisenhower and the Public Schools

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. METCALF. Mr. Speaker, seven state-of-the-Union messages ago, President Eisenhower stated wisely that our school system demands some prompt, effective help. He said the whole situation calls for careful congressional study and action.

Since that time, his recommendations have ranged from study to first echelon action, then back to second echelon study after first echelon inaction.

In 1954, he put it this way:

In order to appraise the needs, I hope that this year a conference on education will be held in each State, culminating in a national conference. From these conferences on education, every level of government—from the Federal Government to each local school board—should gain the information with which to attack this serious problem.

In 1955, the year the conferences were to be completed, he once again became an action man. He put it this way:

However, such factors as population growth, additional responsibilities of schools, and increased and longer school attendance have produced an unprecedented classroom shortage. This shortage is of immediate concern to all our people. Affirmative action must be taken now.

Without impairing in any way the responsibilities of our States, our localities, communities, or families, the Federal Government should serve as an effective agent in dealing with this problem.

Nineteen hundred and fifty-five was the year, too, that the President sent us a special message.

In 1956, he reported the conclusion of the broadly representative White House Conference on Education, that—

The people of the United States must make a greater effort through their local, State, and Federal Governments to improve the education of our youth. This expression from the people—

He said—

must now be translated into action at all levels of government.

So far as the Federal share of responsibility is concerned, I urge that the Congress move promptly to enact an effective program of Federal assistance to help erase the existing deficit of school classrooms.

He promised, and delivered, to Congress that year his recommended program of Federal assistance for school construction.

He hit his peak in 1957, when he said:

High priority should be given the school construction bill. This will benefit children of all races throughout the country—and children of all races need schools now. A program designed to meet emergency needs for more classrooms should be enacted without delay.

But he also hit bottom in the summer of 1957. In July 25, we all lost when the House, by a vote of 208 to 203, killed the bill authorizing general Federal aid to the States for school construction.

This was the bill President Eisenhower said he wanted—until its life hung on his expression of support on the day the bill was voted on. Then there was silence. A statement from the President prior to the vote, that he would be disappointed if school construction legislation were not passed, would have done a lot more good than his mention of disappointment after the bill was killed. For a shift of three votes would have saved the bill. Ninety-seven Democrats and one hundred and eleven Republicans voted against the bill. One hundred and twenty-six Democrats and seventy-seven Republicans voted for it.

In his 1958 state-of-the-Union message, President Eisenhower lumped education and research together, saying his recommended program "involves new activities by the Department of Health, Education, and Welfare designed principally to encourage improved teaching quality and student opportunities in the interests of national security."

But that was the year, too, that he talked of spurring the maximum amount of local effort and called for "redoubled exertions on the part of all Americans if we are to rise to the demands of our times."

This—

He said—

means hard work on the part of State and local governments, private industry, schools and colleges, private organizations and foundations, teachers, parents, and—perhaps most important of all—the student himself, with his bag of books and his homework.

In his 1959 budget message, President Eisenhower proposed another study. He said he would set up a committee of selfless, able, and devoted individuals, outside of Government to make an appraisal of the potentials of our future. The result would be establishment of national goals. The committee also would be concerned "with methods to meet such goals and which levels of Government—local, State, or Federal—might or should be particularly concerned."

As one example, consider our schools, operated under the authority of local communities and States. In their capacity and in their quality they conform to no recognizable standards. In some places facilities are ample, in others meager. Pay of teachers ranges between wide limits, from the adequate to the shameful.

He said:

We need a national goal. Once established, I am certain that public opinion would compel steady progress toward its accomplishment.

So far, we have not heard anything further from the President. His Secretary of Health, Education, and Welfare did hold a press conference and released a letter to Speaker RAYBURN. So we are down to a second-echelon study.

The Late Meyer Berger, of the New York Times

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Shirley Povich which appeared in the Washington Post and Times Herald on February 12, 1959:

NEW YORK, February 11.—At the Riverside Memorial Chapel at Amsterdam and 76th, the cab driver pulled up and said there would be no fare for this one. "I'm not taking," he said, "I'm parking. Meyer Berger wrote a story about me and my hack in 1953. Today, like you, I'm a passenger. I got respects to pay."

They were at Mike Berger's funeral services today, the cab drivers, the destitute, the hardluck ones, his little people with whom he treated in his "About New York" column for the New York Times. Also the big people, the editors of the Times to whom he gave 30 years of super reporting and city officials and bigname folks who had admired Meyer Berger and were now grieving.

They came from other newspapers, too, and the magazines, in farewell salute to the gentle champion of their craft who had beaten his own East Side boyhood poverty to gain fame as the reportorial giant of newspaper city rooms.

They knew that Mike Berger did not merely write stories with his typewriter. He caressed them tenderly and brightly and sensitively amid the tumult of the city room, and the fact that two of them won him Pulitzer prizes was unimportant to admiring colleagues who knew there were hundreds from his typewriter that qualified.

One that didn't win him a Pulitzer prize was the lead he spun when the Times editors turned over to Mike the story of the killing of mobster Albert Anastasia. That master killer of the gangster troop who had plagued New York for years got his in 1957 from two gunmen who found Anastasia in a barber's chair at the Park Sheraton Hotel. Berger assessed the story and wrote, "Death Took the Executioner Yesterday."

The services for Berger today were in the faith of his fathers and he was committed to rest with the chant of the Hebrew "El mole rachmin, schochen bamromin." If it is presumptuous to introduce a Lincolnesque note, at least the fellows of Mike Berger's craft could agree that he, too, is lost to the ages.

The reporter who, better than any other, captured the sights and sounds of New York and grew up to dominate the language of newspapers, made it after only 2 years of high school. But he had discovered the free libraries and learned, too, from his schoolteacher wife, and as one of the 11 Berger children he was learning also the throbs that travel with good people of little goods. He wrote of them kindly.

The big story, too, was Berger's dish and his competitive colleagues on other newspapers would wait for the Berger lead in the New York Times with the kind of trepidation that actors reserve for the next morning's reviews. His way of handling the story was the simplicity of the fine artist as he appraised events and made tools of words.

Thus it was that when the first of World War II's soldier dead came home from Europe in 1947, Mike captured the depth of the story virtually in one lead sentence when he typed "They came in on the morning tide, in 6248 coffins, in the hold of the transport James V. Connolly."

Once a night city editor of the Times, impatient with the lack of slam-bang journalistic style by new young reporter Berger, told him, "You'll never make a newspaperman." Today in the Riverside Chapel, the Times' current city editor, Frank Adams, said "the tongue of an angel is needed to do justice to the craftsmanship and the quality of our departed comrade."

He graduated from police reporter to the toughest crucible of all newspaper-writing jobs, that of night re-write man who assembles facts against time and out of them confects the story that should be written, well. His facility with re-writes brought him the top reporting assignments, and then the Times gave him the thrice-weekly "About New York" column. New Yorkers recognized the byline and then recognized him as the tall, thin gentleman with spectacles and long, inquisitive nose, who listened patiently to them and wrote about them.

Times men said of him that he liked everybody, including some that didn't deserve to be liked. In the city room he was the biggest soft touch for "the bite." Famous enough to have a private office, he wouldn't. Too astigmatic to pass the eye test for the World War I Army, he memorized the good-vision chart and got in. He came back with a Purple Heart and a Silver Star.

He took another fling at war as a correspondent in 1944 and lasted only 2 months, got no farther than England. He developed ulcers that were kicking up. You can get ulcers if you listen too patiently and too kindly to other people's hard-luck tales. Oh, yes, the $1,000 Pulitzer prize he won for writing the 13-person killing by Howard Unruh, the demented war veteran, in New Jersey in 1949, he didn't keep. Sent it along to the killer's mother. His feeling for people told him where it would be needed. It also helped him write so well.

Junior Colleges Put in Limelight

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. ULLMAN. Mr. Speaker, indicative of the widespread support for the public junior college movement was the general display of interest by many school leaders at the national convention of the American Association of School Administrators recently held at Atlantic City. In one of the most heavily attended sectional meetings at the convention, general agreement was expressed on behalf of the need for a system of community colleges throughout the Nation.

Recently the Christian Science Monitor contained an excellent article by the paper's education editor, Millicent Taylor, concerning the association's discussion of the community college movement. I think it will be of interest to all and ask that it be printed in the CONGRESSIONAL RECORD:

JUNIOR COLLEGES PUT IN LIMELIGHT
(By Millicent Taylor)

ATANTIC CITY.—Is extending the public school system upward to include the junior college the next step in American education?

School leaders meeting here for the national convention of the American Association of School Administrators, a department of the National Education Association, say it can't be stopped.

In a heavily attended section meeting, the need for systems of junior or community colleges all across the Nation was readily conceded. The point at issue was what the setup should be.

This discussion was only one of nearly two score section meetings dealing simultaneously with all kinds of school problems, ranging from identifying the gifted and stepping up foreign languages to teacher certification and the training of school custodians.

PATTERN OUTLINED

Presenting the California pattern of public junior colleges as a successful one, James H. Corson, superintendent of schools, Modesto, described such colleges as (1) voluntarily initiated by local communities, (2) tuition free, (3) public supported and distributing the cost between State and local levels, (4) serving an existing high school area or combined areas, and (5) administered by a locally elected or appointed board of lay citizens, with the State responsible for accredited standards, and a liaison between its programs and the university providing professional consultative service and the like.

Dr. Corson sees the public junior colleges as providing, beyond high school, education at less cost to the family and to the State. He also sees these colleges as offering real encouragement in an increasingly complex society to those who can benefit by going on with formal education. In addition, they relieve the strain on the senior colleges—large numbers entering senior colleges in the third year.

Able students that are enrolled in them are challenged, and go on to professional degrees and to positions of leadership.

STRONG GUIDANCE NOTED

At the same time guidance is stronger in the junior college than in the early years of the larger senior colleges and universities, and many a young person is enabled to find himself.

It is the experience in California, too, that the junior colleges iron out student problems and relieve the senior colleges of remedial work, although the junior college is not by any means "just a salvage shop."

Close cooperation with the community, Dr. Corson emphasized, enables the junior college to offer advanced technical, semiprofessional, terminal business, and trade training in direct response to community, area, State, and national needs.

The public junior college has also proved the best center for serving adults locally in special, refresher, and retraining programs. It brings into the community at low cost, he added, many cultural advantages and interests formerly restricted to the oasis of the college town.

"As the Nation faces the rising tide of college students during the next decade, heavy

reliance must be placed upon the junior college," Dr. Corson stressed.

"It is probable that they will continue and extend their important role in the democratization of higher education and will bring educational opportunity within commuting distance to scattered student populations throughout the State and Nation. We advocate the principle of local control. If local school districts feel shortage of funds, as they probably will, the State can increase its support with a much lower outlay than it could provide another brand of higher education."

And he added that to do nothing to meet the already urgent need is to place our heads in the sand.

Lawrence Bethel, president of the Fashion Institute of Technology, a higher education institution of New York public schools, declared himself in favor of public junior colleges. But he warned the school heads against merely adding two grades to the high school. The junior college must have administrative and educational freedom to develop as a separate institution of college character, he stressed.

Formation of a junior college in an area must be voluntary, meeting a felt need of the community with the full support of the community and with ready aid from the State.

This was an opinion expressed by many other school heads present.

FAST GROWTH RECORDED

Dr. Bethel also questioned the practicability of forming junior colleges in any but the more heavily populated districts. Where high school graduating classes are small and distances too great to combine high school areas, the junior college classes would be too small to provide courses diverse enough of quality high enough to meet the interests, needs, and abilities of all the students.

In the light of the preeent 50 percent dropout or failures in some of the better colleges, too, he suggested that we are not reaching the interests and abilities of half our present registration. He therefore urged that before the schools add a network of public junior colleges and encourage more students to go beyond high school, that they improve their present programs.

"The junior college is now the most rapidly developing phase of education in the United States," he summarized. "It is estimated that by the end of the next decade it will register more than 50 percent of the freshmen of all collegiate institutions. This proportion already has been exceeded in California. It is becoming the undergraduate collegiate institution of our modern educational structure.

"Let us not impede its progress by trying to make it an appendage of a totally different phase of the structure. Rather, let us assist it to grow and develop in its own right."

Who'll Be the Next President?

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1959

Mr. SANTANGELO. Mr. Speaker, today more than 15 months before the parties select their candidates for President, speculation is rampant as to who the next President will be. In the 18th Congressional District, I have tried to obtain information in order to translate that speculation into an informed prediction.

At the early part of this year, I forwarded to all the registered voters in my congressional area a questionnaire. Included in this questionnaire were the following questions: "Whom do you prefer as President of the United States?" and "Whom do you prefer as Vice President of the United States?"

Many replies were returned to me and about 60 percent of those that answered indicated that it was too soon to determine their choice. The remaining answers indicated various choices for President and Vice President. One can draw many conclusions from the answers and I shall draw several.

In order to better understand the results, a description of my congressional district and the economic position of the residents would be helpful. My district consists of residents who are paying extremely high rents and extremely low rents. The rentals range from $100 per room per month to $5 per room per month. Included among them are the residents of a great number of low income public housing projects. They are workers, businessmen, executives, teachers, and many public employees.

My area is populated probably by the most heterogeneous group in the United States. There are Italians, Puerto Ricans, Negroes, Cubans, Germans, Hungarians, Irish, Czechs, and other nationality groups. This area is known as East Harlem and Yorkville. This area is strictly urban with no private residences or one-family homes.

The names of the Presidential hopefuls were not listed on the questionnaire and the constituency wrote in the names according to their choice. Twenty-one and one-half percent selected Senator JOHN F. KENNEDY for either President or Vice President. Thirteen percent selected Adlai Stevenson. Four and one-half percent selected Senator HUBERT HUMPHREY. Four percent selected Gov. Robert B. Meyner. Two and one-half percent selected Senator STUART SYMINGTON. Two percent selected Mayor Robert F. Wagner. One percent selected Senator LYNDON JOHNSON. Twelve and one-half percent selected Vice President RICHARD M. NIXON, and 9½ percent selected Gov. Nelson Rockefeller.

The choice for Presidency was the closest with JOHN KENNEDY eking out a 1-percent margin over Adlai Stevenson. Mr. NIXON for President had a slight edge of 2 percent over Rockefeller.

This questionnaire was forwarded to the constituency before Governor Rockefeller advocated his high tax program and reduced exemptions. The attitudes of the residents of the State of New York, and particularly in this section, undoubtedly have changed regarding Governor Rockefeller.

It is noteworthy that during the last presidential election, President Dwight Eisenhower defeated Adlai Stevenson in this area by a margin of 18,000. The district is considered a Democratic district, except in a presidential election.

The strength which Senator KENNEDY showed in the polls was surprising. He was clearly either a choice for President or Vice President, and would, in my opinion, prove to be a strong candidate in this congressional district. The strength of Adlai Stevenson was only for President with a small percentage of the people selecting him as their choice for Vice President. Apparently the voters feel that Mr. Stevenson should be presidential and not a vice presidential choice.

The contest between RICHARD NIXON and Nelson Rockefeller was extremely close. During the last New York gubernatorial election, Nelson Rockefeller on an overall basis won in this congressional area, losing in the north end and winning in the south end of the district. The strength that NIXON showed, in my opinion, was surprisingly strong. While more people favored JOHN KENNEDY, sentiment was strong for NIXON.

Other surveys, such as U.S. News & World Report, are based upon preferences of particular leaders with votes in the convention. My survey indicates the choice by the people who cast their votes. In view of the large number of people who abstained from indicating a choice so far in advance, one can readily conclude that the great majority of the voting population is undecided at the present time.

In my opinion, this is the home stretch and those presidential hopefuls who demonstrate aggressive leadership and who are shown by press and television to possess understanding of our domestic and foreign problems, will be the choice of the uncommitted electorate. At this point, the people of my area who have expressed themselves clearly want JACK KENNEDY for one of the two highest positions in our country.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Water Resources Development

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very worthwhile speech by the senior Senator from Louisiana [Mr. ELLENDER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH DELIVERED BY SENATOR ALLEN J. ELLENDER BEFORE THE ANNUAL MEETING OF THE NEW YORK STATE WATERWAYS ASSOCIATION IN NEW YORK CITY, ON FEBRUARY 27, 1959

Ladies and gentlemen, I am indebted to President Wright for inviting me to speak before your annual meeting of the New York State Waterways Association.

I prize this invitation, since it comes from an organization which, although far removed in miles from my home State of Louisiana, is shoulder to shoulder with us in purpose—the protection and development of one of our most precious resources, water.

My interest in water resources development goes back a long way. I was born at Montegut, La., a small village located about 30 miles from the Gulf of Mexico, and some 16 miles south of my present home at Houma.

Houma, a city of about 25,000 inhabitants, is located about 50 miles southwest of the great port at New Orleans, at the junction of Bayou Terrebonne, a navigable stream which carries a great deal of freight, and the Gulf Intracoastal Waterway, with which all of you are doubtless familiar. The great Mississippi is less than 20 miles away, as the crow flies.

Having been born and reared in this area, I know at first hand the hazards of uncontrolled water, and, conversely, the benefits of wise development of this resource. With such a background the importance of a well-regulated and maintained system of waterways was impressed upon me at an early age. Through the 22 years I have served in the U.S. Senate, that interest has not only been maintained, but it has grown.

In those years I have devoted much time and energy in helping formulate and develop a long-range, well-planned program of our water and land resources. In all humility, but with some pride, I feel that I have achieved some slight degree of success in these long-range plans.

With your indulgence, I would like to expand my remarks to include a birdseye view of the great Mississippi, with the city of New Orleans as the gateway between the Mississippi Valley and the fabulous riches to the south of us.

Some 41 percent of the area of the United States is drained through the Mississippi River. In the last major flood on the Mississippi—that of 1927—an area of 23,000 square miles was inundated. This is about the combined area of the States of Vermont, New Hampshire, and Connecticut.

Cities, towns, and farms were flooded, destroying crops and paralyzing industry. Scores of lives were lost. Property damage ran into hundreds of millions of dollars; rail transportation suffered heavily, with only one rail line operating for a time east and west below Cairo, Ill.; highways and bridges were unstable for weeks; and thousands of people were left homeless and destitute.

The havoc that would result from a repetition of such a flood today, with the increase in population and the growth of industry in this area, is impossible to conceive. Fortunately, a comprehensive plan for the development of the Mississippi River and its tributaries was authorized in 1928, the year following this great flood. Since that time work has progressed steadily, although after 31 years this project is only 72 percent complete. Yet, the benefits from this project already exceed the costs by a benefit-to-cost ratio of 5 to 1.

One of the prime inland waterways of this area, the Gulf Intracoastal Waterway which passes Houma, was authorized on the basis of developing 400,000 tons of commerce a year, but the tonnage on that waterway now exceeds 13 million tons. More important, however, is the fact that the development of this waterway was a major factor in creating the vast industrial complex of the Texas-Louisiana Gulf Coastal area.

Thus my interest in the beneficial development of water resources of the Nation stems from a personal conviction that such developments were an important factor in achieving our present high standards of living, not only in the area of my home State but all across this great Nation of ours.

I believe that unless a well-planned and aggressive program of water resource development is carried forward, our children and grandchildren will not have an opportunity to enjoy the many advantages that today we take for granted.

My convictions in this have been strengthened by my recent travels through Europe and Asia. I believe that unless we protect our greatest resource, water, unless we keep it inland and do not let it flow to the sea unused, some day many parts of our great country may become as barren as the Gobi Desert, or as the lands which I have seen on my travels in old Persia. Our history books tell us that about 500 years before Christ, the entire area of Persia was capable of sustaining the livelihood of 115 million people. Now it adequately can care for less than 14 million.

Consider the great Valley of Mesopotamia between the Tigris and Euphrates Rivers. At one time that area could produce food and fiber for 15 million people. Today that great valley can hardly supply the needs of 2 million people. And why? Because of the neglect of a great natural resource—water. If it had been possible to retain the waters upstream on those great rivers, and not permit them to steal the rich topsoil and float it into the interior of the country and into the sea, the chances are that that great valley would still be very productive.

The fact is, that those rivers carried millions of tons of earth down the streams and clogged the small tributaries and rivers in Mesopotamia. Today that land is not suitable for much cultivation. It is sour. It cannot be farmed. Certainly we cannot afford to let that happen in our great country.

Two years ago I visited various portions of the Soviet Union for well over a month. This was my third trip to this country in as many years. I have the opportunity of visiting cities never before seen by an American Government official; cities in the far reaches of Siberia, an area which had been pictured to me before my visit as wastelands of snow and ice—as a vast prison camp. But that was not what I found. To my great surprise, I saw a virgin land being awakened, a land that promises to make Siberia the granary of Russia. Industry was flourishing to a surprising degree. One of the principal tools the Russians were employing in this development was a well planned utilization of its waterways system, both for navigation and the development of power from falling water. I saw several hydroelectric power stations that were larger than our biggest and one that was almost twice as large as any we have in this country. I saw foundations poured for turbines and generators which will have a rated capacity of 300,000 kw. each—almost three times larger than anything we have. And these projects, gentlemen, were designed, constructed, and had all component parts built within the Soviet Union. In fact, much of the work on the large turbines was being done at Novosibirisk, a place which was a small trading post in 1905, but is now a city of almost 1 million.

As a result of my inspection of installations in Russia, I am convinced that in water transportation and hydroelectric power development the Russians are inching ahead of us.

In any comparison of time, money and effort expended on resource development in Soviet Russia and the United States, there is, of course, absolutely nothing that we can do about the rate of such developments in Russia. They are proceeding with their own resources to meet the needs of their own economy. We must direct our attention to what we can do to satisfy our own needs.

There have been many studies of resource developments by presidential committees. One of the most recent was the Presidential Advisory Committee on Water Resources Policy, dated December 22, 1955. In that report it was stated that the estimated use of water in the United States in 1950 was 185 billion gallons per day and that, based on an estimated population of 200 million by 1975, the requirements would be 350 billion gallons per day.

However, the November 28, 1958, issue of the U.S. News & World Report contained a very penetrating article by Dr. Philip M. Hauser on the so-called explosion of population in the United States, which sheds more light on this problem of expanding population.

Dr. Hauser is head of the Department of Sociology at the University of Chicago, and has been Deputy Director of U.S. Census. He points out that the newest projections of the Census Bureau place the population of the United States in 1975 at between 216 and 244 million.

That is an increase in the predictions of from 8 to 20 percent in the past 3 years.

Putting it another way, taking a mean of the projections, a population of 230 million by 1975 would mean a 30-percent increase in our population in the next 16 years. Think of the tremendous increase in demand on all elements of our resources, including water. In terms of water demand, we will require about 400 billion gallons per day. In other words, during the quarter century period from 1950 to 1975 we will more than double our water requirement.

Thus it should be apparent that plans must be made now to meet these increased needs.

When you consider the time required to develop a major project—3 years or more for planning, then 8 to 10 years for construction—it is evident that it is none too early to start projects needed and justified now.

They will become critically urgent long before they can be completed on an economical program. Crash programs should be avoided if at all possible, since they are always more expensive than necessary, and frequently do not provide for the optimum use of the site.

And yet, in the face of all this data, how is the present administration meeting the known demand for resource development? It has not only failed to recommend funds to start surveys, plans, or new projects that are needed now, but last year built into the budget a planned slowdown which would delay the benefits of the projects underway as well as increase their ultimate cost.

As you all know, last year when the Congress added some new starts for planning and construction, there was a terrific blast from the White House.

On September 2, 1958, the President reluctantly signed the public works appropriation bill. At that time he issued the following statement:

"In the Public Works Appropriation Act, 1959, the Congress has included approximately $39 million in funds to initiate construction on 65 unbudgeted new project starts that will ultimately cost almost $700 million. Adding nearly $700 million to the already heavy future commitments for Federal water resource projects is but another instance of irresponsibility in the expenditure of public funds. I am compelled to approve the act, however, because it appropriates essential funds for continuing work on river and harbor, flood control, and reclamation projects that were started in previous years."

When you consider that the appropriation for construction in the 1959 act was approximately $870 million, was it really an act of irresponsibility in the expenditure of public funds to start new projects which will ultimately cost nearly $700 million? That is adding less than 1 year's future commitment at the present rate of construction.

Unless it is the desire of the administration that the water resource program wither and die on the vine—and that may be the underlying reason—a fair number of new starts should be added each year.

Perhaps those shortsighted planners in the Budget Bureau believe that the Federal Government is spending too large a portion of its budget in developing the water resources of this Nation. Let us examine the facts.

Between 1950 and 1956 our national population increased 11.2 percent. Between 1950 and 1956 the national income increased 42 percent. During the same period the expenditures for rivers and harbors and flood control decreased 14.9 percent.

I believe those figures are very significant.

As all of you know, construction costs have increased on an average of 5 percent a year. If that average is applied to the 1950 expenditure of $627 million, we should be spending about $908 million in 1959 on the civil functions of the Corps of Engineers in order to maintain the same level of operations as in 1950. In contrast, the appropriation was just under $814 million. This comparison disregards the increased need for these public works resulting from our expanding population.

What is the situation in your own backyard—the Middle Atlantic Division of the Corps of Engineers?

The 1960 budget requests $37,448,000 for the continuation of construction on 13 projects. Of these 13 projects, 7 would be completed with the funds requested in 1960. If the budget were to follow its usual course, the 1961 request would be for approximately $24,294,000 for the continuation of six projects, of which three would be completed with the funds requested. By 1962 the budget request would be $21,511,000 for three projects, of which two would be completed with the funds requested. Thereafter you could expect about $13.75 million for the next 2 years to complete the Delaware River Channel.

Had it not been for the new starts added by the Congress, or had the President been granted the item veto he requests, the picture would be even more bleak.

I believe that one of the most vital interests of your association is the improvement and betterment of the 525 miles of the New York State Barge Canal System. This is probably the largest State-owned canal system in the United States. The foresight of the people of the great State of New York in the early 1800's in building this canal has always had my admiration. The part it played in the development of your Empire State and the rest of the United States, particularly the Middle West, cannot be overestimated.

I am aware that efforts are being made to amend the constitution of New York State to permit the legislature to lease or transfer the barge canal to the Federal Government. As I understand the situation, legislation authorizing such transfer passed the legislature in 1958 and similar legislation, now pending, must be adopted this year in order that the proposal may be submitted to the voters in a referendum. Certainly there is a real need for a modern barge canal system, and I am pleased to note that the State legislators are studying the problem of the future of this waterway. It certainly demonstrates a healthy interest by the State of New York in waterway improvements.

The thought expressed in certain quarters as to the reduced future need or role of this system in the overall transportation requirements of the Middle West and Northeastern United States, in view of the early opening of the St. Lawrence Seaway, may be giving some of you apprehension as to the continued interest of the United States in its improvement. While initially there may be some minor traffic for overseas destinations that will be diverted to the new seaway, the system will continue to be a vital artery of commerce to serve the large number of industrial centers which the existence of the barge canal itself helped to create and expand. The seaway will doubtless generate new enterprises and activities which may make your canal system even more vital to the continued growth of the State of New York and the Nation at large.

I can assure you that many Members of the Congress are aware of the continued importance of this system to the welfare of the Nation. This is evidenced by the Federal participation in its modernization as authorized in the River and Harbor Acts of 1935 and again in 1945. It is regretted that the national crisis of the Second World War and the Korean situation made necessary a slowdown of this improvement. I was pleased that last year, through the efforts of the Senate Committee on Appropriations, we were able to give this project a boost by providing an additional unbudgeted $800,000 to the budget estimate of $110,000 in order that a start could be made on replacing a pair of guard gates at Waterford.

In 1935 deepening between locks and the raising of bridges were authorized. Of the 65 bridges to be raised, 42 have been or are being raised and the deepening was completed in 1941 with only some widening at structures remaining to be done. The 1945 act approved deepening through the locks. The sills of 18 locks have been or are in the process of being lowered with 9 locks or structures still remaining to be done.

The Corps of Engineers has been directed to restudy the project with a view of eliminating the restriction in the 1935 act on overall expenditure by the Federal Government and to determine what further improvement might be justified.

Under the present Federal project, the responsibility for preparing specifications and designs rests with the Department of Public Works of the State of New York. Such plans must then be approved by the Corps of Engineers. Contracts are then let by the Department of Public Works of New York and finally, disbursement of Federal funds is authorized by the Corps of Engineers when the work is completed to reimburse the State for expenditures under the contract. Due to the fact that the organization responsible for planning and construction of the project is not the agency that supports the budget request, I fear that the importance of early obligation and expenditure of funds is not fully appreciated.

I recall several occasions when it was impossible to obtain even the budget estimate for this project because funds for the previous year had not been obligated at the time of the hearings.

Your State officials have demonstrated their faith and confidence in the future of their canal system in proceeding with the improvement with State funds pending future appropriation by the Congress.

For years, New York Harbor has had two unique river and harbor activities: the supervision of New York Harbor function and the collection of drift, with which I have become familiar during appropriation hearings. The vast quantity of waste materials generated here surely needs adequate surveillance to insure its proper and legal disposal. The hazard of drift and its damaging effect on boat operation is known to me. I trust our appropriations for these activities have been adequate. If not—show us why.

You have many other interesting and important projects in this area, which are sometimes difficult to follow, since New York Harbor is not included as a whole in one Federal project, but is made up of about 35 projects. Your Kills, or New York and New Jersey Channels project, now nearing completion and again being studied for further improvement; the Newark Bay, Hackensack and Passaic Rivers area, largely completed except for the Hackensack, but needing further study due to your Port of New York Authority's development at Newark and Elizabeth; the Buttermilk Channel that needs completion; the Pierhead Channel in upper bay; and the many smaller channels and harbors. You are truly a series of ports within ports, any one of which in itself warrants the concern, interest and attention of the Federal Government. However, all of these features suffer by reason of the no-new-start policy of the administration.

Unless some of the review studies for modernization of these waterways are permitted to be started, you may have to wait 4 or 5 years before you can start some of the improvements that are needed today.

Another important project in this area is the deepening of the Hudson River, from 27 to 32 feet up to Albany, N.Y. Last year the Senate, following the recommendations of the Appropriations Committee, approved funds to initiate this important modernization of the Hudson River. Unfortunately,

this appropriation did not survive the House-Senate conference. I am hopeful that this project can be started in fiscal year 1960.

There are many other projects I could discuss, but those mentioned are vastly important—important not only to the people of New York, but to those of the entire Nation as well.

To plagiarize a phrase often used, I believe that what is good for New York is good for the country, just as I also believe that what is good for Louisiana is also good for the country.

That is why my temper rises and my blood boils when I hear the all too familiar label of "pork barrel" placed on public works projects. These shortsighted mudslingers have no conception of the good that flows to our entire Nation as a result of such pragrams.

A channel in New York is deepened, and as a result, increased trade pours into Pennsylvania. A harbor in Louisiana is completed and there is an increased demand for Iowa corn, Pittsburgh steel, and so on.

These are the true end results of public work programs—increased trade and activity which will continue to keep our country great and at the forefront of nations.

That is why I cannot understand the position of the present administration. It is not possible for me to accept the thesis that the American economy cannot afford the expenditure of funds for projects which will eventually produce more wealth for all of us.

Efforts to cut down our public works programs are merely shortsighted attempts to curtail spending that in the long run will just cost the American people more money. If the administration is so eager to cut down Federal spending I invite its attention to the trimming of our foreign aid program.

As you are aware, the Congress has been asked to cut back of public works expenditures for next year, while in the next breath, the administration has requested a 26 percent increase in our foreign aid programs.

Perhaps one way to obtain adequate public works programs—and I might add, without the benefit of justification and the close watch of the Corps of Engineers over projects—is to secede from the Union and ask for foreign aid.

If this situation were not so serious it would be farcical. We have an administration that on the one hand is attempting to slowly stifle the progress made in recent years in the development of our waterways, and on th other hand, willingly pours money with both hands into foreign countries.

I repeat, our public works programs are investments in the future of America, and I for one, know of no better place to invest our money, our faith, and our efforts.

I believe the time has come for the Members of Congress—and the entire Nation as well—to stand up and demand that the administration take a new look at its public works policy—or else prepare for the entrance of a new administration that will.

The Massive Irresponsibility of the Spenderc

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent that remarks I made before the Ohio Association of Retail Lumber Dealers on February 26, entitled "The Massive Irresponsibility of the Spenders," be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE MASSIVE IRRESPONSIBILITY OF THE SPENDERS

(Address by U.S. Senator BARRY GOLDWATER, Republican, of Arizona, before the Ohio Association of Retail Lumber Dealers, Columbus, Ohio, February 26, 1959)

Just a few days ago we Americans observed the birthday of the Father of our Country, George Washington. I am frequently amazed at how the words of really great men ring true generations after their time. Abraham Lincoln, Theodore Roosevelt, Thomas Jefferson—even today their philosophies serve us as a guiding light.

So it is with George Washington. I sometimes think that his Farewell Address should be framed and hung in the office of every Senator and Congressman in Washington, for it offers some very sound advice.

Among his words in that address were these: "As a very important source of strength and security, cherish public credit."

He admonished the Nation to use credit as sparingly as possible and to avoid the accumulation of debt not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear.

Now, that's a fairly simple formula. The following of it is what takes courage. Political courage.

I am sadly reminded of those words as I observe the spending orgy now underway in Congress. The budget-busters are going at it hammer and tongs, determined to spend more and more of your tax dollars on the theory that a little bit of inflation is good for the country.

Some observers have expressed the opinion that Congress has reflected the views of the people by approving increased domestic expenditures. They believe the people generally have taken the attitude that if the United States can afford to spend billions for military and economic aid to foreign countries, then they, as taxpayers, want to get as many benefits as possible under domestic programs.

Whether this was a correct estimate of the opinion held by a majority of the people or not, one is entitled to suspect that it was the basis on which the 2d session of the Democratic-controlled 85th Congress permitted:

1. A deficit of $12.9 billion;

2. The public debt limit to be raised from $275 billion to $288 billion temporarily and to $283 billion permanently; and

3. Nondefense spending for fiscal 1959 to be increased by $5.3 billion against an increase of $2 billion for defense purposes.

The fact is that total national defense spending planned for fiscal 1959 will be $4.3 billion under fiscal 1953's defense budget of $52.6 billion. On the other hand, nondefense expenditures in 1959 are estimated at $9.2 billion above the 1953 level of $21.7 billion.

In the face of the growing public debt, such extravagance has no place in the budget of a prudent government any more than it would fit into the budget of a prudent family.

Let's consider the Federal budget in everyday terms.

A family budget, operated in the same manner as the Federal budget, would mean that the family started out fiscal 1959 with a debt of more than four times its annual income. Following the Federal trend that family would face its financial situation by obligating itself to spend more than $1.08 for every $1 income received during the year. No sound financial institution would accept a note signed by a member of a family in such a condition.

As a matter of fact no family and no business or industry could ever get into such a dire financial situation with private financing. They would be considered broke long before ever reaching such a status.

In the light of such a situation we currently have before us the even sorrier spectacle of certain leaders in Congress practically hand tooling an economic disaster.

If the budget is unbalanced the result will be higher taxes for everyone. And if the revenues to balance the spending are not collected by the Government then the people of this country are in for a period of inflation that could push the cost of living upward and make your dollar worth less and less.

There are several bills coming up for consideration in Congress that involve spending more billions than the budget provides. Those behind this legislation seem to feel that the country doesn't care and the sky's the limit on public spending as long as you hang a "welfare" tag on it.

I can't think of many things that would please the Kremlin gang more than to see the economy of this country weakened from within by irresponsible fiscal policies. Deficit spending and lending, if continued, will lead us straight into the Russian trap envisaged by Lenin, who said: "We shall force the United States to spend itself to destruction."

A nation can hang itself on the gallows of excessive public debt—and we are no exception.

Some people would have us believe that the Federal Treasury is a bottomless grab-bag which never needs to be conserved or replenished. Because of this attitude we have seen the national debt soar to dizzying heights. The Federal debt in December 1958, was $283 billion—about $7,000 per family in the United States.

In about 25 years our expanding Federal Government has boosted the average family's tax bill from $120 to $1,600 a year.

We don't often hear these facts.

As I mentioned earlier, this current fiscal year the Federal deficit is estimated at nearly $13 billion—the Government is spending nearly $16 billion more than its receipts. For the coming fiscal year the President has presented a budget of $77 billion. It is a balanced budget, even though it is the biggest peacetime budget in our history.

Yet some critics have called it a skinflint budget. Actually, as the President himself said, it will "help prevent further increases in the cost of living and the hidden and unfair tax that inflation imposes on personal savings and incomes."

Senator HARRY F. BYRD, an outstanding authority on fiscal policy, has said: "Our free-enterprise democracy is the greatest economic system the world has ever evolved. But there is one controlling requirement, and it must never be overlooked. The system is based on solvent government and sound money. It is in this requirement that we have allowed ourselves to become weak." To those words I say "Amen."

We cannot spend our way into prosperity. Nor can we preserve our prosperity and our free-enterprise system by following a reckless policy of spending beyond our income in peacetime.

The vital necessity of sound fiscal policy is illustrated by the constantly increasing prices of military equipment. Even allowing for the obvious fact that the new weapons and equipment are much more sensitive, powerful, effective, and, therefore, more expensive than the items they are replacing, the truth is that a good deal of inflation is already built into their extremely high costs.

Let me give you a few examples of the rising prices of what is known as military hardware. The B-29 heavy bomber at the end of World War II cost about $600,000. The all-jet B-52 intercontinental bomber of today costs about $8 million.

During World War II, a submarine cost about $4.7 million. The Polaris submarine will cost about $90 million.

Rockets and missiles are expensive, too. It is estimated that the cost of developing

ballistic missiles to an operational state will be a good deal more than twice the cost of developing the first atom bomb.

Does this mean that unlimited Federal spending is inevitable? Should we just give up in our attempts to keep the budget within reasonable bounds? If that were so, then we would already have lost the battle to stay free.

But it is not so. Most of our problem thus far has been that the great majority of our people have not been aware of the dangers they face from even bigger Government and irresponsible fiscal planning.

We must wake up. We must alert the various forces in our citizenry to make sure of two things:

First, whatever funds are needed for defense, for space exploration, and for other essential military and civilian purposes must be provided, and provided soundly.

Second, waste, duplication, continuation of governmental services no longer needed must be eliminated and eliminated promptly.

We must live within our income. We must keep our economy sound. It cannot be done by going further into debt. We must maintain fiscal integrity.

This is the road to commonsense, the road to a sound defense—a sound defense against the enemies of freedom, both at home and abroad.

The Federal debt is only a part of the whole U.S. fiscal picture. When we add up our total debt—the net debt owed by Federal, State, and local governments, by business and by individuals—the sum is staggering—$758 billion. It has almost doubled since the end of World War II.

Personal income after taxes is the highest it has ever been. Yet, both mortgage debt and consumer debt have been increasing. In 1958 alone, mortgage debt outstanding went up nearly $15 billion.

At the end of 1958, consumer, or personal, debt totaled nearly $45 billion—seven times what it was 20 years ago. A few years ago only one family out of three had any consumer debt. Now more than half have such obligations.

Worse still, the majority of persons with such personal debt have no liquid assets to fall back on.

We can readily see what a terrible thing inflation is by what it has done to the people of France. In that country the cost of living today is 37 times what it was about 30 years ago.

A pound of butter that cost 10 francs in 1927 is 410 francs today.

Men who put aside savings for substantial annuities find that their pensions are worth only 15 percent of what they were in 1940.

The pensions of French veterans of World War I—pensions once considered adequate—have depreciated to a value of 70 cents a month.

Don't say it can't happen here. The people of France never thought it would happen there.

I do not mean to say that all debt is bad. Of course not. Sound business debt is one of the elements of growth. Sound mortgage credit is a real help to a family that must borrow for a farm or a home.

But is it not apparent that in the areas of both public and personal debt these limitations of soundness are being disregarded by all too many of our citizens?

This matter is of vital concern to all of us, but especially to our younger citizens. They will live under the hysteria of inflation throughout the rest of their lives—if it is not checked now.

They will carry the load of our rising debt, and its growing interest payments—if we go on spending beyond our income.

They and their children will pay the bill that will inevitably be rendered by a continuing fiscal irresponsibility—and it will, I fear, be a bill compounded in hardship and heartache.

Inflation has already robbed our dollar, savings, pensions, annuities, insurance policies, social security, etc., of more than one-half of their purchasing power and real value. It has increased the cost of Government more than 100 percent, thereby raising taxes more than 100 percent. As the dollar buys less and less each year, the cost of national defense rises more and more, thereby seriously crippling this country and the free world in their life-and-death struggle for survival against the disciplined forces of communism.

Since our Government has gone in debt more than all the other governments in the world and since Congress continues to spend more money than it takes in, the money obligations of our Government have been falling in value year by year for a long time.

If this keeps up for a few more years our money will be worthless and the savings of our people for old age, sickness and for their children will be wiped out. It is a certainty—if Congress continues its spending spree. If there is any doubt about this, I suggest reading the history of nations in ancient and modern times. The handwriting is on the wall for all to see but the blind.

This is a period in the early stages of inflation when the owners of equities such as stocks, land, and commodities appear to either hold their own or profit from inflation. This doesn't last long. As history shows, the owners of such equities are finally wiped out.

Under inflation, stocks earn less and less dividends and ultimately their value is based on dividends. Taxes on real property mount ever higher because of inflation until it makes ownership of real property unprofitable. In France and Germany, where inflation was unchecked, the people vainly sought refuge through every type of investment. They all came to the same end—bankruptcy.

Our country is at peace. The economists predict one of the best business years ever. We're all going to make more money, there will be longer fishtails on our automobiles, bigger screens on our television sets, and more chrome-plated gadgets in the kitchen for the little woman.

It sounds just dandy, but I think it would be wise in these times to take a hard look at just where we're headed and see if we are not living in some sort of fool's paradise. Perhaps, as the Chinese say, it is only temporary.

I do know one thing for sure—the massive irresponsibility now being displayed in Congress is definitely not the answer. I think it's about time those elected to high office thought less about winning popularity contests back home and faced up to the responsibility of doing—and voting for—what is best for the country as a whole.

This country faces a challenge greater than any it has ever known. For a nation with so marvelous a heritage to destroy itself by robbing Peter to pay Paul is unthinkable.

We must keep America free and strong—economically, socially, and spiritually—so that our way of life may endure. There is no other way. This is your challenge and mine—a challenge to every American no matter who or what he may be.

In Defense of the South

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement of Mrs. Frank S. Phillips, vice president of the Board of Education of the District of Columbia, delivered before the board on February 18, 1959, in refuting the half-truths and glaring omissions found in the South volume of the "Life in America" textbook series. Mrs. Phillips is to be commended for the courage and forthrightness with which she sets the record straight.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MRS. ARCADIA NEAR PHILLIPS BOARD MEETING, FEBRUARY 18, 1959

I direct my remarks to the "Life in America" series which, according to the typewritten notes pasted in the front of each book, are to be used "to interest the class in exploring this section of the United States—in learning more about its people." I hope, Mr. Superintendent, that the policy is not to select a series of books without examining the merits of each member of the series.

On the flyleaf of the New England book the author is described as writing of his native New England with authority. Most of the books seem to be written in a sympathetic and enthusiastic vein. Certainly if the pupil is to be inspired, the author must be inspired.

However, the flyleaf of the book on the South describes this author as associated with a small college in the Midwest and known as an authority on Indiana writers. The writer shows little enthusiasm and has a stilted and uninteresting style. His report contains certain half-truths and glaring omissions which certainly does not serve to stimulate interest in this section of our country. I will mention a few.

On page 24, he refers to conditions after the Civil War. I quote: "Many white southerners had never worked at all. Thirty years passed before new factories and improved farming brought better days to the South." He does not mention the poverty and destitution left in the wake of the war.

John Spencer Bassett, professor of American History at Smith College in a "Short History of the United States," page 469, says "* * * four-fifths of the heads of families were not slaveholders * * *. The South had no more shiftless and lazy men than other communities * * * The industry and resourcefulness with which these people restored their fortunes * * * shows that they were of the genuine American stock, and were sound in mind and morals".

On page 78 of the book on the South the author says, speaking of the old South; * * * Some of her colleges were great; but there were not enough of them, and only the wealthy could attend * * *."

Professor Bassett says on page 479: "It was in this period that the State university took form. * * *

"The process was first seen in the founding of State universities, in North Carolina, Tennessee, Georgia, and South Carolina and in the reorganization of the University of Pennsylvania on a State basis, all of which occurred between 1779 and 1815[1] * * *.

"During the period of western and southern expansion, the older institutions of the Northeast developed hardly as much as might have been expected. Largely devoted to preparing men for the professions, most of their students came from the leisure class in the North and South. * * * The rapid growth of the eastern seats of learning, with which the present generation is so familiar, came after the Civil War."

So why not give the old South its due. In some aspects, it was ahead of other areas; certainly its faults were not unique.

---

[1] North Carolina, 1795; Tennessee, 1794; Georgia, 1801; South Carolina, 1801.

I will make this further point: Though there is strong emphasis in the books on New England and the Northeast on the matter of educational facilities, New York particularly being pointed out as leading the Nation in the number of institutions of higher learning, I want the record to show that 8 of the 11 States of the South have more colleges in relation to their size than any of the 6 States of the Northeast group.

Also, though 9 of the first 12 Presidents of the United States were from the South (7 were from Virginia and 2 were from North Carolina), no mention of this was made in the book.

The book dismisses the contributions of the South to literature by saying "Before the Civil War the greatest writings the South produced about the Government especially the writing of Thomas Jefferson." Nothing further is said about literature. But Reuben Post Halleck, in "History of American Literature," page 335, says: "In modern southern fiction there is to be found some of the most imaginative, artistic and romantic work of the entire country in the latter quarter of the 19th century." No one need apologize for the literary efforts of Edgar Allen Poe, Sidney Lanier, Thomas Nelson Page, Joel Chandler Harris, O'Henry, William Faulkner, Frank L. Stanton ("Just a' Wearyin' For You" and "Mighty Lak' a Rose") or Margaret Mitchell ("Gone With the Wind").

We Believe in Prayer—It's Impossible To Overestimate the Value of Prayer

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith some extracts from a recently published book "We Believe in Prayer," a compilation of personal statements by American and world leaders about the value and efficacy of prayer, by Lawrence M. Brings, president of T. S. Denison & Co., book publishers of Minneapolis, Minn. Quoted in full is a statement by a constituent of mine, Comdr. Wendell Phillips Dodge, an explorer-ethnologist who has spent a lifetime studying the religious systems of the world at their fountainheads, especially in the Holy Land as we know it, in the Near East.

Exploring extensively there, and studying the Arabs, Syrians, Jews, Persians, and Egyptians, Commander Dodge has written extensively of these peoples and their lands, history, religion and customs. In some of his scientific reports he proves that man's first religion goes back much, much further than we are accustomed to think about. He has stated that when primitive man used a symbol it did not mean to him the object in sight, but what it represented in his mind. Symbols on the walls of the Temple of Sacred Mysteries at Uxmal, Yucatan; among the fallen ruins of some of the South Sea Islands; sacred writings carved by the Naacals—Holy Brothers—some 70,000 years ago, provide a better perspective of thought. The bases of an extremely early religion was the love and adoration of the Creator as the Heavenly Father among these ancient symbolic prayers offered up to only one Creator or Deity worshipped long before our usually recorded history mentions. Prayer symbols have been found on a stone arch on the island of Tonga-Tabu in the Pacific Ocean, on Alaskan totem poles, the House of Taga on Tinian Island, the Mariana group; the Pyramid at Xochicalco; at Anghor Vat and Ankor Thom, the great Monolith at Tiahuanaco; on a road-cut on Capital Hill, Smyrna, Asia Minor, where three civilizations 500 feet above the sea level existed before mountains were raised; yes, says Commander Dodge, symbolic stones at Anarajapura, Ceylon, and many other places in the world all clearly indicate the universality of symbols in religion and prayer.

To Commander Dodge one of the most beautiful of all is the statement of the Prophet Mohammed:

Angels come amongst you both night and day; then those of the night ascend to heaven, and God asketh them how they left His creatures: They say, "We left them at prayer, and we found them at prayer."

The statement follows:

WE BELIEVE IN PRAYER

(Compiled by Lawrence M. Brings, including "It's Impossible To Overestimate the Value of Prayer," by Wendell Phillips Dodge, F.R.G.S., explorer and ethnologist)

The object of prayer is God alone, and we should supplicate the Divine Being for the blessings we stand in need of, to enjoy fellowship with God. It does not consist in the elevation of the voice, the posture of the body, the use of a form, or the extemporary use of words, nor anything of an exterior nature; but simply the offering up of our desires to God. (Matthew 15:8): "This people draweth nigh unto me with their mouth, and honoureth me with their lips; but their heart is far from me."

Secret or closet prayer is recommended by Christ (Matthew 6:6): "But thou, when thou prayest, enter into thy closet, and when thou hast shut the door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly." He, himself, set us an example of it in Luke 6:12: "And it came to pass in those days, that He went out into a mountain to pray, and continued all night in prayer to God."

Prayer in the Bible is the uplifting of the heart to God. It includes supplication, intercession, thanksgiving. As an example we have Christ's prayer in Gethsemane (Mark 14:35): "And He went forward a little, and fell on the ground, and prayed that, if it were possible the hour might pass from Him," and (Mark 14:38): "Watch ye and pray, lest ye enter into temptation. The spirit is ready, but the flesh is weak." He was wont to visit the Mount of Olives.

Among the different kinds of prayer is the ejaculatory, by which the mind is directed to God. Derived from the word ejacular, to dart or shoot out suddenly, therefore appropriate to describe this kind of prayer which is made up of short sentences, spontaneously springing from the mind. The Scriptures give us many instances of ejaculatory prayer, which may be practiced at all times and in all places. It has a tendency to support the mind and keep it in a happy frame. It fortifies us against the temptations of the world, elevates our affections to God, and directs the mind into a spirtual channel.

In one of his celebrated lectures on "Life and Religion," Max Müller said: "What can we pray for? Not for special gifts, but only for God's mercy. We do not know what is good for us, and for others. What would become of the world if all our prayers were granted? And yet it is good to pray—that is, to live in all our joys and sorrows with God, with whom we cannot reason, but whom we can love and trust. Human misery, outward and inward, is certainly a great problem, and yet one knows from one's own life how just the heaviest burdens have been blessings. The soul must be furrowed if it is to bear fruit."

The dying words of Tennyson's Arthur, "More things are wrought by prayer than this world dreams of," clearly shows that it is not possible to overestimate the value of prayer. Prayer is efficacious. It has power with God. It brings great blessings. Nothing that men can do has so vast an influence.

"O Lord, my God. Assist Thy loved ones to be firm in Thy faith, to walk in Thy ways, to be steadfast in Thy cause. Give them Thy grace to withstand the onslaught of self and passion, to follow the light of divine guidance. Thou art the powerful, the gracious, the self-subsisting, the bestower, the compassionate, the Almighty, the all-bountiful. —Abdul Baha.

INTRODUCTION

In his introduction, Lawrence M. Brings writes, in part:

"Civilized man has always engaged in the practice of prayer. Practically every religion of the world recognizes the existence of a Supreme Being to whom its adherents pay homage and offer prayers of thankfulness and supplication. For man realizes that he is a finite being and that he needs the guidance and help of God if he is to live his earthly existence in the sight and glory of God. That this attitude of prayer has become engrained in his very nature is evidenced by the utterance of such simple expressions in daily conversation as 'I wish' or 'I hope.' These phrases are little prayers and indicate how dependent we are upon a power beyond ourselves.

"With advances made in scientific and industrial development, with an emphasis being placed on material things, with a guarantee given by government to every citizen for a security from the cradle to the grave, is it necessary any longer for man to feel dependent upon God? Since it is apparent

in many instances that he has forgotten the fact that God still rules the universe, I became curious to discover to what extent people believe in prayer today.

"I decided to poll certain leaders of America and of the world, asking them to express their views about the value and efficacy of prayer based upon their own experience and observation. No attempt was made to ascertain their religious or denominational background, or even to select individuals from whom I might expect a favorable reply.

"Letters were sent to hundreds of topflight people in many diversified areas of human endeavor. The response was overwhelming. I was surprised that so many persons occupying positions of achievement and responsibility would take the time to write a special statement for this book, giving their personal testimony about the power of prayer as experienced by them. In this book you will find proof that prayer is a potent force in the lives of thousands of our leaders."

The Objectives of International Economic Assistance

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered last week here in Washington by Ambassador B. K. Nehru, the Commissioner-General for Economic Affairs of India. This is a most thoughtful and suggestive public statement which places in realistic perspective the common opportunities which exist for a more effective international assistance program. This statement deserves the attention of all persons who with Ambassador Nehru share both a professional and humane concern for the economic need of less developed nations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE OBJECTIVES OF INTERNATIONAL ECONOMIC ASSISTANCE

(Speech by His Excellency B. K. Nehru, Commissioner-General for Economic Affairs, India, before the first annual international conference of the Society for International Development, Washington, D.C., February 27, 1959)

Mr. Chairman, I feel greatly honored that the Society for International Development should have invited me to speak to its members at this their first annual conference. It is not often that a representative of a government gets the opportunity of being able to speak as a professional to fellow professionals without being hemmed in by considerations of governmental attitudes or fears of intergovernmental complications. And yet, it is only natural that those of us who are actively associated with the day-to-day problems of international development should wish to compare notes among ourselves. It is not possible to work for long in any field of human endeavor without developing some thoughts and ideas as to how existing institutions, practices and approaches could be improved. And I take it that it is precisely for providing a forum for exchanging such ideas that the Society for International Development has been established. I, therefore, particularly welcome this opportunity of placing before you a few thoughts and ideas on foreign economic assistance, shedding for the moment my diplomatic and representative capacity and talking professionally in plain, simple and nondiplomatic language.

One of the most remarkable developments in recent times, Mr. Chairman, is the growth of an international approach to the problem of poverty and want in the world at large. All too often we tend to forget that even at a national level it is only during the last 50 years or so that governments have explicitly accepted it as their duty to abolish poverty within the limits of their jurisdictions. It is only since the beginning of the present century that the major preoccupation of national states has been increasing with the material welfare of all their citizens. Policies have been followed leading to the deliberate transference of wealth from the richer sections of the population to the poorer and from the richer areas to the poorer and to the deliberate development of depressed areas in preference to developed areas. It is not surprising, therefore, that it is only since the end of the Second World War, that the same reasoning which led to the welfare activities of nation states has been recognized as equally valid on the international plane. The realization that the world owes to its citizens freedom from want, that prosperity like peace is indivisible, and that only by the deliberate cooperation and assistance of the richer nations can others less fortunate succeed in guaranteeing quickly to their citizens a decent level of living, is exceedingly new. And yet, it is quite amazing how quickly the conscience of humanity has been struck by the anomaly of extreme, grinding and miserable poverty in the midst of luxurious plenty and how in this very short period foreign aid programs of various kinds have developed with the object of ameliorating and curing this position. I should like at this point, if I may, to pay a genuine tribute to the part that your country has played in the awakening of the human conscience in this regard. The fact that U.S. assistance to foreign countries has far out-distanced similar assistance given by other countries can perhaps be explained in part by the comparative prosperity of this country. But the tribute I should like to pay is to the attitudes which motivate American action in this field; for nowhere as I wander around the earth do I find the intense interest and generous and selfless dedication to this cause as I find in this country.

As I have said, Mr. Chairman, the conception that the richer parts of the world should help the poorer in order to enable them to develop their economies is a very new one; and what I would wish to suggest is that the time has now come to formulate clearly the objectives of foreign economic assistance and to define the manner in which these objectives can be most quickly achieved. These are questions to which, not at all surprisingly, enough thought has not been given. Foreign economic assistance is administered at present through a number of agencies, both national and international, and it takes time before even a single institution acquires a clear perception of its own rationale. There has been the general feeling that there are vast areas where human misery is so great that it requires immediate amelioration; there has also been the feeling that the resources which the richer societies are willing to spare for this task are so small that the task cannot be adequately performed. When demand outruns the supply and there is no market mechanism to bring the two into equilibrium, the rational method of allocating supply is through a system of priorities. Foreign aid has been given to almost every country in the world for a variety of complicated reasons and it is never clear why one country has received more and another less except that the pull of a number of conflicting forces at the centers from which foreign aid emanates has at a particular moment resulted in that particular resultant. I would submit that it is high time to work out a rationale for these aid programs, to be clear about what we want to achieve with them and to decide in the light of these objectives what is the best possible use for the limited funds that may be available for the purpose.

The question I have just raised would, of course, be answered most readily by those who believe that economic development should be left entirely as the responsibility of private capital and enterprise. It is an article of faith in some quarters in the United States as in other countries that the creation of wealth is the function of private enterprise and it follows from this belief that resources should flow from the richer to the poorer countries in such amount and direction as are dictated by considerations of private profit alone. I have no doubt in my mind that private enterprise has an important role to play in the development of less developed regions and that it is the duty of countries wanting capital from abroad to get as much of it as they possibly can from the stocks of the capital available in private hands. But I think it is equally obvious that the needs of underdeveloped countries cannot be met by private capital alone. What is wanted in these countries at this moment is the development of the infrastructure of economic growth, the development of roads and railways and power, of irrigation and agriculture in none of which fields does present day private foreign enterprise have any interest. Furthermore, the conditions in which private foreign enterprise is willing to work are not generally available in the underdeveloped world. Neither absolute security nor large profits nor their transferability can generally be assured by underdeveloped countries. If they could, these countries would hardly be underdeveloped and the whole problem would not exist.

For the same reason, I think, it is equally clear that we cannot rely on normal concepts of creditworthiness for defining the priorities to be observed in foreign aid programs. The concept of bankable projects and the mobilization of capital for financing such projects through international and national institutions have played a valuable part in promoting the development of less developed countries in recent years. But the existence of a number of programs for assistance on a government-to-government level and the search for institutions to make "soft" loans are, I think, reminders enough of the fact that the problem of priorities to which I have referred cannot be solved in terms of some precise calculations of creditworthiness of different countries even if such calculations were possible.

Does this mean then that in the administration of foreign aid programs we should deviate completely from the criterion of economic ability or ability to make profitable use of aid and rely solely on the measurement of the needs of the developing countries? Many of you will recall that some years ago the United Nations established an expert committee to make recommendations for the special U.N. Fund for Economic Development and that the committee approached their task in terms of the needs of the underdeveloped countries as a whole. The committee argued that given the savings potential of underdeveloped countries and the need of these countries to develop at a certain rate, the transfer of resources from the richer to the poorer countries must proceed at a certain pace. The figure of the capital required was so shockingly high that it became the fashion in polite society not even to mention

it for fear that those who were willing to help in the task of economic development might be frightened away by its enormity. I do not presume to question the figures which these eminent experts put into their reports; but it is clear that their approach begs the whole question of priorities in that it fails to take into account the real limits on the funds which the richer countries are willing or able to put at the disposal of the poorer countries.

What is even more important, the approach of the U.N. experts misses the fundamental point that even if the richer countries were willing to spare the sums they had in mind, it would be wholly impossible for the underdeveloped world today to absorb in productive enterprise even a fraction of that money. The term "underdeveloped country," it has to be recognized, is a wide generic term covering a vast variety of different conditions each of which requires separate treatment. The limitations to economic growth differ from country to country and area to area, and it is by no means always shortage of capital which restricts economic growth. Before capital can be usefully employed, there has to be a certain political stability, the presence of a stable and reasonably efficient administration, managerial and technical know-how, and organizational capacity and it is only when these factors are available that capital can usefully be invested in any area. As one looks around the underdeveloped world, one finds that in large parts of it the basic factors requisite for rapid economic growth unfortunately do not exist and, therefore, the first thing that the outside world can do is to help in their creation. It is only after these conditions have emerged or at least have begun to emerge that injections of outside capital can be of use.

This realization was, of course, the basis for the establishment of technical assistance programs. But the tendency to equate one underdeveloped country with another has caused it often to be assumed that the provision of technical assistance, perhaps with a certain moderate degree of capital assistance, is the right recipe for all underdeveloped countries. The basic point I wish to place before you is that the failure to take into account the different needs of countries at different stages of development is the root cause of a great deal of irrationality in foreign aid programs and that the recognition of the divergent needs of different countries contains the key to the solution of the problem of priorities about which I spoke a moment ago. Once it is recognized that each underdeveloped country has problems of its own which are not wholly duplicated anywhere else, it would follow that foreign aid programs should be tailormade and not mass produced, that certain countries should get, because they need it, very much more technical assistance than others and that others, because they can use it, should get very much more capital. I should imagine that if it were a prerequisite of capital assistance that the conditions precedent for its productive use had already been established and also that the country concerned had taken all possible measures to mobilize its own capital resources, there would be few countries in the world today who could usefully absorb large sums of foreign capital while there would be some whose legitimate demands would be very substantial indeed. The distribution of technical and capital assistance in relation to the absorptive capacity of the countries concerned would at once direct aid where it could produce the best results without neglecting the claims of any region and without involving any waste of resources.

At present, both capital assistance and technical assistance, particularly the former, are spread so thinly over so wide a field that their effects though not negligible tend to get lost in the vast desert of need. One cannot today foresee the end of any foreign-aid program; while an indefinite continuation of aid is both unpleasant to the donor and harmful to the recipient. We must guard against the creation of a class of perpetual pensioners and, above all, prevent the growth of a mentality which looks forever to the outside world for help. It seems to me that the objective of any foreign-aid program should be to enable the economy which is receiving the aid to become self-supporting and to make its further growth self-generating in the shortest practicable time. Once the point has been reached at which the economy can by its own efforts develop itself, foreign capital assistance should stop and be diverted to economies where conditions may be ready for this stage of economic development. What I urge in short is that instead of distributing the resources that are available for this purpose on an arbitrary ad hoc unplanned basis, or even on the basis of the existence or nonexistence of projects, the whole of the foreign assistance programs should be so arranged as to enable economy after economy to be brought to what my friend Professor Rostow calls the point of takeoff into self-sustained growth. This would mean a change in the system of allocation of foreign-aid funds for it would involve massive capital assistance to some countries for a comparatively short period of time, with the possibility of ending that assistance very much in sight.

The approach to foreign-aid programs that I have just outlined is essentially the same as was embodied in the Marshall plan for European recovery. The diversion of massive American assistance to Europe during 1948–52 was justified, not in terms of the urgency of Europe's needs relatively to the needs of other regions, but in view of the quick results expected therefrom in Europe and the possibility of Europe being able to dispense with further aid in a comparatively short period. I think it is no exaggeration to say that the prestige and growing acceptance of foreign-aid programs in recent years owes not a little to the impressive demonstration given by the Marshall plan of what such programs can actually do. Foreign-aid programs designed primarily to launch an increasing number of countries on to the orbit of self-sustained growth have also the added advantage that they make it possible for more and more countries to contribute toward the development of less developed countries so that the progress of the latter becomes cumulatively more rapid. The European countries assisted by the Marshall plan are already playing a significant role in providing developmental resources to the rest of the world and it should, I think, be the responsibility of all countries who have succeeded in achieving a satisfactory rate of growth to set apart some of their own resources for furthering the progress of others. Indeed, even those underdeveloped countries which are at a somewhat higher stage of development by virtue of their political stability or administrative and organizational ability are in an excellent position to render technical assistance to those at a different stage of development for want of those facilities. This has been the most promising aspect of the Colombo plan which has shown how widespread the scope is for exchange of technical—and even capital—assistance among the underdeveloped countries themselves. The advocacy of a more pinpointed program for foreign aid should not, therefore, be construed as hampering the growth of any particular group of countries. It is intended only to avoid the misdirection and even waste of scarce resources that result from the failure to distinguish between the different needs of countries at different stages of development so that the economic progress of the underdeveloped world as a whole is as rapid as it possibly can be over a period of time.

I should perhaps also make it quite clear at this stage that in emphasizing the need for a more rational use of the available funds for international economic assistance, I do not wish to minimize the paramount importance of increasing the overall flow of these funds. My contention only is that, while the underdeveloped world as a whole can certainly absorb productively far more sums than are available at present, the most decisive push forward in the development of the less developed countries can be given by an allocation of the available funds on the lines I have indicated.

If I may refer here to yet another result of lumping all underdeveloped countries together, it seems to me that it produces an altogether undesirable degree of rigidity in the laws governing foreign aid and in its administration. Once you begin to treat all underdeveloped countries as being made in the same image, it is only natural to apply the same uniform laws and administrative practices to all of them. But this raises, particularly with those countries which have well-established forms of government, wholly unnecessary administrative and even political problems and takes away in a measure from the good will that programs of foreign aid should generate. It would be of very great advantage all around if the administration of foreign aid could be made flexible enough to suit the varied conditions in which these programs operate, instead of everybody having to conform to regulations which are necessarily conceived to fit the least desirable conditions.

I do not wish, Mr. Chairman, to take any more of your valuable time by dwelling any further on my central thesis. I hope I have succeeded in placing before you some of the questions that have often crossed my mind in regard to foreign economic assistance. If in doing so I have appeared critical of some of the present practices it is, I am sure you will appreciate, not out of lack of recognition of the real and remarkable achievement of these programs in recent years, but out of a desire to place before you some of my doubts and misgivings for your expert scrutiny in the hope that it might help in putting foreign economic assistance on an even more rational and fruitful basis in future so that the developed as well as the less developed countries can get even greater returns from their cooperative efforts to eliminate poverty and want from this world.

Thank you, Mr. Chairman.

A Suggestion for a National Floral Emblem

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. YARBOROUGH. Mr. President, one of the suggestions for a national flower for the United States is the rose.

A large number of very beautiful roses are grown in my own home State in the area around Tyler, Tex., and that city is known as the Rose capital of America.

Mr. Clark Kidd, a committee chairman of the Tyler Chamber of Commerce, has sent me an editorial which I now request unanimous consent to have printed in the Appendix of the RECORD. The edi-

torial appeared in the Tyler Morning Telegraph for Monday, February 16, 1959, under the heading "Corn, Grass, Roses."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CORN, GRASS, ROSES

We were afraid something like this would happen—sex has got into the national fight over what flower—or vegetation—to adopt as the national emblem of the 49 States.

The new issue entered the controversy when the Kentucky Bankers Association recently tried to beat down the efforts of Illinois Senator PAUL DOUGLAS and other corn-State Senators to get Congress to designate the corn tassel as the national emblem.

The Kentucky group retorted that an easy way to bring the argument to a close would be simply to adopt grass as the official flower of the union. In furtherance of that suggestion, the Kentucky bankers fired in a telegram to Kentucky Senator THRUSTON B. MORTON, glorifying grass and condemning the corn tassel as a symbol.

The telegram declared the corn tassel not only falls flat as a flower, but it is also nothing to brag about as the male portion of the corn plant. "For only a few days it (the tassel) is virile, then, in its last wild rampage, it scatters its pollen to the wide ranges of the compass—then fades and dies and is gone forever."

Fortunately for the great cause of east Texans in the growing controversy, the Kentuckians have said no great evil against the rose, which remains as one of the top contenders for the national honor. The only objection against the queen of flowers the blue grass group could think of was to remind their Senator that the rose already is the chosen flower of several States and some foreign countries. From the east Texas point of view, that widespread popularity of the rose is another argument in favor of naming the rose as the national floral emblem.

The Kentuckians argue well, we believe, against the marigold, by saying simply that it smells bad.

The Kentucky bankers almost attain to Churchillian majesty of language in extolling grass for the national honor. Historically, they say, grass sustained the buffalo and deer that provided the American Indian and pioneer palefaces with food and hides, and even now it is the basic food for beef, dairy cattle, and sheep. All cereal grains—corn, wheat, oats, and barley—belong to the grass family. And, say the Kentuckians, there's nothing more beautiful and satisfying than lush, green pastures.

It's agreed here that green pastures, like mother love, are things of great beauty. If there's anything more beautiful than a green pasture, it is a field of east Texas roses glowing with every hue of the rainbow.

Vote for the rose.

Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. KEATING. Mr. President, it was my privilege recently to participate in ceremonies conducted by the Lithuanian American Council of Greater New York on the occasion of the 41st anniversary of the independence of Lithuania. This stirring commemoration took place in Webster Hall, New York City, and was attended by a large group of Lithuanian-Americans dedicated to the freeing of their homeland.

In my remarks on that occasion I paid tribute to the indomitable courage of the Lithuanian people and to those noble Lithuanians now enchained behind the Iron Curtain who have not allowed the flame of freedom to die. I urged all to join in a rededication to work and pray for the day when Lithuania will once more take its rightful place among the family of free nations.

At this meeting, an eloquent resolution was adopted which codifies the strong sentiments and heartfelt views of those in attendance. Because this is a document deserving of wide circulation, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE LITHUANIAN RALLY ON FEBRUARY 15, 1959

We, Lithuanian Americans of Greater New York, loyal citizens and residents of the United States, gathered on February 15 of this year of grace 1959 at Webster Hall in New York City to commemorate the 41st anniversary of the restoration of the independent Lithuanian state after a prolonged eclipse of its liberty;

Voicing once again our indignation at and our protest against the brutal suppression by the Government of the Soviet Union of Lithuania's independence and freedom and her subjugation to ruthless Soviet colonial exploitation, perpetrated at a time when Lithuania was living in peace with the U.S.S.R. and was bound to her by a peace treaty and a nonaggression pact;

Stating that the present Soviet challenge to the West, with Berlin as its direct objective, is aimed at the settlement on Soviet terms of the political problems resulting from World War II, namely, at the legalization and consolidation of Soviet criminal conquests in Europe and at creating conditions for further Communist expansion in Europe and elsewhere;

Considering that the present abnormal and dangerous situation in Europe, characterized by the division of Germany, the subjugation of nine formerly sovereign states of Central and Eastern Europe, including Lithuania, and by the division of the continent, requires an urgent and global settlement in conformity with the wartime and postwar commitments and pledges of the great powers;

Stressing the indivisibility of the problem of Central and Eastern Europe, of which the restoration of Lithuania's independence is an integral part, and of that of Germany and the European security system—these problems being the major cause of the present international tension;

Resolve—

1. To appeal to the President, the Secretary of State, and the Congress of the United States firmly to pursue and vigorously to promote their repeatedly declared policy of the restoration of the independence and freedom of Lithuania and other captive countries of Central and Eastern Europe through free and unfettered elections after the withdrawal of Soviet Armed Forces and agents, and to reaffirm the determination of the Government of this great country not to be party to any agreement or treaty which would confirm or prolong the subjugation of Lithuania, now held in bondage by the U.S.S.R.;

2. To rededicate ourselves to the just cause of Lithuania's independence and freedom and to combat Communist aggression and Soviet Russian imperialism;

3. To assure the Lithuanian people under Soviet occupation of the indissolubility of our ties and of our unswerving determination to spare no efforts and sacrifices for the attainment of the sacred goal of the Lithuanian nation—its independence and freedom;

4. Actively to support the policy of the U.S. Government aiming at the establishment in Europe and elsewhere of a just and durable peace based on the inalienable right of the respective peoples to governments of their own choosing.

Dr. EUGENIJUS NOAKAS,
President.
J. DZIKAS, *Secretary.*

Pennsylvania's Future: Prosperity and Big Problems

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. QUIGLEY. Mr. Speaker, the following article appeared in the Harrisburg Sunday Patriot of February 8, 1959. It is the final and summation article of an excellent 27-part series on the economic future of the Commonwealth of Pennsylvania. It has been hailed one of the best series of articles of its kind. The author of this series is George Draut, of Camp Hill, Pa. Mr. Draut is chief editorial writer for the Harrisburg Patriot and Evening News. And I might say in passing, Mr. Speaker, that with a few rare exceptions, such as when they endorse my opponent, I believe the Patriot-News' editorial pages to be one of the best in the Commonwealth.

I commend this article to the Members, and their reading of it will make them better aware of Pennsylvania's problems and its future.

PENNSYLVANIA'S FUTURE: PROSPERITY AND BIG PROBLEMS—JOBLESS AMIDST PLENTY STILL STATE'S HERITAGE FOR "GOLDEN SIXTIES"

(By George Draut)

Maybe three pieces of paper best symbolize Pennsylvania's economic past, present and future.

Maybe they best point up our Commonwealth's great big problems and its great big hopes, too, for what a lot of people say will be the "Golden Sixties."

They're legislative bills, awaiting action with more than 300 others in our general assembly.

One calls for a deficiency appropriation of $9½ million for public assistance. Before the current budget runs out at the end of May, the State wil run out of money for the flat-broke Pennsylvanians on relief.

Another one will authorize a $50 million loan from the Federal Government to bail out the State's unemployment compensation fund, so badly depleted by the long lines of laid-off Pennsylvanians during the months of the 1958 recession.

The third one calls for an additional appropriation of $1½ million in State mortgage money for industrial development. Here is one of the greatest hopes for the future and one of the brightest developments of the

present: The State ran out of loan money to help finance new industries and new jobs in the depressed areas. And there's a waiting list of new job projects, ready to go.

Here is Pennsylvania's great big problem of the present. There were still 508,000 out of work in the middle of last month. That's 11 percent of the total labor force. That's not quite double the national average.

And here still will be Pennsylvania's great big problem as the golden sixties begin. If most economists and Government brass hats are right, 1960 will be the best year the United States has ever known. Times will be good in Pennsylvania, too. This dominantly heavy industrial State rises or falls, and fast, with the national economic times.

But this boom of the first years of what may be a golden decade won't be spread fully and evenly over Pennsylvania's 45,333 square miles.

That's because of our chronically depressed areas. We have more of them, with our hard-hit coal communities, than any other State in the Nation.

And there'll be this, too, when the State and Nation are setting new economic records right and left. One of those records will be more Pennsylvanians jobless in the midst of prosperity than ever before.

And yet more Pennsylvanians working than ever before.

Along with everybody else, we're in the midst of great economic and industrial change. Exactly what is going on, or what will probably happen, depends upon which economist or Government official or industrialist or labor leader you ask. They'll give you all kinds of appraisals and answers.

But most of them agree the great technological changes that started right after the war and continue today are exerting one of the major forces in the change. More and more, the jobs of our highly technical, scientific, and complex political age demand men and women with higher levels of skills and better education.

Mixed up in this, industries are geared up for more production per worker than ever before. If a company is to survive in the tough competition here at home and face up to that ever-increasing economic challenge of so many other industrially exploding countries, friend or foe, this is an absolute necessity. So many industrial leaders tell you this. And one prominent Pennsylvania economist tells you that if the old industry in this old State is to stay alive, it can find its salvation only in drastic modernization.

Mixed up in this, there is our increasing population; more young men and women entering the labor market every year. This adds to the great big problem of more jobs needed and yet helps solve it at the same time. They're also new consumers of goods and services.

One official Government projection for the early sixties: Total employment of 4¼ million, an alltime Pennsylvania record. Total unemployment of more than 300,000, around 6 percent of our labor force, and another alltime Pennsylvania record, too, for good times.

This will confront Government at every level—in every community, in Harrisburg, in Washington—with major continuing pressures and problems, topped by that massively familiar one: higher costs and higher taxes.

For better or for worse, Pennsylvania's future is becoming increasingly tied to Big Government—State and Federal. And big companies and big unions.

In town after town the familiar family name on the factory disappears and the name of the nationally known company goes up.

Place after place, the small local union increasingly loses its identity in the great big labor organization of which it is a part.

You find chapter and verse to back up these observations. You have notebooks full of names and places.

The impact of Big Government is extraordinarily evident here in the two-county Harrisburg area, where one in every 4 workers calls Federal, State, or local government his boss.

But the impact doesn't stop there.

Big Government, especially at Washington, bedrocks so many of Pennsylvania's jobs. On direct or subcontract with someone else, private industry in plant after plant and the Pennsylvanians who work there are making and selling something to Government—from fancy electronic gizmos to chairs and desks to cans of beans.

The argument over whether this is real good or real bad for the future you'll leave to someone else. This is just pointing up the reality.

Everywhere you turn when you try to look at Pennsylvania's future you run into more Government.

More highways—not just to move the ever-increasing traffic, but as economic lifelines of trucking transportation in every area and every community of the State. Here's a big hassle for a long time.

More people, so many more people coming along in the future. They're already using up the land, right and left. One town ends and another one begins, and you never know which is which as you drive through. Massive new strip cities are building up on opposite ends of the Commonwealth. And many Pennsylvanians worry about and work for regional planning and eventually to come regional government.

More people, more jobs, more of everything?

If you tour all through the State and talk to people, so many of them over a period of long weeks, you find the guesses for the future fall into one pattern of opposing points of view. What two mid-State men say sums it up:

"You can only be optimistic.' More population means more of everything—more homes, more automobiles on highways, and that means more highways."

That's Gene Gurkoff talking. He's the president of Capitol Products, the fast-growing company that came out of nowhere less than 7 years ago.

"I think to call them 'the Golden Sixties' is ridiculous. The population increase can be a liability instead of an asset if it isn't in balance with our production. * * * Our problem is money. Where will we get the money to meet the threat of Russia on the world market and at the same time achieve growth at home? It's a double-barreled headache. I don't see the answer."

That's Frank E. Masland, Jr., talking. He's the president of C. H. Masland & Sons, one of the country's major carpetmakers.

MORE PEOPLE, MORE JOBS

Industrial development is a way of life in the depressed areas. You search all available records. You make a lot of calls in the coal counties. You come up with a pinned-down great big total—$20.8 million.

That's the rockbottom amount of money Pennsylvania's depressed communities have raised on their own, among their own people, since the end of World War II.

You add on the $8,173,000 loaned out in 26 months by the Pennsylvania Industrial Development Authority.

And you list 223 new plants and 42,944 new jobs created just in the chronically depressed areas, overwhelmingly by community effort with a little State help.

This has been a race to stay even, finding new jobs even as more old ones evaporate in large numbers through the coalfields.

There is every indication, and hope, that in "the Golden Sixties" many a depressed community will move from minus or just even into plus, chipping away the unemployment that ran as high as one in every four of their workers last year.

These are summaries and conclusions of a reporting study that began last year.

But when more than 60,000 words have been written in 27 long stories and you are done with the immense stacks of notes and statistics and other information piled all over your desk, this isn't what you remember.

You remember people—perverse, proud, tenacious, hardworking, hard-hoping, wonderful people.

The great big executive of the great big company who walked over to his window and watched the hundreds of workers pour in and out the wide gatet at shift time. He is a stern, closemouthed, no-nonsense man. The only time his face softened in all of the time you were there was when he looked out upon his people.

The obscure, ordinary man who talked to you in the real-small, rundown town almost surrounded by forgotten, dirty, culm banks and an abandoned mine mountain. He said: "I don't know how, but we'll pull through and find jobs for our young people so they can stay here."

So many others.

They are making Pennsylvania's future far more one of prosperity and far less one of big problems.

Democratic Victory Dinner Address

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I made at the Democratic victory dinner in Washington, D.C., on February 28.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MIKE MANSFIELD, DEMOCRAT, OF MONTANA, AT DEMOCRATIC VICTORY DINNER, WASHINGTON, D.C., FEBRUARY 28, 1959

The automobile industry is often described as the pace setter of American industry. In other words, it occupies a position in the American economy like the Democratic Party in American politics. There's one difference. Last year the American people didn't go too well for the new cars. Last November they went, with real enthusiasm, for the Democrats.

So, tonight, we are having a victory dinner. You know, there are some people who think you can have too much of a good thing. They say, for example, "There's too many Democrats in the Senate. What's LYNDON going to do with them all?" Well, so far as I know, we don't have any Democratic unemployment in the Senate. The distinguished majority leader has put all the Democratic Members to work, and they are beginning to produce. There's no such thing as an "acceptable" level of unemployment in the Democratic Senate, just as there oughtn't to be in the Nation.

Personally, I don't think you can ever have too many Democrats at work—in the Senate or anywhere else. As a matter of fact, there's a shortage of Democrats. The country could use a lot more of them over in the other branch of the Government. I don't know about the market for automobiles. But, as far as Democrats are concerned, it won't be until 1960 that the supply will begin to catch up with the demand.

In the last few weeks we've been seeing the new automobiles on the streets of this city. They have clean, fresh lines. Some of the cars are conservative-looking. Others show liberal style changes. A few even have that futuristic look.

Not to be outdone by the automobile industry, we have our own display of 1959 Democratic models tonight. We've got four lines with us—not Fords, General Motors, Chryslers, and Ramblers. What we do have are Democratic Governors, Senators, Representatives, and Democratic presidential possibilities. We've even done something which Detroit hasn't been able to do for years. We've brought in a successful new producer—Alaska—with three new Democratic designs—all fully equipped with snowshoes.

Some of us have had an opportunity to preview the new 1959 Democratic models in the Senate. We've already looked under the hoods and tried the steering-gear and the brakes. Take it from us, the new automobiles have nothing on them. These new Democratic models may not handle as easily—take, for example, the one produced in Wisconsin—but they all do have plenty of power. As a matter of fact, some of us older rattletraps, the Model A's are beginning to wonder what the influx of these bright and shining new additions to the Senate is going to do to the used car market.

Nevertheless, we strongly commend them—all of them—to you. We urge you to take them to your hearts as we have done. They add luster drive, safety and countless new extras to the Democratic Party and to the Nation.

That is why I am delighted to participate in this victory dinner. It is true we are celebrating, in a general sense, the triumph of the Democratic Party in the 1958 elections. But in a special sense we are celebrating the victory of these new Senators, new Representatives and new Governors. It is they who add up to the difference between an ordinary election and the great Democratic victory at the polls last November. Through them, the Nation has made clear what it expects of all of us.

I am very glad that the great leader of the Senate, LYNDON JOHNSON of Texas, is here tonight to help us interpret the meaning of this victory. I can tell you that his reputation as a skilled craftsman and mechanic in this trade is fully warranted. He knows his political automobiles. And out of his warm and responsive heart and his clear-thinking head, he knows something much more important. He knows that the function of the Democratic Party is to go; not to seem to go. It is to go, not in starts and stops, not in bursts of power and sputtering stalls, but to go firmly and steadily in the direction which the American people, by giving us this great victory, have commanded us to go.

The late Senator Robert Taft said that the function of the opposition is to oppose. With all due respect to that great Republican leader, I want to say that for Democrats, opposition alone is not enough. We Democrats will oppose when it is necessary to oppose. But we shall oppose responsibly and we shall try to contribute constructively to the security and progress of the Nation whenever and wherever we can.

To do that, we have got to have clearly in mind what we cannot do, as well as what we can do, under our constitutional system. The administration, alone, can lead in this country. True, it is a fact that is going to change in 1960. It is going to change, however, only if we do what the American people have commanded us to do; it is going to change only if we do what we can do, not what each of us thinks he would like to do. What Democrats can do, what they must do, is to point out a constructive path for the Republican administration to follow. We have got to keep it working when it would prefer to relax. For the sake of the American people we must hold the hand of this Republican administration when it is perplexed. We must try to guide it when it loses the way. We owe that to the people who have entrusted us with a large share of the responsibility for running this Government.

In specifics, we have got to try, as we have been trying, to get it started on the road to policies which may lead to a more durable peace. We have got to improve the administration of foreign aid and restore the decent image of the United States in so many parts of the world. We have got to see to it that this Republican administration keeps its nose to the grindstone of the social and economic problems which plague large parts of the Nation. You know those problems—inadequate education and other unequal opportunities for millions, a disgracefully wasteful agricultural policy which sees mountains of decaying surpluses side by side with millions of people without enough to eat, high prices, millions of unemployed, the decay of urban centers, a lagging science, an antiquated and inequitable tax system and a neglect of our older citizens. These are similar matters are the problems which confront us. To boot, we have to try to deal with them within the framework of a sleight-of-hand budget from an administration which last year gave us another such budget along with policies that helped to produce a $12 billion deficit in it.

We Democrats have a duty to try to make this administration work, not for the benefit of one, but for all sections of the Nation and for peace. We have a duty to try to make this administration work, not for the benefit of the few but for the welfare of the many.

That is the meaning of November 1958. That is what the American people have asked the Democratic Party to try to do. I do not know whether we shall succeed. It is a monumental task to try to do anything with a Republican administration. Speaking for those of us who are in the Senate, however, I can assure you that we shall try our best.

Centenary of the Weekly Arizonian

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent that a statement relating to the small community of Tubac, which was the first community in modern Arizona in which a newspaper was printed, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TUBAC

The State of Arizona proudly looks forward to continued years of progressive journalism and a free press after pausing March 3 to honor the centenary of the State's first newspaper, the Weekly Arizonian, which published its first edition on March 3, 1859, at historic Tubac—one of the New World's oldest communities and now the site of Arizona's first State park.

Two outstanding Arizona civic-minded organizations—the Valley of the Sun chapter of Sigma Delta Chi, national journalistic fraternity, and the Phoenix Philatelic Association, a chapter member of the American Philatelic Society and Society of Philatelic Americans—arranged as a joint project the ceremonies honoring the centenary of Arizona journalism.

Members of the joint centennial committee include Art Matula, Arizona State University, chairman; James M. Chemi, the Phoenix Gazette, vice chairman; Orien W. Fifer, Jr., managing editor of the Arizona Republic; Lloyd Clark, the Phoenix Gazette; William McFarland, bureau manager of United Press International; Merle Nott, Mrs. Emma O'Brien, Debs Metsong, and Robert Corless.

Some of the most colorful history in American journalism has its origin in those earlier days of pioneering in the Southwestern States and in the heavily Indian-populated territories of New Mexico and Arizona. Historical highlights from newspaper articles reporting the Arizona journalism centennial are herewith published.

Receiving a friendly boost from the U.S. Post Office Department in approving their request for a limited postal facility at Tubac, Ariz., the Valley of the Sun Sigma Delta Chi chapter and the Phoenix Philatelic Association have arranged elaborate ceremonies for the celebration of the 100th anniversary of Arizona journalism on March 3, 1959.

Highlight of the program at the ruins of the old Presidio de Tubac will be a reenactment of the famous newspapermen's duel. The long-defunct Tubac post office will be reopened for 1 day in the building now housing the Arizonian to service souvenir mail deposited by the general public.

A special pictorial cancellation, drawn by Harry Wood of the Arizona State University's art faculty, will be hand stamped on all mail posted at the 1-day postal facility. The cancellation has a line drawing of a century plant, symbolizing the centenary celebration. Wording within the pictorial portion of the hand canceling stamp reads: "Century of Arizona Journalism 1859—Tubac—1959."

The Sigma Delta Chi chapter and the Phoenix Philatelic Association made available to the public a set of three casheted covers (envelopes). Two of the designs depict an editor of a century ago armed with a shooting iron, ready to defend a free press by force if necessary.

The legend on the cachets read: "In Arizona Territory, Editors Fought With Gun and Press." The artists who sketched the unique cachets were Kearney Egerton, of the Arizona Republic, and Wood.

The idea for the militant editor cachet theme was drawn from the historic account of a duel fought by Arizona's first editor, Edward Ephraim Cross, who launched the Weekly Arizonian at Tubac on March 3, 1859.

The story relates how Editor Cross quarreled in print with Lt. Sylvester Mowry, who wanted Territorial status for Arizona, which until 1863 was the western half of the Territory of New Mexico.

Cross asserted that Mowry's reports on Arizona's population in articles published in St. Louis, Mo., and Washington, D.C., newspapers were exaggerated. The two men kept up a crossfire through their articles in the Missouri and district dailies.

When Cross opened the Weekly Arizonian, he took advantage of his publication to editorially attack Mowry in the State's only newspaper. These written tirades led to a duel in July 1859. Both men, armed with Burnside rifles, fired at 40 paces, 2 shots each. Neither newspaperman hit the other, but they declared their honor was satisfied and the ruckus ended.

Soon after that July duel, Mowry purchased the Tubac weekly from its owner, a mining company, and Cross relinquished his editorship.

Other pioneer Arizona editors also had to defend their editorial stands with guns.

TUBAC—THE TOWN WITH NINE LIVES

Tubac, the Arizona town with nine lives, will be the subject of an extensive postal history study by the Phoenix Philatelic Association, which is cooperating with the Valley of the Sun chapter of Sigma Delta Chi in honoring the centennial of Arizona journalism.

Tubac's history, dating back many centuries to the days of the Spanish conquistadors, even played a role in the founding of San Francisco.

Frank and Gay Griffin, present publishers of the Weekly Arizonian (now a quarterly), informed the PPA that they will issue a special centennial edition of the State's oldest newspaper on March 3—the date that Arizona's first editor, Edward Ephriam Cross, put the initial edition of the Arizonian to bed in 1859.

The PPA and the Sigma Delta Chi chapter here will release a set of three cacheted covers (envelops) on the March 3 centennial date at Tubac. The U.S. Post Office Department has authorized the defunct Tubac post office to be reopened for 1 day to permit the servicing of the historic philatelic mail. An estimated 10,000 pieces of philatelic mail is expected to be handled at the Tubac post office, which will be set up in the restored office of the Weekly Arizonian.

Editor Griffin asserts that Tubac has been dead eight times since 1695. He writes:

"Tombstone may be known as the town too tough to die, but the establishment of Tubac as Arizona's first State park will publicize Tubac as the town that wouldn't stay dead.

"Tubac was first a Pima Indian village and then came the Spanish explorers. No one knows how many times this rich agricultural settlement was burned or wiped out in the earliest days. But, since 1695, it has been populated eight times.

"In 1695 there was a revolt of Pima Indians and the town abandoned. A second revolt of the Pimas against the Spanish came in 1751.

"In 1761 the garrison abandoned the fort when ghosts, believed to be Indians in disguise, invaded the area.

"In 1777 the Spanish abandoned it and, when it was reoccupied, the Apaches closed it down twice—in 1840 and 1849.

"After the Gadsden Purchase, Tubac was again abandoned and in 1862 more Apache and Mexican bandit raids forced another Tubac evacuation.

"Tubac, with 200 residents, was withering away—within sight of the Nogales Highway—when it was declared Arizona's first State park.

"Now, this town that wouldn't stay dead is going on to make Arizona postal history on March 3, 1959."

The Fight With Inflation

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address made by the senior Senator from Utah [Mr. BENNETT] before the Pennsylvania Manufacturers Association at Philadelphia, on Tuesday, February 24, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FIGHT WITH INFLATION: ADDRESS BY SENATOR WALLACE F. BENNETT, OF UTAH, BEFORE THE PENNSYLVANIA MANUFACTURERS ASSOCIATION, AT PHILADELPHIA, TUESDAY, FEBRUARY 24, 1959

It is always a great inspiration to have the privilege of speaking to an audience of manufacturers, because to me it is like coming home. For 30 years, before I went to the Senate, I was part of the management of a small manufacturing plant in Utah and, like you, I am proud of it. American manufacturers can be proud of their accomplishment, the great heritage of capital they have produced for our country, the millions of jobs they have provided, and the value and variety of the products they supply for our everexpanding pattern of living. To do this has required the use of all the keys to success—initiative, imagination, great drive and vigor, high integrity and sound judgment.

The very fact that we have done all this makes it hard for me to understand why we are so blind to the forces that, unless we wake up, will destroy both our freedom and our wealth. For 20 years now, a thief has been preying on us and, rather than catching and exposing him, we have helped him rob everybody, including ourselves. Maybe this is true because he is the world's most accomplished confidence man whose hand is much quicker than the eye. He blinds us with promises of something for nothing. He drains our capital away, falsifies our records, dries up our markets, and finally squeezes us dry in our old age. And we applaud him and call for more.

Inflation is a thief that can steal the substance of our wealth without altering its outward appearance. Christ said, "The letter killeth, but the spirit giveth life." Inflation preserves the letter of economic values, but kills the spirit.

So real is inflation's illusion that many hardheaded businessmen—who can spot a phony business deal a mile away—not only think that a little inflation is either natural, inevitable, or desirable, but that it offers a real opportunity for growth and profit to a shrewd and daring operator.

Perhaps all this is possible because without realizing it, most of us have become addicted to a powerful narcotic. We reach eagerly for increasing doses of economic "happy dust" because it brings illusions of greater success and well-being, easier and faster progress, and greater profit.

Or perhaps even though we are wracked with the pain of economic cancer, we mistake fever for the glow of health and puffy swelling for expanding muscle. If this is so, then we are using the narcotic to disguise the pain.

No matter in what terms you describe it, there is a force abroad in our economy that has already taken a fearful toll from every American company, family or individual—an evil that must be exposed, faced, and conquered.

What is its awesome name? Inflation.

LET US WAKE UP TO THE DANGER

Fortunately, many Americans are beginning to wake up to the danger, to recognize inflation for what it is—thief, cancer, and narcotic. President Eisenhower is one of these and in his recent messages to Congress and the people has called for, "Action to meet these challenges by all groups in our society, and by all units of Government."

Specifically, he has challenged consumers, government, labor leaders, and businessmen to meet the particular challenge that inflation presents to them.

Being human, as well as being businessmen, we could generate a great glow of self-righteousness by pointing out to government and labor both the extent of their particular responsibility for the present inflation and the things they should do to correct their faults. But there has already been too much finger pointing and blaming of one group by another. Tonight, I propose that we businessmen look our own weaknesses squarely in the eye and see what we can do to cure them.

WHY SHOULD WE BE CONCERNED?

There are two basic reasons why we should be concerned with inflation—one humanitarian, and the other based on enlightened self-interest.

If we have any active sense of social responsibility, we will fight inflation for the sake of those who are most vulnerable to its damages and least able to protect themselves. These include all who live on fixed incomes and pensions, the aged, the widowed, and the disabled. Not much better off are the schoolteachers and the civil servants at all levels of government. If any man profits by inflation—even temporarily—it is eventually from these people on pensions and fixed income that his profit comes—a cruel story of Robin Hood in reverse.

But if a few of us are indifferent to the fate of these victims of inflation, none of us should ignore its damage to ourselves—in the context of the well being of business and industry, both in general, and in our own particular company. In this respect, let me point out four specific ways in which we can be hurt.

1. Inflation discourages the accumulation of capital

By eating away purchasing power year after year, it penalizes thrift and discourages investment. Oh, I know that the smart boys think that investment in common stocks or real estate is a safe hedge, but as more and more people crowd into that escape hatch, they create and accelerate the very force from which they fled until the whole structure of inflated values collapses, as it did in 1929.

2. Inflation destroys capital already accumulated

That this is already going on is demonstrated to every businessman who finds that his allowable accumulation of depreciation reserves will not replace his depreciated assets. As prices rise more rapidly, this erosion shows up in inventory too—while accounts receivable are settled at a discount. The end is bankruptcy, as the Germans found in the twenties.

3. Inflation distorts figures, destroys accurate comparison and forces uneconomic decisions

Speculation replaces sound merchandising, and investments intended to replace money as a device for the dead storage of value are substituted for investments in productive industry to produce more value. Thus we reverse the lesson of the parable, and emulate the man who buried his one talent, rather than the one who put his talents to use and doubled them.

4. Inflation narrows our markets—both at home and abroad

As true purchasing power shrinks, more and more people must use more and more of their remaining purchasing power for basic necessities, and more and more products are in danger of being priced out of the market. This is true for services too, as the great do-it-yourself movement in America demonstrates.

But even more dramatically, inflation dries up our foreign trade. In 1957 we sold $19.5 billion worth of American products abroad. In 1958 it dropped to $16 billion. While our commodity balance of trade is still on the plus side, our balance of payments shifted from plus to minus. In that year we had to pay out $2.3 billion in gold plus $1 billion in dollar balances held by foreigners in U.S. banks to fill the gap. In the past, the effects of our inflation have been balanced by greater inflation abroad, but lately, and by heroic efforts, our chief customers in

Europe—finally including even France—have moved to greater stability. The new European Common Market will protect that stability and unless we solve our problem too, our own price policies will be even more responsible than their tariff barriers for shutting us out. And when we can't export goods, we will export capital and know-how behind the European wall, and there will be fewer American industrial jobs. Then our inflated wage scales will be a statistical mockery—victims of inflation. This mockery has already begun.

Inflation effects on the purchasing power of the dollar

These, then, are among the ways in which inflation is hurting both people and business But when we come to measure the actual reduction in the purchasing power of the dollar since 1939, we become truly alarmed.

The most frequent measurement is in terms of a weighted average of consumer prices—the so-called cost of living index. On this scale the 1939 dollar has shrunk in 20 years to 48 cents.

But there have been other serious shrinkages in purchasing power. When we measure it as income, we have to consider also the increased tax bite before we can translate it into a consumer's dollar. A gross income of $3,000 in 1939 would need to have risen to $6,457 today for a man to pay his taxes and buy the same goods he bought in the year 1939. If a man made $10,000 in 1939 he would have to be making nearly $24,000 today to hold his own. In other words, his spendable dollar is worth only 43 cents. And if a man was in the $25,000 bracket in 1939 he would have to be making $70,000 in 1959 dollars to have the same available purchasing power. His spendable dollar then has shrunk to 36 cents.

And this is not all. Some dollars have shrunk faster than others. Looking at price indexes again, while the average 1939 consumer dollar is now worth 48 cents, the dollar you spend on some other products today is worth even less than 48 cents. Take these examples:

The dollar you spend for prime industrial products is worth 45 cents.

Your commercial and factory construction dollar is worth 37 cents.

If you build a new house, your construction dollar is worth 36 cents.

If you buy a house today which was constructed in 1939, you are spending a 33 cents dollar.

If you have your car repaired, you use 30 cent dollars.

These are samples of the damage inflation has done in 20 years. Unfortunately, history—even recent history—shows that once inflation is accepted as inevitable or desirable its rate always accelerates. When we begin to build a factor for inflation into our personal and business decisions, we give it an extra push. Unless we make a stand soon, it can pass the point of no return, beyond which there will be no question as to whether we will have an economic collapse—only when it will come. To argue that we can live with inflation and control its rate is to forget that it is an economic cancer, and that if we can really control it, we can, in fact, eliminate it.

HOW SHALL WE CONTROL IT?

Up to this point I have been pointing out why inflation must be stopped. Now it's time to try to answer the more difficult question—How? As businessmen and managers of industry, what can and must we do to meet President Eisenhower's special challenge to us, and win the fight against inflation in our special and particular area?

I have four concrete suggestions.

First, we must face the problem and prepare to solve it. This requires the same process that we use to solve any other business problem—plus a little extra spiritual strength. We must wipe out from our own thinking the illusions that inflation has created and replace them with the hard facts. Among these illusions are several false ideas.

1. *That we have always had inflation*

The fact is that until the thirties, the price levels went up and down, but the long term level remained fairly stable. Wholesale prices in 1930 were about the same as in 1790.

2. *That inflation is necessary to growth; that without its artificial stimulation men will not work harder or invest more*

The same thing can be said about a narcotic, but here we recognize that the effect is temporary and the price for it is too high. Actually, in most periods of great growth like the twenties, prices were slowly falling. Inflation distorts figures to counterfeit growth, as you will easily see when you measure the rate of increase in your business in tons or gallons and then compare this with the rate in dollars.

3. *That inflation can be profitable, because it produces something out of nothing*

This is the oldest confidence come-on in human experience and always conceals a clever larceny.

4. *That even if inflation is inevitable, a shrewd man can outsmart it by clever investment*

This is both stupid and cowardly, the action of a soldier who runs from the fight—or a strong man who pushes the helpless out of the lifeboat. In the end, when the inevitable crash comes, even the smart boys get it.

5. *That even if it is bad, it's someone else's fault—and that there is nothing we can do about it*

This dims and rejects the very spirit of American free enterprise and makes hollow mockeries of all our great technical and productive achievements. If we approach inflation as another business problem, which it is, and develop an understanding of its effects, we can master it. The first job then is to straighten out our own thinking and accept our share of the responsibility.

TEACH THE TRUTH ABOUT INFLATION

The second suggestion in our fight against inflation is to help others—and specifically our own employees—to get the same understanding of the truth. This will not be easy, because while the official union line on inflation is essentially wrong, it is very appealing. Because their basic approach of more pay for less work is obviously inflationary, they support it with the idea that if wages can be raised faster, new markets will be created, and enough new production will come in to control inflation. What they must ignore is that wages are always the predominant element of cost, and that wages that rise faster than productivity are engines of inflation. When price rises inevitably follow such wages increases, they blame it onto exhorbitant profits. The true effect can easily be shown by such figures as these from manufacturing. While physical productivity increased only 31 percent between 1947 and 1957, average hourly wages in manufacturing increased 67 percent. Some have referred to this spread between wages and productivity as the "inflationary gap." It is interesting to compare this spread of 36 percentage points with the 32 percent increase in industrial prices over the same period.

Because employees are being fed misinformation regarding the relationship of wages, profits and prices, they too have illusions about inflation. Through patient planned programs of education, these false ideas must be replaced with truth. For obvious reasons the unions will not undertake this, and if work is to be done, we must do it.

In making this suggestion I know it is another case of calling for education in solving specific problems. This need is always with us and always will be. This job will never be finished. But with respect to inflation, it has a special urgency because there is a definite educational process going on through unions intended to produce the wrong results, and this must be offset, and soon.

ADOPT SOUND OPERATING POLICIES

There is a third area in which we can move against inflation, that of our own operating policies. From now on we must think in terms of stable values and force ourselves to face our operating records and our balance sheet after we have wrung out the water of inflation. We should adopt some stable benchmarks for comparison and tie our planning and evaluating to them. From time to time we should make a report to our stockholders and the public in which we spotlight the effects of inflation on our typical dollar figures.

We should always face the problem of inflation in our dealings with our employees and, specifically, fight to keep wage increases well within the total rate of increase in productivity. If we do this, we will leave some share of the benefits of increased productivity for the stockholders whose investment in new equipment really makes most of it possible. But most important of all, we will thus preserve some part of this for the consumer.

In many ways the consumer is the real key to the control of inflation. He is the one who is robbed when prices rise and only when prices fall—ever so slightly—does he, or more properly, she, have a sure share in our progress. When we provide a share of the added benefits of increased productivity to those on the productive side of our two-part economic cycle, it comes in the form of increases, and it means increased wages to the worker and greater profits to the investor. But if the consumer is to have a share, it must be expressed in decreases in price. This has largely been forgotten in the current era of inflation. Forgotten, too, is the once commonly accepted business axiom that mass production produces lower prices. When we in industry begin to plan to give the consumer his share of the progress we make, prices will stabilize or drop, and inflation in consumer prices will disappear. It's just that simple.

REMOVE GOVERNMENT INFLATIONARY PRESSURES

Fourth, and finally, we must work to remove the inflationary pressures that originate in government. These take many forms.

1. Pressures to increase the supply of money to provide easy bank credit at low interest. This is inflationary by definition.

2. Pressures for nonproductive, non self-liquidating Government programs that either increase taxes or pile up more public debt. As a Senator, I am appalled to find that many Americans, including businessmen, are economic schizophrenics where Government finances are concerned. They keep their concepts of Government expenditures and Government income in two thought-tight compartments. They want more local programs, more loans and grants, but lower taxes. They fight increases in the debt ceiling and are piously for economy but only if it does not affect them. If we are to control or eliminate inflation, we must move into a sustained period of balanced budgets, and this inevitably involves the control of expenditures for procurement and services at the local level—in your town or State and in mine. So long as we insist on more for any reason we will face the threat of inflation.

ELECT NONINFLATIONISTS TO CONGRESS

Since ours is a representative form of government run by men and women chosen through popular elections following campaigns conducted by political parties, we who want to cure inflation and other weaknesses in government must devote enough time and effort in political activity to first select, and then elect, representatives who understand the dangers of inflation—and will resist its temptations. The union leaders, who are essentially inflationists by philosophy, have moved into this field with great success and the representatives they have sponsored and elected are too often inflationists. In my opinion, this has made inflation, direct or disguised, our greatest nationwide economic issue.

Well, this is my story. Inflation is a great and vicious evil, a form of larceny, a cancer, a destructive narcotic. There are many reasons, social and selfish, why we must conquer it. This is true for all of us, and particularly for the managers of business and industrial enterprise. But there is one final and particular reason why this is especially true for you, the members of the Pennsylvania Manufacturers Association. One of the chief functions of your association is to supply casualty insurance. In this field, inflation has been especially destructive. Costs of settling claims have skyrocketed. General figures that demonstrate this are hard to get, but your association officials know that in the field of casualty insurance inflation is a real burden.

INFLATION MUST BE STOPPED

Inflation must be stopped, and we must do it as citizens and businessmen. If we leave this fight entirely to the power of Government, it can only be done by increasing Government interference with our own right to manage our own business, even to the possible imposition in peacetime of price and wage controls. There are men in Congress now who favor that step if inflation continues. Our own experiences with controls occurred so recently that they should still be convicing enough to make us realize that this step should mean the disappearance of freedom and free enterprise—and the end of our way of life.

Shall we continue to drift blindly into economic destruction—or wake up and live? Regardless of what others may do, I think the real challenge is to the leaders of business and industry. Have we the courage and faith with which to meet it? I believe we have, but we must act now to be effective.

This Defense Fallacy Costly to America

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. BENNETT of Florida. Mr. Speaker, I very much regret the apparent decision of this administration to cut back the Reserve forces of our country at a time when the Regular forces are also being reduced. It seems logical to me that when the Regular—active duty—Establishment is being reduced that there should be a buildup and increase in the Reserve forces rather than a decrease. A few years ago when similar reductions were occurring the excuse was the so-called new look at our defense needs. All I was able to ascertain in the new look at that point was a reduction based upon budgetary matters rather than defense requirements. A similar line of reasoning by the administration is being pushed at this point to indicate that our Armed Forces can be smaller because of some great change that has occurred in warfare. Even assuming that a change has occurred in the type of warfare making obsolete present methods, which is quite an assumption, the technical advice of the military leaders of our country does not justify the assumption that either our Regular forces or our Reserve forces should be cut from their present strength.

I include here a thought-provoking editorial from the February 24 Florida Times Union, Jacksonville, Fla., which reads as follows and presents the matter in the particular focus of the situation as it is seen in Florida by an able writer:

THIS DEFENSE FALLACY COSTLY TO FLORIDA

Only the most specious brand of reasoning can justify a reduction of Army Reserve forces, in which Florida will lose 31 units, in the wake of secret testimony by Gen. Maxwell Taylor before a Senate committee in which he recommended mobilization of the entire Nation.

It was in a dispatch of February 18 from IV U.S. Army Corps at Birmingham that an announcement was made that Florida and other States in the South would have their civilian-soldier units pared. Sixteen days prior to that the Army Chief of Staff had told the solons that the United States would not be properly prepared for a Berlin emergency on May 27 unless the necessary force was brought into being. He stressed Russia's superior capability in ground troops.

As is customary, the order for a reduction was accompanied by a statement about how the realinement would make for greater strength and efficiency. Reservists know better, of course, and realize that they are just witnessing one of many such cynical procedures which have occurred since the end of World War II.

It was ever thus, even prior to that conflict, and only a person of great patience and endurance can retain his voluntary affiliation under those circumstances.

The Military Establishment is built on the principle of a small Regular force, buttressed by a large, well-trained Ready Reserve. Yet the units of the latter organization are the ones which suffer most from cuts.

The Army undoubtedly is compelled to make these adjustments in Florida and elsewhere because of the niggardly attitude of those who hold the pursestrings toward ground troops.

That is the fallacy for which the American people ultimately are going to pay in blood. How soon the payment will be exacted no one knows, but the "due bill" most certainly will come when we are least expecting it.

Labor's Privileged Position

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Edith Kermit Roosevelt, entitled "Labor's Privileged Position," which was published in the Standard-Times of New Bedford, Mass.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR'S PRIVILEGED POSITION—FEDERAL LAWS PLACE RESTRICTIONS ON BUSINESS THAT DO NOT APPLY TO LABOR UNIONS

(By Edith Kermit Roosevelt)

Is sauce for the goose sauce for the gander? This is the question at the heart of the current debate on legislation to curb labor abuses. Traditionally, the American public takes a strict view of corruption and special privilege. In the 1920's and 1930's the Seabury investigation forced the resignation of New York's popular Mayor Jimmy Walker, while the Teapot Dome oil scandals sent a Secretary of the Interior to jail.

RECENT SCANDALS

More recently, the Internal Revenue Department scandals under President Truman led to jail sentences for high Government officials, and in this administration, Presidential Aid Sherman Adams left under a cloud after it was learned that he had accepted financial favors from Boston Industrialist Bernard Goldfine.

Why, then, the big stick for punishment of wrongdoers in business and Government alone?

Although a Senate committee under Senator JOHN L. MCCLELLAN has unearthed shocking evidence of corruption and gangsterism in eight major unions, there is considerable doubt whether Congress will pass the tough and comprehensive legislation needed to curb the autocratic powers of the lords of labor. Why, then, this double standard?

One reason why the public has been slow to anger is that they have accepted as final some Supreme Court decisions and legislative acts by past Congresses giving labor a privileged position.

In many instances local police have tolerated physical and economic reprisals against those who suggest labor reform.

In the Kohler strike in Wisconsin, law-enforcement authorities permitted sabotage and mob violence, while Michigan's Governor refused for more than 3 years to extradite John Gunaca, a goon who is charged with breaking the neck of William Bersch, a screw-machine operator in the company's brass division.

When an individual is shot crossing a picket line some local judges seem to prefer to regard the killing as an accident arising out of class warfare, rather than for what it really is—murder.

The rank and file of workers are powerless to halt the unruly doings of certain union elements. In most cases elections are not by secret ballot, nor are they subject to review.

Some workers are opposed to joining the union altogether. It is a flagrant example of the double standard that while the majority of States hold it is legal to compel employees to join a union against their will, the yellow-dog contract prohibiting employees from joining a union is almost universally illegal.

NO CEILING ON DEMANDS

Another example of biased labor legislation is that while there are the minimum-wage and maximum-hour law, there is no ceiling over labor demands. This inequality could have grave consequences if repeated and ever-increasing demands by labor succeed in raising prices to such a high point that we price ourselves out of the world markets.

How, then, can we correct labor's lack of self-discipline? The only way is to make labor unions equal under the law with business, Government, and private citizens.

Why shouldn't antitrust laws be applied to unions as well as to big business?

The Justice Department has hauled General Motors before a grand jury on allegations of monopoly. Yet General Motors, as everybody knows, has the strongest kind of competition from Ford, Chrysler, and other companies. The industrywide, nationwide United Automobile Workers' Union—an obvious monopoly—has no competition. Nevertheless, the UAW and other big monopolistic unions enjoy immunity under the Clayton Antitrust Act, which exempts labor unions from its provisions.

The words of our Constitution, "liberty and justice for all," mean the equality of all Americans before the law. This does not mean special favors for labor pressure groups at the expense of the public at large.

Surplus Commodities for the Needy

EXTENSION OF REMARKS

OF

HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. SLACK. Mr. Speaker, there have been introduced a number of proposed measures which would broaden the scope and increase the amount of surplus agricultural commodities presently being distributed to needy persons in areas of high unemployment. Recently, I obtained from the Department of Agriculture a summary listing the counties to which these commodities are most heavily distributed, and I am submitting this list for publication in the RECORD in the hope that it will clarify the picture for my colleagues.

Briefly, this summary lists every county in the United States in which 15 percent or more of the population is receiving surplus commodities. There are 210 such counties in 24 States, spread through districts served by 75 Members of this House. These counties constitute the hard core of the persistent unemployment problem which has given rise to the demand for economic redevelopment legislation.

In the coming weeks there will be a great deal more said on this general topic, so there is no need to discuss it now, but for the information of the Members generally I would like to have this summary printed and I hope they will give it close attention in preparation for the debates to come:

U.S. DEPARTMENT OF AGRICULTURE
AGRICULTURAL MARKETING SERVICE
Washington, D.C.

Direct distribution of commodities to needy persons in family units, counties, by State, in which recipients are 15 percent or more of population

Statement of Secretary of Agriculture on Farm Surpluses

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. GOLDWATER. Mr. President, on February 15 there was published as an editorial in the Washington Evening Star Secretary Benson's own condensation of his statement made before the Senate Committee on Agriculture and Forestry.

Mr. President, there are some who dislike the Secretary, some who dislike his actions and doubt his sincerity. I am not one of those. I have the utmost respect for Mr. Benson. I consider him to be one of the finest men ever to occupy a position in public life at such a high level.

Mr. President, I ask unanimous consent that the statement, which was published as an editorial, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BENSON ON FARM SURPLUSES

The question of what to do about our farm surpluses is before Congress once more. This year the question pretty much gets down to what we do about wheat-support prices. The major part of our surplus is now concentrated in wheat. Certainly, if you add cotton and corn to wheat, you have represented 85 percent of the crops in Government hands or under loan, and they presently total above $7.5 billion, and rising. Surpluses will soon cost us about $1 billion annually in storage and interest charges alone.

We had a great year for wheat in 1958, by far the biggest crop in history. It amounted to 1.2 billion bushels, yet we can consume at home and sell abroad only about 900 million bushels. The rest goes into expensive storage. This does not have a wide benefit for our farmers. As a matter of fact, the bulk of the payments go to less than 10 percent of those who grow wheat.

Actually, farmers generally are doing fairly well. Farm ownership is at the highest level in history, and so are net equities. The condition of life on the farm has improved immensely and there is no longer that old sharp economic, cultural and educational dividing line between life on the farm and life in the city. Transportation, television, electricity have worked wonders. True, there are hardship areas and the cost-price squeeze is especially harmful to farmers, but unrealistic wheat support prices offer no way to alleviate them. There are other means and we are now pursuing them.

What we need now in the Department of Agriculture is congressional authority to set wheat supports at levels that will lead to sales, not storage bins. In this way, we can retain and build our foreign markets and still produce all that our domestic consumers care to buy. This would save us billions yearly, help to revitalize our agriculture at home and abroad.

The above is Secretary of Agriculture Benson's own condensation of his statement to the Senate Agriculture Committee. We thought it worthy of reproduction in this form. It makes a good editorial.

Pacific Gas & Electric Lineman Wins Lifesaving Citation

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, I am including in this permission to extend my remarks in the Appendix of the RECORD this article which appeared in the Neighborhood Journal, Oakland, Calif., for February 18, 1959.

It details how Thomas J. Peters, of Castro Valley, through his quick thinking and fine training, saved the life of a fellow worker who had inadvertently come in contact with a live wire while they both were working on top of a 50-foot power pole.

The Pacific Gas & Electric Co. has awarded Thomas J. Peters its John A. Britton Award, named after the first president of that company and awarded to those who have distinguished themselves in some way within or without the company.

To me, Mr. Peters acted above and beyond the call of duty, because I can think of many more pleasant places to be than on top of a 50-foot pole with an unconscious man slumped in his safety harness by a live transmission power-ing he has acquired that inspired him to do the right thing at the right time under very serious conditions.

The article follows:

PACIFIC GAS & ELECTRIC LINEMAN'S LIFESAVING ACT WINS CITATION

A citation by the Pacific Gas & Electric Co. for distinguished service has been given to Thomas J. Peters, of Castro Valley, for his quick action last year in saving the life of a fellow lineman.

Peters, 43, who lives at 18801 Madison Avenue in Castro Valley, received the award from Raymond W. White, manager of the claims and safety department of the company, during a district accident-prevention meeting in Hayward Tuesday.

Peters and Carl H. Seigfried, 44, of 3657 Lester Avenue, Hayward, were working atop a 50-foot power pole on April 24 when Seigfried accidentally touched the exposed end of an energized wire. He lost consciousness and slumped in his safety belt. Peters immediately prepared to administer first aid.

Seigfried regained consciousness and was quickly lowered to the ground, treated for shock, and rushed to a hospital within 6 minutes.

According to the citation, Peters' calm actions prevented further injury to Seigfried and brought prompt medical treatment.

Peters' citation was made under terms of the John A. Britton Award, named in honor of the company's first president, for distinguished service in an emergency. Peters has been with Pacific Gas & Electric since 1946.

Security: The Great Illusion

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. SCOTT. Mr. President, the February 23 issue of the Philadelphia Inquirer reprinted the editorial by the distinguished editor and journalist, Walter H. Annenberg, which received the George Washington Honor Medal award of Freedoms Foundation. The award was made at the Valley Forge ceremonies on February 22.

The editorial, entitled "Security: The Great Illusion," challenges our complacency in the face of rapidly changing world concepts and threats to what we have called the "American way of life." It deserves the widest possible attention and comment.

I ask unanimous consent that Mr. Annenberg's editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECURITY: THE GREAT ILLUSION

(By Walter H. Annenberg)

We, the people of the United States, are engaged in a struggle not only to maintain our position as a great democracy but for our survival as well.

We have been challenged before by autocratic governments but never in our history have we been in competition with a society in such deadly earnest as Communist Russia.

Let us make no mistake about it. The leaders of the Soviet Union are determined to conquer us by overwhelming superiority in every field of human endeavor.

Most of us feel that we possess security because we have beaten down our challengers in the past. But this concept of security has created in many of us an attitude of our being impregnable and this has led to a dangerous degree of overconfidence.

Permanence of national position simply does not and cannot exist. The relative po-

sition of any nation is subject to the ambitions and policies of other nations.

To prepare as carefully and thoroughly as possible for every conceivable emergency is the sensible, logical answer to what we must do to maintain the supremacy we enjoy, to protect our freedoms and to safeguard peace.

The U.S. Government, in properly making monumental appropriations available for defense and offense, is doing only part of the job that has to be done. Every citizen must be awakened to his or her responsibility in this total struggle.

Have we the national character to measure up to this responsibility?

Too many of our people are soft, smug, spoiled, addicted to pleasure-seeking and easy living.

Too many are more concerned with a future 4-day workweek than with a 7-day-a-week survival.

Organized labor in instances is carrying on much as capital in instances did half a century ago—taking every advantage without thought of equity or of fairness to others.

Far too many of our citizens are becoming such devotees of the cult of individualism that they regard their rights and privileges as paramount and ignore their duties in behalf of the common welfare.

Our greatest natural resource, the youth of our country, needs as never before the sober supervision and wise counsel of their experienced elders. But the current training of youth is too frequently concerned with academic credits in archery or fencing.

We must organize and direct these young people into educational channels that will best fit them to meet the emergencies of the future. The sputnik age brought in by Russia's scientific achievements demands a serious reappraisal of our entire educational system.

Each citizen must feel an awareness of this grave responsibility to those who will inherit the United States. If we fail in this, we will not have met the Soviet threat.

The ideas here expressed have been written and uttered many times in the last few years, but they have to be reiterated and underscored. It is much later than we think.

Let us not fall behind the timetable of the Kremlin.

Important Western leaders with whom the writer recently discussed this broad subject in London, Paris, Brussels, and Spain's summer capital, San Sebastian, are as gravely concerned as our own leaders. These influential persons overseas are keenly aware of the job to be done by every citizen if Khrushchev and company are to be contained. It is a problem not too complex to understand, but the mechanics of meeting it are extraordinarily difficult to set in motion.

Consider, as a small-scale example, the dedication of Russian workers to the stupendous tasks to which they have been committed by their leaders.

In the United States pavilion at the Brussels World's Fair the personnel was, as could be expected, pleasant, calm, and courteous. But in the Russian pavilion the attendants displayed an intensely aggressive eagerness to explain the exhibit and to make a favorable impression upon the visitor, particularly if he was an American.

In the Russian pavilion restaurant the waiter was persistent and enthusiastic in describing the many dishes, the borscht and chicken Kiev, the caviar, and, of course, the vodka. When he had successfully sold the order, with an air of individual accomplishment, he literally ran to the kitchen to fetch and serve it.

We dare not delude ourselves. On all fronts—military, scientific, industrial, agricultural, scholastic, intellectual—the Russians are resolved to master us and the arts and skills in which we have long enjoyed leadership. They are dedicated to this goal. We cannot afford softness or complacency. We cannot afford laggardness. We cannot afford mediocrity in our thinking or in our doing.

Have we what it will take to make and keep our Nation secure in our time? Have we the willingness to work and to accept the disciplines required?

I repeat, have we the national character to meet the challenge?

Address by Hon. Estes Kefauver, of Tennessee, Before Vanderbilt University Law School

---

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech I made on the problems of inflation and antitrust before the Vanderbilt University Law School on February 25, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR ESTES KEFAUVER BEFORE VANDERBILT UNIVERSITY LAW SCHOOL, NASHVILLE, TENN., FEBRUARY 25, 1959

Vanderbilt University is one of the great educational institutions of the South. It has traditionally sought for and taught truth. This is one of the reasons why Vanderbilt men and women have always been able to contribute so much to the building of America. I am indeed honored to be here today and for this opportunity to address the law school. The theme of my talk today presents the choice that must be made if we are to preserve our free, competitive system.

I firmly believe that the high cost of living is our No. 1 domestic problem. This has been increasingly emphasized in recent weeks as we have heard more and more from all sides expressions of alarm over high prices and inflation. The President, in his economic report to the Congress of January 20, 1959, also recognized this problem.

For several years I have served as chairman of the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary of the Senate. As chairman, in the spring of 1957, I announced that the subcommittee would conduct an investigation and hold public hearings on administered price industries. As I explained at that time, "The high cost of living is due in no small part to the upward manipulation of prices by big companies in administered price industries." The subcommittee began by hearing from some of the country's leading economists who have specialized in administered prices. From the testimony of these experts, an administered price may be defined as one having two characteristics: (a) it is set by administrative actions and (b) it is maintained for a period of time. With respect to the first characteristics, it is the seller as a matter of individual choice who establishes the price at which he will make sales, whereas in competitive industries, it is the impersonal market which establishes the price. With respect to the second characteristic, there is no generally accepted period of time during which a price must remain unchanged before it can be regarded as an administered price. What is significant here is not so much the frequency of change, but the responsiveness of a price to changes in the market. Prices which are administratively set and maintained are insensitive to changes in the market; that is, they are increased and maintained at the same time that demand is falling off by decreasing output. Dr. Edwin Nourse, a former economic adviser to the President, in his definition of an administered price industry, emphasized that the essential point is that they can maintain a predetermined price by restricting production. These are the administered prices having the potential for economic distress with which the subcommittee is concerned in its inquiry.

Following the testimony of the economic experts, the subcommittee conducted extensive hearings in the steel and automobile industries, two of the most basic in our economy. It was found in these industries that there existed a kind of upside-down competition. This describes the situation where prices continue to go up even when demand decreases. These high prices are put into effect by the largest company in the industry, with their so-called competitors following almost identically. Apparently this is accomplished without any express agreement.

In the steel industry since World War II, the hearings revealed that prices have moved on a number of occasions in the opposite direction to that which was indicated by the changes in demand. The steel price index continued its virtually unbroken rise even when demand and production declined, as they did in 1949, 1954, and 1957. It also continued its climb when unit labor costs declined, as they did in 1950 and 1955. No matter what the change in cost or in demand, steel prices since 1947 have moved steadily and regularly in only one direction, upward. The subcommittee found that in 1957 steel price increases substantially exceeded cost increases. It was also clear at the time the 1957 price increases were made there was nothing in the information available to the industry to suggest a forthcoming increase in demand that would have supported higher prices. The fact that these price increases were made and maintained despite such underlying adverse economic conditions illustrates how, through price administration by the leader in the steel industry, upside-down competition can result.

In some industries such price behavior possibly would not have caused substantial injury to the public interest, but this is not true of the steel industry which is the very underpinning of our entire economy. Every time the price of steel goes up, it is inevitable that steel consuming industries raise their prices. This has a tendency to cause price increases in many other lines.

When the subcommittee began its hearings in 1957, I think it fair to state that it was the preponderate opinion that the inflation which our country was experiencing was the product of excess demand. It will be remembered that this opinion was so strongly held that the Federal Reserve Board tightened its money policy in an effort to contract demand. In the opinion of many this policy was based on a false analysis and contributed substantially to the recession from which we have not yet fully recovered. Even during this recession period prices continued to rise in most of the administered price industries, such as steel. Dr. Gardiner C. Means, an eminent economist who is the pioneer in the field of administered prices, appearing before the subcommittee on January 24, 1959, said: "Today, after experiencing inflation and depression at the same time, there are few who still think that this inflation has been the product of too much demand. Clearly, the inflation has not been of the old-fashioned, classical kind with all prices going up more or less together. Also, it is now generally

understood that the new type of inflation is associated with administered prices and wage rates. For bringing about this understanding, I believe your committee is in large measure responsible. Indeed, we are fortunate that your chairman and your committee had the imagination to see the relation between these two things and the courage to focus attention on them."

In this recent appearance before the subcommittee, Dr. Means also presented wholesale price changes by product groups for the periods 1942–53, 1942–47, 1953–57, and 1953–October 1958.

In the 1942–53 period the wholesale price changes for all commodity groups generally rose in price and by not too different amounts. During some of this period prices were controlled by OPA and OPS.

In the period 1942–47, demand was far in excess of supply and prices in all commodity groups rose. However, prices in the competitive groups far outrose prices in the administered price groups.

In the period 1953–57, there was an entirely different picture. Price increases were practically entirely in the administered price groups. In some market price groups, prices rose very slightly; in other, they actually went down.

The fourth period 1953–October 1958 extending the third period to October 1958, showed generally the same picture as the period from 1953 through 1957, namely, higher prices in administered price groups with little increases or declines in the competitive groups.

Dr. Means made one point clear: administered steel prices had the dominant role in the 1953–58 inflation. Not only did steel prices rise the most in that period, but prices in the steel and steel using groups also rose more than those of any other groups and accounted for two-thirds of the gross increase in prices. It is significant that, as Dr. Means pointed out, the administered price groups accounted for 85 percent of the gross increase in the wholesale price index. Moreover, he stated that if prices in these administered price groups had not gone up, the wholesale price index would have risen less than 1 percent and that so far as the wholesale price index is concerned, there would have been no inflation.

The result of inflation is strikingly shown in the recent Economic Report of the President. The table on page 142 of that report reveals that in current prices, the total gross national product increased from $397.5 billion in 1955 to $436.7 in 1958. However, when expressed in 1958 prices, the total gross national product only increased from $435.4 billion in 1955 to $436.7 in 1958. Thus it is shown that during this period gross national product has increased only $1.3 billion in terms of 1958 prices. Hence when inflation is milked out of the large increase in dollar values, we have only enjoyed a slight increase in gross national product.

The seriousness of the cost of inflation to the American people is further revealed in the Economic Report of the President. In a chart which appears on page 155 of that report, it is shown that the per capita disposable personal income, using current prices, increased from $1,661 in 1955 to $1,784 in 1958. In contrast, however, when 1958 prices are used, per capita disposable personal income actually declined from $1,790 in 1955 to $1,784 in 1958. Thus we reach the remarkable conclusion that every person in the United States was $6 worse off in 1958 than they were in 1955.

Because the automobile industry is so pivotal in the overall economy, the Antitrust and Monopoly Subcommittee also inquired into the pricing practice of that industry. It is claimed that one out of every seven workers in this country is dependent, directly or indirectly, on the automobile industry for his livelihood. This study reveals that General Motors today commands approximately 50 percent of the automobile market in the United States. During the past 10 years this company's average profit, after taxes, has been an impressive 25 percent of net worth. This compares with a national average of 11 percent for all manufacturing corporations. In 1947 General Motors' profit was only 17 percent, but in 1950 its profits reached 37.5 percent, which was higher than its profits of 36.2 percent in the boom year of 1929. These figures are all the more impressive when the income tax rise is taken into consideration. In 1929 General Motors' profit margin before taxes was 38.5 percent, while in 1950 its before taxes earnings reached 77.4 percent.

Mr. Harlow Curtice, president of General Motors, in his appearance before the subcommittee, stated that he and three other executives determined the prices for all divisions of the corporation and that such prices were fixed so as to return 15 to 20 percent profit after taxes on total investment. It would appear that General Motors sets prices by a formula method, the first ingredient of which is the fixed 15 to 20 percent profit after taxes. To this is added the cost of materials, labor, overhead, taxes, and fixed costs based on a standard volume of 80 percent of production capacity. It is easy to see that if volume exceeds 80 percent of capacity, which is has in many years, profits are bound to rise above the 20 percent goal. The hearings showed that after these prices have been so fixed by General Motors, they become the prices of the industry. A comparison of comparable models of the major producers reveals little or no price differences.

Except for public utilities, our economy is not regulated. Ours has traditionally been a free, competitive enterprise system. But competition is fast disappearing among our basic industries because price competition is disappearing. In almost every industry we now find a big one, two, three, or four where the leader establishes prices and the others immediately follow suit. The problem of high prices and inflation also grows increasingly worse with the decline of price competition.

Almost 70 years ago the first of the antitrust laws, the Sherman Act, was passed by the Congress. This act has been supplemented by a number of others. We refer to these laws as the charter of our economic freedom. We early elected not to force companies to compete. Our antitrust laws seek to remove illegal restraints and monopolistic abuses so that they could compete. Hard core evidence is necessary to prove illegality.

In the past such evidence was forthcoming and many successful cases were brought against giant combinations of economic power. However, evidence of collusion is often lacking today because companies simply do not have to get together to set prices. As I have said, they simply follow the price pattern set by the leader. The Department of Justice and the Federal Trade Commission have told the subcommittee that they are helpless against such pricing practices unless direct evidence of collusion can be produced.

In this unhappy state of affairs the people are caught in a price inflation and the Government, under present laws, appears powerless to do anything about it. The day of decision is here. America must decide, and decide now, whether it wants a free, competitive economic system—not in fancy words, but in reality. It is up to Congress to discover how to exercise its constitutional responsibility of regulating commerce. Today, it appears that more and more of that power is being exercised by a relatively few managers in key industries.

The time has also come for the public interest to be put ahead of the private interests of either management or labor. During this time of high prices, I don't believe labor should demand or receive any wage increases in basic industries which management could justifiably use as the basis for necessary price increases.

Since the end of World War II our economy has been on a wild merry-go-round. As the cost of living increased, labor asked for wage increases as compensation. When wage increases were granted, prices were raised and the cost of living increased again. This, in turn, led to additional wage demands and so on. High prices and inflation obviously affect every group in America. Many U.S. businessmen believe the danger of the United States pricing itself out of foreign markets is an immediate one. In the President's economic message to Congress was the insistence that high prices here at home could lower our capability to compete in world markets. Labor has likewise been harmed. During this same period, we have seen great increases in unemployment. This problem is still with us today.

We now stand at the fork in the road. We must choose either Government regulation of business or the improvement of our antitrust laws. We must restore the climate where competition can be expected. The choice for me is easy. Regulation except in times of extreme emergency is undesirable.

Specifically what legislation might be passed to strengthen the antitrust laws? I would suggest three basic supplements to existing law. First, the test of section 7 of the Clayton Act, with respect to mergers, should be made to apply to section 2 of the Sherman Act. Under this section of the Clayton Act, the evidence need support only a finding of substantial lessening of competition or tendency toward monopoly in order to make a merger illegal. This change in section 2 of the Sherman Act would afford the Government greater power to destroy monopolies.

Second, I would suggest that unfair methods of competition and unfair acts and practices in commerce which are unlawful under section 5 of the Federal Trade Commission Act should be declared illegal under section 1 of the Sherman Act. This would enable the Department of Justice to attack all trade restraining evils.

Third, I would suggest that there be enacted into law my bill S. 716 authorizing the Attorney General to compel the production of documentary evidence required in civil investigations for the enforcement of the antitrust laws. Not having this power today, the Department is unable to gather evidence on which to base a suit except by use of grand juries in criminal investigations.

Together with the staff of the Antitrust and Monopoly Subcommittee, I am presently working on bills to amend section 1 and section 2 of the Sherman Act in the manner in which I have just suggested. When these bills are drafted, I shall introduce them in the Senate.

Although I believe the principal problem in our economy is the undue concentration of economic power, I also suggest that the antitrust laws be strengthened in respect to other problems. For example, I have tried for several years to secure the enactment of legislation which would partially change the law as interpreted by the Supreme Court in the Standard Oil of Indiana case in 1951. This bill designated for several Congresses as S. 11 would, contrary to the decision in the Standard Oil case, make illegal under section 2(a) of the Clayton Act price discriminations which may substantially lessen competition or tend to create a monopoly, even where they are made in good faith.

In 1950, when the Kefauver-Celler amendment to the antimerger section of the Clayton Act was enacted, I was hopeful that the amendment would arrest the great merger movement which was then in progress. However, the enforcement efforts of the Federal Trade Commission and the Department of Justice of the antimerger law even as so

amended has been most disappointing. Under the amended law only one case, the Bethlehem-Youngstown proposed merger, has been finally adjudicated in the courts, and this case was not appealed. I have again joined with Senator O'MAHONEY in sponsoring S. 442 requiring in specific instances that premerger notification be given to the Federal Trade Commission and the Department of Justice, with the hope that such amendment might add stimulus to the enforcement program of the antimerger law.

Standing at the forks in the road, I have indicated that answer to our basic economic problems of today lies in an improvement in our antitrust laws rather than in Government regulation. I have made some suggestions as to what some of these improvements should be. I believe that given an understanding of the problem and the choice of remedies, the public would support congressional action along the lines I have indicated.

History teaches us that when a nation loses its economic freedom, it also loses its political freedom. Germany, under Hitler, and Italy, under Mussolini, went through this experience. We must not have it happen in the United States. Keeping competitive may not be popular. To insist upon price competition may work temporary hardships on present concentrations of power, but in the long run, it is the only way a democracy can survive. The accomplishment of this purpose is the joint responsibility of business, labor, and Government and one in which lawyers must play a major part.

Livermore Lions Look Back Over 35-Year History

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the Livermore Lions Club has a proud history of over a third of a century.

It has made a great contribution to the life of a community that has undergone a metamorphosis in that time. The city, named after the beautiful valley in which it is located, was once the scene of a cattle raising industry. The Livermore Valley has long, too, been recognized as the home of the finest dry wines produced in the United States.

Shortly after the outbreak of the war, the Navy established a flying center in Livermore. The property was later taken over by the Atomic Energy Commission for its giant Livermore Laboratory, the home of the hydrogen bomb.

The Livermore Laboratory attracted industry to serve it. A few years ago the General Electric Co., in looking for a place to establish a laboratory for the adaption of atomic energy to useful and peaceful purposes, selected Vallecitos not far from Livermore and its sister city, Pleasanton. Later the Sandia Co. established a branch in the Livermore Valley so that this once typically rural, cattle growing, wine producing section has become the center around which revolves the atomic energy research and development on the Pacific coast.

Naturally, the whole character of the community has changed but life goes on and it is such things as the Lions Club that ties the old with the new.

It has been my privilege to address the Lions Club in Livermore on many occasions. I remember distinctly the last time I was there one of those present was none other than Dr. Herbert York, one of the world's foremost scientists, who is now Director of Research and Engineering for the Department of Defense.

I am making part of these remarks an article that appeared in the Livermore News February 17, 1959.

The article follows:

LIONS LOOK BACK OVER 35-YEAR HISTORY

Newcomers were filled in on historical phases of the Livermore Lions Club, and older members enjoyed an evening of reminiscing, when a past president's plaque was presented to President Ed Hawkins at the ladies night banquet held at the Castlewood Country Club Thursday night.

The plaque was prepared by and given to the club by Harold Moore, while the nameplates of the past presidents were prepared by a special committee, for which Judge Joseph A. Schenone acted when he made the presentation.

"Our club is dedicated to community service," Judge Schenone said. "All you have to do is to read the list of the various presidents of the Lions through the 35 years of our club's history, and you have 35 names of civic leaders through that period. Each contributed in some way to our community life and to our club."

First name, for the year 1924–25, was that of Charles A. Smith, who was manager of the Bank of Italy, which occupied a building at the corner of Livermore Avenue and First, which later was supplanted by the present building at the same location—now the city hall.

Smith, "Mike" Callaghan, and Jack Hock, father of City Clerk Dorothy Hock, were named as three of the club's founders. The club met at Croce's, and now annually makes a pilgrimmage to Lodi to Croce's restaurant.

Dr. Chesley Rush, still active member of the club, was president in 1925–26; Dr. Paul E. Dolan, who recently passed away, in 1926–27; Manley J. Clark, 1927–28; J. O. McKown, 1928–29; E. J. Lawless, 1929–30; Dr. Frank Savage, 1930–31; M. R. Henry, 1931–32; William Rees, 1932–33; Earl E. Johnson, 1933–34; P. E. Jones, 1934–35; Al Bonne, 1935–36; Lee R. Staiger, 1936–37; Charles Turner, 1937–38; Frank Gill, 1938–39; Harvey Saunders, 1939–40; Walter Motta, 1940–41; Lewis Wright, 1941–42; Everett Miller, 1942–43; Warren Davison, 1943–44; Dr. Don Fraser, 1944–45.

Lloyd Beebe, 1945–46; Joe Michell, 1946–47; Dr. W. A. Cassidy, 1947–48; Elliott Dopking, 1948–49; Earl Ising, 1949–50; Dr. Robert Jeffrey, 1950–51; Henry Windhusen, 1951–52; Manuel Medeiros, 1952–53; Harold Ryman, 1953–54; Manuel Duarte, 1954–55; Judge Schenone, 1955–56; Charles Francisco, 1956–57; G. R. McLeod, 1957–58; and Ed Hawkins, 1958–59.

Funniest incident related by Judge Schenone was when President Bill Rees was chosen a delegate to the Lions convention, which required him to board a train in Oakland and ride to a convention several thousand miles away. "It was his first train trip, and the first time he had left this area," Judge Schenone said. "It so impressed him that when he went to give his report on the convention he began telling about getting on the train. And believe it or not we never did hear about the convention because Bill made three consecutive talks at three consecutive meetings and just got as far as from Oakland to the Nebraska * * * the train impressed him so."

Duarte, zone chairman, awarded 100 percent attendance pins for the year to Ray Centoni, Dr. Hawkins, William McKinnon, Medeiros, Moore, Windhusen, Fracisco, William Kelly, McLeod, Larry Mongeau, Judge Schenone and President Hawkins awarded one to Duarte.

Don Witham, Community Concerts agent, was the guest of Mr. and Mrs. McLeod.

Almost Everything Is Cheaper, Union Finds

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. MUMMA. Mr. Speaker, we hear so much talk these days about what a dollar will buy but some of the economic jargon is difficult to understand. Not everyone knows the meaning of "weighted averages," "median," and so forth, but here is an article that really comes down to earth in making its point.

I thought these were very interesting figures. However, this shows it is cheaper to the person who has a job but unfortunately, more expensive for the one who does not.

The article follows:

ALMOST EVERYTHING IS CHEAPER, UNION FINDS

The Machinist, official weekly publication of the International Association of Machinists, AFL–CIO, published in its February 12 issue a detailed piece of research designed to answer the question: "Are we really any better off financially than we were 10 or 20 years ago?" The answer was a resounding, "Yes."

The newspaper compared prices in 1938, 1948, and 1958 with the amount of time an American had to work in those years in order to earn enough to buy 28 items. The verdict: Almost everything is cheaper (in 1958) when you translate the price into minutes of the average hourly wage rate. The publication added that "except for apples, cotton blouses and cotton dresses, the record shows that it doesn't take nearly as long to earn the necessities as it did 20 years ago. We lost ground on a couple of items since 1948, notably new cars and Blue Cross hospitalization."

Prices have about doubled since 1938, the Machinist noted, but at the same time average 1958 wages have increased 336 percent over 1938 wages and 157 percent over 1948 wages. Here is what that means in terms of specific examples of higher purchasing power, the union newspaper said (that period of work required in each of the years to earn the purchase price):

Item	1938	1948	1958
Loaf of bread	8.5 minutes	5.75 minutes	5.5 minutes.
Quart of milk	12 minutes	8.5 minutes	7.25 minutes.
10 pounds of potatoes	20 minutes	23 minutes	16 minutes.
1 pound of apples	4.5 minutes	5.25 minutes	4.75 minutes.
1 pound bacon	35 minutes	34 minutes	21.5 minutes.
1 pound chuckroast	21.75 minutes	28.5 minutes	16 minutes.
Haircut	47.5 minutes	55.5 minutes	42.5 minutes.
Movie ticket	57 minutes	44 minutes	35.5 minutes.
2 packs cigarettes	24 minutes	17.75 minutes	12 minutes.
Monthly Blue Cross	69 minutes	49 minutes	67.5 minutes.
Ford sedan	1,015 hours	892.5 hours	945 hours.
4-ply tire	12.25 hours	9.75 hours	8.5 hours.
100-mile train trip	6 hours	3.5 hours	2.75 hours.
New York-Chicago flight	71.33 hours	32.66 hours	22.66 hours.
5-room house	7,860.25 hours	6,486 hours	6,369.75 hours.
Portable sewing machine	158.75 hours	92.5 hours	70.25 hours.
Vacuum cleaner	55.5 hours	37 hours	30.5 hours.
Electric iron	5.5 hours	4 hours	2.75 hours.
Refrigerator	147.25 hours	178.5 hours	71 hours.
Wringer washer	59 hours	80 hours	49.5 hours.
100 kilowatt-hours electricity	6.25 hours	2.5 hours	1.75 hours.
Man's wool suit	28.5 hours	26 hours	23 hours.
Men's work shoes	4 hours	4.25 hours	3.5 hours.
Boys' shoes	2 hours	2.5 hours	1.75 hours.
Dungarees	1.25 hours	1.5 hours	1 hour.
Ladies rayon shirt	1.5 hours	2.5 hours	1.75 hours.
Ladies cotton dress	1.5 hours	2.25 hours	1.75 hours.
Ladies house slippers	1.5 hours	1.75 hours	1.25 hours.

Alameda County Grand Jurors Named

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Alameda Times-Star of February 21, 1959:

COUNTY'S GRAND JURORS NAMED

An Alameda man and 14 other men and 4 women were chosen members of the 1959 Alameda County Grand Jury yesterday in the court of Superior Judge James R. Agee.

James Wilkins Pearson, Alameda hardware merchant, of 1364 Pearl Street, is the only Alamedan on the grand jury.

Walter S. Ries, of Oakland, retired real estate broker, was appointed jury foreman by Judge Agee.

Selected to serve with the Alamedan were seven residents of Oakland, five Piedmonters, four Berkeleyans, and one resident each of Pleasanton and San Leandro.

NAMED TO SERVE

Members of the 1959 grand jury are Fred E. Anderson, of Oakland, printing firm executive; Mrs. Anita Baum, of Oakland, wife of a pharmacy owner; Donald A. Breed, of Piedmont, real estate broker; Dunlap C. Clark, of Piedmont, banker; T. C. Drennan, of Oakland, mortuary executive; Mrs. Ruth A. Gotzenberg, of Berkeley, wife of a landscape architect; Harry H. Hicks, of Oakland, retired insurance broker; Edgar B. Jessup, of Piedmont, business machine firm executive; Roy A. Legge, of Piedmont, retired sales executive; J. Elwin Le Tendre, of Berkeley, educator; Mrs. Ruth Logan, of Piedmont, civic leader.

A. Lee Oder, of Berkeley, mortuary owner; Ernest W. Schween, of Pleasanton, insurance broker; Alva G. Starr, of Oakland, retired educator; Fred W. Swain, of Berkeley, retired rubber company executive; Mrs. Gladys Valley, San Leandro, civic leader; and Charles Vegod, of Oakland, women's wear store executive.

Within the next few weeks, the panel is scheduled to tour county institutions, including the county jail, hospital, and juvenile hall.

In addition to returning indictments, the grand jury is empowered to make a complete annual examination of county financial and governmental records.

At the end of its 1-year term the grand jury submits a detailed report on its action during the year and suggestions for improvement in governmental efficiency.

Farmers Union Grain Terminal Association Broadcast

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio broadcast on February 23, 1959, by the Farmers Union Grain Terminal Association of St. Paul, Minn.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF FEBRUARY 23, 1959

If the social experts and the population prognosticators are correct, the quiet of the countryside is due to be disrupted by many strange sounds and happenings. Maybe not next year, or even 10 years from now, but farmers are warned that it is coming. It is the result—of the combination of the technological revolution in farming, and the irresistible bursting at the seams that is going on in the cities.

Kenneth L. Bachman, who is in the Research Division of the U.S. Department of Agriculture, tells us that the U.S. population will grow rapidly until 1975, and that the revolution in farming will continue. City incomes will keep on going up. We'll have neither war nor depression to cause a setback in this headlong race to bigger and better things, Bachman predicts, and let's hope that he's right.

Bachman gives us an idea of what's happening, and is likely to happen, by saying: "The old distinctions between farm and city are disappearing rapidly. Many a farm community is now a veritable melting pot of people of diverse occupations. These developments carry with them important community problems. There surely will be rises in farm property taxes to pay for schools, water, and sewage, for example.

"The growth of our industrial economy has had far-reaching effects on the rural community. Rural people who do not live on farms outnumber those who do by a five to one ratio. In addition, more than one-third of the farm operators work off their farms 100 days a year or more. In 1957, 40 percent of the net income of farm families was from nonfarm sources."

And Mr. Bachman says that by 1975 we'll have a population of 230 million people (we have 175 million now), and the trend toward more non-farm people living in rural areas appears to be inevitable.

But how about the farmers themselves. Bachman predicts that we'll have only two million commercial farms by 1975, compared to a little more than three million now. "Agriculture," he says, "appears to be in the very middle of revolutionary changes in size and capital structure."

Well, you people on the farms don't have to be told about that. But we doubt that a lot of farm areas will ever be homesites for city people. While it is true that millions of acres of farmland are being swallowed up each year by housing developments, highways, and so forth, this is mostly limited to areas not too far from urban centers.

In all this high-speed mechanical and modernization splurge we ought not to lose sight of our most efficient food and fiber producers, the family farmers. True, their farms will grow larger, but we need to preserve the family character of the farm for the good of everybody in the Nation.

Your co-ops, like GTA, are preparing themselves to serve the farm families of the future. It is a co-op responsibility to expand into new fields, and build up abilities to cope with the future. It is only sensible to look ahead, and that's what the farm families who own and control GTA are doing.

The Shrine's Position on Communism

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by Imperial Sir George E. Stringfellow, imperial potentate, A.A.O.N.M.S. of East Orange, N.J., entitled "The Shrine's Position on Communism."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SHRINE'S POSITION ON COMMUNISM: AN ADDRESS BY IMPERIAL SIR GEORGE E. STRINGFELLOW, IMPERIAL POTENTATE, A.A.O.N.M.S. OF EAST ORANGE, N.J.

There is so much confusion in the world today as to who stands where and for what in reference to communism. I think it is appropriate to tell you where the Shrine stands.

Speaking as our imperial potentate in 1947, the Honorable George E. Rowe, member of the Supreme Court of New York,

warned us of the serious inroads communism was then making in America. The judge said: "Fraternalism and religion will cease if communism breaks down our form of government * * * the Shrine has taken the lead among the Nation's fraternal orders in turning the spotlight on Red communism, its identity, its aims, and its purposes." Continued the judge: "World leaders have commended the Shrine for its fearlessness, its forthrightness, and its knowledge of America's red menace."

Speaking as our imperial potentate in 1949, Imperial Sir Galloway Calhoun, currently president and chairman of the board of trustees of the Shriners Hospitals for Crippled Children, said: "Communism is a godless philosophy * * * to accomplish its purpose, it would overthrow our Government by force."

Speaking as our imperial potentate in 1950, Imperial Sir Harold Lloyd, currently a member of the board of trustees, Shriners Hospitals for Crippled Children said: "One cannot be both an American and a Communist. * * * We oppose any philosophy that * * * would invade the secret sanctuary of man's conscience where only God may enter as judge."

The foregoing statements made by three of our most eminent imperial potentates were approved by the imperial council sessions in which they were made, and are, therefore, in effect our fraternity's position on communism. A position which I support.

There are those who profess to believe that communism and capitalism or communism and freedom or communism and Christianity can coexist in the same world. The architects of this diabolical movement deny this. For example, in his book Problems of Leninism, Stalin said, "Communism and capitalism cannot exist in the same world. Sooner or later one or the other must conquer." He said that religion, belief in God, must be exterminated everywhere before communism is safe anywhere, and that religion is an opiate of the people. Lenin, the principal architect of communism, a few years before his death said: "First we will take Eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like overripe fruit into our hands. We have never concealed the fact that our (Russian) revolution is only the beginning, that it will lead to a victorious ending only when we shall have inflamed the whole world with its revolutionary fires." Communists hold implements of war in one hand and the dove of peace in the other. Out of one side of their mouths they plead for peace and out of the other they threaten world war. They thrive on revolution. They love to fish in troubled water of their own making. Communists tell us that war can be avoided if we submit to their demands which would be worse than war since we would lose our precious liberties and demonstrate that we are not worthy of the great sacrifices made for us by our Founding Fathers.

There are two basic threats to our way of life, and our people are becoming apathetic to both, thus playing into the hands of the Communists. Those threats are: communism and inflation. The latter grows out of the former. Communists hope to destroy our way of life through inflation. Inflation feeds on itself and when it gets out of control, as it did in Germany and Italy, chaos reigns. It is from chaos that communism grows. An illustration of the degree to which inflation has taken root in our country is that balanced budget are becoming nasty words in America. To avoid inflation and the resultant dictatorship, we must keep our expenditures within our income. We must expose the Communists for what they are: leeches that destroy liberty. Because of the apathy of the people and the alertness of the Communists, it is dangerous to fight communism in America. History does not reveal the name of a single American who fought communism without being smeared, beginning with Martin Dies of Texas. The men who are currently bearing the brunt of communistic smears are the Secretary of State John Foster Dulles and J. Edgar Hoover. Every red-blooded American, regardless of politics, will rally behind and support their efforts.

You will doubtless recall that more than half of the signers of the Declaration of Independence were Masons, more than half of the signers of the Constitution were Masons. Our Masonic forefathers believed in the dignity of the individual. Many of them gave their lives that we might live in liberty. I, therefore, feel that we Shriners and Masons have a greater responsibility to keep America American than any other group of citizens. If the time ever comes when we are afraid to speak our minds then, indeed, will we have lost our way of life.

Joseph Mekota Letter on Election Day, a Holiday

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. HRUSKA. Mr. President, 66 years ago, Joseph Mekota opened a law office in Cedar Rapids, Iowa. Since that time, he has engaged in the general practice of law in that city. He is now 93 years of age, and still carries on duties pertaining to his profession.

It has been my distinct honor to know this gentleman very well over the course of the last 30 years. In fact, it is my very good fortune to be able to meet and visit with him three or four times a year, since he is general counsel of the Western Bohemian Fraternal Association, in which I am active as an officer. Quarterly, we attend together meetings of the board of directors.

Thus, I know that, at his age of 93, this venerable practitioner and highly respected citizen still possesses much energy and much interest in all such activities, as he has been accustomed to do for many, many years.

By way of a personal light, I should like to say, Mr. President, that one of the former Members of this body was a law partner of Mr. Mekota many, many years ago. This former partner was the one-time Senator from the State of Missouri, James A. Reed, who represented his State in the U.S. Senate from 1911 to 1929. Senator Reed later moved from Cedar Rapids, Iowa, to Kansas City, Mo.

Mr. President, Mr. Mekota is not a member of the same political party to which I belong; but I do not know of anyone for whom I have greater respect, or whom I would honor more as a lawyer, as a gentleman, and as a citizen of the Republic.

He has gathered wisdom. His patriotism and his concern for the continued well-being and advancement of our Republic have deepened as the years have gone on.

The suggestion he wrote to me the other day—to make election day a holiday—is one of notable merit in any event. It is the more so because it is proposed by one with such a splendid background, history, and achievement of American citizenship in his own right.

Mr. President, I ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CEDAR RAPIDS, IOWA.

ELECTION DAY, A HOLIDAY

The American people have many fine qualities. They are intelligent, industrious, religious, patriotic, fraternal, tolerant, sociable, and progressive, with many other good qualities. But they have one weakness. They do not appreciate and exercise their right to vote. In the presidential elections about two-thirds of the electorate cast their ballots. In elections other than presidential, only about one-half do so. This is not a healthy situation. In some future day, some subversive element might get control of our Government.

Recently there has been some suggestions in the press in order to solve this problem, to hold elections on Sunday. To this suggestion many objections have been made by numerous religious denominations.

Why not declare and constitute our election day as a national holiday, the same as Decoration Day and Labor Day? Locally our banks, courthouse, and city hall are closed on election day. Why not close all business, commercial and industrial activities for one more national holiday? Our country has not very many holidays and one more would be acceptable to the people. Election holiday would arouse interest in elections and would cause a much higher percentage of voters to exercise one of the highest and most important privileges of American citizenship. Such holiday should apply only to National and State elections.

JOSEPH MEKOTA.

CEDAR RAPIDS, IOWA.

Reinstatement of National Service Life Insurance Supported by Insurance Executive

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. SPARKMAN. Mr. President, I have joined with the Senator from Louisiana [Mr. LONG] in sponsoring a bill which would allow a 1-year period in which veterans of World War II and the Korean war would be allowed to reinstate those national service life insurance policies which they either failed to take out on leaving the service or allowed to lapse after leaving the service.

I recently received a letter from a constituent who is in the insurance business, in which he informed me that he was in favor of this bill.

I request unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE FRANK M. JONES ESTATE SERVICE,
Birmingham, Ala., February 9, 1959.

Hon. JOHN SPARKMAN,
U.S. Senator,
Washington, D.C.

DEAR MR. SPARKMAN: On Saturday night, January 31, I had the opportunity to listen on my automobile radio to your commentaries regarding the introduction of your bill to make it possible for ex-servicemen to recover their forfeited national service life insurance.

My experience in the life insurance business dates from April 14, 1925. During World War II, and while serving in the U.S. Coast Guard, I handled the sale of national service life insurance; so there has been no interruption of continuous life insurance experience for almost 34 full years.

Since my return from the war I have assisted many ex-servicemen to reinstate and/or to convert their Government insurance to permanent plans. As of the moment we are helping them to include the increased total disability coverage in their policies.

And while no one has ever paid us one dollar for services rendered in connection with their Government insurance, I can tell you for sure that we have sold large and substantial amounts of insurance in the various companies with whom we do business to these same veterans. It was for these personal reasons I regretted very much the passing of legislation April 25, 1951, to preclude "the boys" from picking up their lapsed policies.

No one need explain to me if every ex-serviceman reinstated and retained his national service life insurance that its presence in the amount of $10,000 would mean a reduced ability to buy new insurance to the extent of the premiums paid for the Government policy. But, if the people in the life insurance would view the matter as I do, then they would recognize the fact that ownership of the Government policy, with the substantial dividends thereon, would give millions of men an enlightened perspective of insurance with subsequent desire on their part to own more.

You veterans of War I had until April 25, 1951, to pick up your lapsed insurance. I consider it only equitable and fair that veterans of War II and the Korean police action should be given a restored opportunity to recover their Government policies. And it is for these personal reasons (if you wish to so consider them) that I am 100 percent in favor of your bill.

Sincere regards,

FRANK M. JONES.

Cancer Research

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. NEUBERGER. Mr. President, one of the truly impressive and challenging tasks confronting the American people is a research program which will finally get at the causes and possible cures for cancer. An excellent and thoughtful article was contributed to the Klamath Falls Herald and News, of Klamath Falls, Oreg., on this subject by Florence Jenkins, a member of the staff of that daily newspaper. This article appeared on October 26, 1958, under the title of "Cancer Education."

In her editorial article, Mrs. Jenkins describes the dedicated and capable people in Klamath Falls who have been working in the cause of cancer research through the program of the Oregon division of the American Cancer Society. Because this is a national and international problem, I ask unanimous consent that Mrs. Jenkins' article from the Klamath Falls Herald and News of October 26, 1958, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANCER EDUCATION

(By Florence Jenkins)

"Guard the ones you love" is the slogan of the American Cancer Society.

It is refreshing to have the executive secretary of an organization or campaign present her case without saying, somewhere in the story, how much money is needed.

Grace Reymers, formerly of Klamath Falls and now of Ashland, is executive secretary of the Jackson County chapter of the Oregon division of the American Cancer Society. She came to Klamath Falls on Friday with Mrs. Jack James and Mrs. Ray Frisbie, crusade chairman and service chairman, respectively, for Jackson County.

Through arrangements made by Dr. S. M. Kerron, Klamath County Public Health Department head, they held a meeting with interested local women to reorganize a Klamath Falls chapter. Mrs. Francis Skinner has accepted chairmanship of the public service committee. Mrs. Harold Cloake, Mrs. Don Anderson, and Mrs. Harold L. Catmull will head the educational program here.

"Through education alone, 80,000 lives can be saved in the coming year by acquainting the public with the seven danger signals which may mean cancer," Mrs. Reymers states.

"Cancer will strike one out of four persons," she declared. "One out of three cases can be cured. Half of the remaining cases can be arrested and the other half could have been saved had they gotten to their doctor in time for diagnosis and proper treatment," she added.

The wonderful part about the program is the fact that the information is free. There are pamphlets already printed with concisely stated facts ready for distribution. Much authentic additional information is available from members of the committee or from the Klamath County Public Health Department.

The American Cancer Society puts the responsibility squarely on the shoulders of the individual person. Be on the alert for any of the danger signals which may indicate the present of cancer and seek medical assistance at once.

The society advises a physical checkup, if you are 35 or older, at least once a year. The society's service program seeks to save life and ease pain through a better informed and alert public.

Volunteers are sorely needed in the crusade to save lives from cancer.

Case of the Fugitive Treasure

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the December 28, 1958, issue of Time magazine entitled the "Case of the Fugitive Treasure."

This article illustrates one of the aspects of Swiss banking under a system of numbered and secret bank accounts protected by secrecy laws. It shows the danger to the economy of a nation when the identity of deposits and clients are kept in secret. It also brings to mind that these banks can act as agents for others whose true identity cannot be determined.

The subcommittee on the Trading With the Enemy Act will be interested in this aspect of banking in its consideration of the question of General Aniline & Film Co. Recently a number of Swiss banks acquired control of the claimant to the GAF shares which were seized by the United States. Also, I. G. Farben in Germany filed a suit claiming an interest in General Aniline.

These questions must be resolved prior to legislation dealing with the subject to determine the best course to follow in the interest of the United States.

I have introduced a bill to provide for full return of the seized properties because I believe in the principle of respect for private property. Others have introduced bills for the sale of such properties. The course to be followed will depend on the results of investigation into all of the aspects. I hope this can be done as early as possible in the present session of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPAIN—CASE OF THE FUGITIVE TREASURE

"If Franco could afford it politically," said an American businessman last summer, "he could throw a scandal that would make vicuña coats look tawdry." Last week Franco decided he had to afford it. A mass police roundup hit Spain, and this time the victims were not radical opponents, but some of the nation's biggest and richest names—bankers, industrialists, cabinet ministers, even members of Franco's own family. Though details were carefully concealed from the public, the roundup was the climax of the most sensational financial scandal in the history of the regime. The crime common to all: Setting up secret accounts overseas, mounting to at least $280 million in Switzerland and to millions more in banks elsewhere.

The practice of banking hard money outside is an old one, and the Spanish Government had tended to wink at the practice. Businessmen swore that they could not operate without external balances, and even some government agencies had undeclared accounts of their own. But Spain's sick

economy has been going from bad to worse. In the first 9 months of 1958 the country suffered a trade deficit of $268 million. Its exports of citrus fruits are down more than 60 percent. It has so little left in gold reserves ($57 million) that it cannot even scrape up enough money to pay for the crude petroleum it needs each year. Desperate for hard currency, and shocked by the size of the sums involved, Franco decided to get the fugitive capital back, no matter who might get hurt in the process.

Samuel I. Parker, Citizen-Soldier

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. ERVIN. Mr. President, on December 21, 1958, the Greensboro Daily News, of Greensboro, N.C., carried an article on Col. Samuel I. Parker, of Concord, N.C., our greatest citizen-soldier of the First World War. Colonel Parker returned to active duty during the Second World War and distinguished himself by training small units for their proper role in combat.

I ask unanimous consent that the article which appeared in the Greensboro Daily News be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAR HEEL IS FIRST MAN TO RECEIVE TOP THREE U.S. WAR DECORATIONS

(By Helen C. Arthur)

CONCORD.—It took a modest, reserved North Carolinian to become the first man in history to receive America's three highest awards for heroism in battle.

S. I. "Si" Parker, a native of Monroe and now of Concord, does not appear the stern military man.

But during World War I, his actions won him the Congressional Medal, the Distinguished Service Cross, and two Silver Stars.

These are only a few of the honors and medals bestowed on this quietly forceful man with the iron-gray hair, brother of the late Judge John J. Parker.

His also are two Purple Hearts, the Legion of Merit (from World War II), the French Fourragere in colors of the French Croix de Guerre (which he can wear as an individual), the Victory Medal from World War I with five battle clasps.

WON MANY OTHERS

In fact, Parker was awarded many lesser medals—including a number of foreign decorations for which he has never applied.

Only twice in all the years since has he worn his medals. Until only recently they were packed away. Close friends talked him into framing them.

What were these deeds that made Parker the first man in American history to hold all these awards?

The Army citation puts it in dry, matter-of-fact phrases. It does not describe the dirt and grime and blood and noise and fear of war.

Here is what the then lieutenant did in 1918:

The 2d and 3d Battalions of the 28th Infantry merged after several hours of severe fighting near Soissons, France, finally establishing a front-line position. In doing so, a gap was left between the right flank of a French colonial division and the left flank of the 28th, exposed the 28th to terrific enemy machinegun fire from a nest located on a rock quarry on high ground.

Observing the situation, young Lieutenant Parker ordered his depleted platoon to follow him in an attack on the strongpoint. Needing more help, the lieutenant happened on a group of leaderless, disorganized French colonials and talked them into following him.

They fought their way through enemy rifle and machinegun fire to the crest of the hill, rushed it and took the quarry by storm, capturing 6 machineguns and about 40 prisoners.

The next day, the assault continuing, Parker was hit in the leg. As there were few officers left, he refused to be evacuated and stayed with his command.

Again, he led the attack, crawling on his hands and knees to do it because of his wound, until the objective was reached.

For this, the lieutenant won the Congressional Medal. This is a five-pointed gold satr, surrounded by a green laurel wreath and suspended from a bronze bar on which the word "valor" is inscribed. It is the highest award for heroism America has to offer.

STILL MORE

But there's more.

In France, July, 1918, with General Pershing ordering this citation, Parker "With total disregard for his own personal danger, advanced directly on a machinegun 150 yards away while the enemy was firing directly at him, and killed the gunner with his pistol. In the town of Exermont, his platoon was almost surrounded after having taken several prisoners and inflicted heavy losses on the enemy, but despite the fact that only a few men of the platoon were left, continued to fight until other troops came to their aid."

For this, Lieutenant Parker was awarded the Distinguished Service Cross.

Again, in October 1918, the young lieutenant, "whose great spirit and courage were most stimulating to his men * * * in conjunction with another officer working with two squads, successfully repulsed a strong German counterattack and, singlehanded, captured a German machine gunner."

You would never know of these things about this man.

"The good Lord just let me live through it. I just happened to get where things had to be done.

"In all honesty, it is as difficult for me today as it was in 1918 to piece together in my own mind all that happened."

NEVER REGULAR

A big man, Parker was never a Regular Army officer, but was active in the Reserve between wars. In World War II he was called on to help by lecturing officers and officer candidates on mental preparation for the battlefield.

In fact, he wrote his own textbook, and it was used at West Point Military Academy. For this work he won the Legion of Merit.

Between wars, until his retirement last year, Parker and his family lived in South Orange, N. J. He worked with a pharmaceutical manufacturing firm of New York, becoming a vice president.

As a youth, he left the University of North Carolina in his senior year to enlist in 1917, and attended the first officer training camp at Fort Oglethorpe, Ga. From there he was sent overseas, where for some time he was attached to the British Army.

Now, he and his wife, the former Miss Mary Lou Morris, of Concord, live in a spacious white house high on a hill near Concord. Parker enjoys his retirement and visits from his daughter and two grandsons.

The Changeable Farm Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. HUMPHREY. Mr. President, one of the Midwest's outstanding agricultural writers is Al Stedman of the St. Paul Pioneer Press-Dispatch.

He has effectively called attention to the inconsistencies of the administration in relation to wheat and corn.

On the one hand, the administration professes to be against controls in telling farmers to produce all they can and then it expresses concern about surpluses and insists on tighter controls.

I ask unanimous consent to have an article which was published in the February 15 issue of the St. Paul Pioneer Press, by Al Stedman, entitled "Uncle Capriccio," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNCLE CAPRICCIO

(By Alfred D. Stedman)

A benevolent old gentleman but changeable is Uncle Sam. Some folks affectionately call him Uncle Santa Claus. His payments arriving in any season are welcome as the flowers of spring.

The mystery is as to why he is target for so many brickbats. Down on the farm he should be as popular as sender of payments—soil bank payments, conservation payments, wool payments, sugar payments, etc. Instead, he gets blamed for everything: low prices, high prices, even bad weather being ascribed to H-bomb tests or something done by Uncle Sam.

Oh, there could be a lot of reasons, factual and fictitious. When Government, regardless of party in power, takes credit for prosperity, it has a hard time ducking blame for reverses. It's human nature to cuss Uncle Sam when things go haywire. No matter how much the Government may do for somebody, the beneficiary can always squirm with envy of others who, in truth or imagination, have been treated even better.

But more than platitudes are needed to solve the mystery. Could Uncle Sam's own conduct be a source of his troubles? It's a hunch to explore. Maybe it's Uncle's changeability that has some folks buffaloed.

For instance, there's his split personality toward those two monarchs of the countryside—wheat and corn. True they're different. Wheat is the king of the bread grains. Corn is the king of feed grains. So Uncle can hardly be expected to treat them exactly alike, though he does vow more price equality between them, so farmers can afford to feed flocks on surplus wheat.

Uncle Sam's mien is a bit brusk as he rides the plains with bad news for the wheat farmers.

"Boys," he says, "much as we hate it we'll have to ask you from now on to control your wheat production. You'll have to slash acreage allotments, tighten up quotas, ban exemptions and loopholes, and hike penalties for overplanting. If, that is, you want wheat price supports kept up."

But as he travels over into the Corn Belt, Uncle Sam's mood changes. Government bins and surplus potentials seem no longer to bother him. The worry lines leave his brow. His whiskers quiver with optimism.

He is an altered ego with no chip any longer on his shoulder.

"Boys," he chuckles, "grow all the corn you want. No production controls for you. No allotments, no quotas, no penalties. The sky's the limit. All that and Government price supports too."

Mostly the home folks think simple and straight. They think of a spade as a spade, a cow as a cow, and of sauce for the goose as permissible sauce for the gander.

They think that if a U.S. plan of supplementing free prices with Government payments is right for one crop, it shouldn't be banned on principles from another crop. But as to this, Uncle undergoes another change of personality. He smiles on the plan as fine for wool and sugar. He scowls on it as socialism for wheat or butter.

Earnestly your Uncle talks for constitutional guarantees of freedom of markets for farmers and housewives. This he calls healthy American competition that leaves producers free to sell and consumers free to buy where each can do best. That's for some foods and areas.

But as to Midwest milk and cream, Uncle Sam's mood shifts again. Now he drops his talk about freedom of prices and markets, erects a wall around the District of Columbia, lifts prices inside that wall, and says to Midwest milk, "we do not want you to enter here."

Perhaps that's how Uncle Sam gets to be a magnet for barbs from the back country. Home folks are puzzled by his trait of changing mien as he shifts his farm plans from region to region and from crop to crop. Maybe that's why they shy a verbal, shillelagh now and then in the changeable gentleman's direction.

The Place of the American Indian in Society

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a guest editorial, written by Peter Homer, Sr., a Mohave Indian, chairman of the Colorado River Tribal Council, and published in a recent issue of the Amerindian, the American Indian Review.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

(Contributed by Peter Homer, Sr.)

For the past 130 years or more the Government has handled the affairs of the various Indian tribes in this country. The Bureau of Indian Affairs was created in 1824 for the express purpose of civilizing and Christianizing the Indians and fitting them to take their place as citizens of the United States. This was the outgrowth of the program which Congress had adopted toward the Indians at the very inception of this Government and was in accordance with the policy of the first settlers in this country.

The Indians, to some extent, have taken their place in society, but the numbers are small in comparison with other minority groups which do not get educational and other benefits from the Government. Many people have questioned why the Indians have not advanced more rapidly. Most answers dwell on culture, custom, language, and background as reasons for the difficulty.

Place any class of people in a state of complacency through paternalistic care, protection, and other benefits for over a period of time and see what happens. Place these same activities under a division of Government which soon becomes a bureaucracy with all its policies, rules, regulations, and legal entanglements; let it become a political football and see where it goes and what it does to the very people it is supposed to benefit.

The failure has been that it was not realized that Indians would have to grow up. Policies and objectives should prepare Indians to a point of self-sufficiency so that they can take their place in society without jeopardy to, or loss of, land holdings, rights, and other property. Indians must realize, too, that there is a goal for which they must strive and, if they are to survive, they must do their part in attaining that goal.

The Cyprus Solution

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials on the accord reached in London this week on the Cyprus problem. This remarkable accord, restoring friendly relations among estranged allies, deserves wide acclaim and approval by the free world.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Star, Feb. 20, 1959]

WELL DONE ON CYPRUS

The accord signed in London on the Cyprus problem represents a negotiated compromise of many valid interests. As such, it may not be an instrument of perfection in the eyes of any one party. It is doubtful, if not impossible, that any such instrument could be devised without so offending less-favored interests that continued strife on the island would be assured, and that such a structure of western unity as the NATO would be dangerously weakened.

Precise details of the compact are to be released at a later date. Salient points, however, are those negotiated at Zurich earlier this month by Prime Ministers Karamanlis, of Greece, and Menderes, of Turkey—and concurred in now by Prime Minister Macmillan, of Great Britain, Archbishop Makarios, and Dr. Fazil Kutchuk. The latter two are leaders of the Greek and Turkish Cypriot factions, respectively. In brief, the terms would give Cyprus a status of independence and would create an island government headed by a Greek Cypriot and with an assembly divided 70 to 30 percent between Greek and Turkish representation. Political union with Greece, a long-standing aspiration, would be banned. So would partition, an alternative favored more recently by Turkey. Britain would retain military base rights, still considered vital to the Commonwealth and to NATO as well.

There is credit enough in this solution for all to share. Mr. Karamanlis, in particular, deserves an extra tribute for persuading Archbishop Makarios to modify his last-minute objections, and the Greek Parliament should applaud the strong statesmanship displayed by their chief of government. Ankara should be comparably approving of the contribution made by Prime Minister Menderes, especially against the background of the air tragedy which cost the lives of so many of his associates on this mission of statesmanship. For Mr. Macmillan, about to leave for Moscow, the agreement reflects once again the British capacity for honorable and responsible adjustment to the changing times.

[From the Washington Post and Times Herald, Feb. 20, 1959]

BLESSED EVENT FOR CYPRUS

Good news is a precious commodity in these days of grim international outlook, and the Greek, Turkish, British, and Cypriot representatives meeting in London have produced some really good news by settling the Cyprus dispute. The accord is the more welcome because of the fears that last-minute objections from the Greek Cypriot leader, Archbishop Makarios, might snarl the agreement reached between Greece and Turkey last week. The settlement was possible because each of the principals—Greek Prime Minister Karamanlis, Turkish Prime Minister Menderes from his hospital bed after his narrow escape in an air tragedy, British Prime Minister Macmillan, and Archbishop Makarios himself—joined in a genuine compromise to end 4 years of ugly strife.

Of all the concessions the Greek Government and Greek Cypriots appear to have given the most in forswearing their long dream of union, or enosis; this took real statesmanship. But it would be unworthy to qualify the credit. The Turkish Government and Turkish Cypriots renounced their demand for partition; and the British Government modified its own plans for the beleaguered Mediterranean island in return for continued sovereignty over military bases. Assuredly the soon-to-be-formed independent Republic of Cyprus, with carefully weighted representation and checks for the respective Greek and Turkish communities, will have difficulties of its own. But these can be met with good will.

What is especially remarkable is that this represents an agreed solution of a vexing problem. In too many of the world's grievances solutions prove difficult and are therefore evaded through temporizing and expediency. As Mr. Karamanlis said, the people of Cyprus are the victors; but not the least of the benefits is the restoration of friendly relations among estranged allies. That makes the accord the more rare—and it deserves to be applauded accordingly.

[From the Boston (Mass.) Hellenic Chronicle, Feb. 12, 1959]

CYPRUS SOLUTION

We've had an agreement on Cyprus. Ironically, the negotiations that brought this accord were accompanied by far less fanfare than were many that had fizzled.

Premiers Karamanlis and Menderes, deserve rich plaudits. Though the accord now must go to London, we feel that the Macmillan government will leap at the chance to put its stamp of approval on an agreement that will spell finis for the long-festering sore.

What's more the agreement is an honorable one and one which most will agree will not harm the prestige of either of three parties. What's more important, the agreement leaves the Cypriot people themselves with a working arrangement that should not create any difficulties.

Though propaganda was lacking, the meeting at Zurich did not go unnoticed. The mere fact that the Greek and Turkish

premiers had come together at a meeting table was most noteworthy. It was proof positive that a tremendous amount of progress in dissolving the impasse had been made since the end of the recent U.N. General Assembly session in New York.

At the conclusion of the U.N. session, Greece and Turkey were poles apart. A compromise resolution on Cyprus had been adopted, urging continued negotiations toward resolving the crisis. Few felt that anything would be forthcoming before another U.N. meeting, let alone within 2 months.

Yet here it is, a solution. Although both sides kept cautioning against optimism, it was hard to hide the general feeling of accord that seemed to be permeating from Zurich, where Premier Karamanlis and Premier Menderes were smiling at each other instead of seeking to rip each other apart from across the table.

Archbishop Makarios is still a key figure in the final decision. He has stated that the issue is still primarily one between Cypriot and Briton; but it is hard to visualize him refusing to accept a mutual agreement between Turk and Greek, especially when it means an end to bloodshedding and bitterness.

Cyprus has for too long suffered from the internal warfare. The struggle has been costly in life, in property and in good will. Some of the sores it opened may never be completely healed. Demagogs may reopen them again some day. There is no time to waste on pat agreements. Everyone stands to gain from an end to the strife.

Greece has given up on Enosis. The battle for annexation has long since been lost. Britain has given up on retaining its colony in subjective status. Its compromising proved the worst of approaches. Turkey found a late toehold in the issue and almost wrecked the NATO allies with its demands. Its latest demands for partition were given up grudgingly, but they went.

Let us praise God for guiding the hands of the negotiators to that long-sought end that will let Cypriots gain that long-sought freedom.

Sacrificing Enosis is well worth the price of life and it was necessary in the case of Cyprus. Let us wish them well on the map of free nations.

Georgia Firsts

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column by Hon. DuPree Jordan, Jr., editor and publisher of the West End Star of Atlanta, Ga., enumerating the various firsts which the State of Georgia can claim. Mr. Jordan's column was written in conjunction with the observance on February 12 of the 226th anniversary of the founding of the colony of Georgia.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

JORDAN'S JOTTINGS

(By DuPree Jordan, Jr.)

This column has never run as long as 70 paragraphs, or even half that number, but this week we would like to pass on that number of short items received from Georgia's new secretary of commerce, Abit Massey. Since today is the anniversary of our State's beginning, this information certainly is appropriate.

Possibly no other State has taken the leadership in so many varied fields of endeavor as has Georgia, whose rich and colorful history dates back to February 12, 1733, when General Oglethorpe landed at Savannah. Among the many firsts which Georgia claims, and which you might want to help bring to the attention of its citizens, on the 226th anniversary of the colony's founding on February 12, are the following:

The steamship, the *Savannah*, was the first steamship to cross the Atlantic Ocean, leaving Savannah on May 20, 1819, en route to Liverpool, England.

The University of Georgia at Athens, chartered in 1785, was the first State-chartered University in America.

Georgia was the first State to have a chartered college for women, Wesleyan College at Macon being founded in 1839. Georgia was also the first State in which a college degree was granted to a woman.

A Georgia Indian, Sequoyah, of the Cherokee tribe was first to codify the Indian alphabet in 1821.

The first Indian newspaper, the Cherokee Phoenix, was published in Georgia in 1828.

Georgia was the first State to establish a school for Negro nurses, and the first to grant a certificate to a Negro nurse. (Spelman College, Atlanta, 1881.)

The first women's secret society was organized at Wesleyan College, Macon, May 15, 1851.

The first school of forestry in the South was established at the University of Georgia in 1906.

Georgia was the first State to declare that married women should have full property rights. (The Married Women's Act, 1866).

The first State agricultural experiment station was established at Savannah in 1735.

The first American orphanage was established in Savannah by George Whitfield in 1741.

On March 2, 1912, the Girl Scouts of America was formed in Savannah, Ga., by Julliette Lowe.

The first Protestant Sunday School in America was founded in Savannah in 1736.

The first Moravian Church in the United States was established in Georgia in 1735.

The first Negro Baptist Church was established at Silver Bluff, Ga., in 1733.

The first Negro hospital in the United States was built in Georgia in 1832.

A Georgian, Dr. Crawford W. Long, first discovered and demonstrated the use of ether in surgical operations in 1842.

The Ladies' Garden Club of Athens, organized in 1891, was the first such organization to name permanent officers, adopt a constitution and by-laws and be conducted according to parliamentary law.

Georgia was the first colony, while under England's rule, to abolish slavery and outlaw the sale of rum.

The first silk exported from the colonies was sent from Savannah and made into a dress for the Queen of England in 1735.

The first sea-going vessel made of iron, the *John Randolph*, was built in Savannah in 1834.

Georgia was the first State to charter a railroad, the Mexican-Atlantic, in December of 1827.

The first sewing machine was conceived and perfected by Dr. Francis Goulding, a Georgian.

The Nation's first county-owned hydroelectric plant was built in Crisp County, Ga.

Gold was first discovered in Georgia in 1828 and first mined at Dahlonega.

The first machine for manufacturing ice was made in Columbus and patented in 1844.

The first woman U.S. Senator was Mrs. Rebecca Felton of Cartersville, Ga., who took office in 1922.

The first discovery of bauxite (aluminum ore) was made in Floyd County, Ga., in 1887.

Georgia was the first State to lower the legal voting age to 18.

Georgia was the first State to require birth registration.

A Georgian first organized a memorial association and planned a Confederate Memorial Day.

Poppy Day was first inaugurated by a Georgian, Moina Michael.

The first cotton gin was invented in 1793 by a Georgian, Eli Whitney, and placed in operation near Washington, Ga.

The first successfully operated cotton mill in the South, the Bolton factory, was built in Wilkes County, Ga.

The first process by which cottonseed oil could be made from the previously discarded cottonseed was discovered by Launcelot Johnstone, a Georgian.

Cotton was first planted for commercial use in Georgia.

Georgia is first in producing 75 percent of all the tire cord and fabric used in automobile tires in this country.

Georgia was the first State to organize an agricultural department in 1874.

The largest State farmers' market of its kind in the United States is located in Atlanta.

Cairo, Ga., is the largest producing and shipping point for pure sugarcane sirup in the United States.

Cairo, Ga., leads the world in producing collard seed for market.

Georgia leads the Nation in the production of these agricultural products: pimento peppers, pecans, peanuts, watermelons, velvet beans, and cow beans.

Georgia is first in the production of gum turpentine.

Valdosta, Ga., is the largest naval stores market in the world.

Georgia is first in producing 74.4 percent of gum naval stores produced in the United States and 50 percent of the world's production.

Georgia leads the Nation in production of commercial broilers.

The first exportation of cattle from America was from Savannah, Ga., in 1755.

The largest solid granite body in the world is Stone Mountain, located 16 miles east of Atlanta.

A Georgian, William Longstreet, in 1790, was the first to apply the steam principle to navigation.

The rural delivery system of the United States is the evolution of a plan of a Georgian, proposed in Congress by Thomas E. Watson.

The first motion picture theater in the world was operated in Atlanta in 1895 by C. Francis Jenkins at the Cotton States Exposition.

Coca-Cola was first made and sold in Georgia.

Georgia was the first State to send a schooner against the British in the American Revolution.

The first hymn book in the United States was written by Charles Wesley in 1737.

Georgia was the first State to adopt a vagrancy law in 1813.

A Sunday School established by John Wesley in 1735 at Savannah, was the first in America.

The first Christian baptism in America occurred in 1540 in the Ocmulgee River.

Georgia, in 1774, was the first to ordain a Negro preacher.

Georgia was the first colony to ship a bale of cotton to England.

Georgia was the first State to have a woman own and edit a newspaper, the Washington Gazette, in 1802 with Mrs. Hillhouse as editor.

Georgia was the first colony to cultivate grapes in 1735.

Georgia was the first State to establish a free high school, Richmond Academy, in August, 1783.

Georgia was the first State to have a passenger railroad which ran from Augusta to Charleston.

A Georgian, Dr. Charles Herty, first designed the cup used in the turpentine industry.

Georgia was the first State to have a woman's foreign missionary society, at Athens in 1819.

Georgia was the first State to send troops to the Confederate service, the Oglethorpe Light Infantry, of Savannah.

The circular saw was invented by a Georgian, Mr. Cox, in 1795 and the original design is still used.

A Georgian, Thomas R. R. Cobb, was the first to codify the English law as to principles of equity.

Georgia was the first State to have a railroad commission established in 1877.

Georgia was the first southern State to sign the United States Constitution.

Now, honestly, how many of those facts did you already know?

I Speak for Democracy: Speech by Leslie Rothenberg, West Virginia Winner

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. RANDOLPH. Mr. President, on Wednesday, February 25, in the Nation's Capital, we were again stimulated in our concept of citizenship. This strength came into being through our association, as Senators, with the winners of the I Speak for Democracy contest.

These young men and young women, representing 49 States and the District of Columbia, came to Washington for a nationwide program embraced in the 12th annual voice of democracy broadcast scriptwriting contest.

It was my privilege to talk with Leslie Rothenberg, of Wheeling, the winner from among more than 200 youths of West Virginia who participated in our State.

This lad is a senior at Linsly Military Institute in his home community. He is editor in chief of his school newspaper. Cadet Captain Rothenberg plans on entering college this fall as a prelaw student.

At the national awards luncheon I counseled with this young man. He spoke to me of religious liberty. I reminded him that Roger Williams was banished from the Colonies because he preached religious liberty. He expressed his thoughts on tolerance. I joined him in hoping for that time, which must come, when humankind will live together in closer understanding and more wholesome mutual respect.

Mr. President, I was so impressed with this fine youngster's objective thinking that I requested a copy of the script which had won for him the West Virginia award.

Robert W. Ferguson, of Wheeling, the president of the West Virginia Broadcasters Association, accompanied Cadet Rothenberg. I congratulate Mr. Ferguson, and his associates in our State, for their sponsorship of the contest. We do well when encouragement is given to such a cooperative effort for our youth.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

Why do I speak for democracy? How can I, a first generation American in my family, realize the values of the democratic way of life in the United States of America? How can I know the meanings of such words as liberty, equality, tolerance, justice, and the rule of law? These words are mere abstract nouns until you relate them to such nouns as Concord and Bunker Hill, Corregidor, and Okinawa. I would like to relate these qualities of our democracy to myself.

First, liberty means the right to choose something by yourself without any outside force making the choice for you. My parents have helped guide me—not force me—in my exercising the right of free choice. One example of this ideal was the fact that I could choose the type of school that I wanted. The fact that I may select my own college or career field is still another sign of liberty at work.

The second point that I would like to develop is equality. This word carries with it the key to the togetherness of the millions of people that make up America. The heterogeneous backgrounds of this myriad of human beings have merged into a vibrant force of activity and cooperation in which everyone plays his or her part. Men such as Jackie Robinson and Dr. Ralph Bunche have successfully reaffirmed the equality of opportunity for all people, regardless of race, creed, or color.

Next and closest to my heart is the ideal of tolerance. In this country of ours each man may practice the religion of his own choice. Taking into consideration the large number of religious sects, it is not difficult to understand why ours is a country which has enjoyed religious freedom since its inception.

Men like my grandfather suffered the horrors and brutalities of countless concentration camps and detention centers simply because they believed in God. Although my grandmother died in one of these wretched pestholes, my grandfather lived long enough to enjoy the privilege of worshiping, here in America with his family and his grandson, the religion of his ancestors.

Lastly, let us consider justice and the rule of law together. In order to prevent chaos and to maintain an orderly management of daily life, we have created a code of laws and regulations which promote and guide our actions in a peaceful and sensible manner for the common good of all. The men who impartially interpret this code of law have wisely molded the principles into a strong foundation for the preservation of our rights and privileges. We can look for examples of this in our everyday life. A simple piece of paper called a driver's license, which means so much to me personally, is assurance to society that I am a qualified driver. The policeman on the corner, the judge in the courtroom, and the investigating Congressman are all concerned with the protection of all people from the invasion of their rights as American citizens.

We can now see that these words—liberty, equality, tolerance, justice, and the rule of law—are more than just abstract terms for they are alive in America; they are functioning in America; they are democracy in action.

Elias Lieberman, a Russian immigrant, expresses so vividly the sentiments of all freedom-loving Americans in his poem, "I Am an American," when, pointing to the flag of our Nation, he says, "That flag of stars and stripes is yours; it is the emblem of the promised land. It means, my son, the home of humanity. Live for it * * * died for it. * * * I am proud of my future. I am an American."

Position and Plight of the Textile Industry

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. ERVIN. Mr. President, on January 27, 1959, Mr. Halbert M. Jones, of Laurinburg, N.C., the president of the American Cotton Manufacturers' Institute, made a most illuminating address to a meeting of that organization in Washington, D.C., on the present position and plight of the American textile industry. Since Mr. Jones possesses expert knowledge of this subject, this address should be made available to all Members of the Congress. For this reason, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Distinguished guests and gentlemen, we are grateful for your attendance upon this occasion. We recognize the heavy demands which you have on your time in Washington, and we are honored by your presence here which bespeaks your deep interest in and concern for the textile industry. This is an occasion when the textile industry gathers to honor you, the Senators and Representatives of North Carolina, South Carolina, Georgia, and Alabama, and so well represent the folks of the southeastern area.

As we review the political and ideological tides of the past 25 years, we are doubly grateful for the courageous leadership of the Senators and Representatives from the South. Except for you and your predecessors, we would be much further along the road to socialism and centralization of government authority in this country. Southern delegations have been tagged with the conservative labels in Congress, and the liberal tag has been applied to the free spenders and those who want to see Government assume an ever-increasing responsibility for and control over the lives of our citizens. Historically, a liberal has been one who has stood for freedom and liberty and who has resisted the encroachments of centralized government authority upon the rights of individuals. By this definition, our southern delegations and those who believe as you do are the true liberals, and it is time that we claimed again the label. We salute you who are standing so stanchly in defense of the great liberal principles upon which our Nation was founded.

In the last session of Congress, there was probably more legislation directly affecting textiles than during any session in recent years. You will recall, of course, the wide range of legislation involving world trade, foreign aid, agricultural policy, particularly as related to cotton, labeling, States rights,

regulation of labor activities, taxation, budgets, and many other subjects. As a result, industry people were more active in Washington than ever before, and I expect that the multitude of our calls upon you, the varied pleas for support, were at times confusing, sometimes, perhaps, contradictory, and occasionally so regular as to be wearisome. We appreciate your patience with us and your deep concern for the needs of our industry. This experience emphasized anew the need for the textile industry to develop an overall program which could be presented to you and into which could be fitted the various legislative matters which come before you.

The action of the Senate in appointing a subcommittee of the Committee on Interstate and Foreign Commerce to study the textile industry has proved to be most significant for our industry. Under the able chairmanship of Senator PASTORE, the hearings of this committee have provided a public forum for the full presentation of the story of the textile industry and for the development of a comprehensive program which, we believe, will be quite helpful to the Members of Congress and to the industry. Senator THURMOND has served with distinction on this committee, and we are grateful for his devotion to the task of the committee and for the sympathetic hearing which all of the committee members have given the spokesmen for the industry. We believe that the report of this committee and the record of these hearings will be most constructive.

Certain facts regarding the industry have emerged from the full study we wish to call briefly to your attention tonight. These facts are, of course, not new and are familiar to you:

First. The textile industry, producing materials essential to the very survival of our people and second only to foodstuffs for human security, is a vital segment of our total national economy. It is not necessary, of course, for me to dwell on the importance of textiles in North Carolina, South Carolina, Georgia, and Alabama. In these areas, textiles account for a major share of all manufacturing employment. For our Nation as a whole, textile manufacturing ranks sixth in employment, ninth in assets, and ninth in sales among all industry. Together with apparel manufacturing, our sister, the textile industry employs over 2,300,000 persons directly and is the largest of all the manufacturing segments. Indirect employment required in the production of cotton, wool, manmade fibers, textile machinery, textile chemicals, dyestuffs, starch, and the thousands of other items consumed by textile mills adds many hundreds of thousands to those who are dependent upon textiles for their livelihood. By any standard of measurement, textiles are essential to our Nation's total economy.

Second. In times of national emergency, textiles are second only to steel in our Nation's military security. If, at any time, this country comes to depend upon foreign supplies of textiles to any important degree, at that time will its security be in jeopardy. Textiles are contributing importantly to the rush into the space age and are essential to our military strength. The continued erosion of the textile industry can only impair our military security.

Third. The cost structures of our Nation, reflecting the inflationary pressures of the past 20 years, have put textiles along with many other industries in a position where domestic costs are no longer competitive with those of foreign producers, not because of productivity, for our productivity is the highest in the world, but because wage and raw material costs abroad are far lower than our own levels here. Unrestricted imports of low-wage foreign textiles can destroy our textile industry and present tariff schedules do not afford adequate protection for our textile jobs. Not only do these cost structures open our domestic markets to foreign production but also they have had the effect of reducing our exports by nearly 1 billion yards during the past 10 years.

Fourth. The textile industry has been subjected to a combination of government policies and programs which have weighed heavily and, we believe, unfairly on the textile industry. If only one policy were the problem, the ingenuity of our industry could overcome it, but, in combination, these programs have resulted in a recession in textiles, in declining employment, in very low earnings on investment, and in a long list of mill liquidations.

Our problems include, of course, internal ones of serious nature which require continuing solution, but our internal problems are aggravated by the extra burden of government policy in many areas. These government policies and programs include the following:

(a) An agricultural policy as related to cotton which has restricted the ability of cotton to compete and has made cotton available to our foreign competitors at prices 6 to 8 cents below our domestic cost. During the past 2 years, 13 million bales of raw cotton were exported at prices far below the price to domestic mills. This year another 3 million to 3,500,000 bales will go abroad. Thus, the foreign textile manufacturers are handed a handsome subsidy, and the effects are, of course, keenly felt when their textiles vie with our products in the market place both here and abroad. We understand the very complex nature of the cotton problems, but we do believe firmly that only a competitive one-price system can again make cotton the fiber of growing usefulness and consumption in the United States.

(b) Tariff reduction and foreign trade policies which have stimulated the importation of both greige textiles and made-up goods into the United States to the great damage of our textile markets. Perhaps if the influx of Japanese textiles constituted our only sore spot, we could meet the difficulty. But it must be noted that for the past 2 years the Japanese industry has been regulating its exports to the United States under a so-called voluntary agreement, made by the Japanese Government with our Government. This agreement demonstrates the inadequacy of our foreign trade policy, and voluntary agreements which place the United States in a position of weakness cannot be a long-term solution to this problem. Temporary control of the Japanese situation has only resulted in the breaking out of other problems from other sources. Hong Kong stepped up its production aimed at the U.S. markets taking advantage of the relief afforded by the Japanese. For example, from January through September of 1958, apparel imports, consisting of shirts and other wearing apparel, alone bore a value of something more than $11 million as compared with $2,500,000 the year previous. It comes as no surprise that the Japanese want to review the terms of their agreement. It is little wonder that they want to increase their exports to our market. Our industry is firm in its conviction that any upward revision in the Japanese quotas at this time would be interpreted as evidence of a policy of further liquidation of the domestc textile industry on the part of our Federal Government.

(c) Foreign aid programs which have stimulated and financed foreign textile plant construction in an industry which already had excess capacity in the free world. As an illustration, recently the ICA predicted that there would be 29 textile manufacturing enterprises operating very shortly in the Philippines, where in 1955 there was only 1 firm. Nothing was said about what effect this expansion would have on American exporters of textiles to Manila, which has, for a long time, been a major market for us, nor the effect upon the Japanese mills, which also have been major suppliers of textiles to Southeast Asia. What do these newly founded textile industries abroad do with their output? Are they content merely to meet their own domestic needs, needs once filled by the U.S. industry and the industry of our friends in the free world? The answer is no. They begin as soon as possible producing for export and for the U.S. market. Can our State Department require these beneficiaries of our tax dollars to confine their textile output to their own lands? "No," say the diplomats, "that's the way the Soviets operate. We dare not put any strings on our assistance." That may be, but it seems certain that more harm than good will be done in the long run if this situation is not reevaluated. What will be the result when our needy friends find themselves competing with one another, plus those nationalized industries which care naught for profits? A program of our Government which seeks to expand textile production abroad is most illogical when it takes away our own export markets, closes export markets for our textile manufacturing friends in the free world, increases pressure on our domestic markets to take an increasing volume of imports, and puts our friends abroad in a position to be severely damaged in this highly competitive field. We are surely leading our friends along a course which will lead to bitter disappointment in textile production.

(d) The ICA purchase program for textiles which has resulted in buying nearly 90 percent of its requirements during the past 2 years from foreign producers. These purchases made with U.S. dollars are used to stimulate production and provide undergirding for textile industries abroad at a time when textile employment in this country has been declining and mills have been liquidated by the hundreds.

(e) Depreciation schedules currently in effect and completely inadequate to reflect the obsolescence of textile equipment and the operating schedules which are customary in the industry. A revision of bulletin F is surely sorely needed by the textile industry.

Perhaps, as an industry, we might be able to cope with any one of these problems, each created by Government policies, but we are required to deal with the combined and interrelated effects of all these troublemakers. To put it as simply as I can, the total impact of these conditions is more than our industry, or any industry, can bear. Is it any wonder that we look toward our Government for help? These problems are Government created; they can be corrected only by Government action. Considering all of the facts which have been presented, there is good reason to believe that the extraordinary influence of Government to which this industry is subjected represent that small shade of difference between a dynamic growing industry and an industry which for some years has been contracting.

As you, of course, know, the Communists have launched a new trade offensive against the free world, and they have chosen as major weapons textiles and raw cotton. Their primary battleground is the Far East, with Red China leading the attack. The Chinese Communists say that they will have a cotton crop of about 14 million bales ready for market by 1961. They also claim that they will be able to produce 7 billion square yards

of cotton cloth annually, which is twice as much cloth as manufactured in Japan in 1957. Already textiles from Red China are pouring into Indonesia, Singapore, Malaya, Burma, Pakistan, markets supplied traditionally by Japan, and the Red Chinese goods are priced about 10 percent below the Japanese price. Now our Government has indicated that it will help Japan find a way to meet such competition. We appreciate the enormity of the problem for those who fashion our policies on international relations. We are certain that this is going to pose difficulties for the Congress. The complexities will be many, and our industry wants to be of any possible assistance to you as these problems come before you.

Most of you know something about another uncertainty which looms ahead for us. There is a greater emphasis being placed upon the need for lowering the export price of cotton. The farm law requires the Secretary to set the price of U.S. cotton at a level which will enable it to compete in the world market. The offshore demand for our cotton is declining at an alarming rate at current price levels. Once Red China begins flooding the world markets with its fiber without regard to production costs or profits, the situation will be critical. Any lowering of export prices for cotton without providing some offsetting equalization to domestic industry could be disastrous.

To us, an import quota system on textile yarns and fabrics appears to be the only practical solution in sight. Our friends in Japan and elsewhere in the free world should not be led down a blind alley. The U.S. marketplace. despite the population growth, despite a dynamic expansion of our economy, cannot support the ever-expanding production of the world. Only a well-developed quota system can provide some definite assurance of a future for our domestic industry and a reasonable share of our markets for our friends abroad.

Our industry is truly faced with many problems. But let me comment, just briefly, upon some of the great strengths which this industry has. It is my own conviction that the textile industry today is potentially in the strongest position on its history. Through painful years of contraction, the excess productive capacity of the industry in relation to domestic markets has, in large degree, been liquidated. The financial strength of the industry as a whole has never been greater. Research, which has already produced dramatic results, is expanding rapidly, stimulated by and producing new fibers, new finishes, new fabrics, and new processes. Sound merchandising and sales promotion techniques and practices are employed more extensively than ever. The productive efficiency of the industry has been growing at a rapid rate and, in the use of material and man-hours, the industry must be considered as one of our most effective. The increasing income and the population of the United States certainly provide an expanding market for this industry which supplies fundamental and basic needs of our people. The textile industry, because of these fundamental strengths, possesses the potential for a vigorous and a dynamic future in the United States provided (1) our raw materials, including cotton, can be made available to us under a one-price system at a level truly competitive, and (2) that our domestic markets are protected from a flood of imports from low wage foreign countries.

Thank you for honoring us by being our guests this evening. We look forward to the close association which we will have with you in this session of Congress. and we are grateful for the true liberal leadership which you bring to the Congress.

Dr. Howard A. Rusk Salutes Valor of Roy Campanella

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. NEUBERGER. Mr. President, a truly inspiring article in tribute to the fighting spirit and courage of Roy Campanella was published in the New York Times of Sunday, March 1, 1959. It came not from the pen of a sportswriter or leader of Campanella's Negro race, but from the distinguished medical editor of the Times, Dr. Howard A. Rusk.

Dr. Rusk is one of the world's great medical authorities on human rehabilitation. He has been a consultant and doctor in the rehabilitation process of Roy Campanella himself, and he knows Campanella's valiant qualities of heart and mind and soul.

As we consider funds for the National Institutes of Health, it is well for us to keep human beings in mind, human beings like the brave Campy of Dodger fame, who need the findings of the National Institute of Neurological Diseases and of the other institutes, too, as they struggle to regain health and a normal life. We cannot scrimp on funds so vital to humankind and health.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD the article by Dr. Howard A. Rusk in the New York Times entitled "New Life for Campy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW LIFE FOR CAMPY—DODGER STAR REJOINS TEAM AS COACH SADDENED BY PLIGHT OF HIS YOUNG SON

(By Howard A. Rusk, M.D.)

One day early last May, Roy Campanella lay flat an his back on a Stryker frame with his head held rigid and motionless in a neck brace.

He was watching a telecast, through an overhead mirror, of his teammates, the Dodgers. But the Dodgers were in a disastrous losing streak and his old friend, Charlie Neal, had gone hitless for days.

When the game ended, Campy immediately placed a long-distance call to Neal and said: "Charlie, I've been watching the game. You're never gonna start hittin' again unless you pull that right foot back about 6 inches. Do that and you're gonna be back in the ball game."

Neal followed Campy's advice and his batting slump was over.

Watching a baseball game on television with Campy last season in the early days of his convalescence from injuries he received in an auto crash was a real experience. His ability to call the balls and strikes and predict which ball would be hit and where was a revelation to an average baseball fan.

A NEW MILESTONE

This weekend marked a new milestone in Roy Campanella's rehabilitation. Yesterday he flew to Vero Beach, Fla., to take up coaching duties with his former team, now the Los Angeles Dodgers.

Mr. Campanella's neurological status remains about the same. He is paralyzed from the chest down and partially paralyzed in both hands.

But he has made tremendous functional progress. He can feed himself, assist in his dressing, type a little, and even write surprisingly well.

He whizzes around his Glen Cove home in an electric wheelchair—backing, turning, going between obstacles, traveling anywhere he wants to go. He has a specifically modified chair for outdoor use in which he will do his coaching.

HE IS HURT AGAIN

Last week Roy Campanella was hurt again—this time in the heart. The entire country joined him in sadness at the plight of his 15-year-old son, David, who was released last Wednesday in $3,500 bail on a charge of breaking into a Queens drugstore and stealing money and cigarettes.

The charge came just after the boy had been convicted of juvenile delinquency following a gang fight.

In judging David Campanella, both the courts and the public must remember that the youth had been under severe emotional stress for more than a year. In addition to his anguish and worry, he has been deprived of his father's counsel and guidance.

Roy Campanella met this new tragedy with the same courage that characterized his life as a quadriplegic since January 1958.

Paradoxical as it seems, the increased strength Roy Campanella has gained from conquering his own physical disability will give him greater depth of understanding and depth of spirit in confronting this new problem.

UNBROKEN IN SPIRIT

Fine china is not made by putting clay in the sun. It comes only from the white heat of the kiln. In the process of firing, some pieces are broken. Those that come through have qualities that can be obtained only through the firing process.

Roy Campanella has come through the white heat of a personal experience unbroken in spirit, courage, and understanding. In those qualities he has grown immeasurably.

Campy has been a very busy man these last 9 months with his radio program, his magazine articles, his return to his family, and his participation in a U.S. Information Service film for oversea distribution.

At Vero Beach, the spring training camp of the Los Angeles Dodgers, his rehabilitation will be complete. He will be back at work at the job he knows and loves—baseball.

If Campanella follows the pattern of most disabled persons who go back to their jobs after rehabilitation, he will not only be as good as before, but better. While he will never play baseball again, he can combine his baseball skills with the wisdom that comes only with experience. His tasks will be to develop young players.

There has never been a more beloved figure in baseball than Roy Campanella. As in baseball, his courage and character have also left an indelible mark on rehabilitation.

Managing a baseball team is considered the toughest assignment in the sport. It requires courage, leadership, respect for and by fellow players and fans, and a knowledge of and devotion to the game.

If any baseball club is looking for those qualities in a manager, they can forget about Campanella's wheelchair and remember the adage of rehabilitation: It's ability, not disability, that counts.

Men Who Live in Glass Houses

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. MUNDT. Mr. President, because of its relevancy to current discussions as to whether physical afflictions should disqualify important Americans from public service I ask unanimous consent to have printed in the Appendix of the RECORD a most penetrating article on the subject by George E. Sokolsky, a respected American columnist who speaks out of an abundance of personal experience on the subject.

To the illustrations listed by Sokolsky, one might well call attention to the fact that physical setbacks have not curtailed the services of such colleagues as our distinguished majority leader, LYNDON JOHNSON, or of Senator NEUBERGER, of Oregon, who is back on the job with his energy and enthusiasm undiminished.

I suggest to our colleagues who are inclined to call for the undertaker or to suggest resignations every time an important public official suffers a physical setback that they display greater confidence in the modern-day techniques of the medical profession and that they give heed to the fact that even those who enjoy the best of health today may at any early date find themselves victims of some of the very disabilities now endured by the men they criticize so freely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR AILING OFFICIALS
(By George E. Sokolsky)

The tremendous advances that have been made in the medical and biochemical sciences would be purposeless if life were not prolonged by them and if those who are stricken by serious illnesses could not continue to work. The man who suffers what used to be called a fatal heart attack may have many years of life and work ahead of him, if he obeys dietary and other instructions. His major problem is to ration his time and to avoid fatigue. He need not give up his career to accomplish either.

Cancer is a bit more difficult, but the word, cancer, is a generic term for a number of related illnesses which may, in the not too distant future, become unrelated as the cause for some of them is fixed. However, many forms of cancer are handleable in certain stages and then one can go back to work.

I have had a coronary occlusion which is a fancy name for one form of heart attack, two other incidents, one of which was heart failure, and a cancer of one kidney. I am doing as much work as ever but my time is more carefully rationed and my diet is both small and unpleasant because it is saltless. But apart from a few inconveniences, such as not dancing after a day of hard work or walking my dog, Joe, or smoking big, black cigars, there is hardly a change of routine.

I give this personal testimony because Senator STUART SYMINGTON and Senator HUBERT HUMPHREY are making so sharp a point of appointing a new Secretary of State while John Foster Dulles is in the hospital taking treatment. His presence in the hospital interferes with his work less than if he were hunting quail or traveling about in distant parts of Missouri or Minnesota looking for votes. A telephone is at hand; he is no distance from the State Department; he can be in touch with all the world.

Of course, there are those who are so egotistic that if anything is wrong with them they become so preoccupied with themselves that they can think of nothing else. There are others who find work a form of therapy, who reject themselves as problems, even when they feel pain, and become so absorbed in their duties that their will to live is stimulated.

Some people are afraid to die and the scratch of a pin will send them into paroxysms of fear; there are others who fully believe in the life eternal and to whom life and death are stages in the fulfillment of the destiny of the soul. John Foster Dulles, for instance, was raised as a Presbyterian, a faith to which he has been devoted. He surely believes that God's will be done which is a cornerstone of the Calvinistic philosophy which his father preached from the pulpit. Such a man moves through life fearlessly and when he faces death, he does not flinch, for it will come when it comes and is one of the facts of eternal living that needs to be faced.

At this moment, Dulles is valuable to this Nation. I do not say indispensable, because we should indeed be a weak and poor nation if any man were indispensable. However, Dulles is useful and needed and as long as his services are available, they are of value. Let them therefore be used up to the last moment.

A word needs to be said about Christian Herter, the Acting Secretary of State. He has some form of arthritis and uses canes or crutches, or a wheelchair to get around. So what? Can he exercise his mind? Does he know what he is doing? Is he a man of ability and experience? Does his arthritis interfere with his ability to work? It would seem that some Americans believe that an official of the United States must be physically perfect. George Washington had bad teeth and Franklin D. Roosevelt was a cripple. Maybe we ought to elect Jayne Mansfield's husband President because he is supposed to be physically perfect—I believe the peepholers call him a muscle man.

It is brains, not muscles of the shank, that we need in the men who do our work. If we find our best brains in cripples, let us use what we find and not be too particular.

Statement of Secretary of the Interior Seaton

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. SAYLOR. Mr. Speaker, recently the members of the Committee on Interior and Insular Affairs invited Secretary of the Interior Fred A. Seaton to discuss the operation and plans of his Department as they related to the 86th Congress. In his usual precise manner, Secretary Seaton delivered the following statement, the reading of which I commend to our colleagues:

STATEMENT OF SECRETARY OF THE INTERIOR FRED A. SEATON, BEFORE THE HOUSE INTERIOR AND INSULAR AFFAIRS COMMITTEE, FEBRUARY 16, 1959

Mr. Chairman, it is a pleasure to appear again before this committee. My understanding is that you are interested today in discussing the operations and plans of the Department of the Interior as they relate to consideration by, and possible action of, your committee.

Before commencing this discussion, permit me to present to you the members of my staff who are here.

First is Under Secretary Elmer F. Bennett. Many of you, I know, are acquainted with his background. For the information of your new members and the record, however, let me say that Mr. Bennett came to the Department of the Interior from the office of Senator Eugene Millikan, of Colorado. He is an attorney with 17 years' experience in the Federal Government. He has successively served in the Department as legislative counsel, as my personal assistant, as solicitor, and since September 20, 1958, as Under Secretary.

Another gentleman whom most of the members of this committee know is Assistant Secretary Fred G. Aandahl. A former Governor of North Dakota, he also served as a member of this committee when he was Member of the 82d Congress. Secretary Aandahl's responsibility in the Department is in the joint field of water and power. The Bureau of Reclamation, Bonneville Power Administration, Southeastern Power Administration, Southwestern Power Administration, Office of Saline Water, report to him.

Our Assistant Secretary for Fish and Wildlife is Ross L. Leffler. Secretary Leffler came to Interior with a lifetime record of devotion to conservation. He served 29 years with the Pennsylvania Fish and Game Department. While jurisdiction over a great part of the activities of the Bureau of Sport Fisheries and Wildlife, the Bureau of Commercial Fisheries and the Office of the Commissioner of Fish and Wildlife, all of which report to Secretary Leffler, rests with another committee of the Congress; there is a definite relationship between public lands legislation and action and fish and wildlife conservation.

Roger C. Ernst, our Assistant Secretary for Public Land Management, supervises the Bureau of Land Management, the Bureau of Indian Affairs, the National Park Service, and the Office of Territories. Formerly the Land and Water Commissioner of the State of Arizona, Secretary Ernst also has a full background of experience in the fields of reclamation and conservation.

Another area of our Department, that of Mineral Resources, is supervised by Assistant Secretary Royce A. Hardy. It includes the Geological Survey, Bureau of Mines, Office of Oil and Gas, Office of Geography, Office of Minerals Mobilization and the Office of Minerals Exploration. Secretary Hardy, a graduate of the University of Nevada in mining engineering, is a registered professional mining and metallurgical engineer. Before joining the Department, he was vice president and general manager of Manganese, Inc., of Henderson, Nev.

The next member of our staff needs little introduction here. George W. Abbott, our solicitor, was counsel for this committee from 1953 to 1957. He is now our chief legal officer. Earlier he served as my assistant.

The Department's administrative management activities are the responsibility of D. Otis Beasley, our Administrative Assistant Secretary. Secretary Beasley, who began his career in Government in 1928, now has the top career position in our Department. He is responsible for Administrative Services, Budget and Finance, Inspection, Management Research, Personnel Management, Property Management, and Security.

The last member of my staff with me today is Ted Stevens, one of my assistants who also serves as legislative counsel. He came to the Department of the Interior from Fairbanks, Alaska, where he had served as U.S. Attorney.

Mr. Chairman, as you requested, I am here today to discuss the program of our

Department—particularly the budget and legislative aspects of it.

We have completed our hearings before the Interior Appropriations Subcommittee, in which we supported a request for $344,564,400, exclusive of the Reclamation and power agencies. In all, our total budget request for fiscal 1960 is $633,775,400. This amount reflects our recognition of two facts.

First, our programs—in conservation, in science and technology, and in the advancement of human welfare—are of such importance to the Nation as a whole that we must continue to carry them on at a high level of efficiency and intensity.

Second, if we overexpand these programs and thus require excessive cash outlays, we shall necessarily contribute to inflationary pressures, decreasing the value of the dollar, and ultimately hobble the very programs we were trying to aid.

It is of great interest to this committee, I believe, that we are not requesting funds for new reclamation construction starts for fiscal year 1960.

One reason, largely, is that there are 11 new starts in the current fiscal year. During the next few years, these 11 projects, added to the large list we already had underway, will pyramid the fund requirements for the Bureau of Reclamation. The following tabulation lists the totals of fund requirements for construction and rehabilitation from regular funds and from the Upper Colorado River Basin fund, for fiscal years 1959 to 1965 inclusive, with and without the new starts for which funds were appropriated for the fiscal year 1959.

Fund requirements for Bureau of Reclamation construction and rehabilitation, regular funds and Upper Colorado River Basin Fund, fiscal years 1959–65

FUNDS REQUIRED

Fiscal year	With 11 new starts provided for in the 1959 Appropriation Act	Without 11 new starts	Increase required by new starts
1959	$214,048,335	$207,828,335	$6,220,000
1960	212,445,000	195,060,000	17,385,000
1961	267,172,000	227,671,000	39,501,000
1962	263,276,000	211,181,000	52,095,000
1963	203,182,000	157,763,000	45,419,000
1964	127,950,000	100,735,000	27,215,000
1965	84,053,000	70,631,000	13,422,000

While the new starts included in the 1959 appropriation act raised the fund requirements of the Bureau only about $6 million in 1959, they increased these requirements $17 million for 1960, $39 million for 1961, and $52 million for 1962. More new starts in 1960 would mean more pyramiding in the 2 or 3 years ahead.

The no-new-starts policy for water resources projects is governmentwide; the administration is seeking no funds for starting new projects for flood control, navigation, and related activities of the Bureau of Reclamation or the Corps of Engineers. Nevertheless, the total activities of these two agencies in 1960 are expected to reach an all-time high of $1.1 billion.

If the 11 new starts had not been added last year but rather commenced this year, our schedule through 1965, exclusive of additional new starts, would have looked like this:

Fiscal year:	*With 11 new starts in 1960 appropriation act*
1960	$201,280,000
1961	245,056,000
1962	250,682,000
1963	209,858,000
1964	146,154,000
1965	97,846,000

The peak demand would have occurred in 1962 rather than 1961 and would have been almost $17 million less. When we recall that Congress over the past 12 years has appropriated an average of $188,940,480 for reclamation construction, the point becomes clear. It does seem to me that a further pyramiding of reclamation fund requirements might result in disaster. The surest way to destroy the reclamation program, in my opinion, is to extend the fund requirements beyond hope of realization.

In preliminary legislative studies before the convening of this Congress, the Department reviewed approximately 300 pieces of legislation, a large majority which are within the area of interest to this committee. Some of them have already been sent to you, or similar bills have been introduced by Members of Congress, and referred to your committee.

Foremost of all the items under consideration is, of course, Hawaii statehood. We are grateful to this committee for the privilege extended to me to present my views on the Hawaii bill and for the fact that you have already favorably reported it. To me, few bills to be considered by this Congress will have the national—yes, even the international—attention that will follow action upon the Hawaii statehood bill. And I know, Mr. Chairman, that you will call upon me or any member of my staff, if there is anything more we can do to further its prompt passage.

Next in importance, to me, is our proposal to establish an effective helium conservation program. As you, of course, all know, helium is a unique resource. Its use is essential to our most vital defense and nuclear programs and of growing importance to medicine and industry. Our annual consumption of helium has increased fivefold since 1950, yet no major new source of this gas has been discovered in the natural gases being produced from a relatively small area in Texas, Oklahoma, and Kansas. This helium constitutes a minor percentage of these natural gases. Helium, which will not burn, if wasted into the atmosphere through millions of gas stoves and furnaces.

Our conservation program envisions the construction of up to 12 new recovery plants, to be located on certain pipelines, transporing helium-bearing natural gases to commercial markets. This helium would be stored underground until needed.

Since we submitted our legislative proposal to the Congress in the final weeks of the last session, we have reviewed this proposal in its entirety and made some changes in it. As soon as these have been cleared through the executive branch, we shall resubmit our proposal to the Congress.

Mr. Chairman, we have many other items which we consider important. We will again urge favorable consideration of the Fryingpan-Arkansas project in Colorado, the San Luis project in California, the Burns Creek Dam in Idaho, and several other projects for possible initiation of construction after 1960 when our fiscal situation permits. Of course, my recommendations for joint development of the Trinity River Division of the Central Valley project are still before you.

One of the important problems in the mineral resources field is that of coal research. We have previously reported our views to your committee on bills which call for the creation of a Coal Research Commission. We have noted a bill introduced in this Congress which would give contract authority to the Bureau of Mines for research. Our experts have predicted a phenomenal growth in national demand for energy in the next two decades. Increased emphasis on the development and more efficient use of our vast coal reserves should result from research programs conducted by both industry and Government. We hope to have our report on this legislation completed and cleared soon.

Meanwhile the Bureau of Mines is continuing its research program on the production, use, and conservation of coal. Recognizing the need for greater emphasis on shorter range problems, the Bureau has programed research work for the next fiscal year on hydraulic mining and transportation of coal, on degasifying coal beds to eliminate hazards that exist in gassy mines, and on the performance characteristics of commercial coal-cleaning equipment.

Generally, the resurgence in the economy has materially improved employment and the outlook for the major metals and minerals industries. For example, already, copper, aluminum and steel have enjoyed a significant recovery. And there are signs of strength in other mineral markets that were giving us concern in the recent past. For example, the import quotas established by the President, 5 months ago, have had the effect of tending to firm the U.S. price for lead and zinc. Despite the recent drop in lead, U.S. prices still exceed the prices when quotas were imposed. We believe that the general economic recovery will stimulate additional consumption of these commodities.

The work of the Bureau of Mines and the Geologic Survey of our Department is also essential to the continued health and vigor of our minerals industries. Through geologic and mineral resource surveys, investigations and research, both agencies provide the public and industry with basic data, which stimulates exploration for and development of new sources of mineral raw materials.

Through research in geology, geochemistry, and geophysics, the Geological Survey is developing new and more definite knowledge concerning the occurrence and origin of mineral deposits. It is vigorously pursuing the development of new prospecting techniques to provide the key to the discovery of new mineral deposits, particularly those not obvious to surface exploration. Through research in mining methods and metallurgical techniques, the Bureau of Mines is making major contributions to fuller and more efficient utilization of the Nation's mineral resources.

Our Office of Minerals Mobilization is constantly reviewing the mineral mobilization situation of various segments of the American mineral and solid fuels industries, and revising program to conform with changing defense requirements. In carrying out this function, OMM provides the staff work for the Department under the Strategic and Critical Materials Stockpiling Act, the Defense Production Act, the Trade Agreements Act, and Public Law 480—known as the agricultural barter program.

We are also just initiating the program of the Office of Minerals Exploration designed to stimulate exploration for new domestic mineral reserves. We have already had more than 600 requests for information on this new program.

The Bureau of Land Management is responsible for approximately 475 million acres of the Nation's public lands, including 298 million in the new State of Alaska. Most of the remaining 177 million are in the other 11 westernmost States. The Bureau also has responsibilities in connection with more than 300 million additional acres and for mineral leasing on the submerged lands of the outer continental shelf.

As principal custodian of the public lands, BLM's primary purpose is the wise administration, selective disposal, conservation, and management of the Nation's public lands and resources. These resources include the land itself, minerals (including oil and gas), forests, and range vegetation. Some idea of the scope of the Bureau's responsibilities may be seen in the fact that about 174 million acres are administered under the Taylor Grazing Act and almost 100 million acres are under oil and gas leases. During the fiscal year ending on June 30, 1958, the BLM took in gross receipts for $127,385,000, to

increase the total of receipts since the BLM was formed in 1946 from union of the General Land Office and the Grazing Service to nearly $1,077 million.

Among the significant items of legislation we propose to submit to the Congress in this field will be bills to regulate and control the activities and effect of land locators and promoters on the public domain.

We are faced today with a serious situation, resulting from the entrance into the land locating business of a number of promoters, some of whom are not qualified and may be unethical in their practices. They prey upon the desire of people to own land and upon the ignorance of the general public concerning the requirements of the public land laws. Advertising widely, executing contracts which actually promise nothing more than to file an application with the land office, and holding out great expectations of gain, they have induced people by the thousands to file applications—sometimes for substantial fees—under various public land laws.

By and large, these applications have been filed upon lands without respect to the acceptability of the application under the regulations or the availability of the lands under the law. This practice costs the public many thousands of dollars in wasted money and tends to paralyze the land offices by the very numbers of applications and by the conflicts with other applications that result.

We hope to have legislative proposals in this area.

We also believe that the present public land laws do not provide a convenient means by which public lands can be made available for needed developments. We are considering a proposal to permit the sale of public lands chiefly valuable for business and urban purposes. The chief features of this proposal would authorize the sale of such lands to States and local governments at their appraised fair market value and also, where appropriate, sales at public auction to private individuals, associations, and corporations. This proposal, we believe, might facilitate needed commercial, industrial, and suburban developments in the public land areas.

Section 17 of the Mineral Leasing Act establishes a minimum rental for non-competitive oil and gas leases of 25 cents per acre per annum, with a waiver of all rentals for the second and third years. By regulation we have raised the rental for the first year and for the 6th through 10th years to 50 cents. We cannot, however, alter the waiver provision by administrative action. We have found that the low rental and the waiver of 2 years' rental may have encouraged speculation and have in reality been detrimental to oil and gas development. By the payment of a very small sum a party may hold a lease for a number of years with no intention of developing the leasehold but with the hope of selling the lease for a profit. If annual rentals are increased, and there is no longer a waiver of any year's rental, the mere holding of a lease for possible resale will be less attractive, and the speculating leaseholders will, we believe, be replaced by leaseholders interested in the active development of the oil and gas potentialities of the leasehold. The proposed legislation which we have prepared, H.R. 3263, would increase the minimum annual rental per acre to 50 cents and would eliminate the waiver provision. This amendment would have the added advantages of bringing Federal rentals more into line with the prices charged on State and privately owned lands and of recognizing the changes which have occurred in the value of money since this rental provision was first enacted in 1935.

One of the significant legislative proposals affecting the National Park Service is contained in legislation pending before you to authorize the Chesapeake and Ohio Canal National Historical Park and Parkway. Originally it was thought that a parkway road should be constructed along the canal between Washington and Cumberland. Further studies have demonstrated that the canal and adjoining lands should be set aside as a park with emphasis on the preservation of its historic, scenic, and recreational values. We, of course, subscribe to the general objectives of this legislation. Specific details will be discussed in our report, which has not yet been cleared with other interested executive agencies.

We are considering whether we need additional authority to enable the National Park Service to utilize land acquisition funds to pay for options in the acquisition of lands, and to utilize Federal lands adjoining park areas for park facilities—with the concurrence of affected Federal agencies—without including these lands within boundaries of the park. Moreover, the Park Service should be given authority to avail itself of nongovernmental architectural and engineering services. This is particularly necessary if we are to avoid the necessity of large, temporary increases in our professional and technical staff while Mission 66 is under way. This new authority will make possible a more efficient execution of our Mission 66 program.

In the field of Indian affairs, several controversial subjects will require the consideration of Congress. Unfortunately, there are no easy answers. This is a field in which opinions frequently differ and in which emotional reactions are sometimes strong.

One of the problems that need congressional consideration is the disposition to be made of the submarginal lands that were acquired by the United States during the depression in the middle 1930's and that were transferred by Executive order to the Department of the Interior for administration for the benefit of various Indian tribes. Approximately 326,000 acres are involved. Title has been in the United States now for more than 20 years, and a decision needs to be made regarding the conditions under which the lands may be acquired by the Indians. The problem has been faced on a piecemeal basis in two instances (with the Seminoles in Florida and the Pueblos in New Mexico).

Another problem involving Indian lands that need attention is the heirship problem. After tribal lands were broken up and allotted (i.e., conveyed) in separate parcels to individual Indians, the original owners have died, and the inheritance process has resulted in the creation of almost unbelievable numbers of undivided fractional interests in the lands. In many instances this process has virtually frozen the title in a manner that makes it difficult for the individual owners to use the land themselves or to dispose of it. The problem is to determine the conditions under which the land may be sold by the individual Indian owners when some of them do not agree or cannot be located, and the conditions under which the tribes may, if they wish, acquire the lands that are offered for sale. In the latter case the big problem is how tribal acquisitions should be financed.

The Department's study of these subjects is also proceeding—and we shall work closely with your Indian Affairs Subcommittee in regard to specific recommendations in these areas.

The policy of terminating Federal supervision over the affairs of the various tribes as they become ready for that action has received much attention in the past. The Department expects to submit to this Congress a few termination bills, but as I have previously announced and emphasized, the Department will submit a proposal in this field only if it is fully understood and concurred in by a majority of the Indian group affected. The groups under consideration are small ones and will not present the complex issues that were involved in the Klamath and Menominee legislation.

The major item of legislation we shall submit to your committee in the fish and wildlife field will be our proposal to establish the Arctic Wildlife Range in Alaska. This area of approximately 9 million acres is located in the extreme northwest corner of our new State. Over 5 million acres of the area was formerly withdrawn as part of Public Land Order 82. As a refuge for caribou, grizzly and polar bears, Dall sheep, and wolverine, plus countless flocks of migratory birds of over 100 species, this wildlife range will provide a working laboratory for the study of Arctic life.

Our proposal for this area will seek authorization to permit metalliferous mining under a permit system and to open the area to mineral leasing. We will, however, seek to limit access to the area in order to prohibit appropriation of the surface title under the public land laws. We are currently working with the Department of Defense to eliminate their objections to our original draft bill. We are in substantial agreement now, and as soon as the technical drafting is completed and clearance has been given by the Bureau of the Budget, we shall submit this proposal to Congress.

Of primary interest to this committee is our saline water program. As you know, we recently had an independent board of consultants make a study of the needs of the Office of Saline Water in light of our expanded responsibilities under the demonstration plant authority enacted by Congress last year. This survey resulted in a series of recommendations, mostly administrative in character, which will be put into effect as the program progresses.

Interest in the contemplated demonstration plant activity has been intense. We are approaching the date for the selection of the first process to be demonstrated under this program. Selection of the process will precede and influence selection of the site.

Our budget request for fiscal year 1960 for this portion of our saline water program is $300,000. This amount includes funds for the selection of processes and for the engineering plans for the first conversion plants.

Of course, our basic activity in research and development is continuing.

The development activity is in the areas of three major processes—distillation, membrane, and freezing. In distillation small pilot plant work is underway on rotary vapor-compression stills, long-tube vertical multiple-effect systems, and solar stills of several types. The LTV distillation and the multistage flash distillation cycles continue to look very promising.

Two membrane processes are in commercial use, and a number of small plants are in operation on brackish water treatment. Improvement in equipment and membranes is continuing.

A small pilot plant using freezing as a separation process is now being built. It is based upon successful laboratory research and development recently completed.

Research is being carried out on these major processes, including the reverse osmosis and osmionic processes, and on others, such as solvent extraction. Some of these will be going into small pilot plant development.

In closing, let me repeat, Mr. Chairman, the comments I made to some of the members of this committee recently. It has been a matter of continuing pride to those of us now serving in the Department of the Interior that our relationships over the years with your committee and its members have been most satisfactory and pleasant. We have disagreed—at times—but our disagreement has normally been as to the means we should adopt to accomplish a mutually

agreed upon objective. Partisanship has not impeded the important work of the committee (and I like to believe has not impeded the important work of the Department), and the people we all serve have benefited thereby.

I make these comments again to give me the opportunity to assure you, Mr. Chairman, on the record, that it is our intention to do our part in continuing, in every way possible, this outstanding record of cooperation.

We stand ready to assist this committee in any way. And it is my feeling that any disagreements arising during this Congress between any of us will be eventually resolved as they always can be by reasonable and sincere men. If our relationships continue in the future as they have in the past, and I feel confident they will, we will continue to build sound and wise programs for the development, wise use, and conservation of our precious natural resources.

Future Role of Cooperatives in Farm Economy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. WILEY. Mr. President, we recognize that the Nation, faced with a wide number of problems, particularly in agriculture, still must find ways and means for dealing more effectively with the complex problems which confront it.

At this time, I want to refer briefly to a program that, over the years, has performed an outstanding service for the American farmer—that is, the cooperative movement.

In Wisconsin, we stand second in the number of cooperatives in the Nation, with a total membership of over 415,000.

According to a recent farm review by the U.S. Department of Agriculture, cooperatives, during the 1956–57 period, did a net business of $10.4 billion. This included $8 billion for farm products marketed, more than $2.1 billion for farm supplies, and $235 million for services performed for the patrons. The survey reveals that about 63 percent of all market cooperatives handled at least some production supplies, 59 percent furnished specialized or general services for their patrons, 22 percent of the farm supply cooperatives marketed farm products, and 42 percent performed other various services for their members.

Nationally, the latest survey shows 9,872 marketing, purchasing, and related service cooperatives for that period; returning millions of dollars to their patrons.

Over the years, however, we recognize that these cooperatives have been of substantial assistance to the American farmer by helping to improve income, have tided the farmers over downtrends in prices, and generally have brightened the outlook by providing better marketing, supply procurement, and other services for the farmers.

We are aware, of course, that consideration is being given to the relative size, the scope of operations, and other aspects of cooperative functions and their effects in our economy.

We recognize that these questions must be resolved, both in the interests of the farmer and of the general public.

The February 21 edition of the Wisconsin Agriculturist and Farmer, a splendid publication that has served Wisconsin farm families for 110 years, carried a fine article by the columnist and farm authority, Bill Groves, on "Cooperatives of the Future Must Be Strong." Very pertinent questions are raised as to the role which cooperatives will play in our farm economy. To give my colleagues the benefit of the thinking in this article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CO-OPS OF THE FUTURE MUST BE STRONG
(By William F. Groves)

I received a letter the other day from Peter May which is both stimulating and challenging. Mr. May is a member of the Equity Cooperative Livestock Sales Association staff. His letter comments on my column of January 17. I believe it merits quoting:

"What you have done (in your column) is to open up a vastly important field of thought. I agree that farmers should choose the middle road rather than go to the extreme right or left. I agree that some form of self-help is the desired objective.

"But the pertinent questions are these: How can farmers travel the middle road working as individuals? How can farmers become businessmen? How can they do anything about self-help until they learn how to work together?

"This column of yours becomes a natural opening wedge for a followup on the way farmer cooperatives can help make businessmen out of what have been merely producers."

Assuredly Mr. May's questions are fair and pertinent. They are important questions that should be answered and I accept his challenge.

Let us survey the inevitable steps a farmer must take if he is to become a businessman in fact as well as in name.

First, he must assume his proper responsibility in the marketplace. Second, he must put a price tag on his commodity. Third, he must effectively control his output. All of these are a part and parcel of every true business operation.

NEED GROUP ACTION

The farmer can achieve none of these legitimate goals by operating as an individual. If he is to enter the sphere of business and assume his proper responsibility in the marketplace, it must be done by group action. In the past the cooperative has been the farmer's most potent tool for achieving joint endeavor. It is natural, therefore, that the farmer should turn to his cooperative for a solution.

Cooperatives have an old and an honorable history. In the course of my lifetime I have witnessed the birth and the death of many farm organizations. Most of these cooperatives, whether living or dead, have rendered valuable service to their farmer members. They have returned millions of dollars to their patrons which would otherwise be found in the pockets of the processor or dealer.

In spite of their great success, cooperatives have failed to solve the farm problem. In my opinion, the reasons for this are three:

First, the cooperative has failed to speak with a voice of real authority in the marketplace. The voice of the industrialist rather than the farmer is dominant there.

Second, the cooperative has never been able to place a price tag on its finished product and make the price stick. I do not know of a single cooperative in the United States which is large enough to make even a dent in agriculture's price structure.

Third, no cooperative, to my knowledge, has ever made a conscientious effort to control the productive output of its members. Farmers and cooperatives alike have been content to shift all three of these important functions onto the shoulders of the Government.

No organization is stronger than its component parts. This is especially true of cooperatives. The reason why the cooperatives have never accomplished a full measure of success can be traced to the attitude of their farmer members. Farmers have been loathe to surrender a portion of their individual freedom for the common good.

CAN CO-OPS DO THE JOB?

The cardinal principle of all business is that production must be in approximate balance with consumer demand. No business which produces a surplus of goods year after year can prosper. In agriculture this means the imposition of production controls. Do the cooperatives possess the courage and the leadership to perform this important and inevitable task? Only the future can answer this question.

The cooperatives of the future must be strong. They must be large enough to make a deep impression in the marketplace and strong enough to impose their price. Above all, they must possess the courage to tackle the problem of farm surpluses and eventually solve it.

Our New Atomic Boss Is Confident

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Washington Sunday Star of March 1, 1959, written by Frank Carey and entitled "Our New Atomic Boss Is Confident."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR NEW ATOMIC BOSS IS CONFIDENT
(By Frank Carey)

When John Alex McCone became Chairman of the Atomic Energy Commission last summer, he vowed to follow the advice of a priest: "When your knees begin to buckle, just kneel."

But today, looking back at his first half-year in one of the Nation's toughest jobs, Mr. McCone says his knees have yet to buckle. Modestly, he gives the credit to:

1. His fellow Commissioners.

2. A close and friendly relationship with Senator ANDERSON, Democrat, of New Mexico, and other members of the Joint Congressional Atomic Committee.

3. To his embattled predecessor, Admiral Lewis L. Strauss, who "left things in remarkably good shape."

As boss of the AEC, Mr. McCone runs an agency that has offices and laboratories scattered from Brooklyn to Japan. It budgets $2 billion a year, maintains facilities worth $7 billion, and employs 105,000. It builds

bombs, prospects for uranium, probes the secrets of cancer, builds powerplants, operates cyclotrons, studies mice and men, and conducts research literally from the depth of the earth to the far reaches of space.

"The problems have been perplexing and difficult," says Mr. McCone, "but they haven't caused my knees to shake." He came to the AEC from a distinguished career that included liberal doses of business, industry, and Government. Though a dyed-in-the-wool Republican, he won his public servant spurs as a Truman appointee.

HIS ATTITUDE ON CRITICISM

Public criticism of the AEC in the past has been partly justified, says Mr. McCone.

"There has been criticism because actions by the AEC have taken too long. Some of this has been due to uncertainties as to policy objectives and some due to uncertainties about the relative responsibilities of the commission and of the joint Senate-House Atomic Committee.

"Some of the delay has been due to the fact that development had to await basic scientific advances—and that has not been clearly understood by the public."

The originally quiet-spoken McCone adds with vigor: "But there's one thing on which there has been no criticism—and that's the nuclear weapons field.

"As a nation we've wrung our hands over lack of planes, lack of missiles and even, in the case of the Korean war, lack of conventional ammunition. But never has there been a time when we were worried about a lack of nuclear weapons capability."

The 56-year-old chairman, whose rimless glasses give him a scholarly look, has built ships, machinery, oil refineries, and powerplants. As an undergraduate at the University of California, he worked the swing-shift at a shipyard and later was a riveter and boiler maker.

With that background, he is immune to most noises.

PUBLIC VERSUS PRIVATE ENTERPRISE

But he says there has been altogether too much ruckus over whether economical nuclear power could best be developed by public utilities or private enterprise.

"I believe the public-versus-private power issue in the nuclear field has been unnecessarily and erroneously emphasized by industry, by public, and private power groups and their Washington spokesmen, and by people within Government," he says. "To some extent, it has delayed development."

With nuclear power still more expensive than conventional power, the important thing is to find a way to cut costs, Mr. McCone says. "If we continue to follow a policy in the AEC of making research information available to all, then it shouldn't make a great deal of difference who does the development work."

After the technique has been made economical, says Mr. McCone, there might be some basis for arguing the merits of public versus private power—but not now.

The AEC Chairman believes nuclear power plants capable of competing with conventional powerplants can be built by the mid-1960's. And he agrees with the recommendation of a special advisory committee that emphasic should be placed on developing pilot-plant reactors instead of full-scale plants.

"This country could build big reactors right now," he says. "Obviously they would have to be built on the basis of known technology. They would not produce competitive power. The power would be more costly than if we went thrugh a little more development period—and that calls for prototypes (pilot plants)."

HELD DEFENSE JOBS

However, Mr. McCone isn't a foot dragger. He proved that in previous Government jobs—as a member of former President Truman's Air Policy Commission in 1947, as Deputy Secretary of Defense in 1948, and as Air Force Under Secretary from 1950 to 1951.

He likes to recall that as early as 1950 he recommended that the Nation's infant guided missile program be conducted by an official with absolute power over the entire effort.

"In August 1950," he says, "I pointed out to my boss (then Air Force Secretary Thomas K. Finletter), and it eventually got up to President Truman, that while we were then spending $100 million a year on missiles, we should spend $2 billion a year or more.

"I also said we should have a project like the Manhattan project that produced the atomic bomb, with all the services working on missiles under a directorate, and with the primary responsibility in the hands of an individual—a czar type thing, if you will."

The idea was accepted in modified form, he says, with K. T. Keller as coordinator. "He did a superb job, but he could have done a better job if he had actually controlled the whole project," says McCone.

Mr. McCone, who reportedly was an unofficial adviser to President Eisenhower on missiles before he took the AEC job, says he thinks the missiles program is progressing very well. "I think we are going to see spectacular progress—in fact, we're seeing it right now."

He adds, "I think we have to do enough to be sure that anybody who would 'launch a surprise attack of any magnitude would get back a counterattack so massive that they wouldn't attempt to put the idea into action in the first place."

"In my Air Force days," Mr. McCone recalls, "I was devoted to the concept of massive retaliation, and I still am."

TRIES FOR CONCILIATION

When he moved into the AEC Chairman's office, Mr. McCone made no mention of Admiral Strauss' periodic tiffs with the Joint Atomic Committee. He said only that his aim would be to bring about a conciliation of views between the AEC and the committee.

Still, there was a flareup last week between Mr. McCone and Representative HOLIFIELD, Democrat, of California, at a hearing on the administration's latest program in the development of electric power from atomic energy. The words exchanged—while sharp—were the result of a misunderstanding, both men agreed at a resumption of the hearing on Friday.

Mr. McCone is a handsome, silvery-gray man of medium build. He plays golf in the low 80's, but has managed only a couple of rounds in recent months, what with learning the ropes of his new job and making four trips to Europe. A Catholic, he attended the funeral of Pope Pius XII.

He says he has made no attempt to become a nuclear whiz-kid, other than to get a general feeling for the technicalities. He gets advice on the technical stuff from staff members, a policy that allows him wider range "to judge problems from the standpoint of the businesslike approach."

He divides his time between the AEC's new headquarters in Germantown, Md., and a branch office downtown.

Mr. McCone says he doesn't mind the long jaunt to Germantown—"it gives me a chance to keep up on the reading that's required on his job." His car is equipped with a radio telephone in case there's some change of schedule while he's on the road.

The Chairman and his wife, Rosemary, lived in hotels until recently when they found a house suitable for themselves and three servants. They had just moved into a new home in San Marino, Calif., when he was named AEC Chairman.

When Mr. McCone was in business in Los Angeles—his shipbuilding firm turned out about $1 billion worth of ships during World War II—employees said he outdid Hollywood's version of big businessmen, handling several phone conversations at the same time. But one of his secretaries there says "he was never too busy to say 'please,' 'thank you' and 'my, you did a nice job on that.'"

Though usually mild-mannered, one of his AEC staffers says "he's impatient with delay or sloppy work—he's interested in results, not excuses."

Famous American Criticizes Supreme Court

EXTENSION OF REMARKS
OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial entitled "Worst Supreme Court," which was published in the February 19, 1959, issue of the Augusta (Ga.) Chronicle in comment upon the remarks of a famous American, Gen. Robert E. Wood, retired chairman of the board of Sears, Roebuck & Co., upon the unveiling of a plaque honoring him and Mrs. Wood in Augusta.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORST SUPREME COURT

"The worst in 100 years."

This caustic but apt description of the U.S. Supreme Court and other critical comments thereon, voiced by a nationally known northerner, a straight-voting Republican, should by all means be disseminated throughout the whole country, for it is almost certain that "nary a word" of it will get through the Paper Curtain set up by the anti-South press.

Northern newspapers generally will ignore the remarks, although they come from a famous American whose opinions have always carried considerable weight.

We refer, of course, to the speech of Gen. Robert E. Wood, retired chairman of the board of Sears, Roebuck & Co., delivered while he was in Augusta for the unveiling of a plaque honoring him and his Augusta-born wife in connection with the opening of Sears' new store.

"This racial problem," declared the veteran Chicago military chieftain and noted business leader, "could have been settled—given time and patience—by the South itself."

Noteworthy also, and of good cheer for the South in its fight for constitutional rights, was his statement that "hundreds of thousands of northerners feel the Court's desegregation decision was a mistake."

General Wood's castigation of Chief Earl Warren as "the worst appointment ever made by President Eisenhower," and his statement that "I resent the interference into States' rights by this Supreme Court," were likewise pleasing to the South.

Incidentally, General Wood lauded both of Georgia's U.S. Senators—HERMAN TALMADGE and RICHARD RUSSELL—as "two of the best in the U.S. Senate today."

Although General Wood is not a southerner, he knows the South, especially Georgia where, in Columbia County, he is an extensive landowner.

It is tragic, indeed, that more northerners are not equally familiar with the South and its problems, and that nonsoutherners

generally fail to realize that government by judicial decree is potentially as dangerous to them as to the southern people themselves.

General Wood knows that the Supreme Court has gone too far, and doesn't hesitate to say so.

He knows too—although some lethargic southerners apparently don't—that the following words, once uttered by Thomas E. Watson, a noted Georgia statesman, are true:

"Democratic institutions exist by reason of their virtue. If ever they perish, it will be when you have forgotten the past, become indifferent to the present, and utterly reckless as to the future."

Hon. Lister Hill of Alabama Recognized for Contribution to Medical Research

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. NEUBERGER. Mr. President, there appeared in today's Washington Post and Times Herald a fine editorial paying tribute to the eminent leadership of the senior Senator from Alabama [Mr. Hill] in our efforts to encourage effective international cooperation in medical research. Senator HILL is now conducting hearings on his bill to create an Institute for International Medical Research within the National Institutes of Health. I am happy to be a cosponsor of this important measure, which could be instrumental in laying the groundwork for an International Medical Year such as proposed by many of us here in the Senate, including the able Senator from Minnesota [Mr. HUMPHREY], who has done so much to promote this vital concept.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "International Killer," from the Washington Post and Times Herald of March 2, 1959.

The editorial makes clear why Senator LISTER HILL will rank high in our history among the lay and nonscientific people who have contributed greatly to the advancement of medical research and the alleviation of human suffering.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTERNATIONAL KILLERS

Senator HILL's International Health and Medical Research Act of 1959, introduced with the sponsorship of a long list of both Democratic and Republican Senators, comes as a reminder of how little the United States has done to promote health on an international scale. Disease is truly, as Mr. HILL noted, an international problem. Contagion arising in any country may sweep over the globe. Such major killers as cancer and heart disease continue their slaughter year after year with no regard for international boundaries. Far too little has been done to internationalize the assault on these universal human foes.

Last year Congress invited the World Health Organization to initiate studies looking toward the strengthening of research into diseases common to all mankind. The Hill bill is a followup to the policy thus enunciated. It would set up a National Institute for International Medical Research and authorize the spending of up to $50 million a year to encourage medical research abroad, to train technicians, to improve facilities and to reduce wasteful duplication of efforts in different countries. If the program did nothing more than acquaint scientists in all countries with the findings of other researchers in the medical field it would give a powerful impetus to the conquest of disease.

Senator HILL estimated, with the aid of experts, that the advance of medical science since 1900 has saved 23 million lives in this country. A comparable advance no doubt is possible abroad with sanitation, hospital treatment and medical care. Of course, a mere increase in longevity would not necessarily be a boon to mankind—as can be seen now in some underdeveloped countries—unless there were accompanying economic efforts to provide new opportunity and increase living standards. Nevertheless, the research which Senator HILL's measure would provide is fundamental to the problem. Even more acute is the need for medical supplies, hospitals and medical training.

Senators HILL and HUMPHREY are unquestionably right in saying that international cooperation in this sphere may have a potent influence on peace. Of course the resources that may be devoted to this vital work are limited because of the multiplicity of demands upon the Government. But its value should be recognized. Congress must also remember that the Soviet Union is winning the gratitude of many free peoples by giving them medical aid while in this country it is still largely in the discussion stage.

Commercial Use of the Word "Government"

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Probing Use of 'Government' in Store Names," published in the New York Times of February 20, 1959, dealing with the commercial use of the word "Government."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROBING USE OF "GOVERNMENT" IN STORE NAMES—CLAIM DECEPTION IN SOME TITLES

WASHINGTON, February 19.—The Federal Trade Commission has turned over to its Bureau of Investigation complaints about discount house operations in St. Louis and elsewhere using "Government" in their names, it was learned today.

The Commission has, on several occasions, issued complaints against private business firms using names suggesting that they operated as Government agencies.

Senator WILLIAM LANGER, Republican of North Dakota, also has introduced legislation (S. 355) to bar collection agencies from using any names, emblems or insignia which create the impression they are Federal agencies.

The latest complaints to FTC involve Government Employees Mart, 10,900 Page Boulevard, St. Louis, recently opened discount-type store.

A similar GEM store wil be opened soon in nearby Alexandria, Va.

FTC now has a complaint outstanding against Federal Employees Distributing Co., Los Angeles. The agency charged last November 20 the company, selling appliances, apparel and other goods, misrepresented itself as a nonprofit organization connected with the Federal Government. FTC also charged that, contrary to corporate name and advertising, is a profit-making retail business—even though chartered under California's nonprofit corporation law.

The latest complaint about the St. Louis Government Employees Mart, and related discount enterprises which are to be opened in California, Colorado, Minnesota, and Honolulu was made by George J. Burger, vice president of the National Federation of Independent Business.

In a letter to FTC chairman John Gwynne, Mr. Burger said "where the name of the Federal Government is used, directly or indirectly, it is misleading and deceiving, and we trust appropriate action will be taken * * * to allow these subterfuges to continue will eventually mean elimination of independent retail establishments in many areas * * * again, we repeat, these are nothing but private business corporations and the Government's name should not be used to mislead."

Community Colleges

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD news reports from the New York Times, the Christian Science Monitor, and the Washington Post regarding junior colleges, as well as an article from the February issue of the Reader's Digest entitled "With a Barnful of Students and a Countyful of Faith."

The growing interest in community, or junior, colleges is an indication that Americans have recognized this type of institution has a real potential for helping meet the problems created by an increasing demand for admission to colleges. As a member of the Education Subcommittee of the Senate Committee on Labor and Public Welfare, I have urged that hearings be held on a bill which I have introduced to provide Federal assistance for construction of community public colleges. I feel that this would help encourage the development of these facilities.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 18, 1959]

EDUCATORS ARGUE JUNIOR COLLEGES—JOINING THEM TO HIGH SCHOOL IS DEBATED AT MEETING IN ATLANTIC CITY

(By Loren B. Pope)

ATLANTIC CITY, February 17.—School administrators disagreed strongly here today on a proposal that 2-year junior colleges be made part of the public high school system.

The issue was debated at the 91st annual meeting of the American Association of Administrators. The group met in the Atlantic City Auditorium. Twenty thousand school officials are attending the 5-day session, which ends tomorrow.

President Eisenhower in December advocated adding 1 or 2 more years to the public school system. He said that the present 12 years were not enough to equip students to live in today's world. He said the 2 additional years might be something like junior college.

In today's discussion, the administrators agreed that the opportunity to attend junior college should be widely available. They also agreed attendance should be voluntary. But they were divided on whether it should be part of the school system.

James H. Corson, superintendent of schools in Modesto, Calif., said the 63 public junior colleges in his State were able to provide terminal education or preparation for transfer to college.

ABILITY TO DO IT DOUBTED

Lawrence Bethel, president of the Fashion Institute of Technology in New York City, replied that only the larger urban areas could support adequate junior colleges.

Dr. James E. Allen, Jr., New York Commissioner of Education, disagreed. He said, "As I look ahead, the lines of demarcation between the various parts of the educational structure are going to get thinner and thinner. * * *

"If the junior college is not an appendage of the public school system, I don't see how we're going to achieve articulation of the system all the way through, so it will serve all the people all the way."

In another session Dr. James B. Conant, president emeritus of Harvard University, said too many of the highly gifted children, the top 2 or 3 percent, were getting too narrow an education.

Dr. Conant also said that, following his 2-year study of the American high school, he would embark this year on a study of the elementary schools.

[From the Christian Science Monitor, Feb. 18, 1959]

JUNIOR COLLEGES PUT IN LIMELIGHT

(By Millicent Taylor)

ATLANTIC CITY.—Is extending the public school system upward to include the junior college the next step in American education?

School leaders meeting here for the national convention of the American Association of School Administrators, a department of the National Education Association, say it can't be stopped.

In a heavily attended section meeting, the need for systems of junior or community colleges all across the Nation was readily conceded. The point at issue was what the setup should be.

This discussion was only one of nearly two-score section meetings dealing simultaneously with all kinds of school problems, ranging from identifying the gifted and stepping up foreign languages to teacher certification and the training of school custodians.

PATTERN OUTLINED

Presenting the California pattern of public junior colleges as a successful one, James H. Corson, superintendent of schools, Modesto, described such colleges as (1) voluntarily initiated by local communities; (2) tuition free; (3) public supported and distributing the cost between State and local levels; (4) serving an existing high school area or combined areas; and (5) administered by a locally elected or appointed board of lay citizens, with the State responsible for accredited standards, and a liaison between its programs and the university providing professional consultative service and the like.

Dr. Corson sees the public junior colleges as providing, beyond high school, education at less cost to the family and to the State. He also sees these colleges as offering real encouragement in an increasingly complex society to those who can benefit by going on with formal education. In addition, they relieve the strain on the senior colleges—large numbers entering senior colleges in the third year.

Able students that are enrolled in them are challenged, and go on to professional degrees and to positions of leadership.

STRONG GUIDANCE NOTED

At the same time guidance is stronger in the junior college than in the early years of the larger senior colleges and universities, and many a young person is enabled to find himself.

It is the experience in California, too, that the junior colleges iron out student problems and relieve the senior colleges of remedial work, although the junior college is not by any means just a salvage shop.

Close cooperation with the community, Dr. Corson emphasized, enables the junior college to offer advanced technical, semiprofessional, terminal business, and trade training in direct response to community, area, State, and national needs.

The public junior college has also proved the best center for serving adults locally in special, refresher, and retraining programs. It brings into the community at low cost, he added, many cultural advantages and interests formerly restricted to the "oasis" of the college town.

"As the Nation faces the rising tide of college students during the next decade, heavy reliance must be placed upon the junior college," Dr. Corson stressed.

"It is probable that they will continue and extend their important role in the democratization of higher education and will bring educational opportunity within commuting distance to scattered student populations throughout the State and Nation. We advocate the principle of local control. If local school districts feel shortage of funds, as they probably will, the State can increase its support with a much lower outlay than it could provide another brand of higher education."

And he added that to do nothing to meet the already urgent need is to place our heads in the sand.

Lawrence Bethel, president of the Fashion Institute of Technology, a higher education institution of New York public schools, declared himself in favor of public junior colleges. But he warned the school heads against merely adding two grades to the high school. The junior college must have administrative and educational freedom to develop as a separate institution of college character, he stressed.

Formation of a junior college in an area must be voluntary, meeting a felt need of the community with the full support of the community and with ready aid from the State.

This was an opinion expressed by many other school heads present.

PAST GROWTH RECORDED

Dr. Bethel also questioned the practicability of forming junior colleges in any but the more heavily populated districts. Where high school graduating classes are small and distances too great to combine high school areas, the junior college classes would be too small to provide courses diverse enough of quality high enough to meet the interests, need, and abilities of all the students.

In the light of the present 50 percent dropout or failures in some of the better colleges, too, he suggested that we are not reaching the interests and abilities of half our present registration. He therefore urged that before the schools add a network of public junior colleges and encourage more students to go beyond high school, that they improve their present programs.

"The junior college is now the most rapidly developing phase of education in the United States," he summarized. "It is estimated that by the end of the next decade it will register more than 50 percent of the freshmen of all collegiate institutions. This proportion already has been exceeded in California. It is becoming the undergraduate collegiate institution of our modern educational structure.

"Let us not impede its progress by trying to make it an appendage of a totally different phase of the structure. Rather, let us assist it to grow and develop in its own right."

[From the Washington Post, Feb. 18, 1959]

TWO-YEAR COLLEGE CALLED BOON TO INDIGENT

ATLANTIC CITY, February 17.—The nationwide trend toward publicly supported junior colleges is placing higher education within the reach of many who could not or would not have gone to college before, school administrators were told here today.

A California educator, whose State has pioneered in the development of the 2-year schools, said this is a major reason for supporting junior colleges as part of public school systems.

"Evidence exists aplenty that many late bloomers, early goofers or slow starters have finally come through," said School Superintendent James H. Corson of Modesto, Calif.

But junior college is "not just a salvage shop," he added.

"Able students enroll, are challenged and go on to masters' and doctorate degrees and positions of leadership," Corson told a session of the annual meeting of the American Association of School Administrators.

PUBLICLY SUPPORTED

Corson said the junior colleges should be "tuition-free and publicly supported—preferably distributing the cost between State and local levels."

(Recently established junior colleges in Montgomery and Prince Georges Counties operate on a tuition basis. The District School Board has proposed setting up a junior college as part of an expanded program at District Teachers College.)

Corson said the "rising tide of college students during the next decade" will make junior colleges increasingly important.

"If local school districts feel a shortage of funds, as they probably will," he added, "the State can increase its support of junior colleges with a much lower outlay than it could provide another brand of higher education supported entirely by State funds."

DILUTION OF COURSES

Some educators here voiced concern that establishment of junior colleges as appendages to public school systems would divert funds from elementary and secondary programs and dilute the content of high school courses.

"The junior college has a meaning and a distinctiveness in its own right and demands separation from other levels of education," said President Lawrence L. Bethel of the Fashion Institute of Technology in New York City.

Bethel challenged the thesis that all high school graduates should be admitted to free junior colleges, regardless of ability or financial need.

[From Reader's Digest]

WITH A BARNFUL OF STUDENTS AND A COUNTYFUL OF FAITH

(By Elizabeth Fagg)

In their flowing black robes and cocked mortarboards, the class of 1952 looked like any other college graduating class: the same fresh faces; the same ripple of laughter at

the prexy's jokes; the same pride in accepting the diplomas.

But to thoughtful observers this first commencement at Orange County Community College in Middletown, N.Y., was no ordinary June graduation. It was a heartening symbol of new opportunities which are opening to thousands of U.S. youngsters. For Orange County Community College is one of the 2-year, low-cost community colleges now springing up in many parts of the country, offering an educational chance to thousands who might otherwise never get to college.

Take Joe Loomis (not his actual name), a recent OCCC graduate. With neither cash nor precedent for a college education in his family, Joe had drifted through high school. His highest ambition had been to become a garage mechanic. Then in his senior year classmates began talking of going to OCCC. They could live at home and work part time to pay the modest yearly tuition of $200. Practical vocational courses were available to prepare them for specific jobs in the region. For the first time Joe began to see a chance—and the need—for more education.

That fall, with summer earnings in his pocket, he enrolled at OCCC. His below-C average would have barred him from many colleges, but now he was eager to learn, and aptitude tests indicated that he had a strong potential in science. So he was accepted—on probation. Joe worked hard, made up his deficiencies, graduated with honors. He has now gone on to study engineering in a 4-year college.

Joe's story is typical in many ways of OCCC students. Not all the applicants present such poor high-school records; they range from honor students to bottom man on the totem pole. But they possess two common denominators: a short pocketbook and a hunger for higher education.

Junior colleges, supplementing the senior institutions, are not new in this country, but since World War II their number has soared. Today there are 652 of them, located in every State, with a total enrollment of nearly a million students. The most striking recent version is the community college, operated by a city or county, often with State support. Says Ralph Fields, of Columbia University Teachers College, "The present rapid spread of 2-year community colleges may well parallel the growth of public high schools 50 years ago."

OCCC is an outstanding example of this kind of home-grown institution. It got its start 13 years ago, when a survey disclosed that Orange County, a low-income farming area, sent a smaller proportion of its high-school graduates to college than any other county in New York State. Shocked by this fact, Fred Germain, secretary of the Middletown Chamber of Commerce, organized a committee on higher education, which held meetings all over the county to discuss setting up a local college.

The most practical and economical kind of school, Germain decided after some research, would be a 2-year community college. It would be less expensive to run than a 4-year school, because lower-division work is less specialized: class sizes can be larger, teaching staff smaller, buildings and equipment simpler. And with a nonresident campus there would be no need for dormitories.

First step was to qualify for State aid. New York State would match in capital investment whatever the community put up in funds or real estate. After that, operating costs could be split three ways between the State, a local sponsor, and students' tuition.

The committee approached Mrs. John H. Morrison, widow of a Middletown businessman, and made a bold request: Would she move out of her 40-room mansion and 16-acre estate and give them to the county for a college? She generously consented. Market value of the property was about $60,000. Later, however, the educational value was appraised at $242,000, a sum which the State matched.

At this point the Orange County Board of Supervisors, asked to become sponsor, hesitated at accepting the financial obligation. "County College Appears Doomed," a local newspaper headlined. Promptly, Fred Germain got on the radio, pleaded with local citizens: "If your property is valued at $2,000 for tax purposes, a community college would cost you the colossal sum of 50 cents a year. Fifty cents to guarantee you son and daughter the opportunity of a college education."

Citizen pressure on the board grew strong. It was clear that the people wanted a college, and in June 1950, the board of supervisors voted for it. Four years of hard work had triumphed.

At the committee's victory celebration someone asked, "What do we do next?" There was a silence. In the intense effort to get official backing, no one had had time to plot out the nuts and bolts of getting a college started.

"One thing's sure," one member remarked. "We can't possibly open this fall."

This aroused Germain. "We'll open this fall or not at all," he said. "We can't afford to lose a whole year."

Under Germain's leadership, work began immediately on the Morrison place. Horses and hay were moved out of the stone carriage house, and carpenters, electricians, and plumbers set about turning the building into a science laboratory. Germain borrowed from the Middletown Chamber of Commerce to pay bills until State funds became available. Since many of the workmen had youngsters of their own who wanted to go to the new college, a miracle of energy went into the renovations that summer.

Edwin H. Miner, an experienced professor and former Associate Commissioner of Education in the U.S. Office of Education, was chosen dean (and, a few months later, president). He at once began engaging a teaching staff. And that October, with a barnful of students and a countyful of faith, the new college opened.

There were 165 students in that first group. Today there are 3,023 at OCCC, drawn from a 30-mile radius. There are 57 full-time faculty members, 14 part-time. The Morrison mansion has become a classroom and office building; the former carriagehouse now holds an auditorium and a chemistry laboratory. Three new buildings have gone up: A library, a student center, more classrooms. Where the quiet of private gardens once reigned, today there is a great bustle of purposeful people.

"This is your college," the administration tells the public. "Come use it." For the concept of a community college embodies the ideal of serving the whole community, of offering learning to all individuals who sincerely want it.

OCCC has three major programs, each of which bears the special community college stamp. First obligation is to the undergraduate. For students who plan to go on and get B.A. or B.S. degrees, the college give 2 years of undergraduate work paralleling that of 4-year institutions. Some 40 percent of OCCC students have gone on to other colleges and universities, transferring with full recognition of credits.

As to those for whom these 2 years may be the beginning and end of college education, OCCC must not only make them better citizens but good job candidates as well. Vocational training is offered in business management, engineering, secretarial work, agriculture, retail selling, electrical technology. "To us, curriculum is anything but a rigid thing," President Miner says. "We're constantly looking for new ideas useful to our region."

A striking illustration of this is the training program offered to meet the critical shortage of nurses in the community. The usual registered nurse's course requires 3 years. OCCC became one of the first colleges to turn out registered nurses in 2 years. Under the watchful eye of the state department of education, OCCC streamlined the usual course, retaining all essential but drastically trimming the repetitious hospital chores that occupy much of the student nurse's time. OCCC's graduates passed the licensing exams, quickly acquired manual dexterity in the routine chores which their training had not given them. Today OCCC's 2-year registered nurses are able to find jobs in any hospital they wish—local or metropolitan.

A second major program of the at home college is adult education, so popular at OCCC that it has threatened to swamp the facilities. Some 2,500 men and women from the surrounding countryside are enrolled yearly in evening classes or extension courses. Nearly 200 courses are given including all the regular curriculum subjects as well as special occupational courses. Approximately 75 percent of the adults study for college credit.

OCCC's third major role is as a public-service agency, a consultation and planning center. The college helped create a county mental-health program, and is working to start a county library system. A project to improve grade-school instruction of gifted children began last fall. OCCC's counseling center provides educational, vocational, and psychological guidance to any who want it.

Small wonder that Orange County citizens feel this is truly their college. The taxi driver, the farmer, the elevator operator and the waitress all speak of it with pride. They know an important new influence has entered their community, and their lives.

Address by Charles H. Silver at Alfred E. Smith Memorial Foundation Dinner

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. KEATING. Mr. President, I am pleased to call to the attention of this body a fine speech recently delivered by Hon. Charles H. Silver, president of the Board of Education of the city of New York, at the annual dinner of the Alfred E. Smith Memorial Foundation. Dr. Silver, who served as chairman of the dinner, spoke out eloquently on civil rights, civil liberties, and the sanctity of man's innate dignity. His words deserve the thoughtful reflection of all of us.

It is fitting that these remarks should be voiced before a group which perpetuates the memory of that great American, Al Smith. It is equally fitting that a foundation devoted to the alleviation of human suffering should bear the name of the "Happy Warrior." In this connection, I think this body should take note of the efforts of that outstanding churchman and world leader, Francis Cardinal Spellman, in behalf of the wonderful work of the Smith Foundation. He has labored untiringly to make the foundation's program a success.

I ask unanimous consent that Dr. Silver's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HONORABLE CHARLES H. SILVER, PRESIDENT OF THE BOARD OF EDUCATION OF THE CITY OF NEW YORK, AS CHAIRMAN OF THE ALFRED E. SMITH MEMORIAL FOUNDATION DINNER, HELD AT THE WALDORF ASTORIA HOTEL, THURSDAY, OCTOBER 30, 1958

It is my very great pleasure as chairman to welcome you this evening. May I express my heartfelt gratitude to you and to all our honored guests who have gathered together to mark the progress of the Alfred E. Smith Memorial Foundation. I rejoice again in the presence of so many faithful friends. In our established custom, I wish to explore with you the climate of this trouble time.

Long ago, when man made his way through a wilderness he determined his direction from the stars. He knew that if he looked into God's heaven at the eternal pattern of creation, his path would become plain.

But sometimes the night was clouded over or the jungle closed above his head. Then, he would wait for the light to come so he could see where he was, how far he had come, and where he was going.

When men and nations become lost in a wilderness of opposing ideologies and conflicting ambitions, even the stars can fail us. They are there, all that hung in the sky since the beginning, and even a few that we have put there to confuse us further. But the darkness has gathered over many lands and we must seek the light to find the way.

That is why, even today, the soul and mind of man must seek a high place from which to judge his position in a troubled world and learn the path he should take. We, who come to these dinners devoted to the precious remembrance of one who walked nobly in the American way, have gathered to climb together this annual watchtower of the world.

Gazing from here on all that God has given our beloved country, we give thanks for the peace and freedom we still enjoy. And we must firmly resolve, in an hour when the dignity of man and the rights of some of our people are being debased in our own land, that we will not sit idly by with do not disturb signs on our hearts and hands while the miracle of America is ground in the dust of apathy, weakness or regional self-interest.

There are others on this evening's program, more qualified than I to give counsel in these matters of tremendous decision. We can well take confidence in their leadership in national and international affairs.

But in a climate of uncertainty and doubt, when men cry peace and there is no peace, we need more than the physical trappings of power. We must draw on our deepest spiritual resources. We must gain strength from the fervent conviction that the history of our country is a tremendous adventure in freedom.

We need to realize that when our country was founded, man's finest dream and noblest thoughts were inscribed on parchment. To insure that human rights, human liberty, human dignity would ever be paramount, our Bill of Rights and subsequent amendments were added for all to observe and obey. These wise pioneers of our liberty provided for a judicial guardian of our sacred words.

As we approach more closely to fulfillment of our dream, a desperate band of little men would have us becloud those guiding stars of our history, would have us denounce a Supreme Court that refuses to join them in subverting our laws and principles. They would plunge our people into ignorance at a time when man stands on the threshold of his greatest triumph, through knowledge, and would have us governed by men, not laws.

If ever there were need to rally throughout this Nation those men who truly believe in America and all for which it stands, there is need now. How can we look at the rest of the world and say, "Believe in me for my way is the way of freedom, liberty, brotherhood and peace", if we cannot look at ourselves and say it. How can we seek the privileges if we fail the responsibilities given us by the great men who framed the destiny of this God-loved land?

We must know, as they knew and pledge our lives and sacred honor—as they did theirs—that no state's rights transcend human rights.

We must pledge ourselves to the sacred cause of human dignity, and preserve our Union with its principles unshaken.

The explosion of the rocket to the moon—as man's mind soars to the heights—must not be debased by the explosion of the bomb in the synagogue basement—as man's mind plunges to the depths.

The American commonwealth is the product of thousands of years of man's yearning for freedom. We have emerged as the strongest, healthiest, most prosperous people on earth. Yet, in our very success, and, until now, unchallenged supremacy, lie the seeds of our own destruction.

That is our world today. Let us make sure it is not our world of tomorrow. Indeed, let us make sure there is a world tomorrow; more than that, a world free of the torment and tension which have tortured our times.

The strongest ally of communism is a new type of traitor. He stanchly protests his love of our Nation's liberties, but does everything in his power to undermine our Nation by denying those liberties to men, women, or children of a color or creed other than his own.

That is where the jungle is growing right over our own heads. That is the wilderness through which we must grope our way to peace.

Let us be ever alert, with our guard up against the guns aimed at our heads from other shores. But let us not ignore the gun we are aiming at our own while we fumble with this trigger of delay on the march to mankind's emancipation. Freedom cannot survive as a monopoly.

We each have an individual opportunity—and it may be for the last time as we balance between utter chaos or universal good will—to build a better world, based on the wisdom which can lift men's minds and hearts to new heights and is more powerful, more worth the price, than ever before.

This should be the way we seek as we stand together on a high place. "Happy Warriors" for a holy purpose, resolved to give our children a future more secure, a life more rewarding.

The State of Liberalism

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. HUMPHREY. Mr. President, on January 31, 1959, at the Roosevelt Day dinner in Washington, D.C., the noted economist John Kenneth Galbraith delivered an address entitled "The State of Liberalism."

Dr. Galbraith is not only one of our country's finest economists, but he also stands out as a great and articulate liberal. When he writes or makes a speech, it is certain not only to be of great interest, but even more important it is certain to be thought provoking. In the tradition of the outstanding liberals throughout the years, Dr. Galbraith does not hesitate to take a bold and critical look at our society and at our thinking, and to come forth with new, imaginative ideas and constructive proposals.

I ask unanimous consent, Mr. President, that this excellent speech by one of our finest liberal spokesmen be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE STATE OF LIBERALISM

(Address by John Kenneth Galbraith at the annual Roosevelt Day dinner, Shoreham Hotel, Saturday, January 31, 1959)

I

My subject this evening, the state of liberalism, will suggest a somewhat introspective mood, and this is most appropriate in such a gathering as this. It is one of the maxims of our political life that while conservatives worry about liberals, liberals worry about themselves.

Perhaps that is the nature of that curious political being called the liberal. He would like to leave well enough alone. Like everyone else he prefers the familiar ideas, the established faith. But he is not quite content. The nagging habit of reflection, like the gnawing desire for a cigarette, or for reelection, is something he cannot quite suppress.

Here, I think, is one of the claims we can make—and in this confessedly nonpartisan gathering no such opportunity should be overlooked—for the Eisenhower administration. It would seem to have avoided, perhaps more effectively than any other administration of modern times, the pain, uncertainty and discomfort that are associated with the pursuit of ideas.

II

Indeed, while we are paying tribute to this administration, I wonder if a further word might be said on this point. There are those—some are my friends—who think that this administration will be more celebrated by historians for its foreign policy—for devising, for the first time, a foreign policy that is at once frozen and unpredictable. This is based on an intelligence system which functions perfectly on the inner aims of the Kremlin (so that Mr. Dulles can issue a daily commnique on them) but which provides no knowledge of what is about to happen in the Caribbean.

Others, also thoughtful men and women, argue that it is the economic policy of this administration which bears the mark of destiny. They cite the touching faith in the magic of the interest rate and the magic faith in the power of words. This is coupled with the reverent belief that recessions are an act of God and that recovery is the reward of those who only stand and wait. To an economist this view has its fascination. Adlai Stevenson once referred to the Old Guard Republicans who had to be hauled, kicking and screaming, into the 20th century. The modern Republicans come along tractably enough but bring the 19th century with them.

But I think it wrong to suggest that either foreign or economic policy will be the enduring monument of the modern Republicans. The Eisenhower administration will endure in memory because of its unparalleled dreariness. On the reasonable assumption that it can avoid exertion for another 23 months, it will have gone 8 years without introducing a single interesting, novel or ex-

citing departure in the field either of foreign policy or domestic government. It will have contributed nothing to set beside point 4, the Marshall plan, the Wagner Act, TVA and the hundred other ventures into the needed and the unknown which marked the preceding 20 years. As its most ardent critics have complained, the administration has even succeeded in being uninspired in its efforts at reaction.

Only in the field of what may perhaps be called administrative semantics has there been a certain type of pioneering. I refer, of course, to the way words have become divorced from action during these last 6 years. This separation is now nearly total. A declaration that the Government will promote recovery, raise farm incomes, prevent inflation, or promote higher living standards abroad is now a portent of nothing whatever. The words have replaced the action. Indeed, they are more than a substitute. A statement of deep concern for the well-being of other peoples now means that there will soon be a cut in foreign aid. A declaration that we will surely outstrip the Russians in space exploration means that the administration is contemplating a reduction in appropriations for research.

Like you, I have been fascinated to note that this divorce of speech from action has even invaded Republican Party affairs. A week or two ago, President Eisenhower received from Chairman Meade Alcorn a thoughtful report calling on members of the party to loosen the embrace of big business and to preach and practice a militant republicanism 365 days a year. The President warmly endorsed and applauded this report. Then he left for a vacation, taking with him a couple of the country's outstanding entrepreneurs.

Let me say that a closely related administrative accomplishment of these last 6 years has been the divorce of responsible officers from responsibility. This has long been noticed in the case of the President. He stands above the battle, anyhow, whenever the battle is going badly. But I wonder if we have fully realized how completely his subordinates have copied his technique. The Dulles paper pacts are Mr. Dulles' monument. But when things go from bad to much worse in Baghdad or Manila, this is never the fault of Mr. Dulles. Or to come closer to home, there is the tragic and sickening case of Cuba. Our recent Ambassador there—he was the appointee of the President and Mr. Dulles—was described last year in State Department syntax as doing a very outstanding job in one of the most difficult spots imaginable. This outstanding job included open support for the corrupt and brutal tyranny of Fulgencio Batista. Now Batista has gone and so has Smith, the outstanding Ambassador. We are reaping the whirlwind of the policy precisely as observers predicted we would. But there has been not the slightest suggestion that Mr. Dulles feels in any way responsible.

Similarly when the Soviets seize scientific or technical leadership, it is no one's fault. No one is to blame when prices rise, or income drops, or unemployment grows, or fallout falls. Even Ezra Benson has been able after 6 years to maintain a remarkable detachment from his mountainous surpluses and his astronomic expenditures. He is a good man. He does the right thing. It just produces the wrong results. But someday virtue will have its reward. I wonder what would have happened to a liberal Secretary of Agriculture who had managed things as Secretary Benson has and at similar cost. The press would, I think, have been a trifle waspish.

III

But, in a more philosophic mood, perhaps we would temper our criticism. We have survived 6 years of this negativism. With luck—we may of course need quite a lot of luck—we will survive 2 more. And one is tempted to wonder if these periods of interruption and hesitation are not part of a deeper historical process. The twenties and early thirties of this century were years of minimal action or postponement. Then as now there was the conviction that providence was irrevocably on the side of sound business judgment, the status quo and the balanced budget. This being so, neither thought nor energy was needed.

Because so little was done then, much was done in the years that followed. Coolidge and Hoover accumulated the tasks that Franklin D. Roosevelt performed. The unfinished business of one decade became the opportunity of the next. So perhaps progress does not come by smooth advance. I must avoid saying that we too have our great leaps forward.

As problems accumulate in certain periods, so we may hope does understanding and the perception of needed action. Here perhaps we have the simplest statement of the division of labor between conservatives and liberals. Conservatives accumulate the unsolved problems. The task of liberals is to keep pace with the solutions.

No one can doubt that the Eisenhower administration is nobly performing the historic mission of conservatives.

IV

Meanwhile, there are a number of things on which it seems to me the liberal position is now very poorly prepared. Perhaps this is inevitable. As a people we are not very good at settling on courses of action in the abstract. We work best under the whiplash of necessity. Moreover, we are often reluctant to see that not all problems have an equal priority and that on occasion first things must be put first. Yet perhaps we could do better. There are three things which seem to me of particular importance. Let me give you my list.

V

First, there is the problem of the massive role of our military expenditures in the economy and the question of the alternatives. That rational man will triumph must be a tenet of the liberal faith. So we must expect to find a way through the morass of our age without war. But increasingly we encounter the conviction—it is common at home and epidemic abroad—that if we cannot afford war, neither can we afford peace. To withdraw some forty billions of military spending from the economy would surely write finis to the economic system. Many firms, numerous industries and some whole communities would be devastated. So, a few voices like HUBERT HUMPHREY'S apart, we treat the problem with an embarrassed silence.

No doubt a drastic reduction in military spending would involve problems. But I hazard the view that with some exercise of foresight, planning and imagination, these problems would be far from insuperable. The global totals of expenditure could be readily offset by other outlays—even without throwing Ezra Benson into the breach. Thus, immediately on reduction of military spending, there should be generous payments to individuals and families left jobless by the change. Tax reduction for families in the low income brackets—families which reliably spend their entire income—would readily offset several billions of military outlay. Urban redevelopment, housing and urban and suburban transportation; education and school construction; and a solid increase in economic aid would offset another substantial chunk. In the slightly longer run, always given the determination and the willingness to free our minds from the slavery of the past, we could make highly effective use of these resources in a direct attack on poverty. Of this I will say a word in a moment. The harder question seems to me less economic than social and psychological. It would concern the declining urgency of work itself. As this happens, can leisure be made more rewarding? And work too? In short, how, as we solve the economic problem—that Old Man of the Sea which humanity has always carried—can life be given not less but more meaning?

One reason that liberals have been reluctant to discuss these questions is that they seem to imply a willingness to disarm unilaterally. And, of course, such discussion invites the angry riposte of the hardheaded and practical men who have flourished these last years—the men who think it idle to imagine that humanity has a future of any kind. The American people are far more to be trusted than the hardheaded men—those who use the head as a blunt instrument.

The best way to have no future is to cease thinking about it.

So we must look at the alternatives to the arms race and get them into solid form. Everyone must know that we are not committed by economic necessity to that venture. We must be able to embrace alternatives easily and quickly and immediately the opportunity arises.

VI

Our second priority task, or so it seems to me, is to find out how we may mount a new and final attack on poverty. No one I imagine denies that in the 22 years since, in January 1937, Franklin Roosevelt saw one-third of a Nation ill-housed, ill-clad, ill-nourished, there has been much progress in the reduction of privation and want. Much of it has been the result of specific action directed to the specific goal of popular well-being—to the development of a stronger trade-union movement, of social security, minimum-wage legislation, improved health and other welfare services. Much more has been the result of the general advance in income and output in the war and postwar years. We must look to future expansion to rescue more of our people from their misery and to help others climb the ladder to more satisfactory incomes.

But, I would urge, we cannot much longer be satisfied with this general progress—important though it is. Both the statistics and the evidence of our eyes must tell us that it is leaving too many people behind. (In 1956, between two and three million households still had income of less than a thousand dollars; 7.5 million had incomes below $2,000.) These are the urban slum dwellers, the minorities, the bypassed rural areas and the Nation's truly forgotten men, women and children—those who do hard ill-paid farm labor and have not, in many cases, even the minimal amenity of a place to live.

We need to know who our poor are, where they are, and why they remain excluded from the richer current of our economic life. And we need a solid design for seeing that they, and above all their children, are rescued from what is now anachronistic privation.

Nor should we be bound by ancient notions as to how this may be done or what can be afforded. The problem must be attacked in a large and generous frame of mind. It means much better schools and health and welfare services. It means help for communities that do not have these in adequate quality and quantity and which cannot afford them. Almost certainly it means supplementary cash income for families that cannot afford proper care and education for their children. We will hear of the corrupting effect of such help. It would be well were it compared to the corrupting effect of ignorance and starvation. But our greatest need is for a plan—a design—for the final elimination of poverty.

VII

Third and most immediately we must find a way of reconciling full employment and economic growth with price stability. If not, our hard-won social gains and our hard-won public services will be subject to the con-

stant erosion of inflation. Let there be no mistake: Inflation is a highly reactionary phenomenon. It rewards most those who are best skilled at serving themselves. It encourages precisely the behavior which in every society is the most plentiful. With equal precision, it penalizes those services—education, health, welfare—which the civilized community has the most need to encourage.

Inflation is also the relentless enemy of a strong and effective labor movement. Unions will rarely be as effective in winning wage advances as the employing corporations are in offsetting them with price increases. And in the competition to explain who is really responsible for the price advances, unions will always come off second best.

If I read the economic policy of the present administration correctly, it holds that inflation can be solved by a three-part policy, the three parts being, in equal measure, prayer, incantation, and William McChesney Martin. The present liberal position is, if anything, less specific. Liberals rightly reject monetary policy—the tight money crusade—as inequitable to the extent that it is not unworkable. They reasonably conclude that full employment and growth are preferable to the kind of astringent tax and spending policy which would provide price stability. But we do not say what we are for.

There is only one thing we can be for. In the big industries where the basic wage and price patterns are set, we must have a national price and wage policy that is consistent with price stability. This will unquestionably take some kind of public mechanism. Just what kind is uncertain—one hopes that it can be simple, and certainly it must safeguard the vital democratic interests of all parties. But clearly it is time that we began to find out what is required.

VIII

As I suggested, this is a list of problems, not a platform. These three things—price stability, poverty, and the peacetime economy—are the matters on which we most need answers. There are other tasks of equal urgency—full citizenship and civil rights, education, economic growth. But on these, I think you will agree, the liberal vision is clearer and our course far more clearly marked. On the things of which I have spoken we have yet to take the measure of the task.

And, of course, my list has had to do only with our domestic life. In domestic policy in recent times, we have, at worst, stood still while the world has moved on. In foreign policy, while the world has moved ahead, we have tried with a determination unmatched in other matters to march backward. It was the nature of the Roosevelt diplomacy that it identified itself with people. People, as Roosevelt's superb political instinct told him, were in this century the enduring foundation of influence and ultimately of power. People were the ultimate basis of reliable association and alliance. If we respected and supported popular aspirations, we would be strong and we would be respected. But if we supposed that political liberty and economic well-being were objects for exclusively American consumption, we would invite the mistrust, suspicion, and even the dislike of the less fortunate peoples of the world. The Roosevelt foreign policy was never perfectly articulated. I do not wish to idealize it unduly. But all will recognize these broad lineaments. Its identification with people was brilliantly continued in UNRRA, the Marshall plan, and point 4 under Harry Truman. And none can doubt the success of these policies. Whatever else the thirties and forties may have been, they were the American years.

I need scarcely remind you how diligently we have sought to reverse the Roosevelt policy. Foreign policy at the level of its leadership has become a matter of narrow strategic calculation. Idealism is idiotic; compassion is soft-headed. Dictators are excellent allies, if, in addition to being against their own people, they are also against communism. Latin Americans are no longer neighbors but occupants of a safe rear area. Indians are not men and women but inhabitants of a bastion. Economic aid is not an expression of our will to help others. It is a counter in the cold war. Narrow self-interest is the only test of policy.

Is it so surprising that this higher diplomacy—so much of which passes for deep guile and craftiness—has not been very ingratiating? Is it so astonishing that literate and intelligent people the world around should have seen it and seen through it? I think not. It is more surprising that quite a few Americans still feel that they can leave their political convictions at the water's edge—that they can be men of good will and compassion at home but hard-headed friends of dictators, rascals and reactionaries once they cross a border.

Liberalism is, in fact, an indivisible faith. It has never been satisfactorily established that hunger is less painful for a Pakistani than for a man from Pennsylvania. Liberty is as important in Caracas as in Kansas City. Compassion is not indecent. Generosity is not subversive. An intricate calculation of self-interest is not always the mark of wise statesmanship.

This is the liberal faith. But it is also the only practical faith. Our foreign policy has failed in these last years less because of mismanagement than because it has been hopelessly conservative, hopelesly out of date.

Its leaders have supposed that we could have it one way at home and another way abroad—that expert inconsistency could be a substitute for political conviction. One needn't dwell on the morality of this for the practical consequences are sufficiently evident.

Foreign policy, like domestic policy, must be abreast of the popular revolution of our age. If it isn't, no matter how superficially clever it may seem, history will overtake it—and in a very few months. Those responsible, if they want to escape from Washington with their reputations intact, must not stay too long.

This, if I may conclude on a philosophic note, has been another mistake of the present administration.

Community Spirit Still Abounds in Lykens and Williamstown Area in Pennsylvania

---

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. MUMMA. Mr. Speaker, these indeed are changing times and they say that man does shape his own future.

Well, up around Lykens and Williamstown, Pa., the people are proud enough to want to keep their communities going in the face of adversity and they are doing something about it. Actions speak louder than words, and that is what is going on up there.

Here is an article from the Harrisburg Evening News that tells the story of how they are going about trying to help themselves with a fine community spirit in their drive to bring industry into their area to take up the slack.

UP IN THE VALLEY LOYALISTS REFUSE TO GIVE UP GHOST

(By George Draut)

The lights start going on at 5 o'clock in the morning in hundreds of homes in the Lykens-Williams Valley.

This northern Dauphin County valley used to be one of the biggest anthracite coal areas in the country.

But that was long ago.

The mines closed down years ago.

Now it is a valley of car pools and commuters, maybe as many as 5,000 of them if you range back from Millersburg on the river through the long-dead coal industry towns into the Tower City area of Schuylkill County.

They chip in around $5 apiece a week to pay for gasoline and oil, and they spend 3 hours a day in an automobile every working day of their lives just to get to jobs and paychecks and back home again.

If they live in Williamstown, the center of this coal ghost area where once the biggest mine in the United States went full blast, they're driving or riding 100 miles or more a day to and from work. If it's winter and the roads are icy, this can be rough. This is mountain country.

Most of them are men.

There are precious few jobs for men in the valley.

So they work in the complex of industries and offices and government centered around Harrisburg * * * at one of the three big Federal installations, or in one of the State government departments, or at the Bethdehem steel mill in Steelton, or someplace else.

Or they are the men who leave Williamstown and the valley every day and drive over the Gold Mine Trail to jobs at Indiantown Gap. Or the 11 people from this same small town who work at the Dauphin County Home—room, board, and $180 a month. And just weekends home with their families.

Back in the valley, 2,200 women—wives, daughters, and widows—are going to work, too. There are 2 textile plants, 16 apparel plants and 5 shoe factories. Just about every town in the valley has one or more of them. And some of this also involves commuting. A car pool of women who live in Williamstown may drive to jobs in a Millersburg factory. Or Lykens women may drive the few miles to jobs in a neighboring town.

This is a valley of older people, of old age assistance and miners' and widows' pension checks. Every year, a few more of the young people leave. That shows up in the declining school enrollments.

But with the fierce family and community affection and loyalty that you can find only in a Pennsylvania coal town, many of them just will not think of leaving. And some, who do, come back homesick to stay. That's why there are 5,000 men and women battling fatigue and traffic every day so they can make a living. There's this intangible, deep feeling of belonging in the towns of the Lykens-Williams Valley and all of the other Pennsylvania coal communities that just doesn't exist in the big, fat, prosperous cities and their well-groomed suburbs.

Once 4,000 miners worked in the valley. The last big mine closed down at Williamstown in 1941 just a few months before Pearl Harbor. It was owned by Susquehanna Collieries, a subsidiary of giant M. A. Hanna Corp. Earlier it had closed down its big mine at Lykens. And along the way the two mines of Reading Coal and Iron closed at Tower City. Today there are only 400 miners in Dauphin County on the official jobs count of the Pennsylvania State Em-

ployment Service. And most of them are small operators, maybe working over the culm banks or dredging coal out of the river. Back in the hey-day of the early twenties, 50 railroad cars and 1,500 tons of coal left Williamstown every day.

The 1950 census says there are 2,332 people in Williamstown. Once there were twice as many.

What keeps a town like this going when just about everything is gone? This was a mine town, period. Founded by a mine company, surveyed and laid out by a mine company, once owned by the mine company—lock, stock, houses, and culm bank.

For one thing, there's the big hosiery mill that has been there a half century. And there's the dress factory, and the small blouse-making plant.

But most of all, there are the people who just won't give up the ghost and let their community become a ghost town.

Perhaps it started back in 1942 in the Williamstown Post of the American Legion.

How many Pennsylvania communities were thinking about industrial development then, this going after a new industry and its new jobs?

They were at Williamstown. The Legion post had $25,000 in the bank accumulated over the years. And it had been like Harry Steites, Joseph Graham, George Uhler, James Noel, and Dr. G. H. Barndt. World War II was raging. Just the year before the last mine had closed. "We've got to have something for our boys to come back to. They've got to have jobs," these men decided.

Burgess Arthur J. Grubb tells about it today. He and the man who was then supervising principal of Williamstown's school, John W. Kopp, were added to the Legion's Industrial Development Association.

They went out and borrowed $90,000 along the way, put up a modern factory building, finished it in 1944 and got the Clement Ball Shoe Co. of Baltimore to come in. Clement Ball and its 160 jobs, half of them men, lasted for 4 years. Then it moved out.

The long, hard search for a new company began all over. Finally the Triple Novelty Footware Co. of New York set up a subsidiary, Williamstown Shoe Co., and moved in. Again there were jobs. But the parent company went bankrupt and carried the Williamstown company with it. Worse than that, there was an involved contract that tied up the building.

The Legion's committee went to work again. They borrowed more money to get back their building, and went after another company—and new jobs for Williamstown men.

Finally they got one in 1952, a blue chip company—American Marine Products, Inc. There was more remodeling, a parking lot was built, and AMP moved in and began production. Eighty-seven men work there today, about half of them from right in the Williamstown area. AMP put up a hiring sign for six more workers one day last week. Ninety men showed up and filled out applications.

Along the way, the Legion bought the old Geist Hotel and remodeled it into apartments. "We figured any company we could get would want housing for the people it would bring in," says C. Raymond Machamer who now heads the Legion's industrial development group. The Legion also remodeled the first floor of the hotel and leased it to the State. An office of the Pennsylvania State Employment Service now is there. It's one of the busiest places in town.

Along the way, the Legion bought an old hosiery mill, fixed it up and gave it to the Williamstown Dress Co. Here were a few jobs for men and 70 jobs for women. Some of them make $20 a day on piecework, you're told.

Along the way, the Legion bought and gave to the State another plot of ground. The armory of the 722d Trucking Company, National Guard, is there now. And men come from all over the valley to put in their time and effort and get their pay as guardsmen.

Along the way, there was the wonderful prospect, great big Philco, but this one blew up at the last minute.

Along the way, when the Air Force announced it was looking for a site for a big jet runway and air installation, Williamstown joined in the Williams Valley Industrial Association. There were Dr. D. H. Evans, of Tower City; the Reverend Joseph Crowley, Williamstown priest; Clarence Otto, a Tower City merchant; and many others. They campaigned like blazes to get the big air installation for one of several promising sites in their valley. They even wrangled a meeting with then Defense Secretary Charles Wilson at Washington.

A lot of other towns in Pennsylvania and New Jersey were in this act, too. And the Air Force wound up by keeping its big installation at Middletown and building the big jet runway there.

All of this and more, you're told by Raymond Machamer, James J. Smith, Ben J. Warlow, Herman L. Carl, Carl Machamer, Robert Thomas, Earl Fetterhoff, and Burgess Grubb. They're the Legion's industry-seeking board now.

Then they drive you around the area.

"There's a good site," one of them says.

It is.

"Maybe one day we can get a new plant there."

"Commuting is our big problem," they say. "Eight hundred to 900 of our people commute to work every day. What do we need here? Employment, that's all."

You stop on Division Street. This is the Williamstown Recreation Center. There's a beautiful new swimming pool, a big bath house and other buildings. "And there'll be playground equipment next year."

First, the Hometown Liberty Volunteer Firemen and then the Williamstown Rotary Club knocked themselves out, raising money and building up this park in the last 3 years. The borough and Williams Township helped out.

"This is a wonderful park," you say, and mean every word of it. You know of many big and prosperous cities that don't have a public swimming pool.

There's silence. Then Burgess Grubb says: "We wanted our children to have it."

You stand beside the swimming pool and look off not too far away at the gray-dross culm banks piled around the base of Bear Mountain, towering over this little town.

A thin plume of white smoke winds into the winter sky. This culm bank fire has been burning "for as long as we can remember—more than 50 years."

Somehow the fire that won't go out, the thin plume of smoke seems to symbolize a lot more than the mine that'll never open again.

Compulsory Unionism in Its Modern Setting

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. GOLDWATER. Mr. President, on February 19 I asked unanimous consent that there be printed in the Appendix of the RECORD an excellent treatise on "Compulsory Unionism in Its Modern Setting," written by Father Edward A. Keller, of the faculty of Notre Dame, which was published in the magazine Extension of September 1958. The cost of printing the article exceeded the amount allowed under customary unanimous consent requests. According to the printer, it will make approximately 2⅓ pages of the CONGRESSIONAL RECORD and will cost $189.

I ask unanimous consent that, notwithstanding the cost, the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPULSORY UNIONISM IN ITS MODERN SETTING

(By Edward A. Keller, C.S.C.)

Delegates to the Catholic Press Association's 48th annual convention held in May (1958) at Richmond, Va., adopted five resolutions, one of which noted "a healthy increase in controversy in the Catholic press of late. Legitimate disputation sharpens awareness of problems and leads to a fuller grasp of their complexities, said the resolution." (Our Sunday Visitor, June 1, 1958.)

The main controversy in the Catholic press has been over right-to-work laws. The legitimate disputation about this controversial topic has indeed led to a clarification of the main issue involved, the morality of right-to-work laws. Due largely to the wide discussion in the Catholic press of this question, the basic morality of right-to-work laws is now seldom challenged. However, the controversy continues and, unfortunately, too much of the argument against right-to-work laws still takes the form of invective, accusation of bad motivation and especially of deliberate dishonesty in use of the term "right to work" by supporters of right to work. An associate editor of a Catholic magazine states:

"One's suspicion grows when the drive against traditional forms of union security proceeds under a slogan that seems to have been cleverly chosen to deceive. No doubt, many people who favor right-to-work laws are sincere. * * * Such people owe it to themselves to disavow the misleading banner under which they march or quit the parade. They should honestly say that right-to-work laws guarantee nobody's right to work."

No responsible defender of right to work has even intimated that right to work laws guarantee a right to a specific job with a specific employer. I, and many others, including the National Right to Work Committee, have repeated often, openly and honestly that right to work laws do not guarantee a right to a job. The United States Supreme Court would stand charged of "proceeding under a slogan cleverly chosen to deceive" because the Court has used the term "right to work" long before the present controversy without explaining that "right to work" does not guarantee anybody a job. These same critics are strangely silent about the deceit of certain opponents to right to work in classifying right to work laws "right-to-wreck" laws, without offering one bit of evidence to prove that any right to work law wrecked or even weakened a single union.

A sample of the emotionalism generated over this controversial topic is that of an editor of a Catholic magazine who accused supporters of right to work of being "schizophrenic" Catholics. The Webster Dictionary defines schizophrenia as "a type of psychosis characterized by loss of contact with environment and by disintegration of personality"—in less technical language, we are

accused of being "space men" with "bats in the belfry." Another sample is gleaned from an article, attacking right to work laws, written by a priest-professor. He characterized right to work laws as "public frauds," as having been "conceived in deceit and born in the sin of fraud," as "a fraud so heinous that to be hated, it needs only to be seen," as "unconscionable distortion of the whole truth" and as "frauds, worse than wolves in sheep's clothing" (I somehow get the impression, he slightly dislikes right to work laws). A prominent Protestant clergyman uses just as picturesque language. He states right to work laws were "conceived in hypocrisy, and proclaimed in Pharasaic deceit."

Such slap-happy journalism may all be good, clean intellectual fun but it makes for a sensationalism that is somewhat startling, not to say a bit scandalizing, to lay readers.

Such emotional attacks, insinuations, and "ad hominem" arguments, however, merely prove the weakness of the case for compulsory unionism. The oldest trick in debate, when you can't answer your opponent's argument, is to call him dirty names—accuse him of having a disintegrated personality. One expects such tactics in the political arena and in the tabloid press but hardly in the Catholic press. The importance of this topic demands charitable, calm and dispassionate discussion. It is easy to understand the uncritical, emotional antagonism of the union worker in an open shop toward what he considers to be a free loading nonunion worker who refuses to join the union and pull his freight. It is difficult to understand, however, the use of such emotionalism as a substitute for rational argument by scholars of the subject. Their task and obligation are to cut through the confusing fog of emotionalism and lay clear the fundamental issue involved in right to work, namely, voluntary unionism vs. compulsory unionism.

Despite emotional arguments to the contrary, unions and union security are in no way threatened by right-to-work laws because union security is not merely protected by law (the Railway and Taft-Hartley Acts) but overprotected by legal immunities not granted to any other private association. Prior to national labor legislation, beginning with the Railway Labor Act of 1926, for railroad workers, and the Wagner Act of 1935, for most other workers, union security was not legally protected. Today, the basic right of self-organization, without any interference from an employer, is guaranteed in the Taft-Hartley Act and has in no way been legally weakened in States with right-to-work laws by that act.

All that right-to-work laws do is to grant to workers the right voluntarily to join or not join a union, thereby effectively protecting their freedom of association and freedom of conscience, as guaranteed them in the first amendment to the Bill of Rights. The opponents of right-to-work are long on vituperative adjectives but short on their knowledge of labor law.

The obvious error made by opponents of right-to-work is their refusal to see that the pendulum of economic and political power has swung in completely the opposite direction from where it was 25 or 50 years ago. They refuse to see that unionism in its modern setting is not the weak unionism of a generation ago. The problem today is not union security, overprotected by law, but the protection of the moral and legal security of workers against a union economic and political power which apparently neither Government, union members nor business can counterbalance or control. The problem is how to prevent the basic freedoms guaranteed under the first amendment of the Bill of Rights from being destroyed by the legally protected monopoly of modern unionism. Donald R. Richberg, author of the Railway Labor Act, maintains that "Americans are more out-of-date and ill-informed concerning the realities of the labor movement in the United States than they are in any area of public interest." He contends that to portray modern unions as weak, downtrodden organizations "is willfully or ignorantly untruthful." He further contends that the "labor movement has now become a political movement with the objective of establishing a social labor government in control of the economic and social life of the Nation." ("Labor Union Monopoly," Henry Regnery Co., Chicago, 1957.)

How far modern unionism has gone in reaching that objective can be seen in the capture of all the State offices of the State of Michigan by the UAW-CIO. Congressman Ralph W. Gwinn, New York, maintains that "labor dominates the House of Representatives . . . that 176 members of the House have benefited from labor campaign contributions, free political campaign assistance, such as radio and TV time, extensive publicity in the labor press, scores of voluntary workers, doorbell ringers, telephone workers, etc." Mr. Gwinn estimates that unions spend $62 million yearly for activities of a political character.

The merger of the AFL and the CIO brought about the merger also of the political committees of the AFL and CIO into a new committee, called the Committee on Political Education (COPE). The national codirector of COPE, James L. McDevitt, indicates the extent to which unions would go to force political conformity, when at a Virginia State AFL–CIO convention, he said:

"There are some labor leaders who have helped in Senator BYRD's election and they are 'traitors.' He added that if they had been in the Army they would have been lined up against a wall and shot." (Washington Star, May 20, 1958.)

Under modern unionism, the national and State legislatures have been more and more substituted for the "bargaining table." George Meany, president of the AFL–CIO, stated that "the scene of battle is no longer the company plant and picket line. It has moved into the legislative halls of Congress and the State legislatures." To the modern union leader, political activity is essential to unionism. Mr. Dallas Sells, chairman of the merged Indiana AFL–CIO, even goes so far as to contend that "political activity is life blood of a labor organization." (Indianapolis Star, Jan. 31, 1957.)

There is nothing secret or "hush hush" about union political activity. The UAW–CIO subsidized two books on the subject: "The CIO and the Democratic Party" by Fay Calkins (University of Chicago Press, 1952) and "When Labor Votes" by three professors of Wayne University, Detroit, Michigan (University Books, Inc., New York). The late Philip Murray, when president of the CIO made a deliberate test, *U.S.* v. *CIO*, 335 U.S. 106 [1948], of the Corrupt Practices Act, which prohibits contributions or expenditures in connection with any Federal election. Mr. Murray won the test in the U.S. Supreme Court. In a more recent case (*U.S.* v. *UAW*, 352 U.S. 567 (1957)), brought under the Corrupt Practices Act, the Department of Justice prevailed upon the Supreme Court to adopt its construction and statute, but lost when the case was sent back to the District Court for trial, and a jury returned a verdict of acquittal in favor of the UAW. This case involved the use of union funds and union dues to pay for TV broadcasts favoring the election in Michigan of candidates for Congress in 1954. These legal decisions throw a cloud over the chances of successful prosecution and conviction of unions under the Corrupt Practices Act. The unions interpreted them as leaving the legal gates wide open for political activity on their part.

To accomplish their ultimate objective of political control, unions have substituted compulsion for persuasion for an obvious reason—to carry on effective political activity, unions must have the funds the apparatus of modern politics require. Mr. Joseph L. Rauh, attorney for the UAW, when pleading the case of the UAW (*U.S.* v. *UAW*) before the U.S. Supreme Court (December 4, 1956) openly stated in his oral argument that "the only funds available (for political activity) to the union are those that come from dues for the purpose of buying radio time, television time, and newspaper advertising." Mr. Rauh argued that "a union man thinks he has paid, when he pays his dues, for political activity. He doesn't feel he should pay a second time for political activity. That is why it is so hard to raise voluntary contributions."

The almost hysterical opposition to right to work laws by union leaders seemingly stems from the fact that these laws can frustrate the political ambitions of union leaders which so far have not been hindered by the Corrupt Practices Act. If union members, who object to union political activity or object to the use of their dues for political activity, can withdraw both their presons and their money from the union, then there is an effective escape from a political captivity created by compulsory unionism. The pushing of the agency shop in certain right-to-work States, as Indiana, when a union shop agreement legally cannot be entered into, is another indication of the use of every means to get money to carry on political activity. Under the agency shop a nonunion worker is compelled to pay the usual fees, dues, and assessments paid by union members, supposedly to pay for his share of the cost of collective bargaining. This is the heart of the free-rider argument.

This argument takes on an entirely different aspect when viewed in light of the political objectives of modern unionism. It is one thing to argue that those who benefit from representation by the union, should pay their share of the cost of collective bargaining but it is an entirely different matter to argue free rider when general funds of unions are used for political and other purposes that bear little or no necessary relationship to collective bargaining.

Because the free-rider argument is seemingly so plausible and because it is, currently, the main argument against right-to-work laws, it should be carefully examined. It is argued that it is unfair for a nonunion employee working in the open shop demanded by right-to-work laws, to receive the benefits of collective bargaining without paying his share of the cost of such bargaining. This becomes doubly unfair, they argue, when the unions are compelled by the Taft-Hartley Act to represent nonunion employees.

The legal requirement of representation of nonunion workers by the union is called "exclusive" representation. It was originally incorporated in the Wagner Act and was continued in the Taft-Hartley Act. The Wagner Act in section 9(a) states:

"Collective bargaining representatives selected by the majority in the unit shall be the exclusive representatives of all the employees in the unit for purposes of collective bargaining in respect to rates of pay, wages, hours of employment, or other conditions of employment provided, that any individual employee or group of employees shall have the right at any time to present grievances to their employer."

This passage of the Wagner Act was retained bodily in section 9(a) of the Taft-Hartley Act.

The legislative history of the Wagner Act shows that the representation by the union of nonunion employees was put into the law because of the strong demand by unions for "exclusive" representation of all em-

ployees. If there were a serious threat to repeal "exclusive representation," unions would just as strenuously oppose repeal as they had originally demanded adoption. Therefore, the legal obligation of unions to represent nonunion employees can hardly be classified as unfair, much less immoral. It is misrepresentation to argue that, what is in reality a much sought after and prized legal privilege granted to unions, is an unfair, burdensome and costly legal obligation.

No one can object to unions engaging in political activity so long as their members agree to it and the funds to finance it are obtained from strictly voluntary contributions. What is highly objectionable is the use of general union funds for such a purpose when these funds are obtained under the compulsion of either a "union shop" or "agency shop."

The compulsory exaction of funds for purposes other than collective bargaining is a violation of the personal rights of free American workers. Because compulsory membership in a Communist union best demonstrates this point, the following case study of Larue I. Berfield as reported in the Wanderer, a national Catholic weekly is cited:

"For the Catholic labor priest, who this week labeled right-to-work-laws as a hoax and an antiunion measure, we cite the following staff memorandum sent to us last Thursday by the Senate Internal Security Subcommittee. This memorandum, which we quote without comment reads:

"'WASHINGTON, D.C., May 29, 1958.—A Pennsylvania electronics worker told the Senate Internal Security Subcommittee today that he will be forced to resign a job he has held for 19 years if he does not join a Communist dominated labor union.

"'Larue I. Berfield, 38, of Sinnamahoning, Pa., contended that the situation is a violation of his constitutional right of freedom of association, and asked the subcommittee to help solve his dilemma. * * * "If there is a constitutional right of freedom of association with Communists, then I feel I should have the same right not to associate with Communists," Berfield said. * * *

"'Following an election in January, Berfield said the UE was certified by the National Labor Relations Board as bargaining agent for employees in his plant. Eight years ago the UE was expelled by the CIO because of Communist domination'."

Mr. Berfield was fired from his job in July. According to the Chicago Tribune "Members of the Senate Internal Security Subcommittee agreed he was a martyr to a legal system which protects those who associate with Communists, but not those who oppose such association." This martyr to compulsory unionism said "I was advised that I might have paid dues to the union under protest and held my job. But I will not contribute a dollar to support the Communist conspiracy. * * * I am a member of my local school board and a member of the civil defense organization. I would have to resign from those posts because I took loyalty oaths in both cases, swearing that I had never been and would not be a member of an organization advocating overthrow of the Government. It was a choice between keeping a job and betraying those oaths, and I chose not to violate the oaths." The Berfield case demonstrates the need for right-to-work laws to protect the consciences of loyal Americans from Communist oppression into which they are legally forced by compulsory unionism.

No one could dispute that a worker's personal rights and conscience are oppressed when he is compelled to belong to or support a Communist dominated union and come under the "formative" influence of such an association. But is there not oppression of personal rights under any kind of existing compulsory unionism when a worker is forced to pay union fees, dues, and assessments, most of which are used, not to pay the cost of collective bargaining, but for purposes that have little or no reasonable relationship to collective bargaining? This important point goes to the heart of the right-to-work controversy but is almost completely ignored by opponents of right-to-work, who for some reason, do not see that modern unionism is radically different in its objectives, policies, and programs from what it was a generation ago.

Since it unlikely that protection against the misuse of general union funds for political purposes, obtained under compulsory unionism, will be given by the Corrupt Practices Act: and since it seems even more unlikely that a national right-to-work law, which could give such protection can be passed for some time to come, the main hope for immediate relief rests with the courts—in a declaration of unconstitutionality by the United States Supreme Court, of the exaction of funds for political purposes, under compulsory unionism, in a case involving right-to-work laws. To understand this, a short summary of the pertinent court cases involved must be given.

The constitutionality of the railway union shop was upheld by the United States Supreme Court in 1956 in the Hanson case (*Railway Employees Department, AFL* v. *Hanson et al*). The Railway Labor Act was passed in 1926, and amended in 1934, at the request of the unions, to prohibit union shop agreements. This was in effect a railway right-to-work clause. The clause was amended in 1951 to specifically permit union shop agreements to be entered into between the railroads and the railway brotherhoods, State right-to-work laws notwithstanding. The railway unions then began to negotiate for union shop agreements and by 1953, with an assist from the Federal Government, had forced most of the major railroads, including the Union Pacific, the employer of Mr. Hanson, to sign such contracts. Mr. Hanson and other employees of the Union Pacific refused to join the union and brought suit against the union, contending their constitutional rights under the first amendment and fifth amendment had been violated. Since Mr. Hanson lived in Nebraska, which has a right-to-work law, he pleaded protection under that law against being compelled to join the union. His case went to the Nebraska Supreme Court which ruled in his favor. The case was then appealed to the United States Supreme Court which overruled the Nebraska Supreme Court primarily on the grounds that the Federal Railway Labor Act preempted the field and, therefore, superseded the Nebraska right-to-work law and that since the unions bargain collectively for all employees, both union and nonunion, it is not a deprivation of employees' constitutional rights to force all employees to pay dues, fees and assessments to cover the cost of collective bargaining. However, the Court ruled very narrowly on what the statute required, holding that the Railway Labor Act permitted only a modified union shop, according to which an employee could be bound only to financial support of the union but not to full membership in it. The Court ruled that the record before it (in the Hanson case) did not raise the issue of whether the union shop "forces men into ideological and political associations which violate their right to freedom of conscience, freedom of association and freedom of thought, protected by the Bill of Rights." The Court stated that if it should later be proved that "exaction of dues, initiation fees or assessments is used as a cover for forcing ideological conformity or other action in contravention of the first amendment, this judgment will not prejudice the decision in that case." This has been interpreted to mean that if an actual case were brought before the Court that did prove the use of dues money for political purposes, the Court might well render the union shop contract unconstitutional.

Just such a test may go to the Supreme Court in the case of *Allen et al.* v. *Southern Railway Company, Brotherhood of Railway Clerks, et al.* This case, tried in the superior court of Mecklenberg County, N.C., is significant because it is the first case in labor litigation history in which a jury made "a finding of fact" regarding the political activity of unions. The jury, composed of six men and six women (two of the jurymen being members of a union), handed down a verdict on April 25, 1958, and found that the defendant railway unions had used ordinary union dues, fees and assessments, collected under union shop agreements, to influence votes in elections to public office and to make financial contributions to political candidates and political committees which were not necessary or reasonably related to collective bargaining.

The judge on the case, Judge J. Will Pless, upheld the jury finding and continued the temporary injunction against compelling the nonunion plaintiffs either to join the unions or to pay dues to them. However, he included a provision in his court order that if the unions would prove what portion of the periodic dues, fees and assessments were necessary and reasonably related to collective bargaining, he might modify his order to compel the nonunion plaintiffs to pay this share of the cost of collective bargaining. This ruling could pose a problem for the unions because it might be embarrassing to them to disclose the proportion of total union expenditures that go to pay for the actual cost of collective bargaining and how large a portion of union funds go for purposes not necessarily or even reasonably related to collective bargaining. Immediately upon ruling of the judge the case was appealed by the unions to the North Carolina Supreme Court. If this court upholds the jury verdict, the case will, most likely be appealed to the U.S. Supreme Court.

It is difficult to see upon what ground supporters of compulsory unionism can base their case that workers be compelled, at the expense of their jobs, to financially support political, economic and ideological causes and programs, to which they are opposed. They must face up to the fact that compulsory unionism, today, can make political captives out of free Americans. Opponents of right to work are blind to the fact that modern unions seek and are winning complete political and economic control, using the plea of "union security" to cloak their drive for power.

The opponents of right to work should heed the warning of the Pope that:

"Such discriminations are indicative of a wrong concept of the proper function of labor unions and of their essential purpose, which is the protection of the interests of the wage earner within modern society. How, therefore, can they consider it normal that the protection of the personal rights of the worker be more and more in the hands of an anonymous group, working through the agency of immense organizations which are of their very nature monopolies? The worker, thus wronged in the exercise of his personal rights, will surely find especially painful the oppression of his liberty and of his conscience, caught as he is in the wheels of a gigantic social machine." (Christmas Message, 1952.)

The American worker's personal rights, liberty and conscience are oppressed in this country by compulsory unionism caught as he is in the wheels of a gigantic social machine of modern compulsory unionism. Since all other suggested means have been proved ineffectual in protecting the personal rights of the worker, right to work laws
